- 1. Refer to the Application, page 5, which states: "[the] District employs eight (8) full-time employees that perform meter inspections. To inspect all meters in the system each year would require adding twelve (12) more full-time staff. Combined with the nine (9) additional staff for valve inspections, this represents an increase of 14% of the District's total staff." Additionally, page 3 of the Application states that there are approximately two full-time employees who perform valve inspections.
  - a. Provide the total number of staff members currently employed by Northern Kentucky.
  - b. Provide a complete list of all staff members, by job title, currently employed by Northern Kentucky.
  - c. Confirm that the eight full-time employees who perform meter inspections are dedicated to the sole purpose of inspecting meters.
  - d. Provide the job title, description, current pay rates, and benefits that are provided to each of the eight full-time employees who perform meter inspections.
  - e. Provide the number of hours, with overtime hours separately stated, that each full-time employee who performs meter inspections worked during the calendar year 2016, and separately state the number of those hours that were dedicated to meter inspections.
  - f. Confirm that the two full-time employees who perform valve inspections are dedicated to the sole purpose of performing valve inspections.
  - g. Provide the job title, description, current pay rates, and benefits that are provided to the two full-time employees who perform valve inspections.
  - h. Provide the number of hours, with overtime hours separately stated, that each full-time employee that performs valve inspections worked during the calendar year 2016, and separately state the number of those hours that were dedicated to valve inspections.

#### Answer:

- a. The total number of staff members currently employed by Northern Kentucky is 144.
- b. A complete list of all staff members, by job title, currently employed by Northern Kentucky is attached as Exhibit A.
- c. Northern Kentucky does not currently employ any full-time employees that are dedicated to the sole purpose of inspecting meters. Northern Kentucky currently employs 6 full-time employees

NKWD\_PSCDR2\_1\_101217 Case No 2016-00427 Response to Q1

Witness: Rechtin/Kramer

responsible for repairing, testing, and changing out meters, including inspecting meters. In addition, these employees perform meter pit upgrades, and resolve meter leaks. Northern Kentucky also currently employs 9 full-time employees that are responsible for responding to calls, complaints or emergency events that require investigating, and resolving issues that are related to water service and/or billing inquiries. This position is also responsible for turning on and off water service, and assisting with the meter change out program, and may serve as backup to the meter shop employees. Northern Kentucky estimates that the equivalent of 8 full-time employees' time is spent on performing meter inspections.

To inspect all meters annually, Northern Kentucky would require approximately 20 full-time employees. Since Northern Kentucky currently uses 8 full-time equivalent employees, an additional 12 full-time employees would be needed. The additional 12 employees would increase Northern Kentucky's expenses for salary and benefits by approximately \$889,104 annually  $$12 \times 74,092$ . This does not include the added cost that would be needed to provide vehicles and equipment for the employees to inspect the meters and meter settings.

- d. Job title, description, current pay rates, and benefits that are provided to each employee who perform meter inspections as part of their job duties are attached as Exhibit B.
- e. The number of hours with overtime and estimated hours dedicated to meter inspections separately stated are attached as Exhibit C.
- f. Northern Kentucky currently has two staff members assigned to inspecting and operating distribution valves during a regular work week. They are not dedicated to the sole purpose of performing valve inspections, however, as they could be needed to help with emergency water main work or other assignments. The valve program, as provided as Exhibit A in the response to the first request for information, consists of inspection, repair, and replacement of valves and is supported collectively by the entire Distribution group. In addition to 1 Supervisor, this group currently consists of 22 Fieldmen, 8 Crew Leaders, and 3 Foremen.

Northern Kentucky's proposed program, as noted in response to 5.a in this second request for information, proposes to increase the number of valves currently being inspected annually, particularly the smaller mainline valves and hydrant valves, to bring the total number inspected to approximately 4,000 valves a year. At an estimated average rate of 1 hour per valve inspection for the proposed program, it is estimated that 2 full-time equivalent employees will be needed just to inspect valves. Northern Kentucky anticipates being able to meet the objectives of the proposed valve program.

To inspect all 25,000 valves annually, however, would require approximately 11 full-time employees. Since we currently use 2 equivalent full-time employees, this would mean we would need an additional 9 full-time staff. Northern Kentucky intends to add 2 additional Fieldmen to

the Distribution Department in 2017. Therefore, it is projected that 7 more full-time staff would still be needed to inspect the valves. Adding these 7 staff would increase Northern Kentucky's expenses for salary and benefits by approximately \$518,644 a year (7 x \$74,092). This does not include the added cost that would be needed to provide vehicles and equipment for the employees to inspect the valves.

- g. The valve crew consists of a Crew Leader and a Fieldman. The Crew Leader is responsible for conducting and coordinating the daily work. The Fieldman assists with the daily work. The employees assigned to the valve crew may rotate each calendar year and be supplemented by other crews throughout the year. Job title, description, current pay rates, and benefits that are provided to the crews who perform valve work are attached as Exhibit D.
- h. The number of hours employees performed valve inspections and other valve work in 2016 is shown in the table below. A total of 1,430.50 hours were spent on inspecting valves and 4,582.50 hours on other valves work for a total of 6,013.00 hours. This level is consistent with Northern Kentucky's goal of spending 5,000 hours a year on the valve program as discussed in the 2003 procedure provided as Exhibit A in the response to the first request for information.

Employee	Employee Valve Inspections		Valve	Work	Total
Number	Regular	Over Time	Regular	Over Time	Hours

NKWD\_PSCDR2\_2\_101217 Case No 2016-00427 Response to Q2 Witness: Rechtin

### **Question:**

- 2. Refer to the Application, page 5, which states that the average annual salary and benefits per field employee is \$55,250.
  - a. Provide the calculation of the average annual salary and benefits stated above.
  - b. Provide the gross pay, hourly rate, hours worked, overtime hours worked, and job title of each position that was used to generate this calculation.

#### Answer:

- a. The average annual salary and benefits per field employee of \$55,250 was calculated based on 2016 average annual base salaries excluding overtime. Northern Kentucky has recalculated the average annual salary and benefits per field employee as \$74,092, which reflects 2017 actual rates and annualized gross wages, which includes overtime hours worked. The calculation is attached as Exhibit E.
- b. Gross pay, hourly rate, hours worked, overtime hours worked, and job title of each position that was used to generate this calculation is attached as Exhibit E.

NKWD\_PSCDR2\_3\_101217 Case No 2016-00427 Response to Q3 Witness: Rechtin

# **Question:**

3. Provide the number of meter inspections that were completed for the year ended December 31,

# Answer:

3. In 2016, the District inspected and changed out 8,862 meters, inspected 7,061 meters as a result of customer service inspection requests, inspected 6,177 meters due to billing inspection requests, and inspected 5,480 meters when delinquent turn-off/turn-ons were performed. In total, 27,580 meter inspections were performed during 2016, which is approximately one-third of our system.

NKWD\_PSCDR2\_4\_101217 Case No 2016-00427 Response to Q4 Witness: Kramer

# **Question:**

4. Provide the number of valve inspections that were completed for the year ended December 31, 2016.

# Answer:

4. A total of 567 mainline valves were inspected by Valve Crews for the year ended December 31, 2016. This does not include inspection of fire hydrant valves and other valve work and valve operation. It is estimated that 2,200 additional valves were involved in other work orders or operated for maintenance and construction.

#### **Question:**

- 5. Refer to Northern Kentucky's response to item 1.b. of Commission Staff's First Request for Information ("Staff's First Request").
  - a. Confirm that the response contains Northern Kentucky's proposed inspection schedule for its valves. If the response does not contain Northern Kentucky's proposed inspection schedule, state the proposed inspection schedule for valves.
  - b. State whether the response contains Northern Kentucky's current inspection schedule for its valves. If the response does not contain Northern Kentucky's current inspection schedule, state the current inspection schedule for valves.
  - c. Identify the individual or individuals who approved the decision to utilize Northern Kentucky's current inspection procedures for its valves and state when the policy became effective.
  - d. For each individual identified in sub-part c. of this question, provide the job description and duties for the individual.

#### Answer:

a. We confirm that the response 1.b. contains Northern Kentucky's proposed inspection schedule for valves which breaks down as shown in the table below:

Valve Size	Valve Designation	Proposed Inspection Frequency
16" & Larger	Main Line	Every Two (2) Years
4" - 14"	Main Line	Every Five (5) Years
3" & Smaller	Main Line	Every Ten (10) Years
4" & 6"	Fire Hydrant	Every Ten (10) Years

b. The response does not contain Northern Kentucky Water District's current valve inspection schedule. The current inspection schedule is shown in the table below:

Valve Size	Valve Designation	Current Inspection Frequency
16" & Larger	Main Line	Every Two (2) Years
4" - 14"	Main Line	When Needed
3" & Smaller	Main Line	When Needed
4" & 6"	Fire Hydrant	When Needed

NKWD\_PSCDR2\_5\_101217 Case No 2016-00427 Response to Q5 Witness: Kramer

In addition to the valve crew operating the valves, staff visually checks for apparent leaks and other problems attributed to valves during system flushing and other distribution system work.

- c. Per Exhibit A of Northern Kentucky's response to Staff's First Request, Richard Harrison approved the current inspection procedures for its valves on October 27, 2003, and it became effective October 31, 2003. The Northern Kentucky Water District's current valve inspection procedure was approved by the Commission on November 10, 2010 as shown in Exhibit F.
- d. Richard Harrison was the Vice President of Engineering & Distribution on October 30, 2003. The job duties included the planning, procurement, design, construction, operation, and maintenance activities for the Northern Kentucky Water District's distribution system. This individual no longer works for Northern Kentucky, and the title of Vice President of Engineering and Distribution no longer exists. The job description for the position at that time is attached as Exhibit G.

NKWD\_PSCDR2\_6\_101217 Case No 2016-00427 Response to Q6 Witness: Kramer

#### Question:

6. Refer to Northern Kentucky's response to item 2.c. of Staff's First Request. State the factors in support of Northern Kentucky's position that inspecting valves 36-inch and larger not less frequently than once every two years is reasonable.

#### **Answer:**

6. As shown in Exhibit H, Page 55 of the American Water Works Association Manual M44 "Distribution Valves: Selection, Installation, Field Testing, and Maintenance, Third Edition", it was stated that condition assessment on all critical valves and all valves 16" and larger should be completed on a regularly scheduled (annual if possible) basis and that operation of the majority of valves in a distribution system should be conducted on a three-year to five-year cycle or based on the criteria established by the agency. (Note that fire hydrant valves were not included in this manual).

Based on the operational history of the large valves, Northern Kentucky has not seen a need to increase the inspection frequency from two years to one year.

NKWD\_PSCDR2\_7\_101217 Case No 2016-00427 Response to Q7 Witness: Kramer

# **Question:**

7. Refer to Northern Kentucky's response to item 3 of Staff's First Request. State how long Northern Kentucky has been out of compliance with 807 KAR 5:006, Section 26(6)(b), with respect to its valves.

### Answer:

7. Northern Kentucky received approval from the Commission on November 10, 2010 with respect to its inspection of valves. The Inspection Plan was prepared to comply with 807 KAR 5:006, Section 26(6)(b). Based on prior PSC inspection reports, Northern Kentucky was not aware of, nor had it been notified of, any non-compliance with this regulation. The 2016 Inspection Report was the first notice to Northern Kentucky that its previously approved inspection program was deficient.

NKWD\_PSCDR2\_8\_101217 Case No 2016-00427 Response to Q8 Witness: Rechtin

#### Question:

8. Identify the individual or individuals who approved the decision to utilize Northern Kentucky's current inspection procedures for its meters and meter setting, and state when the policy became effective. For each individual, provide the job description and duties for the individual.

#### **Answer:**

8. Northern Kentucky has been following the same unwritten operational policies and procedures for inspection of its meters and meter settings since the merger of Kenton County Water District and Campbell County Kentucky Water District in 1997. The current inspection procedures were approved by Mark Lofland, VP of Account Services, who no longer works for Northern Kentucky, and Chris Wetherell, Customer Service Supervisor, who no longer works for Northern Kentucky. The VP of Account Services position no longer exists and is now combined with the position of VP of Finance and Support Services. The job description for VP of Account Service at that time and Customer Service Supervisor is attached as Exhibit I.

NKWD\_PSCDR2\_9\_101217 Case No 2016-00427 Response to Q9 Witness: Rechtin

#### Question:

9. Refer to Northern Kentucky's response to item 9 of Staff's First Request. State how long Northern Kentucky has been out of compliance with 807 KAR 5:006, Section 26(6)(b), with respect to its meters and meter settings.

#### **Answer:**

9. All meters in Northern Kentucky's system are automatic meter read (AMR) meters that are read using drive-by technology, or manually read in the event of an issue with the AMR technology. The installation of AMR meters has eliminated the need for meter boxes to be accessed unless equipment failure occurs and the meter or radio requires repair or replacement. If meters and meter settings are not functioning properly, Northern Kentucky would either be notified by the customer, or be alerted by an abnormal change in customer's usage. The Northern Kentucky billing system has triggers in place to provide alerts of potential issues, including abnormal over and under usage on a bill. Thus, Northern Kentucky's current system acquires and analyzes meter functioning data electronically and more efficiently than a visual inspection annually, thereby reducing the need to send a District employee to each meter and meter setting. The information is generated at each meter read, rather than annually, giving the District more frequent information and in greater detail than with annual inspections. Because of the availability of data from the AMR, annual meter inspections are substantially replaced by the data available from the AMR. This essentially provides the District with a more frequent inspection of each meter. The approval to change all meters in Northern Kentucky's system to the AMR system was in 2008 when the effects of the recessionary pressures regarding rate management were beginning to be experienced in the Northern Kentucky area. In order to have physically inspected or examined all meters and meter settings at least once annually, Northern Kentucky would have had to increase staffing significantly, as has been noted throughout this deviation request. Northern Kentucky was therefore not in a position to increase staffing per the KAR, and relied on the AMR system to analyze meter functioning data.

Further, based upon the ruling Northern Kentucky received from the PSC on valves in 2010 as referenced in Exhibit F, Northern Kentucky believed the PSC would be understanding of our cost effective approach to inspect meters and meter settings under our current practice versus significantly increasing staffing levels to meet 807 KAR 5:006, Section 26(6)(b), with respect to its meters and meter settings. Note that our current practice involves a visual inspection of roughly a third of our meters and meter settings annually, in addition to the electronic inspections we receive from our billing system, which further justifies a request for deviation from 807 KAR 5:006, Section 26(6)(b). It is Northern Kentucky's position that strict compliance with 807 KAR 5:006, Section 26(6)(b) to visually inspect all meters and meter settings, with the additional costs that would be incurred, would not directly benefit Northern Kentucky's customers, and a deviation from this KAR is an economically sound decision that would not adversely impact the operation of the District or the security of our system. Based on prior PSC inspection reports, Northern Kentucky was not aware of, nor had it been notified of, any non-compliance with this regulation. The 2016 Inspection Report

NKWD\_PSCDR2\_9\_101217 Case No 2016-00427 Response to Q9 Witness: Rechtin

was the first notice to Northern Kentucky that its previously approved inspection program was deficient

NKWD\_PSCDR2\_10\_101217 Case No 2016-00427 Response to Q10 Witness: Rechtin/Kramer

#### Question:

10. Provide a copy of the inspection procedures used to assure safe and adequate operation of Northern Kentucky's facilities and compliance with KRS Chapter 278 and 807 KAR Chapter 5 adopted by Northern Kentucky. If the inspection procedures for meters, meter settings, or valves, of any size or type, have been modified since January 1, 2010, state each modification.

#### Answer:

10. Northern Kentucky's current valve inspection procedure, shown in Exhibit F, was approved by the Commission on November 10, 2010. It has not been modified since then.

Northern Kentucky's meter and meter settings unwritten inspection procedures have not been modified since January 1, 2010 and are as follows:

- Obtaining the GPS coordinates of the meter location if the GPS coordinates are not currently in the system
- Opening the meter lid and verifying that the transmitter is installed through the lid properly
- Pumping any excess water out of the crock, if needed
- Visually inspecting the crock and meter setting for any possible issues
- Obtaining a visual and an electronic read, and changing out meter if needed
- Verifying that there are no leaks inside the crock
- Operating the angle valve inside the crock to ensure proper operation
- Closing lid and making sure the lid fits the ring properly and securely

#### Question:

- 11. Refer to 807 KAR 5:006, Section 26(3), which states: "Appropriate records shall be kept by a utility to identify the inspection made, the date and time of inspection, the person conducting the inspection, the deficiencies found, and the action taken to correct the deficiencies." Provide the following:
  - a. Northern Kentucky's most recent inspection record for each valve 16-inch or larger.
  - b. By year, for the years 2010 through 2016, the number of valves 16-inch or larger in Northern Kentucky's system, the number of inspections conducted by Northern Kentucky of valves 16-inch or larger, and the number of valves found to have deficiencies. By year, for the same period, provide a schedule that summarizes the number of deficiencies found during the inspections by type of deficiency and the action necessary to correct the deficiency.
  - c. By year, for the years 2010 through 2016, the number of valve failure or damage in valves 16-inch or larger in Northern Kentucky's system discovered during an attempt to use the valve while not conducting an inspection. By year, for the same period, provide a schedule that summarizes the deficiencies determined to be responsible for the failures, the action necessary to correct the deficiency, and whether the valve had been inspected within 12 months prior to the failure.
  - d. By year, for the years 2010 through 2016, the number of valves smaller than 16-inch in Northern Kentucky's system, the number of inspections conducted by Northern Kentucky of valves smaller than 16-inch, and the number of valves found to have deficiencies. By year, for the same period, provide a schedule that summarizes the number of deficiencies found during the inspections by type of deficiency and the action necessary to correct the deficiency.
  - e. By year, for the years 2010 through 2016, the number of valve failures or damage in valves smaller than 16-inch in Northern Kentucky's system discovered during an attempt to use the valve while not conducting an inspection. By year, for the same period, provide a schedule that summarizes the deficiencies determined to be responsible for the failures, the action necessary to correct the deficiency, and whether the valve had been inspected within 12 months prior to the failure.

#### **Answer:**

a. Northern Kentucky's most recent record of inspection for each valve 16-inch and larger was completed on the dates shown in Exhibit J. Using the asset inventory information in the work order system, it appears that there are approximately 1,000 mainline valves 16-inches and larger. A total of 62 of the larger valves would not be operated because they are privately owned or need to stay closed for hydraulic separation.

The total number of mainline valves, the number of inspections, and the number of valves repaired or replaced each year for 2010 through 2016 are shown in the table below. In addition to the scheduled mainline valve inspections listed in the table, Northern Kentucky estimates that another 2,200 mainline valves are operated each year for other maintenance or emergency shutdowns and construction. Using the annual average of 94 valves needing corrective action and a total of approximately 2,600 valves operated each year, this results in a rate of 3.6% of the valves needing corrective action following operation. This number seems reasonably low and is the basis for Northern Kentucky's proposed alternative inspection schedule outlined in the requested deviation. The alternative inspection schedule is less costly than complying with the regulation. Northern Kentucky strives to supply safe, reliable, and efficient service to its customers.

Year	Number of Mainline Valves	Number of Valve Inspections	Number Repaired or Replaced
2010	10,606	393	117
2011	10,958	264	76
2012	11,353	363	79
2013	11,725	279	75
2014	12,214	505	119
2015	12,578	440	116
2016	12,914	567	76
Average	11,764	402	94

b. The number of 16-inch and larger valves in the system and the number of 16-inch and larger valves inspected in years 2010 through 2016 are shown in the table below. Northern Kentucky's records do not reflect deficiencies found during inspection, the type of deficiency, or the corrective action necessary to correct deficiency.

	Number of Valves	Number of Valves ≥16"
Year	≥16"	Inspected
2010	848	269
2011	900	162
2012	936	262
2013	951	166
2014	985	335
2015	993	261
2016	1,012	403

c. Northern Kentucky's records do not reflect how many of the 16-inch and larger valves were found to have deficiencies while not conducting an inspection, the type of deficiency, the

corrective action necessary to correct deficiency, or whether the valve had been inspected within 12 months of the failure.

d. The number of 16-inch and smaller valves in the system and the number of 16-inch and smaller valves inspected in 2010 through 2016 are shown in the table below:

Year	Number of Mainline Valves <16"	Number of Mainline Valves <16" Inspected
2010	9,758	124
2011	10,058	102
2012	10,417	101
2013	10,774	113
2014	11,229	170
2015	11,585	179
2016	11,902	164

The asset inventory includes 11,902 valves smaller than 16 inches in 2016, but 675 of these would not be operated because they are privately owned or need to stay closed for hydraulic separation.

Northern Kentucky's records do not reflect how many of these valves were found to have deficiencies during inspection, the type of deficiency, or the corrective action necessary to correct deficiency.

e. Northern Kentucky's records do not reflect how many of the valves smaller than 16 inches were found to have deficiencies while not conducting an inspection, the type of deficiency, the corrective action necessary to correct deficiency, or whether the valve had been inspected within 12 months of the failure.

# **Job Description**

Position Title:	Customer Service Fieldman Representative	Department: Cus	stomer Service
Reports to:	Customer Service Foreman	Classification: Exe	empt
Schedule:	Monday – Friday	Location: Cer	ntral Facility
Hours:	8:00 a.m 5:00 p.m.	Supervisory Respons	sibilities: No

#### **Position Summary**

The Customer Service Fieldman is responsible for responding to calls, complaints or emergency events that requires investigating and resolving issues that are related to water service and/or billing inquiries. This position is also responsible for turning on and off water service and assisting with the meter change out program. Additionally, this position assists in the regulatory compliance and efficient operations of the District.

#### **Essential Functions**

Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions of this position.

- Responsible for daily customer inquiries, turn on water service, delinquent account notification and disconnection program, including disconnects for the Sanitation District
- Responds to, investigates, repairs and resolves customer complaints
- Performs meter change out and repairs
- Maintains inventory and cleanliness of trucks and equipment
- Records data in the work order system and completes appropriate paperwork for tracking purposes
- Position requires on-call availability
- May serve as backup to the meter shop when needed
- Ensures compliance of company policies, including but not limited to safety concerns and incident reporting
- This description describes only the core areas of responsibilities; specific position assignments will vary depending on the needs of the department

### **Required Education and Experience**

- High School Diploma/GED
- 1 year of Customer service experience

### **Licensing/Certifications:**

Valid Driver's License

#### **Additional Skills**

- Ability to maintain effective, fair, cooperative, collaborative and respectful relationships with internal and external colleagues, peers, work teams and workgroups
- Ability to gain working knowledge of the entire distribution system
- Ability to interpret, understand and administer regulations
- Ability to work alone
- Ability to work with various computer software

#### **Work Environment and Physical Demands**

This job requires climbing, balancing, stooping, kneeling, crouching, crawling, pushing, reaching, standing, sitting, lifting, talking, hearing and repetitive motions. Heavy Work: exerting up to 50 pounds. Environmental conditions: subject to extreme heat, cold, humidity, wetness, noise, and vibration.

Exhibit B NKWD\_PSCDR2\_1\_101217 Case No 2016-00427 Response to Q1.d Witness: Rechtin

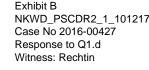

Works with equipment such as computer, copy machine, fax, and phones. Frequently required to sit, stand, walk, and reach for objects. The position requires manual dexterity; auditory and visual skills; and the ability to follow written and oral instructions and procedures. There is no regular travel expected for this position.

### **Other Duties**

Please note this job description is not designed to cover or contain a comprehensive listing of activities, duties or responsibilities that are required of the employee for this job. Duties, responsibilities and activities may change at any time with or without notice.

The Northern Kentucky Water District employs qualified persons in all jobs in a manner which will ensure equal employment opportunity, as well as administer personnel actions in a manner as to not discriminate against any person on the basis of race, religion, national origin, age, sexual orientation or disability.

# **Job Description**

Position Title:	Customer Service Field Foreman	Department:	Finance

# **Job Description**

		<u> </u>
Position Title:	Distribution Fieldman	Department: Distribution
Reports to:	Crew Leader	Classification: Non-Exempt
Schedule:	Monday – Friday	Location: Central Facility
Hours:	7:30 a.m.– 4:00 p.m.	Supervisory Responsibilities: None

#### **Position Summary**

The Distribution Fieldman performs routine duties to maintain, repair, replace and install the delivery of safe drinking water to the system. This position will involve physical labor, use of hand tools and heavy equipment, and may assist other departments to ensure water delivery throughout the system. Additionally, this position assists in the regulatory compliance and efficient operations of the District.

#### **Essential Functions**

Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions of this position.

- Perform routine maintenance, repair, replacement and installation on the existing water system which includes, but is not
  limited to: water main repairs, valve operation and replacement, water service line installation & replacements, meter moveouts, system flushing, and fire hydrants repair & replacement.
- Perform routine duties such as:
  - Operate District vehicles, service trucks, handtools and heavy equipment, such as, backhoe, bobcat, jackhammers, power saws, and dump trucks
  - Daily inspection of vehicles/equipment
  - o Ability to complete tasks, when necessary, without the direction of the crew leader and/or foreman
  - Perform general maintenance activities, basic housekeeping, and the fabrication of stock from inventory (i.e. double yokes, pressure regulators, risers)
  - Assist in contacting police and fire departments to coordinate tasks like road closures, salting of roads, and flagging
  - Restore work area when job is complete
  - Ability to work on-call hours
- Ability to increase knowledge of department operations and of the water system by rotating between crews and specialty crews to contribute to the efficient delivery of water
- Ability to interact with the general public and customers to notify of water service interruptions/ restoration, and direct complaints or concerns to the appropriate personnel
- Ability to communicate to crew leader, foreman and/or supervisor issues that may hinder the efficient operation of the department/District
- Complies with company policies, including but not limited to safety concerns and incident reporting
- This description describes only the core areas of responsibilities; specific position assignments will vary depending on the needs of the department

#### **Required Education and Experience**

- High School Diploma, GED or equivalent experience
- A background in construction or related field preferred
- General working knowledge of use of handtools and heavy equipment

## **Skilled In:**

- Good verbal and written communication skills
- · Ability to read, write and use basic arithmetic and grammar

Exhibit D NKWD\_PSCDR2\_1\_101217 Case No 2016-00427 Response to Q1.g Witness: Rechtin

- Ability to work with customers and other employees in a courteous manner
- Basic computer skills
- Establishing and maintaining effective, fair, cooperative, collaborative and respectful relationships with internal and external colleagues, peers, work teams and workgroups.

## **Licensing/Certifications:**

- Commercial Driving License (CDL) is preferred or able to obtain within one year of employment
- Class IV Distribution License preferred

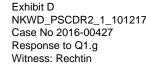

#### **Work Environment and Physical Demands**

This job requires climbing, balancing, stooping, kneeling, crouching, crawling, pushing, reaching, standing, sitting, lifting, talking, hearing and repetitive motions. Heavy Work: exerting up to 125 pounds. Environmental conditions: subject to extreme heat, cold, humidity, wetness, noise, vibration and muddy/slippery situations. Hazardous conditions: moving parts & equipment/tools, chemicals, exposure to equipment exhaust fumes and other gases when digging. Extended hours and overtime work is required/needed.

## **Other Duties**

Please note this job description is not designed to cover or contain a comprehensive listing of activities, duties or responsibilities that are required of the employee for this job. Duties, responsibilities and activities may change at any time with or without notice.

The Northern Kentucky Water District employs qualified persons in all jobs in a manner which will ensure equal employment opportunity, as well as administer personnel actions in a manner as to not discriminate against any person on the basis of race, religion, national origin, age, sexual orientation or disability.

# **Job Description**

Position Title:	Distribution Foreman	Department: Distribution	
Reports to:	Distribution Supervisor	Classification: Non-Exempt	
Schedule:	Monday – Friday	Location: Central Facility	
Hours:	7:00 a.m.– 3:30 p.m.	Supervisory Responsibilities: Yes	

#### **Position Summary**

The Distribution Foreman directs and participates in the day-to-day operation of the Distribution department which includes coordination of the maintenance, repair and replacement of water mains and appurtenances to ensure the delivery of safe drinking water to the system. This position oversees the completion of projects in a manner that reflects the standards of the District. This position may involve physical labor, use of hand tools and heavy equipment, and may assist other departments to ensure completion of projects. Additionally, this position contributes to regulatory compliance and efficient operations of the District.

#### **Essential Functions**

Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions of this position.

- Directs and performs routine maintenance, repair, replacement and installation on the existing water system which includes, but is not limited to: water main inspection and repairs, valve operation and replacement, water service line installation & replacements, meter move-outs, system flushing, and fire hydrant repair & replacement
- Ensures the development and training of the Crew Leaders and Fieldmen
- Coordinates with Supervisor to develop a daily work schedule for field crews
- Directs and performs routine duties such as:
  - Operate District vehicles, service trucks, handtools and heavy equipment, such as backhoe, bobcat, jackhammers, power saws, and dump trucks
  - o Ensures daily inspection of vehicles/equipment
  - o Directs and performs general maintenance activities, basic housekeeping, and the fabrication of stock for inventory (i.e. double yokes, pressure regulator, risers)
  - Contacting and/or coordinating police and fire departments to coordinate tasks like road closures, salting of roads, and flagging
  - o Ensures identification and implementation of necessary traffic control measures
  - o Ensures underground utilities are notified prior to excavation and that utility notification procedures are followed
  - Oversees notification of customers impacted by work activities
  - o Ensures restoration of work area when job is complete
  - o Ensures contractors working for the District on restoration are working efficiently and completing work in a timely manner
  - o Ability to work on-call hours
- Instruct and increase knowledge of department operations by rotating crews to allow for cross-training
- Direct Crew Leaders, Fieldmen and communicate to Supervisor issues that may hinder the efficient operation of the department/District
- Collaborates and conducts performance reviews for Crew Leaders and Fieldman
- Ability to interact with the general public and customers to notify of water service interruptions/restoration, and direct complaints or concerns to the appropriate personnel
- Ensures compliance of company policies, including but not limited to safety concerns and incident reporting
- Assists with department activities such as preparation and review of standard operating guidelines, completion of dump site reports, and information for tracking sheets
- Ensures appropriate reports and documentation for work orders are completed accurately and in a timely manner
- This description describes only the core areas of responsibilities; specific position assignments will vary depending on the needs
  of the department

# PUBLIC SERVICE COMMISSION - INSPECTION PLAN

# **Northern Kentucky Water District**

### **SECTION 1 - INTRODUCTION**

Northern Kentucky Water District (NKWD) provides drinking water to most of Campbell and Kenton counties and portions of Boone in Northern Kentucky for retail customers and portions of Boone and Pendleton counties as wholesale customers. The NKWD presently meets the water needs of this service area by operating 3 treatment plants having a combined capacity of 64 million gallons a day. The NKWD has two raw water pumping stations along the Ohio River and one along the Licking River that supply raw water to the plants. In addition, the NKWD has thirteen distribution system pumping stations and 20 water storage tanks for treated water. The District owns over 1,238 miles of water mains that include approximately 10,500 hydrants and 26,000 valves. It is necessary for NKWD to properly maintain these facilities in order to ensure adequate supply of drinking water to its customers meeting the desired level of water quality.

Through its Asset Management Program, the NKWD tracks the characteristics (make, model, installation date) and evaluates the condition of all above-ground assets. The program assists the NKWD in identify those assets most critical for delivering water to customers at sufficient quantities and excellent water quality and allocates appropriate spending levels needed to maintain the desired level of service. The NKWD formally updates the program every 5 years. This document describes the additional inspections conducted at least annually to comply with the Public Service Commission (PSC) requirements.

## **SECTION 2 - PURPOSE**

The purpose of this Inspection Plan is to describe procedures developed by the NKWD in order to satisfy the requirements of 807 KAR 5:006 General Rules Section 25 - Inspection of Systems. Specifically paragraph 6 of this section of the regulation applies to water utilities. The NKWD is required to file these procedures with the commission for review.

## **SECTION 3 - DEFINITIONS**

These terms are applicable only for this Plan unless specifically noted.

- A. "Customer" shall mean any person or entity using water for any purpose from the NKWD's water distribution system and for which either a regular charge is made or, in the case of bulk sales, a cash charge is made at the site of delivery.
- B. "Raw Water Supplies" shall mean all water potentially available to persons in the NKWD's service area.
- C. "Treated Water" shall mean water that has been introduced by the NKWD into its water distribution system, including water offered for sale.

Page 1 of 4

Revised Date: 10/01/2010

### **SECTION 4 - APPLICABILITY**

The provisions of this Plan shall apply to the NKWD. When implemented, this document becomes the NKWD's Inspection Plan to meet the regulation.

## **SECTION 5 - RAW WATER SUPPLY**

The regulation indicates that the utility shall inspect all structures pertaining to source of supply for their safety and physical and structural integrity at least annually. The NKWD uses the following procedures to comply with this requirement:

- A. Intakes and Pumping Stations The raw water intake structures housing the pumps are inspected yearly by NKWD staff using an evaluation form designed to comply with the PSC inspection criteria. The annual inspection looks at the roof and gutters, exterior and interior coatings, structural integrity, heating, ventilation, air conditioning, external and interior lighting, and fencing. If any deficiencies are identified, they are reported and the correction date recorded on the form. The NKWD procures the services of divers to inspect the below-water infrastructure twice a year.
- B. Reservoirs The NKWD procures the services of divers to inspect the condition of the reservoirs and to monitor the accumulation of solids in the reservoirs and around the inlet twice a year.
- C. Dams The Kentucky Division of Water inspects the dams yearly. The NKWD uses the services of a geotechnical engineering firm to monitor for movement in the dam; the monitoring devices are read twice a year.

## **SECTION 6- WATER TREATMENT**

The regulation indicates that the utility shall inspect all structures pertaining to purification at least annually for their safety, physical and structural integrity and for leaks. The NKWD uses the following procedures to comply with this requirement:

- A. Process Equipment The process equipment is inspected through routine maintenance and cleaning and daily operations by NKWD staff. A work order is generated for any equipment found to be in need of repair.
- B. Structures and Buildings The treatment plant buildings housing the processes are inspected yearly by NKWD staff using an evaluation form designed to comply with the PSC inspection criteria. The inspection looks at the roof and gutters, exterior and interior coatings, structural integrity, heating, ventilation, air conditioning, external and interior lighting, and fencing. If any deficiencies are identified, they are reported and the correction date recorded on the form. The intake screens and pumping equipment receive routine maintenance by NKWD staff. A work order is generated for any equipment found to be in need of repair.

## **SECTION 7 – DISTRIBUTION SYSTEM**

The regulation indicates that the utility shall inspect the distribution system components at least annually for their safety, physical and structural integrity and for leaks. The NKWD uses the following procedures to comply with this requirement:

Northern Kentucky Water District

Inspection Plan Witness: Kramer

A. Hydrants – hydrants are operated at least once a year by the NKWD as part of the water main flushing program or by the local fire departments. Hydrants that are reported to be inoperable are scheduled for repair.

B. Valves - The distribution system includes regulated areas that do not have any additional storage. The NKWD owns and maintains more than 30 pressure regulating valves in the distribution system. The pressuring regulating valves are important for maintaining the desired delivery pressure and are inspected quarterly by NKWD.

Currently large valves (16 inch and larger) in the distribution system that are used for isolation are exercised every two years. Smaller valves are exercised when needed for a scheduled or emergency shutdown. Valves that are found to be inoperable are scheduled for repair or replacement. Additionally as part of the flushing program, staff visually checks for apparent leaks and other problems attributed to valves.

Water Mains - Flushing is performed in accordance with 401 KAR 8:020 - Public and semipublic water supplies; general provisions, Section 2, Paragraph 13 as follows: To protect public health, a distribution system may be thoroughly flushed at least twice a year, usually in the spring and fall. The purpose of flushing is to reduce turbidity created from the scouring of accumulated sediment within the water lines. Additionally as part of the flushing program, staff visually checks for apparent leaks and other problems attributed to mains.

- C. The NWKD reviews the performance and evaluates the functionality of water mains to determine the need for rehabilitation or replacement. Coordinating water main replacement with street improvement work is also a priority. The water mains are ranked by a scoring system to prioritize which mains are selected each year for replacement or rehabilitation.
- D. Pumping Stations – The buildings housing the pumps are inspected yearly by NKWD staff using an evaluation form designed to comply with the PSC inspection criteria. The inspection looks at the roof and gutters, exterior and interior coatings, structural integrity, heating, ventilation, air conditioning, external and interior lighting, and fencing. If any deficiencies are identified, they are reported and the correction date recorded on the form. The NKWD checks the station three times a week and records information on its performance. The pumping equipment receives routine maintenance by NKWD staff. A work order is generated for any equipment found to be in need of repair. Quarterly staff perform a vibration analysis and alignment check on pumps and motors and sends the oil to a vendor for analysis. Two times a year the NKWD hires a firm to perform preventive maintenance on the high voltage equipment.
- E. Storage Facilities – The tanks are inspected yearly by NKWD staff using an evaluation form designed to comply with the PSC inspection criteria. The inspection looks at the exterior coating condition and cathodic protection, overflow screen, site and tank security, altitude valve, and valve pit condition and security of lid. If any deficiencies are identified, they are reported and the correction date recorded on the form. Each tank receives a thorough inspection approximately 10 years after the date of its last coating. Twice a year staff conduct a visual inspection of the tank. In addition, staff make monthly security checks on fencing and security devices.

**SECTION 8 – CONSTRUCTION EQUIPMENT AND VEHICLES** 

The NKWD prepared a Safety and Security Manual that covers operation of vehicles and equipment. The manual states that the driver of each vehicle is responsible for testing brakes, lights, turn signals, steering, and windshield wipers for proper operation prior to leaving NKWD's property and noting any defects to a supervisor. The Manual states that vehicles with defects which would in any way affect the safe operation of the vehicle shall not be driven. The Manual also requires employees to inspect equipment before each use.

The NKWD tracks vehicle mileage and equipment hours on a monthly basis and performs routine maintenance recommended by the manufacturer. Vehicles are replaced and new vehicles specified with safety features appropriate for the intended use as determined by the NKWD's Safety Coordinator and Vehicle Committee.

### **SECTION 9 - ENFORCEMENT**

This plan will be enforced by President of the Northern Kentucky Water District.

### **SECTION 10 – EFFECTIVE DATE**

This plan shall take effect immediately upon approval by the Public Service Commission.

## NORTHERN KENTUCKY WATER DISTRICT JOB DESCRIPTION

**Position:** VICE PRESIDENT – Engineering and Distribution **Date Revised:** March 21, 2005 **Pay Band:** 9 **Department:** Eng/Dist **FLSA Status:**Exempt

**Job Summary:** Responsible for the planning, procurement, design and maintenance activities for the Northern Kentucky Water District's distribution system and the procurement and project management for the District's facilities.

## **Job Duties:**

- Manages staff of approximately 50 employees.
- Responsible for distribution system planning, procurement of construction projects and construction and financial oversight of projects.
- Manages operations of and maintenance of water distribution system.
- Responsible for meeting all federal and state regulations and all District guidelines related to the Engineering and Distribution Department.
- Responsible for preparation and maintenance of Standard Operating Guidelines for the Engineering and Distribution Department.
- Responsible for preparation and implementation of an annual department budget.
- Responsible for safety and training of department employees.
- Responsible for strategic planning for the Engineering and Distribution Department.
- Responsible for hiring and firing within the department.

## **Job Requirements:**

## **Skills and Qualifications:**

- Bachelor of Science Degree in Civil Engineering or related Engineering discipline
- Licensed Professional Engineer in the State of Kentucky
- At least 5 years of related Professional Engineering experience
- Ability to prepare reports and make presentations including but not limited to NKWD Board of Commissioners, Kentucky Public Service Commission, Kentucky Division of Water and professional organizations
- Must belong to a professional organization such as AWWA
- Ability to work with others in a team environment
- Ability to lead and supervise others
- Ability to solve unique problems and prioritize work effectively
- Ability to understand and carry out broad directives with little supervision
- Valid driver's license

## **Physical Effort:**

- Climbing, balancing, stooping, kneeling, crouching, reaching, standing, sitting, walking, pushing, pulling, lifting, fingering, grasping, feeling, talking, hearing, repetitive motion.
- Visual accommodation for PC work and driving.

### **Working Conditions:**

• Indoor and outdoor environment

#### VALVE ASSET MANAGEMENT 55

- Condition assessment and operation of each critical valve and all valves 16 in. and larger should be completed on a regularly scheduled (annual if possible) basis.
- Condition assessment and operation of the majority of valves in a distribution
  system should be conducted on a three-year to five-year cycle or based on the
  criteria established by the agency. With historical performance data, the usability
  decay rate (the rate at which valve assets are rendered unusable due to locatability,
  accessibility, and/or operability challenges) can be modeled, and this cycle can be
  further refined to make the best use of asset management investments.
- All gate valves should be physically cycled from full open to close and back open at least once every five years or on a timetable based on the criteria established by the agency.
- When operating a valve, use the lowest torque possible. Do not force the valve.
- If a gate valve is difficult to operate, apply low torque in the closed, then open, then closed direction up to 20 times in an attempt to free up the valve before increasing torque.
- If a gate valve is difficult to operate and has not been operated for an extended period of time, begin with the lowest torque required to turn the valve in the closed direction, moving through 5 to 10 rotations. Reverse for 2 or 3 rotations. Reverse again and rotate 5 to 10 more turns in the closing direction. Repeat this procedure until full closure is attained. Once the valve is fully closed, it should be opened a few turns so that high velocity water flowing under the gates can move the remainder of the sediment in the valve seat. The reason for this cautious approach is that in many gate valves, debris and sediment can build up on the gates, stem, and slides. If this material is compacted while the valve is being closed, the torque required to close the valve continues to build as the material is compacted. If the procedure above is used, the stem and other parts are "scrubbed" by the series of back-and-forth motions, and water in the system can flush the debris that has broken loose away from the stem gate and slides or guides.
- Condition assessment includes examining the condition of the valve box or vault.
- When proactively operating a valve, the valve should be slowly closed, opened, closed, and then reopened. This cycling of the valve should continue until the turn count and the torque required to operate the valve stabilizes.
- Preventive maintenance should be performed as necessary or as suggested by the
  manufacturer. Some valves (such as butterfly valves that have a seating where a
  resilient coating meets stainless steel, or valves with actuators isolated from the
  contents of the line) may need less exercise. The manufacturers' guidelines should
  be followed.
- During the condition assessment and operation, valves on transmission mains
  that are associated with the primary source of supply or the only source of supply in a particular area, should only be cycled partially. (In order to not cause an
  inadvertent outage or hydraulic lock of a gate valve.)
- Caution should be exercised when large valves in critical single-source transmission mains are cycled to the fully closed position.

**Valve information.** Key information needed about valves may be summarized as follows:

 Condition assessment includes accurately documenting valuable information, including the specific location of the valve asset.

Exhibit I NKWD\_PSCDR2\_8\_101217 Case No 2016-00427 Response to Q8 Witness: Rechtin

## NORTHERN KENTUCKY WATER DISTRICT JOB DESCRIPTION

**Position:** VICE PRESIDENT – Account Services & Billing **Department:** Account Services & Billing **Date Revised:** March 01, 2005 **Pay Band:** 9 **FLSA Status:** Exempt

**Job Summary:** Responsible for the function and operation of all account services, this includes billing, call-center, and cashiering, also light field services, meter reading, meter repair, testing and maintenance of meters, and flushing operations. Additionally; all staffing, safety, regulatory compliance, and procurement of materials and supplies.

## **Job Duties:**

- Manages staff of approximately 45 employees.
- Manages operations of all account service related activities, meter reading, testing and repair, light field services and distribution flushing.
- Responsible for meeting all federal and state regulations and all District guidelines.
- Responsible for preparation and maintenance of Department Standard Operating Guidelines.
- Responsible for preparation and implementation of an annual budget.
- Responsible for safety and training of Division employees.
- Responsible for strategic planning and implementation of projects related to Account Services & Billing.
- Responsible for hiring and firing within the Department.

## **Job Requirements:**

## Skills and Qualifications:

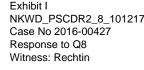

- Bachelors or Associate Degree in Applied Sciences, or related field.
- At least 10 years experience in service and water industry related field.
- Ability to prepare reports and make presentations including but not limited to NKWD Board of Commissioners and professional organizations
- Must belong to a professional organization such as AWWA
- Ability to work with others in a team environment
- Ability to lead and supervise others
- Ability to solve unique problems and prioritize work effectively
- Ability to understand and carry out broad directives with little supervision
- Valid driver's license

## **Physical Effort:**

- Climbing, balancing, stooping, kneeling, crouching, reaching, standing, sitting, walking, pushing, pulling, lifting, fingering, grasping, feeling, talking, hearing, repetitive motion.
- Visual accommodation for PC work and driving.

## **Working Conditions:**

• Working in both climate controlled and non-climate controlled environments. Public interaction that can include hostile, threatening or aggressive individuals.

# **Job Description**

Position Title:	Customer Service Supervisor	Department:	Finance
Reports to:	VP of Finance and Support Services	Classification:	Exempt
Schedule:	Monday – Friday	Location:	Central Facility
Hours:	8:00 a.m 5:00 p.m. (some flexibility with hours)	Supervisory Res	ponsibilities: Yes

#### **Position Summary**

The Customer Service Supervisor manages the Customer Service Department to ensure the proper administration of service is provided to all customers. This position directs, investigates and resolves, in a timely manner, customer requests/complaints and emergency events related to water service issues and/or billing inquiries. Additionally, this position ensures regulatory compliance and efficient operations of the District.

#### **Essential Functions**

Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions of this position.

- Manages the workload, assignment, efficiency and quality of work of the Customer Service Field Representatives, Meter Shop and company courier
- Manages the meter shop change out program, meter read schedule, meter testing and meter pit upgrades
- Manages the Customer Service daily customer inquiries, delinquent account notification and disconnection program, including disconnects for the Sanitation District
- Manages inventory and contracts related to the department to ensure proper administration
- Manages and ensures compliance of regulatory bodies
- Develops, manages and administers department annual budgets
- Manages and coordinates with multiple agencies for the testing of interconnects
- Reviews and makes recommendations on insurance claims related to water and/or property damage
- Writes, reviews, and gives performance evaluations
- Builds mutually beneficial relationships with professional organizations and external stakeholders
- Reviews and/or approves weekly timecards to ensure proper administration of pay, recordkeeping and service call reports
- Conducts monthly staff meetings
- Prepares Board communications and makes presentations at Board meetings as needed
- Coordinates projects/programs with other departments
- Ensures compliance of company policies, including but not limited to safety concerns and incident reporting
- This description describes only the core areas of responsibilities; specific position assignments will vary depending on the needs of the department

### **Required Education and Experience**

- High School Diploma/GED; Associates Degree in related area preferred
- 5 years of customer service experience
- Supervisory experience preferred
- Knowledge of water systems preferred
- General knowledge of budgets

## **Licensing/Certifications:**

Valid Driver's License

## **Additional Skills**

Exhibit I NKWD\_PSCDR2\_8\_101217 Case No 2016-00427 Response to Q8 Witness: Rechtin

- Ability to maintain effective, fair, cooperative, collaborative and respectful relationships with internal and external colleagues, peers, work teams and workgroups
- Ability to gain working knowledge of the entire distribution system
- Ability to interrupt, understand and administer regulations
- Ability to supervise and direct others
- Ability to work with various computer software
- Ability to create specialized reports and correspondence and to speak effectively before groups of customers or employees

### **Work Environment and Physical Demands**

This job primarily operates in a climate-controlled environment but some time may be spent in the field which is subject to various weather conditions. Works with equipment such as computer, copy machine, fax, and phones. Frequently required to sit, stand, walk, and reach for objects. The position requires manual dexterity; auditory and visual skills; and the ability to follow written and oral instructions and procedures. There is no regular travel expected for this position.

#### **Other Duties**

Please note this job description is not designed to cover or contain a comprehensive listing of activities, duties or responsibilities that are required of the employee for this job. Duties, responsibilities and activities may change at any time with or without notice.

The Northern Kentucky Water District employs qualified persons in all jobs in a manner which will ensure equal employment opportunity, as well as administer personnel actions in a manner as to not discriminate against any person on the basis of race, religion, national origin, age, sexual orientation or disability.
