FIRST PSC DATA REQUEST DATED APRIL 25, 2018

1. Refer to the Application, Schedule I. State if Delta is aware that the proposed rates will not produce sufficient revenues to meet the \$2,017,503 Pipeline Replacement Program ("PRP") adjustment.

Response:

Delta is aware the proposed rates will not produce sufficient revenues to meet the PRP adjustment. When rounded to two decimal places, the monthly PRP rate yields \$2,016,103 which is \$1,400 different from the total PRP adjustment of \$2,017,503. Since a fixed charge must be rounded to two decimal places, there will always be a slight difference between the revenue generated by the rates and the amount requested. Adjustments could be made to the rate classes with fewer customers to adjust for the rounding; however, such adjustment would result in improper allocation of revenue across the customer classes. Delta believes the balancing adjustment within the filing appropriately handles issues caused by rounding of the rates as it ensures there is no over or under billing of PRP rates.

FIRST PSC DATA REQUEST DATED APRIL 25, 2018

- 2. Refer to the Application, Schedule V, the responses to Items 1.a., c., and d., and to Schedule VII.
 - a. The response to Schedule V, 1.a. indicates that Delta is proposing to include Aldyl-A plastic pipe as pipeline eligible for replacement through its PRP. Provide detailed information setting out how much of the \$3.05 to \$6.89 million annual estimated range shown in Schedule VII is related to steel pipeline currently eligible for replacement, and how much represents the cost of 168 miles of Aldyl-A plastic pipe which Delta now proposes to include in the PRP.
 - b. Refer to the response to Item 1.c. Provide support for the additional 15 years proposed to complete the PRP. Explain how this length of time was chosen, and state whether Delta considered other time periods such as 20 or 25 years in order to lessen the cost impact to its customers.
 - c. Provide support for the reasonableness of the \$7.8 million cap proposed in the response to Item 1.c. State whether Delta considered lower cap amounts to lessen the cost impact to its customers.
 - d. Provide estimates of the annual surcharge amounts for each customer class through 2033 based on the high and low ends of the annual cost projections provided in Schedule VII.
 - e. The response to Item 1.b. states that once a service has been inactive for five years, Delta schedules removal of the service line from the premise.
 - (1) Explain why Delta removes the service lines rather than abandoning them in place.
 - (2) Explain if Delta does any analysis to determine which service lines should be removed, or if there is a possibility the service may be renewed.

FIRST PSC DATA REQUEST DATED APRIL 25, 2018

Response:

a. The PRP, as proposed, would provide for the replacement of 201 miles of pipe which includes approximately 168 miles of Aldyl-A pipe and approximately 33 miles of bare and unprotected steel pipe. In any given year, the amount of each type of pipe will vary as replacements will occur based on priority rather than proportionately. As noted in Item 3 of this data request, Delta will prioritize the replacement of PRP pipe based on prior leak history, irrespective of pipe type. Delta will then target older vintages of pipe, which are currently bare steel.

The costs estimates of \$3.05 and \$6.89 million for main replacements and retirements, as provided in Item 2c of this data question, use the historical cost of PRP pipe replacements and extrapolate the high and low cost per foot projections based on the estimated feet of pipe to be replaced. As the mix of bare steel versus Aldyl-A pipe could change from year to year, the projection does not differentiate between the two.

b. Based on 2017 PRP replacements, Delta can replace an average of 11 miles of pipe a year. Accelerating the program through the use of additional resources, Delta believes it could replace up to 14 miles per year.

Delta chose a fifteen year program so that by replacing 14 miles of pipe per year, the newest vintage of pipe eligible for replacement was approximately 50 years old or less by the end of the program. In developing the program, Delta considered a fifteen year term with a five-year renewal option at the Commission's discretion. Delta recognizes that the decision regarding the pace of replacing at-risk pipe is a balance between the cost to the customer and the integrity and safety of the pipeline system.

c. Attached are Delta's cash flow projections created to develop the high and low cost estimates.

The caps were created using a high and low estimated cost per foot derived from actual experience under the PRP program. The cost per foot was then escalated 2% per year for inflation. The cost per foot can vary widely from year to year based on the circumstances of the pipe being replaced. For example, factors that escalate the cost of replacement include geographic density, rock formations, crossings (highway, railroad and waterway), state right of ways and customers tapped into the main.

Lower cap amounts could be attained by replacing fewer feet of pipe on an annual basis. However, the longer at-risk pipe remains in service the greater the probability of failure. Delta's proposal to accelerate the replacement of the at-risk pipe is designed with the goal of replacing pipe before it fails and becomes a risk to public safety.

FIRST PSC DATA REQUEST DATED APRIL 25, 2018

d. See attached estimates of the annual surcharge amounts for each customer class through 2033 based on the high and low ends of the annual cost projections provided in Schedule VII.

e.

- 1) Delta uses the term service line removals whenever a service is disconnected from the main and the above ground appurtenances are removed. Most often, the service line is purged, capped and left in place for potential future use.
- 2) Before a service line is removed for any reason, Delta's customer service personnel contact the owner of the premise to determine if they anticipate coming back on service. If the customer does not intend to come back on service, the service line removal will be scheduled.

Federal	21.00%
Kentucky	5.00%
Federal benefit of state deduction	-1.05%
	24.95%

FIRST PSC DATA REQUEST DATED APRIL 25, 2018

3. State how Delta proposes to integrate the replacement of Aldyl-A plastic pipe into its steel pipeline replacement efforts. The explanation should include how the risk ranking of the vintage plastic pipe compares to the steel pipe which is eligible for replacement through the program.

Response:

Delta utilizes its leak history to prioritize the replacement of bare steel pipe for the PRP program. In planning its construction activity for a year, Delta reviews the prior year leak classifications and number of leak occurrences in a section of pipe to determine which pipes require priority for replacement. This approach gives high risk pipe replacement priority. To the extent the construction crews can take on additional projects, the oldest vintage pipe is given secondary priority. The longer at-risk pipe remains in service, the greater the probability of failure.

To integrate the Aldyl-A pipe into the PRP program, the leak analysis will be broadened to include bare steel and vintage plastic pipe. Priority between the two types of pipe will be dictated by leak history. Then, consistent with Delta's current approach, additional replacements will target the older vintages of PRP pipe first.

The combined integration of vintage plastic pipe into the PRP and acceleration of replacement efforts is designed with the intention to increase public safety by replacing at-risk pipe before it fails.

2016	0.20%
2017	0.05%

FIRST PSC DATA REQUEST DATED APRIL 25, 2018

6. Provide a discussion of Delta's PRP cost containment efforts. The discussion should include the bid or Request for Proposal process used to ensure that the cost is as low as possible for Delta's customers.

Response:

Delta's PRP efforts are a combination of in-house and outside construction crews. There are currently two primary construction companies in Delta's service territory which can assist with replacement projects. Delta sends these companies an invitation to bid which includes construction specifications and standards, list of equipment needed, the crew size and crew skill set. The most recent invitation to bid was performed in 2017. The company who won the 2017 bid agreed to honor its 2017 price for calendar 2018. Delta will conduct its next invitation to bid in 2019.

In response to the invitation to bid, the companies provide Delta an itemized calculation which arrives at a fixed hourly rate per five person and three person crew for the entire year. Delta is currently utilizing the lowest cost provider; however the decision is not limited to price alone. Delta considers the company's operator qualification program, safety policy, safety record, drug and alcohol policy, and overall capabilities.

Delta also takes steps during the planning and construction process to reduce costs. When feasible, Delta either plans several jobs in close geographical proximity or for larger projects schedules multiple crews on a single project. This approach creates cost savings as synergies with multiple crews reduces construction down time, allows for sharing of employees and equipment and allows for the project to be managed by a single inspector.

Additionally, inclusion of vintage plastic pipe into the PRP program would create efficiencies for construction crews where sections of Delta's pipeline system containing both vintage plastic and bare steel could be replaced in a single project, rather than revisiting the vintage plastic pipe at a future date.

FIRST PSC DATA REQUEST DATED APRIL 25, 2018

7. State whether the cost estimates provided in Schedule VII include changes to the federal corporate tax rate. If not, provide any revisions necessary to reflect those changes.

Response:

The cost estimates provided in Schedule VII are the anticipated construction costs incurred on an annual basis and therefore do not include a provision for income taxes. The impact of changes to both the federal and state corporate income tax rates tax law change have been reflected in the gross-up factor and deferred tax calculations to determine the annual PRP adjustment as provided in Item 2d of this data request.

Sponsoring Witness:

FIRST PSC DATA REQUEST DATED APRIL 25, 2018

8. Refer to the Application, Exhibit 1, Schedule 1. This page shows a different PRP adjustment from what is shown on Application Schedule 1. Explain each difference between the two pages, and explain which rates Delta is requesting the Public Service Commission to approve.

Response:

Exhibit I includes a revised Schedule I and Schedule III. The difference between Exhibit I and the Application schedules is the amount of property tax expense calculated on Schedule III which ultimately flows through to line 10 of Schedule I.

Delta is requesting approval to update the property tax expense calculation on Schedule III to utilize the average property tax rate for the current year as opposed to an outdated rate. As a result, Delta is requesting approval for the PRP adjustment of \$2,181,023 as shown on Exhibit I, Schedule I.
