
DIRECT TESTIMONY OF BRAD LEVI ON BEHALF OF KENTUCKY INDUSTRIAL UTILITY CUSTOMERS

I. INTRODUCTION AND QUALIFICATIONS

Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Brad Levi. I am Vice President of Catlettsburg Refining, LLC, a subsidiary of Marathon Petroleum Company LP ("Marathon"), and the Refining General Manager at Marathon’s Catlettsburg facility, located at 11631 Old US Hwy 23, Catlettsburg, KY 41129, which is also my current business address.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND.

A. I graduated from the University of Iowa with a Bachelor of Science degree in Chemical Engineering, and began working for Marathon directly out of college. I have worked at Marathon for 28 years, including 15 positions in a variety of engineering, supervisory and management roles at Marathon’s corporate offices in Findlay, Ohio, as well as four of
Marathon’s refineries in Robinson, Illinois, St. Paul Park, Minnesota (since divested), Garyville, Louisiana and Catlettsburg, Kentucky. I also attended the Oxford Energy Seminar in 2011. I was promoted to my current position of Refining General Manager in February 2016.

Q. ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A. I am appearing on behalf of Kentucky Industrial Utility Customers (“KIUC”). Marathon is a member of KIUC. Headquartered in Findlay, Ohio, Marathon is the nation’s third-largest petroleum product refiner and the largest refiner in the Midwest. Marathon owns refineries in the following six locations: 1) Catlettsburg, Kentucky; 2) Canton, Ohio; 3) Robinson, Illinois; 4) Detroit, Michigan; 5) Garyville, Louisiana; and 6) Texas City, Texas (two refineries). Our operations are concentrated primarily in the Midwest, Southeast, Northeast, and Gulf Coast regions of the United States. Marathon became the sole owner of the Catlettsburg, Kentucky refinery in 2005.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. My testimony addresses Marathon’s operations and how Kentucky Power Company’s (“Kentucky Power” or “Company”) proposed rate increase could adversely impact Marathon’s Catlettsburg refinery.

Q. HOW MANY PEOPLE DOES MARATHON EMPLOY AT ITS CATLETTSBURG REFINERY IN KENTUCKY?
Marathon’s Catlettsburg refinery employs approximately 750 people directly and hundreds of contract workers that are onsite on a regular basis.

Q. HOW MUCH ENERGY DOES MARATHON’S CATLETTSBURG REFINERY USE ANNUALLY?

A. Pursuant to the electricity sales information provided in Kentucky Power’s 2016 FERC Form 1 filing, Marathon is currently the largest customer of Kentucky Power with the Catlettsburg refinery purchasing more than 19% of the energy sold at retail by Kentucky Power.

Q. HOW HAVE THE ENERGY RATES AT THE CATLETTSBURG REFINERY CHANGED OVER THE LAST TEN YEARS?

A. A decade ago, the Catlettsburg refinery had the lowest energy rates among the seven Marathon refineries. In 2018, the Catlettsburg refinery will have the highest energy rate among all of the refineries, even before taking into account Kentucky Power’s proposed rate increase in this case.

Q. HOW WOULD THE IMPOSITION OF A LARGE RATE INCREASE FOR MARATHON’S RATE CLASS (IGS) IMPACT THE CATLETTSBURG REFINERY?

A. If adopted, Kentucky Power’s proposed rate increase would significantly raise the Catlettsburg refinery’s operating costs. Operating costs are one of the biggest factors considered by Marathon’s management when determining which of its seven refineries
will be used for production. Substantial increases to the Catlettsburg refinery's electric
rates would therefore adversely impact that facility's production costs and could impact
its utilization rates.

Q. DOES CATLETTSBURG ALSO COMPETE WITH ITS SIX AFFILIATED
REFINERIES FOR CAPITAL DOLLARS?

A. Yes. Capital dollars to modernize, maintain, or expand Marathon's seven refineries are
allocated to the most productive uses. Catlettsburg competes with the six other refineries
for both expense and capital investment dollars. As our electric rates continue to increase
in Kentucky faster than other locations, investment in Catlettsburg becomes less
attractive. That is one reason we are evaluating energy efficiency projects and
considering making our own electricity from natural gas.

Q. IS MARATHON CURRENTLY CONSIDERING ALTERNATIVES TO
MITIGATE KENTUCKY POWER'S PROPOSED RATE INCREASE?

A. Yes. Marathon is actively exploring whether to invest in co-generation at the
Catlettsburg refinery. That refinery is located in an area with easy access to natural gas
and co-generation offers several benefits to the Catlettsburg refinery, including the
potential to generate power for less than the price proposed to be charged by Kentucky
Power after this rate case. Should Marathon undertake a large capital investment in co-
generation, it would likely leave Kentucky Power with substantial fixed costs that would
potentially be recovered from Kentucky Power's other customers.
Q. DOES MARATHON HAVE COGENERATION AT ANY OF ITS OTHER FACILITIES?

A. Yes. In 2013, Marathon acquired a 1,055 MW cogeneration facility at our Galveston Bay refinery in Texas. Therefore, as a corporation, we have significant experience operating our own power generation resources. While energy generation is not a core function of our refining business, evaluation of a cogeneration facility must be considered to remain competitive.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes
COMMONWEALTH OF KENTUCKY
BEFORE THE PUBLIC SERVICE COMMISSION

Case No 2017-00179

AFFIDAVIT

STATE OF Kentucky
COUNTY OF Boyd

Brad Levi, being duly sworn, deposes and states: that the attached is his sworn testimony and that the statements contained are true and correct to the best of his knowledge, information and belief.

Brad Levi

Subscribed and sworn to or affirmed before me this 2nd day of October, 2017.
