LOUISVILLE GAS AND ELECTRIC)
COMPANY FOR AN ADJUSTMENT OF ITS) CASE NO. 2018-00295
ELECTRIC AND GAS RATES)

REBUTTAL TESTIMONY OF KENT W. BLAKE CHIEF FINANCIAL OFFICER KENTUCKY UTILITIES COMPANY AND LOUISVILLE GAS AND ELECTRIC COMPANY

Filed: February 22, 2019

TABLE OF CONTENTS

KIUC's Argument to Capitalize Construction Financing Costs in the Form of AFUDC	. 2
Slippage Adjustments to the Companies' Proposed Rate Base	10
Economic Development Adjustments to the Companies' Operating Income	14

1

Q.

Please state your name, position, and business address.

A. My name is Kent W. Blake. I am the Chief Financial Officer of Kentucky Utilities
Company ("KU") and Louisville Gas and Electric Company ("LG&E") (collectively,
the "Companies"), and an employee of LG&E and KU Services Company, which
provides services to KU and LG&E. My business address is 220 West Main Street,
Louisville, Kentucky 40202.

7 Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to rebut intervenor testimony on the issues
of: (1) the use of Allowance for Funds Used During Construction ("AFUDC") in lieu
of Construction Work in Progress ("CWIP"); (2) slippage adjustments to the
Companies' forecasted capitalization; and (3) economic development adjustments to
the Companies' operating income.

Q. Before addressing these points, do you have any general observations concerning the claims and arguments presented in the testimony of the intervenors?

15 A. Yes. A number of the adjustments raised in the testimony of the intervenors simply defer recovery of incurred costs, in some cases to an indefinite period in the future. 16 17 Under this approach, customers in effect receive a one-time benefit, with the costs to 18 be borne later by other customers. This is not sound ratemaking practice. Other 19 proposed "normalization" adjustments are simply based on the selective use of 20 historical averages in a results-oriented fashion and are contrary to Commission precedent with respect to the appropriate use of normalization and the basic tenets of 21 22 a forward-looking test period. Finally, some of the adjustments are the product of 23 numeric calculations without any consideration or understanding of the activities

1		already undertaken or necessary to be undertaken in the forecast test period in order
2		to provide safe and reliable service to the Companies' customers based on the
3		judgment of an experienced management team.
4	<u>KIU</u>	C's Argument to Capitalize Construction Financing Costs in the Form of AFUDC
5	Q.	How do the Companies currently recover construction financing costs?
6	A.	The Companies use the Construction Work In Progress ("CWIP") methodology,
7		which allows the carrying costs on capital investments in projects under construction
8		to be recovered through current rates.
9	Q.	Are there benefits to including CWIP in capitalization and rate base compared
10		to the Allowance for Funds Used During Construction Methodology for
11		construction financing costs?
12	A.	Yes, there are many benefits, including lower capitalized costs, stable cash flows, and
13		improved quality of cash earnings. The Accounting for Public Utilities treatise
14		identifies the following benefits:
15 16 17		• Because CWIP has the lower capitalized costs, the inclusion of CWIP in rate base actually reduces the total cost to the utility and its customers over the life of the plant. ¹
18 19 20 21		• Inclusion of CWIP in rate base also causes increased cash flows and allows the utilities to avoid a certain amount of outside financing, which is advantageous whenever incremental borrowing costs exceed embedded costs. ²
22 23 24		• Increased cash flows and less outside financing lead to an improved quality of actual cash earnings. Because securities analysts and bond rating agencies focus on cash flow and cost deferrals, the improved

¹ Accounting for Public Utilities, § 4.04[4], pg. 4-15. ² *Id*.

1 2		quality of cash earnings may allow required financings at relatively lower costs. ³
3 4 5		• The greater risk associated with higher levels of non-cash earnings, such as AFUDC, would ultimately be reflected in higher rates of return required by investors. ⁴
6 7 8		• Investors recognize that including CWIP in rate base is an important tool that supports the utility's financial integrity and attenuates some of the financial risks associated with new infrastructure investment. ⁵
9	Q.	How long have the Companies been including CWIP in capitalization and rate
10		base?
11	A.	The Commission has authorized the use of CWIP for ratemaking since at least the
12		1970s to address the impact of construction costs on utilities' financial integrity. ⁶
13		Like the long-standing use of capitalization as the valuation policy for the
14		Companies' property for ratemaking discussed in Mr. Garrett's testimony, both CWIP
15		and capitalization are long-standing policies of this Commission for the Companies.
16		Indeed, in LG&E's 1983 rate case, the Commission noted in its final order,
17		"LG&E had never accrued AFUDC."7 The Commission further observed, "[t]his
18		means that the present ratepayers are paying less because of financing costs paid by
19		prior ratepayers."8 In rejecting the argument by intervenors to adopt the AFUDC
20		approach, the Commission further remarked that it was "painfully aware that a switch

⁴ *Id.* ⁵ *Id.*

³ *Id*.

⁶ The Treatment of CWIP, Eugene F. Brigham, Public Utility Research Center Working Paper 5-81 (October 1981) (https://bear.warrington.ufl.edu/centers/purc/docs//papers/8111_Brigham_The_Treatment_of.pdf).
⁷ Case No. 8924, Order at 28-29 (May 16, 1984).
⁸ Case No. 8924, Order at 28-29 (May 16, 1984).

1		to the accrual of AFUDC could lead to grave difficulties later" and expressly held that
2		the historical treatment of CWIP should continue.9
3		In the course of denying the Attorney General and other intervenors' petitions
4		for rehearing on the CWIP issue, the Commission stated:
5 6 7 8 9 10 11		LG&E's electric rates are lower now, due to the current CWIP policy, than if AFUDC had been accrued on prior construction projects. These lower rates result from a lower rate base, lower return requirement and lower depreciation expense. A cash return on CWIP also benefits ratepayers through lower financing costs due to improved financial ratios and reduction in risk as perceived by the investment community." ¹⁰
12		In addition, the Kentucky courts have also upheld the Commission's decision to allow
13		CWIP accounting for LG&E. ¹¹
14		Because the Commission has never directed the Companies to change their
15		CWIP methodology, the Companies' rate bases are much lower than they otherwise
16		would be and their embedded cost of debt is relatively low. These two factors have
17		helped the Companies over time to have some of the lowest rates in the nation.
18	Q.	Is KIUC witness Kollen's assertion that the Virginia Commission excludes
19		CWIP from rate base for KU correct?
20	A.	No. Under Virginia Commission regulation, KU has not accrued AFUDC for
21		decades. The Virginia Commission has recognized KU's construction costs as CWIP

⁹ Case No. 8924, Order at 36 (May 16, 1984).

¹⁰ Case No. 8924, Order at 2 (June 25, 1984).

¹¹ Jefferson County Fiscal Court v. Kentucky Public Service Commission, Opinion and Order, 29 PUR 4th, pp. 143-144 (Franklin Circuit Court March 15, 1977) ("The commission was on sound ground when it allowed LG&E to include CWIP in the rate base. The evidence is uncontradicted that, for many years, LG&E (with commission approval) has included CWIP in its rate base, but it has not increased its earnings by an allowance for funds used during construction (AFUDC). Therefore, LG&E's rate base is smaller, and its revenue requirements are less than they would have been had its rate base included an AFUDC component. There is respectable authority for the proposition that the policy of including CWIP in the rate base, and of paying for construction costs currently, instead of mortgaging the future, is the sounder approach, because it costs consumers less in the long run.").

and thus as part of rate base in KU rate cases in Virginia since Old Dominion Power
 was legally merged into KU and KU was reincorporated as a Virginia corporation.
 KU has included CWIP in rate base in five base rate cases filed with the Virginia
 Commission following the expiration of the legislative rate cap in 2008.

5

6

Q. Have other regulators recognized the potential benefits associated with including CWIP in rate base?

- A. Yes. Investors recognize that it is not uncommon for regulators to include CWIP in
 rate base when establishing rates. Studies prepared by Pacific Economics Group
 Research LLC and Edison Electric Institute show that more than 21 states have recent
 electric utility precedents for CWIP in rate base.¹²
- Q. KIUC Witness Kollen suggests that the AFUDC approach "provides the
 Companies dollar for dollar recovery of its actual construction financing costs,
 no more and no less." Do you agree with this statement?
- 14 A. No. Mr. Kollen appropriately notes that the methodology of the Federal Energy 15 Regulatory Commission (FERC) requires the Companies to first assign its short-term debt balance to CWIP and applies the weighted average of long-term debt and 16 17 common equity only to any residual amount of financing costs. Yet Mr. Kollen 18 ignores this nuance in his testimony and calculation of the revenue requirement effect 19 of removing CWIP from capitalization in these proceedings. Rebuttal Exhibit KWB-20 1 shows that the weighted average cost of capital that the Companies would use to 21 accrue AFUDC under this methodology for the forecasted test period would be 6.04%

¹² Pacific Economics Group Research LLC, *Alternative Regulation for Evolving Utility Challenges: An Updated Survey* (January 2013); Edison Electric Institute, *Forward Test Years for US Electric Utilities* (August 2010).

1 for KU and 3.36% for LG&E, or 154 and 428 basis points lower than the actual 2 weighted average cost of capital for KU and LG&E. The larger reduction in the 3 AFUDC rate for LG&E is due to the fact that its thirteen-month average short-term 4 debt balance is greater than its thirteen-month average CWIP balance in the 5 forecasted test period, meaning that all of LG&E's CWIP is assumed to be funded by 6 short-term debt under the FERC methodology. The FERC methodology also contains 7 rules as to the timing of these calculations which were not used in Rebuttal Exhibit 8 KWB-1 in order to simplify the calculations and limit them to data already contained 9 in the record of these proceedings. Interestingly, despite Mr. Kollen's understanding 10 the FERC methodology, he calculated the revenue requirement impact of removing 11 CWIP from the Companies' revenue requirement using their weighted average cost of 12 capital, rather than removing it from short-term debt first and then allocating any 13 remaining balance on a pro rata basis between long-term debt and equity. This 14 difference between the Companies actual weighted average cost of capital and the 15 FERC AFUDC methodology would not provide the Companies a full recovery of its 16 actual construction financing costs.

17 Q. KIUC Witness Kollen also asserts that AFUDC is consistent with generally 18 accepted accounting principles ("GAAP"). Is this a credible argument for the 19 use of AFUDC?

A. No. As noted earlier, the Companies have decades of history of including CWIP in
 capitalization and rate base and not recording AFUDC for its Kentucky and Virginia
 retail jurisdictions. That treatment has been reflected in their published financial
 statements filed with the Securities and Exchange Commission. Those financial

1 statements have always been prepared in accordance with GAAP as evidenced by the 2 unqualified audit opinions received and included with those financial statements. To 3 put a finer point on this, in accordance with ASC 980-835-25-1 and 30-1, AFUDC 4 should be capitalized only during periods of construction and only if it is probable 5 that the regulated utility will receive subsequent recovery through the ratemaking 6 process. Any amounts that are not probable of recovery should not be capitalized. 7 Furthermore, pursuant to ASC 980-835-25-2, if AFUDC is not capitalized because 8 future recovery through rates is not probable, the regulated utility should not 9 alternatively capitalize interest cost under ASC 835-20, Interest - Capitalization of 10 Interest.

Q. KIUC Witness Kollen also makes multiple contentions in support of AFUDC that it depreciates the construction financing costs over the useful life of the asset, somehow avoiding intergenerational inequities. Do you agree?

14 A. The trade-off is that AFUDC involves the compounding effect of those No. 15 construction financing costs, meaning those financing costs increase the amount capitalized and increases the cost of capital recovered by the Companies over the life 16 17 of the assets. More importantly, this traditional AFUDC vs. CWIP argument is 18 significantly mitigated in the case of the Companies. As shown in Rebuttal Exhibit 19 KWB-2, nearly half (46%) of the thirteen-month average CWIP balance of the 20 Companies for the forecasted test period represents projects in service by the end of 21 the forecasted test period. Of those projects not yet in service by the end of the 22 forecasted test period, Rebuttal Exhibit KWB-2 also shows that the weighted average

time period before going into service is only about eight months beyond the end of
 the forecasted test period.

Q. What methodologies does KIUC witness Kollen suggest the Companies use to recover construction financing costs?

5 A. Mr. Kollen recommends the Commission exclude CWIP from capitalization and 6 order the Companies to accrue AFUDC starting with the effective date when base 7 rates are reset in this case. He recommends the Commission use the Duke/Columbia 8 Gas methodology or, in the alternative, the Kentucky Power methodology.

9 The Kentucky Power methodology in effect since 1984 includes CWIP in rate 10 base, but offsets the inclusion of CWIP in rate base by including AFUDC in operating 11 income, called the "AFUDC offset." When the operating income deficiency or 12 surplus is grossed up to the revenue requirement, the effect of the "AFUDC offset" is 13 a reduction in the revenue requirement equivalent to the grossed-up return times the 14 CWIP balance. Kentucky Power has been utilizing the "AFUDC offset" since 1984.

Unlike the Kentucky Power methodology, the Duke/Columbia Gas methodology eliminates the steps of including CWIP in rate base and including the "AFUDC offset" in operating income, reasoning that these two steps result in zero recovery of a return on CWIP. Instead, CWIP is not included in rate base at all. This is a 100% AFUDC approach and Duke has used this methodology since 1992.

Q. If the Commission were to consider the KIUC's recommendation to require the
Companies to switch from CWIP in capitalization and rate base to AFUDC, do
Mr. Kollen's calculations produce an accurate revenue requirement impact of
this?

8

1 No. As noted above, the revenue requirement impact of removing CWIP from A. 2 capitalization would have to employ the same FERC weighted average cost of capital methodology used to accrue AFUDC in order to provide the Companies an 3 4 opportunity to recover their construction financing costs. In addition, Mr. Kollen 5 removed the Companies' entire CWIP balance, failing to recognize that a portion of the total CWIP balance represented construction payables which were not in the 6 7 Companies' thirteen-month average capitalization for the forecasted test period and, 8 as a result, did not need to be removed from capitalization. Rebuttal Exhibit KWB-3 9 includes a revised calculation of the revenue requirement impact of this change in 10 methodology with these two adjustments. As shown in that exhibit, these two 11 adjustments reduce Mr. Kollen's proposed KU revenue requirement reduction from 12 \$12.7 million to \$6.7 million and LG&E's electric revenue requirement reduction 13 from \$7.7 million to \$1.1 million.

14 Q. Do you agree with Mr. Kollen's recommendations?

A. No. For the reasons noted above the Commission should not deviate from its longestablished support for including CWIP in the Companies' capitalization and rate
base.

In addition to the reasons noted above, the Companies would have to leave behind decades of CWIP accounting and create completely new accounting protocols to conform to AFUDC accounting. Even more important than the administrative burden, if the Commission were to direct the Companies to accrue AFUDC instead of allowing CWIP, the cash flow and quality of earnings impacts would negatively affect the Companies.

9

1	Attached as Rebuttal Exhibit KWB-4 is the most recently released report by
2	Moody's affirming the current stable ratings of the Companies. But the report
3	cautions that "[t]he stable outlook for KU and LG&E reflects Moody's expectation
4	that the regulatory environments will remain credit supportive" and "incorporates
5	Moody's view that KU and LG&E will continue to generate stable cash flow and
6	adequate financial metrics" ¹³ An Order directing the Companies to switch from a
7	ratemaking methodology in place for decades to one that adversely impacts funds
8	from operations ("FFO") and calls into question the quality of earnings would not be
9	viewed favorably by credit rating agencies. The elimination of cash recovery of
10	construction financing costs replaced by non-cash AFUDC earnings for the forecasted
11	test period, as recommended by the KIUC, would adversely impact the Companies'
12	FFO/Debt metrics.

13

Slippage Adjustments to the Companies' Forecasted Test Period

14

Q.

What is a slippage adjustment?

A. This is a claim that asserts the reasonableness of budgeted capital expenditures should
be adjusted based on historic comparisons of actual to budgeted capital expenditures,
with the adjusted amount expressed as a percentage of the budgeted amounts as the
so-called "slippage factor." The slippage factor claim is normally based on an
average of the variances over the past ten years. As is the case with using averages,

¹³ Moody's Affirms the Ratings of Kentucky Utilities Co., Louisville Gas & Electric Company, and LG&E and KU Energy LLC; Rating Outlooks Stable, Moody's Investor Service, at 3 (Jan. 15, 2019).

1

2

there are multiple ways to calculate the slippage factor,¹⁴ but the Commission has requested the mathematical average for both Companies in this rate case.¹⁵

Q. Do the Companies believe that a "slippage factor" should be applied to their forward-looking test period capital projects as suggested by KIUC witness Kollen or Attorney General witness Mullinax?

The Companies have addressed this same intervenor recommendation in 6 A. No. 7 multiple recent rate cases. In none of those cases did the Commission impose such a slippage adjustment on the Companies. Ms. Mullinax suggests such an adjustment 8 9 was made in the Companies' last base rate cases. In those cases, the parties agreed to an adjustment for slippage,¹⁶ but this was part of a settlement and thus was not 10 imposed on the Companies by the Commission. In fact, the Stipulation and 11 12 Recommendation Agreement explicitly states that it "shall not have any precedential value in this or any other jurisdiction."¹⁷ As the Companies have explained in their 13 14 discovery responses, the calculated capital construction slippage factors demonstrate 15 their accuracy in estimating their budgets for utility plant. This accuracy has been achieved through the very robust process for forecasting capital expenditures and 16 17 managing to that forecast described in detail in the testimony of Mr. Arbough.

¹⁴ KIUC witness Kollen recommends the weighted average slippage factor of 95.373% (sum of 2008-2017 base rate capital actual cost divided by sum of 2008-2017 base rate capital budget cost). AG witness Mullinax recommends the mathematical average slippage factor of 96.027% (sum of mathematic average of the 2008-2017 yearly slippage factors divided by 10 years).

¹⁵ See Case Nos. 2018-00294 and 2018-00295, Data Request PSC 1-13 and PSC 2-65.

¹⁶ Case No. 2016-00370, Order at 8 (June 22, 2017) and Case No. 2016-00371, Order at 10 (June 22, 2017).

¹⁷ See Case No. 2016-00370, Section 6.12 to Stipulation and Recommendation Agreement, Order (June 22, 2017); See Case No. 2016-00371, Section 6.12 to Stipulation and Recommendation Agreement, Order (June 22, 2017).

Given the high degrees of accuracy demonstrated with years of being both 1 2 over and under budget, the need to apply a slippage factor does not exist and the Commission should decline to do so.¹⁸ Going forward, a purely numeric slippage 3 4 factor calculation may provide a perverse disincentive for utilities to continue their 5 efforts to reduce capital costs after having established their annual budgets. 6 Are the Companies aware of instances in which the Commission has not applied **Q**. 7 a "slippage factor" to projected capital construction in a forward-looking test period rate case? 8 9 A. Yes. Contrary to the contention in KIUC Witness Kollen and AG Witness Mullinax's

10 testimony, Commission precedent does not support "slippage factor adjustments" to 11 projected capital expenditure in all forward-looking test period rate cases. With the 12 exception of rate proceedings involving Kentucky-American Water Company 13 ("KAWC"),¹⁹ the Commission appears to have applied a slippage adjustment in only 14 one other proceeding.²⁰ Since that decision, which was entered more than thirteen 15 years ago, the Commission has not applied a slippage adjustment factor in any non-

¹⁸ The Companies believe a slippage factor should not be applied at all. In the alternative, if the Commission does apply a slippage factor, the Companies request the Commission use the mathematical average pursuant to Commission precedent.

¹⁹ The Commission's treatment of KAWC appears to be based upon historic concerns regarding that utility's budgeting process. See, e.g., Case No. 95-554, *Application of Kentucky-American Water Company to Increase Its Rates* (Ky. PSC Nov. 19, 1993) at 3 ("Based on the historical relationship demonstrated by the slippage factor, the Commission concluded Kentucky-American's 'very best estimate(s)' of construction spending was inaccurate and showed a pervasive pattern of over budgeting for construction. To eliminate Kentucky-American's historical overestimation, the Commission reduced the forecasted recurring and specific budget projects by their respective slippage factors.")

²⁰ Case No. 2005-00042, An Adjustment of the Gas Rates of Union Heat, Light and Power Company (Ky. PSC Dec. 22, 2005).

KAWC forward-looking test period proceeding. This included a proceeding where
 the subject utility had a calculated slippage factor of 81.396.²¹

Given KU and LG&E's greater accuracy and the Commission's decision not to apply a slippage factor in recent cases, it is clear that Commission precedent does not support the application of a slippage factor adjustment in the current proceedings.

Q. If the Commission were inclined to make a revenue requirement adjustment for slippage, do you agree with the calculations of the KIUC witness Kollen and AG witness Mullinax?

9 A. No. First, KIUC Witness Kollen used the weighted average slippage factor 10 calculation rather than the mathematical average noted by the Commission in its 11 Order in Case No. 2005-00042, the Order quoted by Mr. Kollen on page 22 of his 12 testimony. Relative to the Companies' original quantification of the revenue 13 requirement effect of applying the mathematical average slippage factor, two 14 adjustments are appropriate. First, in order to be consistent with this calculation from 15 prior proceedings, the factor should not be applied to FERC Account No. 108, 16 Retirement Work In Progress. Secondly, using the Commission quote from page 22 17 of Mr. Kollen's testimony, the calculation should use the "most recent ten year 18 period." As the Companies are filing this rebuttal testimony on February 21, 2019, 19 the most recent 10 year period would include 2018. An updated slippage calculation 20 and revenue requirement impact is shown in Rebuttal Exhibit KWB-5. That exhibit 21 reduces the previously calculated revenue requirement of the slippage adjustment for

²¹ Case No. 2010-00167, Application of East Kentucky Power Cooperative, Inc. for General Adjustment of Electric Rates (Ky. PSC Jan. 14, 2011).

KU, LG&E electric operations and LG&E gas operations from \$2,685,522,
 \$1,304,937 and \$432,475 to \$1,296,112, \$1,277,010 and \$425,829.

3 <u>Economic Development Adjustments to the Companies' Operating Income</u>

- 4 Q. Do the Companies agree with AG witness Mullinax's recommendation that
 5 economic development costs should be excluded from base rates?
- 6 A. No. Because all customers benefit from investment in economic development, these 7 expenses should be included in base rates. When an existing Kentucky business 8 expands or a new business locates in the state, significant economic benefits ensue. 9 The creation of those new jobs bring payroll dollars, increased demand for housing, 10 goods and services, greater capital investment, and a broader tax base, all of which spread throughout the economy.²² A recent publication by the Kentucky Cabinet for 11 12 Economic Development noted that the creation of 100 new jobs can result in an additional 320 jobs in other sectors, resulting in a total impact of 420 jobs.²³ The 13 14 total value added of these 420 new jobs is \$69,159,000 and \$9,442,600 in total state and local taxes.²⁴ 15

Moreover, as noted in the PPL acquisition commitment number 38 approved by the Commission, the Companies committed to maintaining its pro-active stance on developing economic opportunities in Kentucky and supporting economic development activities throughout the Companies' service territories.

20

²⁴ Id.

 ²² Just the Facts: Economic Impact of 100 Jobs, Think Kentucky, July 2018, http://thinkkentucky.com/kyedc/pdfs/100jobs.pdf.
 ²³ Id.

Q. What costs are included in the economic development expenses the Companies are seeking to recover?

A. The economic development costs that the Companies are requesting to recover are reasonable and total \$654,809.²⁵ In general these expenses are largely associated with four Economic Development Project Manager positions that are responsible for marketing and promoting the service territory to new and expanding businesses and providing direct company support for economic development projects and some minor associated expenses.

9 Q. How do you respond to Ms. Mullinax's contention that the Companies should
10 provide a "record of incremental revenues generated through economic
11 development" and "forecasts of future revenue growth expected"?

12 A. The Companies would point to its retail load forecast filed in these proceedings. In 13 addition, the Companies employ a variety of tactics focused on economic 14 development project leadership, leading and partnering on marketing opportunities of 15 expansion and investment opportunities in Kentucky, providing leadership to 16 communities and local economic development organizations, and providing guidance 17 and input into the development of infrastructure to support a community's growth 18 prospects. This activity contributed to 156 announced new and expanding companies 19 in the LG&E and KU service territories as noted by the Kentucky Cabinet for 20 Economic Development. The investment totaled \$4 billion and resulted in 7,580

²⁵ KU February 15, 2019 Corrected Response to Attorney General's Supplemental Data Requests for Information No.49 Dated December 13, 2018; LG&E February 15, 2019 Corrected Response to Attorney General's Supplemental Data Requests for Information No, 49 Dated December 13, 2018; LG&E and KU's Economic Development Rider ("EDR"), which is designed to promote economic development efforts and encourage brownfield development, assists companies in demand reduction credits on their electric utility bills. The 2019 forecast EDR credit totals \$1,029,068 (\$904,886 for KU and \$124,183 for LG&E).

1 jobs. The Companies have been recognized as a "Top Ten Utility" for their economic 2 development efforts six times in the past seven years by Site Selection magazine. 3 **Q**. What is your response to AG Witness Mullinax's claims that "economic 4 development by definition is neither a reasonable nor necessary cost of providing 5 safe and reliable electricity and natural gas service to customers" and "the dayto-day activities of economic development risk can distract the Companies from 6 7 their stated mission to provide safe and reliable service to its customers"? 8 The Companies were very surprised by these statements being included in testimony A. 9 sponsored by the Kentucky Attorney General, as well as Louisville/Jefferson County 10 Metro Government and Lexington-Fayette Urban County Government, the two 11 largest metropolitan areas in the state. The Companies believe that assisting existing customers as they look to expand business as well as working with prospective 12 13 customers, alongside state and local economic development and other officials, is a

14 core component of customer service. The current administration enthusiastically 15 supports economic development because of the widespread benefits for the state. 16 Near the beginning of his term, Governor Bevin stated "When it comes to economic 17 development, we have our foot on the gas."²⁶ As of October 2018, the Bevin 18 administration had announced and reported 1,101 new expanded facilities, over \$18 19 billion in new investment, more than 50,000 new jobs, and \$86.6 billion in exports.²⁷

20

A key factor in economic development, especially in the manufacturing sector, is low

²⁶ Susan Gosselin, *Business-Savvy Approach Scores* \$8 *Billion in Economic Development Deals*, THE LANE REPORT, 30 (Dec. 2017).

²⁷ Think Kentucky, Cabinet for Economic Development, http://thinkkentucky.com.

electricity rates.²⁸ Economic development officials expect the Companies to work with them to help existing businesses expand and to bring new businesses to the state.

Q. In the event the Commission accepts any of the revenue requirement modifications proposed by intervening parties, would it be appropriate to simply accumulate the impacts for those adjustments?

6 A. No. The proposed modifications of various intervenors are not independent of one 7 another. For example, many of the proposed adjustments that impact net operating 8 income would also impact capitalization. Likewise, the proposed adjustments that 9 impact capitalization would impact the revenue requirement effect of a change in the 10 weighted average cost of capital, including the authorized return on equity. Some of these interdependencies are even more nuanced. For example, as noted in the 11 12 testimony of Mr. Garrett, any of the proposed reductions in depreciation rates would 13 also have partially offsetting revenue requirement effects by increasing the 14 Companies' capitalization and thus cost of capital, as well as by reducing the rate of 15 amortization for excess accumulated deferred income taxes.

- 16 **Q.** Does this conclude your testimony?
- 17 A. Yes.
- 18

1

2

²⁸ Mr. Baron agrees with Mr. Conroy and Mr. Seelye in their belief that economic development impacts are important considerations when assessing rate increases. Direct Testimony of Stephen J. Baron at page 20. Mr. Baron also points out that the Kentucky Cabinet for Economic Development lists the low cost of electricity as number 5 of the top 10 reasons companies locate and expand in Kentucky. Direct Testimony of Stephen J. Baron at page 21. Mr. Baron further notes that Kentucky's economy is more sensitive to energy prices compared to most competitor states, partly because of Kentucky's larger than average manufacturing sector. Direct Testimony of Stephen J. Baron at page 23-24.

VERIFICATION

COMMONWEALTH OF KENTUCKY)) COUNTY OF JEFFERSON)

The undersigned, Kent W. Blake, being duly sworn, deposes and says he is the Chief Financial Officer for Kentucky Utilities Company and Louisville Gas and Electric Company and an employee of LG&E and KU Services Company, that he has personal knowledge of the matters set forth in the foregoing testimony, and that the answers contained therein are true and correct to the best of his information, knowledge and belief.

Kt WBlah.

Kent W. Blake

Subscribed and sworn to before me, a Notary Public in and before said County and State, this 21^{\pm} day of <u>February</u> 2019.

Jammy Eliz

My Commission Expires:

November 9, 2022

1. KU Supplemental Response to PSC 1-53 – Schedule J (Ky. PSC Feb. 15, 2019); LG&E Supplemental Response to PSC 1-53 – Schedule J (Ky. PSC Feb. 15, 2019).

2. While acknowledging the FERC rate formula allows for negative long term debt and equity rates, if short term debt is greater than the 13 month average CWIP we have applied 100% to short term debt and 0% to long term and equity.

Rating Action: Moody's affirms the ratings of Kentucky Utilities Co., Louisville Gas & Electric Company, and LG&E and KU Energy LLC; rating outlooks stable

15 Jan 2019

New York, January 15, 2019 -- Moody's Investors Service ("Moody's") affirmed the ratings of Kentucky Utilities Co. (KU) and Louisville Gas & Electric Company (LGE), including the A3 Long Term Issuer Rating and Prime-2 short-term rating. Also, Moody's affirmed the Baa1 rating of LG&E and KU Energy LLC (LKE). The rating outlooks for all three issuers is stable. The affirmation of the ratings is based on the continued constructive regulatory environments, primarily in Kentucky where the two utilities have most of their operations, and the stable generation of cash flows.

Outlook Actions:

- ..Issuer: Kentucky Utilities Co.
-Outlook, Remains Stable
- .. Issuer: LG&E and KU Energy LLC
-Outlook, Remains Stable
- .. Issuer: Louisville Gas & Electric Company
-Outlook, Remains Stable

-Senior Unsecured Revenue Bonds, Affirmed A1
-Underlying Senior Unsecured Revenue Bonds, Affirmed A1

RATINGS RATIONALE

"PPL's Kentucky utilities balance the longer term risks of carbon transition and climate change with a strong balance sheet and steady cash flow metrics, thanks to a supportive regulatory environment," stated Jairo Chung, a Moody's analyst. Prospectively, KU and LGE's key financial metrics are expected to be lower than historical levels due to sizeable capital expenditures and the resetting of its rates due to tax reform in 2017. For example, the ratio of cash flow from operations excluding changes in working capital (CFO pre-WC) to debt is expected to decline to the low 20% level from the mid-20% level.

The affirmation of the A3 rating for KU and LGE incorporates Moody's view that the regulatory environment will continue to be supportive and allow these utilities to generate stable cash flows. It should be noted that these utilities rely heavily on coal as a fuel for their power generation, with approximately 64% of capacity using coal as fuel. However, the state of Kentucky is very supportive of the coal industry in general and coal usage specifically. This support is evidenced by various cost recovery riders such as the environmental cost recovery surcharge mechanism and the fuel adjustment clause. Under the constructive Kentucky regulatory environment, Moody's expects KU and LGE to be able to mitigate some of their carbon transition risk over time, although the transition risk is higher relative to other regulated utilities.

In addition, the outcomes of KU and LGE's regulatory proceedings have been more supportive in Kentucky. Both KU and LGE utilize a suite of tracker mechanisms, allowing timely cost recovery for utility investments, particularly environmental investment, outside of a general rate base. Also, a forward test year is used in general rate cases. Thus, KU and LGE typically begin recovering their annual investments within 12-18 months of the spend with the every other year cadence for the general rate case filings. Also, the service territories of KU and LGE have better demographics and somewhat benefit from the regional differences between metropolitan areas around Louisville and other rural areas in the east. Moody's expects KU and LGE's key credit metrics to be lower than historical levels. The 2017 Tax Cuts and Jobs Act had a negative impact on several key financial metrics. Also, their robust capital investment programs continue to put some pressure on their metrics. However, the capital investment programs are expected to decrease over the next four years and there are no large projects within the plan, providing some flexibility within the plan. Moody's expects KU and LGE to maintain its CFO pre-WC to debt ratio in the low 20% range over the next few years.

The affirmation of LKE's Baa1 issuer rating reflects the support from the consistent and stable operations at its utility subsidiaries, KU and LGE. Although LKE's key metrics are expected to be weaker than their historical levels, including CFO pre-WC to debt in the 15% range compared to 18%-20% historical range, we do not expect any material changes to its fundamental profile. The expected decrease in the metrics are mainly due to the reduction in the cash flows related to deferred income taxes. Furthermore, LKE has \$725 million of debt issued at this level under two notes outstanding. These notes are due in November 2020 and October 2021 and are likely to be either repaid or refinanced at PPL Capital Funding, Inc.

Rating Outlook

The stable outlook for KU and LGE reflects Moody's expectation that the regulatory environments will remain credit supportive. The stable outlook also incorporates Moody's view that both KU and LGE will continue to generate stable cash flow and adequate financial metrics, including a ratio of CFO pre-WC to debt in the low-20% range for KU and LGE.

Similarly, the stable outlook for LKE reflects Moody's expectation of consistently credit supportive regulatory environments for its utility subsidiaries, KU and LGE. It also incorporates in Moody's view that LKE's overall leverage remains the same and considers the stable outlook of its parent company, PPL Corporation.

Liquidity

Moody's expects all three entities to maintain an adequate but weaker liquidity profile over the next 12 months. KU and LGE have a P-2 short-term commercial paper rating and have separate credit facilities. KU's liquidity is supported by a separate \$400 million syndicated credit facility expiring in January 2023 and a \$198 million letter of credit facility expiring in October 2020. LGE's liquidity is supported by a separate \$500 million syndicated credit facility is supported by a separate \$500 million syndicated credit facility expiring in January 2023 and a \$200 million term loan credit facility expiring in October 2019, which is now current and weakening the family's overall liquidity. Furthermore, LKE's \$75 million syndicated credit facility expired in October 2018, further weakening LKE's liquidity position. LKE's next long-term debt maturity is \$475 million senior notes due in November 2020. The companies plan to address the recent weakness in their liquidity position in early 2019.

Factors That Could Lead to an Upgrade

KU and LG&E's rating could be upgraded if its financial metrics improve, including CFO pre-WC to debt at or above 26% on a sustained basis. An upgrade could be considered if the regulatory environment in Kentucky improves materially and provides more favorable regulatory recovery mechanisms.

A rating upgrade for LKE would likely require a rating upgrade at KU and LGE or a material reduction of debt issued at LKE. A rating upgrade could be also considered for LKE if its financial metrics improve, including CFO pre-WC to debt at or above 22% on a sustained basis.

Factors That Could Lead to a Downgrade

A rating downgrade could be possible at KU and LGE if there is a significant deterioration in the credit supportiveness of the regulatory environments. Also, if the financial metrics deteriorate, such that CFO pre-WC to debt declines below 20% for an extended period, a downgrade could be considered for KU and LGE.

LKE's rating could be downgraded if one or both of the utility subsidiaries experiences negative rating actions or a significant deterioration in the credit supportiveness of the regulatory environments. Additionally, a rating downgrade could be possible if its financial metrics declines, including CFO pre-WC to debt below 15% on a sustained period. LKE's rating could be downgraded if there is a material increase in LKE debt level.

Kentucky Utilities Co. (KU) and Louisville Gas & Electric Company (LGE) are wholly-owned subsidiaries of LG&E and KU Energy LLC (LKE). LKE is a wholly-owned subsidiary of PPL Corporation, a diversified utility holding company headquartered in Allentown, Pennsylvania. In Kentucky, these two utilities serve approximately 1.3 million electric and gas customers and under the purview of the Kentucky Public Service

Commission. KU also has some utility operations in Virginia and they are regulated by the Virginia State Corporation Commission.

The principal methodology used in these ratings was Regulated Electric and Gas Utilities published in June 2017. Please see the Rating Methodologies page on www.moodys.com for a copy of this methodology.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the credit rating action on the support provider and in relation to each particular credit rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this credit rating action, and whose ratings may change as a result of this credit rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

(11) Underground gas facility locates	. 34

1

Q.

Please state your name, position and business address.

A. My name is Lonnie E. Bellar. I am the Chief Operating Officer for Kentucky Utilities
Company ("KU") and Louisville Gas and Electric Company ("LG&E"), (collectively,
the "Companies") and an employee of LG&E and KU Services Company. My
business address is 220 West Main Street, Louisville, Kentucky 40202.

6 Q. What is the purpose of your rebuttal testimony?

7 A. The purpose of my testimony is to rebut intervenor testimony on the following topics: 8 (1) investments in transmission and distribution systems; (2) pipeline replacements 9 for gas transmission lines; (3) gas pipeline reinforcement in Nelson County; (4) 10 merger mitigation depancaking; (5) exclusion of revenues from Phoenix Paper-11 Wickliffe in forecasts; (6) expenses for Brown 1 stack repair; (7) impact on labor 12 expense due to retirement of Brown Units 1 and 2; (8) forecasting of generation 13 outage expenses; (9) depreciation life span of steam generating units; (10) inclusion 14 of customer education expenses in base rates; (11) value provided by the Companies' 15 membership in EPRI and EEI; and (12) underground gas facility locates.

16

(1) Investments in Transmission and Distribution Systems

Q. Are the Companies making investments to replace, upgrade and modernize their electric transmission and distribution systems?

A. Yes, the Companies are in the midst of a long term plan to improve and modernize
their electric transmission and distribution infrastructure. Many of the investments
contemplated by these plans and the underlying reasons for those investments are set
forth in detail in the Transmission System Improvement Plan ("TSIP"), attached as

Exhibit PWT-2 to Mr. Thompson's testimony in the Companies' 2016 rate cases¹,
 and the Distribution Reliability and Resiliency Improvement Program ("DRRIP"),
 attached as Exhibit LEB-5 to my testimony in these cases.

4 Q. Are the investments described in the TSIP and DRRIP necessary and prudent to 5 ensure the safety and reliability of the Companies' power delivery systems?

6 A. Absolutely. The Companies have an obligation to deliver safe and reliable power to 7 customers. Aging transmission and distribution assets that are past their useful lives present safety and reliability risks to the system. The Companies have systematically 8 9 evaluated those risks and developed a plan for minimizing them through 10 implementation of the TSIP, DRRIP and related projects. Transmission asset replacements and the addition of modern circuit breakers and switching equipment 11 12 have resulted in marked improvements on specific circuits that were previously consistent contributors to customer outages.² 13 The Companies expect these 14 improvements to positively impact reliability system-wide, and have set concrete and 15 measurable goals for reliability improvements to be achieved through implementation 16 of these programs.

17 Q. How are the projects described in the transmission and distribution system plans

18 prioritized?

20

19

A. The Companies undertake a rigorous approach to business planning in making decisions on how to prioritize investments. As described in the Annual TSIP Update

¹ E.g., Direct Testimony of Paul Thompson, Case No. 2016-00370, and Exhibit PWT-2 thereto.

² Case Nos. 2016-00370 and 2016-00371, LG&E and KU Transmission System Improvement Plan Annual Report, June 1, 2018, at Section 4.2.

1 Report filed with the Commission last year,³ the prioritization of reliability and 2 system integrity projects varies depending on the type of asset. In general, the 3 Companies consider a combination of the magnitude of customer impact in the event 4 of failure, the type of asset, the age and condition of the asset as determined by field 5 inspections, and past performance and maintenance history. Often, groups of 6 transmission or distribution system assets can be replaced as part of a single outage to 7 minimize customer impact and gain efficiencies in the cost of the work performed.

8 Q. Is KIUC's witness Kollen critical of any particular project included in the 9 Companies' proposed transmission and distribution investments?

10 A. No. Mr. Kollen does not have a specific criticism of any project included in the 11 Companies' proposed transmission or distribution investments. Nor is he critical of 12 any aspect of the Companies' business planning process. Instead, he asserts that 13 transmission and distribution investments are "controllable" costs that should be 14 normalized to more closely reflect historical spending. He further argues that 15 minimizing recovery of transmission and distribution investments will force the 16 Companies to better prioritize their investments.

17 Q. Are Mr. Kollen's criticisms of the Companies' transmission and distribution 18 investments valid?

A. In a word, no. These arguments ignore the realities of the operational business
 planning process. First, the Companies do not consider investments needed to
 improve the safety and reliability of their power delivery systems to be discretionary
 or subject to lengthy deferrals. If the Companies are restricted to making a certain

³ *Id.*, Section 3.

1 level of investment based only upon the level of past investment, their ability to 2 respond to the current condition of their assets is significantly impaired. This is true 3 whether the Companies are proposing to make upward *or* downward adjustments to 4 spending on a particular system or group of assets. Second, Mr. Kollen's arguments 5 ignore the fact that the investments proposed in the Companies' business plans have 6 already been culled and prioritized throughout the Companies' business planning 7 process. The investments included in the TSIP and DRRIP are the result of the 8 rigorous process of evaluating and prioritizing projects. Mr. Kollen's 9 recommendation to curtail recovery of these investments based on historical levels 10 should be rejected by the Commission.

11

(2) Pipeline Replacements for Gas Transmission Lines

12 Q. Why is LG&E proposing to replace certain segments of gas transmission lines?

13 The proposed replacement of multiple segments of gas transmission lines I described A. 14 in my direct testimony is part of an overall strategy to achieve two related objectives: 15 (1) promote the overall safety and reliability of LG&E's gas transmission lines; and 16 (2) ensure that LG&E is able to demonstrate compliance with proposed PHMSA 17 safety regulations pertaining to natural gas pipelines. In order to achieve these two 18 objectives, LG&E proposes to perform enhanced inline inspections (ILIs) on its 19 transmission pipelines. Running enhanced ILIs presents the best option for LG&E to 20 gather data on its pipeline and support compliance with proposed PHMSA 21 regulations. Current technologies allow some types of ILIs to be run only on uniform 22 diameter pipeline, i.e., a contiguous segment of 20-inch nominal diameter pipeline. 23 By replacing segments of 16-inch and 22-inch diameter gas transmission pipeline 24 with 20-inch pipeline, LG&E can achieve a uniform diameter and facilitate the use of 1 2 ILI technologies on long contiguous segments of pipeline, dramatically decreasing the cost to run these tools.

3 Q. Are there other alternatives for running ILIs on gas transmission pipeline?

4 Yes, but they are both much more costly and much less accurate. One alternative is 5 for LG&E to run ILIs on each single-diameter section of pipeline. For transmission 6 pipelines like Western Kentucky A and B, which consist of segments of varying 7 diameters, running ILIs on each individual segment is impractical and expensive. To 8 the extent it could be done at all, LG&E estimates that it would cost as much as \$2.5 9 million to run ILIs on each of the more than 20 segments of single-diameter pipeline 10 on the Western Kentucky A and B gas transmission lines. These tools would be run 11 every seven years in order to comply with PHMSA regulations. Conversely, if the 12 Western Kentucky A and B transmission lines were a uniform diameter, these tools 13 would only be run once for each continuous line, at roughly the same cost for 14 inspection of single segment of multi-diameter pipeline.

15 A second method of performing enhanced ILIs is to employ the use of 16 technology that allows enhanced ILI tools to be run on a mutli-diameter pipeline. 17 Unfortunately, the technology needed to run ILIs on a multi-diameter pipeline is not 18 sufficiently advanced to accommodate LG&E's system. LG&E has approached 19 vendors and asked for proposals to develop this technology and to implement its use 20 on LG&E's gas transmission lines. However, because enhanced ILI tools that can be 21 used in LG&E's transmission lines are not currently available, there is no guarantee 22 that the multi-diameter inspection tools will be effective on LG&E's gas transmission 23 lines. Furthermore, it is likely the proposed tools would not be designed to

accommodate 16-inch, 20-inch and 22-inch diameters pipelines. Therefore, since the
 Western Kentucky A and B lines are predominantly 16-inch and 20-inch pipelines,
 the 22-inch diameter segments would still need to be replaced even with the use of
 mutli-diameter ILI tools.

Is replacing pipeline segments to achieve uniform diameter a prudent method of

5 6 **O**.

accomplishing the use of enhanced ILI?

7 A. Yes. The proposed replacement of a total of seventeen segments of the Western 8 Kentucky A and B lines is a key component of an overall strategy to enable the 9 effective use of enhanced ILI tools to maintain the safety and reliability of LG&E's 10 gas transmission system and to demonstrate compliance with proposed PHMSA 11 regulations. It is not the only strategy that LG&E is pursuing. As described above, 12 LG&E is also continuing to pursue the approach of using enhanced ILI tools on 13 multi-diameter pipelines. However, simply awaiting the development of this 14 technology until it can be reliably employed on LG&E's system is not by itself a 15 responsible course of action. The proposed replacement of pipeline segments to 16 achieve uniform diameter is simply one prong of a multi-pronged approach to achieve 17 enhanced pipeline safety and regulatory compliance. In addition to facilitating the 18 use of enhanced ILI tools, replacement of these pipeline segments also modernizes 19 older pipeline with new pipeline, enhancing the overall safety and reliability of the 20 transmission system. LG&E will continue to evaluate the best strategy as the 21 technology evolves, but must responsibly plan in the event that multi-diameter ILI 22 tools do not become available over the next several years.

6

Q. What is Ms. Mullinax's criticism of LG&E's proposed strategy to replace segments of its gas transmission pipeline?

A. Ms. Mullinax is not critical of LGE's proposal to implement enhanced ILI tools or the
prudence of LG&E's proposed investments to replace portions of its transmission
pipeline to accommodate these tools. Rather, she asserts only that the \$9.6 million
allocated for these replacements in the forecast test period should be disallowed
because LG&E has not obtained a CPCN.

8 Q. Will LG&E seek a Certificate of Public Convenience and Necessity ("CPCN") 9 for the proposed pipeline segment replacements?

10 The transmission pipeline segment replacements are individual replacements of A. 11 existing infrastructure in the usual course of business, and thus a CPCN is not 12 required pursuant to KRS 278.020. Moreover, the proposed strategy to replace 13 pipeline segments on the Western Kentucky A and B lines, Magnolia road crossings, 14 and connection to Dixie Highway is still in the early stages. The individual segment 15 replacements for all four of these lines are expected to cost around \$91 million 16 cumulatively. Less than fifteen percent that amount, \$12.7 million, is expected to be 17 incurred before the end of the forecasted test period. Approximately \$9.6 million of 18 the \$12.7 million during the forecasted test period is projected for the Western 19 Kentucky A and B lines. As the technology for enhanced ILI tools on multi-diameter 20 pipeline evolves, LG&E will continue to assess whether replacement of individual 21 pipeline segments is required to achieve safety enhancements and demonstrate 22 compliance with proposed PHMSA regulations. If segment replacements are

1		required and at an appropriate time, LG&E will reevaluate those replacements on a
2		case-by-case basis to determine whether a CPCN is required.
3		(3) Gas Pipeline Reinforcement in Nelson County
4	Q.	Describe LG&E's proposed reinforcement of gas distribution pipelines in Nelson
5		County.
6	A.	LG&E proposes to construct up to a 3.5 mile, likely 12-inch, steel high pressure
7		distribution pipeline that will extend the Calvary Transmission pipeline from north of
8		the Bardstown Operations Center on Bloomfield Road to the Highway 245 area on
9		the west side of the system.
10	Q.	Why is the reinforcement necessary?
11	A.	To ensure reliable service to 3,400 gas customers in the Bardstown area of Nelson
12		County. LG&E's current Bardstown medium pressure system is composed of
13		approximately 80 miles of distribution pipeline that operates at 55 psig. The majority
14		of the system is fed by two regulator facilities on the eastern side, with no regulator
15		facilities to supply the west side of the system. Annual system reviews starting in the
16		2017/2018 winter season noted that the Bardstown medium pressure system should
17		be monitored closely since the system is expanding away from the supply locations.
18		The Bardstown system is heavily dependent on one of the two primary regulator
19		facilities. If supply is lost from this regulator facility on a day with high load, up to
20		3,050 of 3,400 customers in Bardstown would lose service. The proposed
21		reinforcement project would mitigate this risk by supplying additional high pressure
22		capacity to the western side of the system.
23	Q.	In addition to bolstering reliability to serve existing Nelson County customers,

24 would the reinforcement project also be able to accommodate load growth?

1 A. Yes. The proposed reinforcement project would add additional capacity on the west 2 side of the system to serve growing load. Since 2015, LG&E has received more than 3 two dozen load requests and inquiries for service by the Bardstown system, with 4 some on the western side of the existing distribution system. As discussed in 5 LG&E's response to AG DR 1-57(b), these requests are and could be served by 6 existing distribution, but would significantly reduce the available capacity on the 7 western side of the system, particularly for commercial or industrial customers 8 requiring delivery pressures above 30 psig. Reinforcement of the distribution system 9 would provide the needed capacity to support anticipated load growth on the west 10 side of the system.

11 Q. What is the current status of the Nelson County reinforcement project?

A. This project is still in the very early stages. Of the roughly \$12.5 million expected
cost of the project, only a small fraction – less than \$32,000 – is scheduled to be
incurred by the end of the forecasted test period. Included in this expected spending
is route selection and some preliminary engineering and design work.

16 Q. If the project is still in its infancy, why was it mentioned in your direct 17 testimony?

A. The Nelson County reinforcement project is included in the five-year business plan
 for the gas distribution business. In an effort to be transparent about future capital
 projects, I chose to summarize the project in my testimony. This project is one of
 many that are included in LG&E's business planning process, although only a
 relatively small amount of capital will be devoted to its development in the near term.
 LG&E assesses the need for reinforcement and the need to serve load growth system-

wide based on evolving information. Adding this project to the business planning
 process allows LG&E to allocate funds to determine the feasibility, cost, and possible
 alternatives for the project.

4

Q. Has LG&E sought a CPCN for this project?

5 No. As currently formulated, the Nelson County reinforcement project is an ordinary A. 6 extension of an existing system in the usual course of business, and thus a CPCN is 7 not required pursuant to KRS 278.020. Regardless of whether Ms. Mullinax agrees or disagrees with this assertion, seeking a CPCN for this project at this very early 8 9 stage would be premature. LG&E has not formulated engineering plans or 10 specifications for this project, nor has it commenced construction in any respect. As 11 set forth in my direct testimony, construction on this project, if LG&E elects to 12 proceed with it after completion of preliminary engineering and design work, would 13 not begin until 2021. Pursuant to KRS 278.020(1)(e), a utility must exercise CPCN 14 authority within one year of its issuance or the certificate shall be void. LG&E will 15 reevaluate the need for CPCN authority for this project as the preliminary work 16 progresses. However, it bears mention even at this early stage that this reinforcement 17 project is significantly smaller, both in pipeline length and expected capital cost, than 18 the Bullitt County project for which the Commission required a CPCN in Case No. 19 2016-00371.

20

(4) Exclusion of Revenues from Phoenix Paper-Wickliffe in Forecasts

21 Q. What is Phoenix Paper Wickliffe?

A. In 2018, Global Win Wickliffe LLC ("GWW") purchased an idled paper mill located
in Wickliffe, Kentucky, with plans to restart production at the mill in 2019. On
September 4, 2018, KU entered into a contract to provide electric service to the

1 GWW plant under the Time of Day – Primary ("TODP") rate. A copy of this 2 contract is attached to my rebuttal testimony as Exhibit LEB-Rebuttal-1. Under the 3 terms of the contract, GWW agreed to accept initial capacity of 1,500 kVA, with 4 adjustments to 9,400 kVA by December 1, 2018 and 26,000 kVA by March 1, 2019.

Do the Companies' proposed revenue forecasts include revenue from load of

5 6 **Q**.

Phoenix Paper Wickliffe?

7 A. No, but the costs to serve this load are not included, either. Exclusion of both the 8 demand and the cost to serve demand of this single customer from the revenue 9 requirement is appropriate. The capacity contract with GWW was executed after the 10 load forecast used in the Companies' business plan was developed. Projecting 11 revenue and cost to serve specific load under capacity contracts with no customer 12 usage history is inherently speculative. For example, the cost to serve the GWW load 13 could increase dramatically due to a transmission network constraint if the customer's 14 capacity were to significantly exceed 26,000 kVA. Furthermore, the revenue derived 15 from this single customer could also change significantly if the customer elected to 16 take service under the Economic Development Rider ("EDR") offered by KU. For a 17 single customer without usage history, both the load and the cost to serve that load 18 can fluctuate. The Companies cannot accurately include either the revenue from 19 speculative load or the anticipated cost to serve this load in forecasts used to 20 determine base rates.

Q. Do the Companies' load forecasts also include expected revenue which will not actually be received due to plant closures?

11

1 A. Yes, they often do. The Companies do not continually adjust load forecasts for 2 ratemaking purposes to account for every industrial customer that comes and goes 3 after a forecast is made. For example, the Companies' load forecasts used in the last 4 base rate cases did not reflect lost revenue from at least five plant closures by large 5 electric customers in 2017 and 2018, nor was the prior idling of the Wickliffe plant in 6 2015 and its subsequent closure in 2016 reflected in the Companies' load forecasts. 7 Projected revenues from a single large customer cannot be singled out for inclusion in 8 the revenue requirement when the Companies' load forecasts also assume revenue 9 that will never be realized due to plant closures or scaled down operations from other 10 industrial customers.

11 Q. How does Mr. Kollen calculate his assumption that the Phoenix Paper load 12 would result in \$7.6 million in additional revenue?

13 The Companies asked that very question in data requests to KIUC. The electronic A. 14 work papers filed contemporaneously with Mr. Kollen's testimony referenced in 15 footnote 26 only contained a hard coded \$7.620 million number. In response, Mr. Kollen produced a workpaper file in native Excel format he claimed was 16 17 inadvertently excluded from the other workpapers filed contemporaneously with his 18 direct testimony. This Excel file assumes that GWW will be billed under Rate RTS 19 and assumes a 12 month base demand of 600,000 kVA (using 50,000 kVA per 20 month), an intermediate demand of 533,671 kVA and a peak demand of 534,269 21 kVA.⁴ To derive these figures, Mr. Kollen applied a pro rata portion of all demand 22 revenue under Rate RTS to his assumed level of GWW's demand. In so doing, Mr.

⁴ KIUC Response to LG&E and KU's Data Requests to KIUC, No. 3, and Excel attachment.

1 Kollen has made no investigation in GWW's actual or forecasted demand, nor has he 2 provided any basis for the assumption that GWW's demand will be incurred 3 proportionally to base/intermediate/peak demand for all customers under rate RTS.

4 Q. Is Witness Kollen's calculation of expected revenues from Phoenix Paper in the 5 forecasted test period accurate?

6 A. Not at all. Mr. Kollen makes a number of assumptions about the GWW capacity 7 contract, none of which are borne out by its actual terms. First, Mr. Kollen assumes that the Phoenix Paper peak demand will be 50 MW.⁵ This is nearly double the 8 9 capacity that GWW has agreed to accept starting on March 1, 2019. Furthermore, 10 Mr. Kollen assumes that this load will be constant through the forecasted test period. There is no objective basis for that assumption. Under the GWW capacity contract, 11 12 GWW could cancel and generate no revenue effective March 1, 2020, a full two 13 months before the end of the forecasted test period. Further, Mr. Kollen assumes that 14 GWW would take service under the retail transmission service ("RTS") rate, when in 15 fact it has agreed to take service under the TODP rate. These are different rate 16 structures and would result in different projected revenues depending on the load.

17 Mr. Kollen's assumptions starkly illustrate the speculative nature of 18 estimating revenue from a single-customer load with no usage history and the 19 offsetting costs to serve that load. Indeed, Mr. Kollen's testimony, replete with

⁵ Mr. Kollen's selection of 50 MW assumes that the Phoenix Paper plant will operate at the same peak demand as the former paper mill idled in 2015 and closed in 2016, as stated in the Companies' response to the Commission's June 22, 2017 Order in Case Nos. 2016-00370 and 2016-00371, addressing the departure of municipal customers. Mr. Kollen has not provided a foundation for his assertion that peak demand would be the same for the new operation. He simply assumes it will be the same with no analysis of or support for the GWW plant's current operations or electricity needs going forward. This assumption has no logical relationship to GWW's actual demand to date or its projected demand.

unfounded assumptions, is a strong argument for exclusion of these revenues and
 associated costs from the revenue requirement.

3 Q. If some revenue from the Phoenix Paper load is recognized, what amount is 4 appropriate?

5 For the reasons just discussed, KU does not believe that speculative revenue from the A. 6 Phoenix Paper plant in Wickliffe should be included in the revenue requirement, 7 particularly when lost revenue from plant closures has not historically been deducted 8 from the Companies' revenue forecasts for the purpose of setting rates. Nevertheless, 9 if the Commission elects to assign revenue to this single contract, then it should be 10 approximately \$900,000, and not \$7.62 million as Mr. Kollen proposes. \$900,000 11 represents the approximate annual minimum demand revenue that would be generated 12 from the GWW contract under proposed rate TODP, assuming GWW met minimum requirements under the agreement.⁶ This is the only portion of revenue under the 13 14 capacity contract that KU is reasonably certain to recover, and the only amount that 15 can be reliably included in revenue forecasts, if any revenue at all is to be included.

16

(5) Expenses for Brown 1 Stack Repair

17 Q. Why is KU planning to perform repairs to the stack of Brown Unit 1?

A. Brown Units 1 and 2 will be retired at the end of February 2019. However, because
 the units will not be immediately demolished, KU must perform certain work on the
 decommissioned units to ensure the integrity of the structures and the safety of
 employees, contractors, and others working at the Brown generating station. Included

⁶ Because this demand revenue figure assumes the rates proposed in the Companies' applications, it would change if the Commission approves a different rate design than the one proposed by the Companies in these proceedings.

in this work are necessary repairs to maintain the structural integrity of the stack of
 Unit 1. Upkeep and maintenance of retired generating plant to ensure the safety of
 the site is both prudent and reasonably incurred.

4

5

Q. How do you respond to KIUC witness Kollen's suggestion that the repairs to Unit 1' stack are non-recurring and should be deferred?

- A. KU will not defer the required repairs to the Unit 1 stack. Safety-related projects are
 KU's first priority and the project will be performed to ensure the structural integrity
 of the stack. As for the accounting treatment of the expense, which is estimated at
 approximately \$300,000, given the retirement of Brown Unit 1, KU would agree to
 amortize the expense over a three-year period.
- 11

(6) Impact on Labor Expense Due to Retirement of Brown Units 1 and 2

Q. What portion of the labor expense at Brown is attributable to maintaining and operating Units 1 and 2?

14 A. Since 2015, only about twenty percent (20%) of the total man hours at the Brown 15 generating station have been dedicated to maintaining and operating Units 1 and 2, 16 compared to roughly forty percent (40%) for maintenance and operation of Unit 3, 17 and 38-40 percent for common equipment and salaried staff. Units 1 and 2 are smaller-capacity steam generating units with a combined capacity of 280 MW, 18 19 compared to the 460 MW capacity of Unit 3. Unit 3 takes significantly more 20 headcount to maintain and operate than Units 1 and 2 combined, in part because Unit 21 3 is a newer and more complex unit with more auxiliary equipment (baghouse and 22 SCR).

Q. Have the Companies significantly reduced headcount at Brown in anticipation of the retirements of Units 1 and 2?
A. Yes. In fact, these headcount reductions began in 2016, primarily by taking
 advantage of planned retirements of KU employees. The following chart shows the
 reduction of headcount at Brown since 2015, excluding headcount for combustion
 turbines and the Dix Dam hydroelectric facilities:

As this chart demonstrates, KU reduced employee headcount at Brown by 18, or nearly 15 percent, between 2016 and 2018.⁷ From 2018 to 2019, KU will reduce contractor headcount attributable to steam generating units at Brown by 16, or more than 30 percent.

5

10 Q. Will the retirement of Units 1 and 2 result in a reduction in the workload for
11 salaried employees at Brown?

⁷ The headcount numbers in this chart vary slightly from the figures used by Mr. Kollen in his testimony, which are based on KU's Response to KIUC DR 2-5a. There are two reasons for the discrepancy. First, Mr. Kollen uses an average of monthly headcounts to derive his annual totals, whereas KU uses the projected headcount for the last month of each period. Second, KU's headcount figures are stated as of the time of this filing, which accounts for one retirement ahead of forecast, a transfer and a departure since KU's application was filed.

A. Not materially. Salaried positions at Brown include production and maintenance
 managers, administrative staff, an environmental coordinator, and safety and
 engineering personnel. The responsibilities of these individuals will not lessen over
 the long term due to the retirement of Units 1 and 2.

5

6

O.

Are the headcount reductions at Brown over the past three years commensurate with the reduction of man hours due the retirement of Units 1 and 2?

A. Absolutely. As stated previously, operation and maintenance of Brown Units 1 and 2
consumed roughly 20 percent of the man hours for all steam generating units at
Brown in 2015 down to 18 percent in 2018. Total headcount at Brown will be
reduced from 175 in 2016 down to an expected 142 in 2020. That is a total reduction
of 33 headcount, or nearly 19 percent over this time period, which closely aligns with
the proportion of man hours formerly attributable to Units 1 and 2.

Q. In light of your testimony, is KIUC witness Kollen's recommendation to reduce Unit 3 payroll and contractor expense by 20 percent appropriate?

A. No, it is not at all appropriate. There is no objective basis for Mr. Kollen's assertions.
He has undertaken no analysis of how headcount at Brown will be utilized postretirement of Units 1 and 2 nor has he acknowledged KU's efforts to reduce
headcount through planned retirements over the past several years. Overall reduction
of headcount at Brown through 2020 is commensurate with the reduction in man
hours attributable to the operation and maintenance of Brown Units 1 and 2. The
Commission should reject Mr. Kollen's recommendation.

22

(7) Forecasting of Generation Outage Expenses

Q. How do the Companies propose to treat expenses for generator outages included
in the revenue requirements?

A. As Mr. Garrett sets forth in his direct testimony, the Companies propose to continue
regulatory asset and liability treatment of generator outage expense based on an 8year average, using actual expenses from the previous four years and forecasted
expenses for the next four years.⁸ This is the very same accounting treatment to
which all parties agreed and the Commission approved in the Companies' previous
rate cases.⁹

Q. Does the proposed approach allow the Companies to recover more outage expense than they incur?

9 A. No. Contrary to the implication of Mr. Kollen's testimony, the regulatory asset and
10 liability treatment proposed by the Companies allows recovery of only those
11 generator outage expenses actually incurred, while at the same time smoothing out
12 the fluctuations in outage expense due to the inspection cycle. Under this approach,
13 the Companies will recover no more and no less than their prudently incurred cost for
14 planned generation outages. The Companies only seek to recover prudently incurred
15 outage maintenance expense through the regulatory asset and liability treatment.

16 Q. How does KIUC witness Kollen propose to treat generator outage expense?

A. On behalf of KIUC, Mr. Kollen is not critical of the Companies' need to conduct
scheduled generator outages for major maintenance activities or the costs associated
with those outages. Instead, Mr. Kollen proposes that the Companies should be
required to "normalize" generation plant scheduled outage expense to an average of

⁸ See Direct Testimony of Chris Garrett, at 36-37.

⁹ Case No. 2016-00370 and Case No. 2016-00371, Stipulation and Recommendation, Article II, Section 2.2(F) (Ky. PSC Apr. 19, 2017).

1

2

the past five years, rather than what is actually forecasted in the test year. This is the very same proposal that Mr. Kollen put forth in the previous rate cases.

Q. How do you respond to Mr. Kollen's proposal to normalize scheduled outage expense based on historical spending?

5 A five-year historical average for outage maintenance expense is inappropriate to use A. 6 as a predictor of future outage expense. As I described in detail in my rebuttal 7 testimony in the Companies' last rate cases, generator outage expense is both cyclical 8 and highly variable. Major overhauls typically occur about every eight years, 9 depending on the type of generating unit and the condition of the unit as assessed 10 through regular inspections and monitoring. Mr. Kollen's proposal does not 11 accurately reflect scheduled outage maintenance activities that must be performed 12 during the forecast test year, nor is it representative of the overall eight-year cycle of 13 scheduled outage maintenance at the Companies' generation stations. The proposal 14 also disregards the reality that yearly outage expense for a particular unit will vary 15 depending on when a major overhaul is performed, among other factors. Outage 16 expense may be lower in the years following a major overhaul, and higher as a unit 17 approaches its next major inspection. Mr. Kollen's five-year average does not 18 account for those variations within an 8-year cycle, whereas the Companies' approach 19 both accounts for the 8-year cycle and allows the Companies to recover its prudently 20 incurred costs through regulatory asset and liability treatment.

The Companies are in the best position to assess the condition of their own generating assets and to forecast the timing and extent of scheduled outage maintenance expenses for planning and budgeting purposes. The outages in the past

1 cannot be compared to the outages in the future because of the additional 2 environmental control equipment now installed at each generation station. As a result, 3 the outages are reasonably expected to last longer, be more complex, and thus, cost 4 more than the outages did in the past. Those forecasted expenses, combined with the 5 previous four years of actual generator outage expense and a means for the 6 Companies to recover their prudently-incurred expenses effectively addresses the 7 variation inherent in cycled outage maintenance. Mr. Kollen's proposed approach 8 does not.

9 Q. Aside from being a poor predictor of future outage expense, are there other
10 problems with Mr. Kollen's proposal to use a five-year historical average for
11 future outage maintenance expense?

A. Yes. Namely, if the Companies were confined to recovery of average historical outage expense, their ability to assess the current condition of generator assets and respond to those conditions with appropriate maintenance activities would be severely hindered. Conversely, the Companies' current approach allows the Companies to quickly respond to unplanned or emergent issues and defer recovery for related expenses under the regulatory asset treatment.

18 Q. In light of your testimony, what is your recommendation to the Commission
 19 regarding Mr. Kollen's proposed scheduled outage normalization adjustment?

A. The Commission should reject these proposed adjustments. Mr. Kollen's method for normalization of outage maintenance expense based on a five-year historical average is less likely than the Companies' current method to accurately predict future maintenance expense. Mr. Kollen's approach would also have the potential effect of

precluding recovery of prudent and necessarily-incurred costs. Adoption of Mr. Kollen's proposal would severely hinder the Companies' ability to conduct real-time condition assessments of their generation resources and to respond to the results of those condition assessments to ensure that customers can be reliability served with power generation.

6

(8) Depreciation Life Span of Steam Generating Units

Q. What are the expected life spans Mr. Spanos has assigned to the Companies'
steam generating units in his depreciation study?

9 A. In the depreciation study accompanying his testimony, Mr. Spanos has fixed expected 10 life spans for currently operating steam production plant at between 54 and 64 years, depending on the unit in question.¹⁰ In assessing the life span for each unit. Mr. 11 12 Spanos considered the life spans of similar units, the age of surviving units, operating 13 characteristics, major refurbishing of units, and information provided by the 14 Companies' management. Mr. Spanos notes in his depreciation study that the life 15 span for most steam, base-load units is 54 to 64 years, and his estimates were within 16 the typical range for such units.

17 Q. What is KIUC witness Kollen's criticism of these conclusions?

A. Mr. Kollen is not critical of either the Companies' or Mr. Spanos's methodology and
offers no substantive rebuttal testimony regarding the same. Rather, he asserts only
that the life spans for currently operating generating units are fixed at levels below 65
years, which Mr. Kollen asserts is the assumed service life assigned to the generating
units in the Companies' 2019 Generation Planning & Analysis business plan.

¹⁰ See Exhibit JSS-KU-1 to Spanos Direct Testimony, at III-4 to III-5; Exhibit JSS-LG&E-1, at III-4 to III-5.

Q. Are Mr. Spanos's life span projections for the Companies' currently operating
 steam generating units consistent with the Companies' own analysis?

A. Yes, they certainly are. The Companies periodically assess the expected life spans of
their generating units as part of their Integrated Resource Plan ("IRP") process. The
Companies filed their most recent IRP with the Commission in the fall of 2018.¹¹ In
that process, the Companies conduct a Long-Term Resource Planning Analysis,
which presents numerous cases over a range of forecasted energy requirements, fuel
prices, carbon dioxide prices, and generating unit operating lives.¹²

9 In that analysis, the Companies ran base, high and low resource plan scenarios 10 using both 55-year and 65-year generating unit life spans. The Companies studied the 11 distribution of the age of coal-fired boilers across the United States that were either retired, or have announced plans to retire, between 1970 and 2030.¹³ The analysis 12 revealed that most coal-fired units were retired between 44 years (25th percentile) and 13 60 years (75th percentile), with a median retirement age of 53 years.¹⁴ The 65 years 14 15 referenced in the Companies' Generation Planning & Analysis business plan represents the upper end of industry-expected life spans for coal-fired generating 16 units according to the IRP.¹⁵ It does not represent the individualized assessment that 17 18 the Companies performed in providing Mr. Spanos information for his depreciation 19 study.

¹¹ See Electronic 2018 Joint Integrated Resource Plan of Louisville Gas & Electric and Kentucky Utilities Company, Ky. PSC, Case No. 2018-00348, IRP filed Oct. 19, 2018.

¹² Id., Long-Term Resource Planning Analysis, at 3.

¹³ *Id.*, at 9.

¹⁴ Id.

¹⁵ Id..

Q. In addition to consistency with industry averages, what methodology was used in
 estimating the life spans of coal-fired generating units for use in Mr. Spanos's
 depreciation study?

4 A. The Companies have provided in response to data requests detailed descriptions of the criteria used for determining the life spans reflected in Mr. Spanos's study.¹⁶ In 5 summary, the methodology incorporates an assessment of the starting life of the unit, 6 7 the industry averages referenced in the IRP and described above, and periodic 8 evaluations of each unit for equipment age, physical inspection, operational factors 9 such as startups and shutdowns, and maintenance and repair history. The Companies 10 then assess the unit for any indication of an End of Life event based on those inputs, 11 and adjust the expected life span of the unit based on the possibility of such an event. 12 In the end, those assessments tracked closely to the average industry-wide retirement 13 data described in the IRP.

Q. Does the expected life-span of the OVEC generating units at Clifty Creek and Kyger Creek provide good evidence of the depreciable lives of the Companies' coal-fired generating units?

A. No. Mr. Kollen asserts that because the OVEC generating units are expected to last
80 years or more based on the amendment and renewal of the ICPA through 2040,
this is proof that the depreciable lives of the Companies' coal-fired generating units
should be at least 65 years. The comparison is inapt. Indeed, the Commission order
Mr. Kollen cites in support of his opinion plainly refutes it. In the Order approving

¹⁶ See Generation Services Engineering 2018 Steam Only Depreciation Study Evaluation, attached to KU's Response to DR DOD-1, Question 29(a); see also Methodology attached to KU's Responses to DR DOD-2, Question 2(b).

the amendment and renewal of the ICPA, the Commission referenced an independent engineering assessment of the condition of the OVEC generating units.¹⁷ As paraphrased by the Commission, the assessment concluded that "largely due to the generating units having been nearly always operated in base load mode, with limited thermal cycles of the equipment, the units are expected to be operational at or near their historic operating levels through . . . 2040."¹⁸

Furthermore, according the Companies' study of steam generating units in their IRP, a life span of 80 years is far outside the industry norm due to the unique nature of the OVEC units. Indeed, the IRP analysis notes that fewer than five percent of coal-fired units nationwide are retired after age 67.¹⁹

11 Q. How are the Companies' coal-fired generating units different than the OVEC 12 units?

13 As the independent engineering assessment of the OVEC units concluded, those units A. operated at base load mode for nearly fifty years. The primary load served by the 14 15 OVEC units during that time span was AEC, a *single* customer. This is a unique use 16 of generating plant that does not accurately translate to the generating units owned by 17 the Companies. The Companies' units serve hundreds of thousands of native load 18 customers and are regularly called upon to switch seamlessly between base and peak 19 load mode. Accordingly, the OVEC units, which have likely experienced far less 20 load following cycling than the Companies' units over a span of many years, do not

¹⁷ In the Matter of: Verified Application of Louisville Gas and Electric Company for an Order Pursuant to KRS 278.300 and for Approval of Long-Term Purchase Contract, Case No. 2011-00099, Order at 2-3 (Aug. 11, 2011).

¹⁹ Electronic 2018 Joint Integrated Resource Plan of Louisville Gas & Electric and Kentucky Utilities Company, Ky. PSC, Case No. 2018-00348, IRP filed Oct. 19, 2018, Long-Term Resource Plan, at 9.

- 1 provide comparable evidence as to the useful lives of the Companies' steam 2 generating units.
 - (9) Inclusion of Customer Education Expenses in the Revenue Requirement
- 4

3

- **Q**. Do the Companies propose to include advertising expenses for energy-efficiency 5 programs in the revenue requirement?
- 6 Certainly. The Companies have included a cumulative line item of roughly \$2.3 A. 7 million for advertising specifically for energy-efficiency and conservation education. 8 As stated in the Companies' respective responses to PSC DR 3-21, these costs are for 9 customer education efforts designed to advise customers of means to reduce their 10 utility bills and conserve energy. The Companies have long provided this benefit to 11 customers with Commission approval.

12 **O**. Do these advertising efforts provide customers with a material benefit?

13 They do, by the Commission's own definition. The Commission's advertising A. 14 regulation states at 807 KAR 5:016 Section 3,"Advertising expenditures by gas or 15 electric utilities which produce a 'material benefit' include, but are not limited to the 16 following: (a) Advertising limited exclusively to demonstration of means for 17 ratepayers to reduce their bills or conserve energy" The advertising contemplated 18 by this line item does exactly that, and therefore by law provides a material benefit to 19 customers.

20 Why is AG witness Mullinax critical of modest advertising spending designed to 0. 21 make customers aware of means to reduce their consumption and lower their 22 bills?

23 A. Ms. Mullinax is not critical of the value of customer education regarding demand 24 conservation or the reasonable expenditure proposed by the Companies in furtherance

1 of these efforts. Instead, her criticism relates to a misinterpretation of the Companies' 2 data responses on this topic. Specifically, Ms. Mullinax claims that the Companies acknowledged that a similar program, the Customer Education and Public 3 4 Information ("CEPI") Program, which ended December 31, 2018, did not result in 5 any energy savings. That is not the Companies' position nor is it the position stated in their responses to PSC DR 3-21 and PSC DR 3-23, respectively. What the 6 Companies stated is that no energy savings were attributed to the CEPI program.²⁰ 7 8 The Companies further took the position in their most recent Demand-Side 9 Management and Energy Efficiency (DSM-EE) proceeding that notwithstanding the 10 cessation of CEPI, the Companies were committed to continuing customer education efforts regarding the benefits of reduced energy consumption.²¹ The CEPI program 11 12 was primarily designed to drive customer participation in the Companies' portfolio of 13 DSM-EE programs. The program was terminated because DSM-EE programs were 14 being scaled back and modified, not because CEPI itself was not providing material benefits to customers.²² 15

Q. By not renewing the CEPI program, did the Companies intend to cease all spending for customer education on energy efficiency?

A. Absolutely not. As the Companies noted in the DSM-EE proceeding, the intent was
 always to continue to inform customers of the benefits of energy efficiency
 notwithstanding the lapse of CEPI. The difference between CEPI and the planned
 advertising spending in the forecasted test period is largely organizational. CEPI was

²² Id.

²⁰ KU Response to PSC DR 3-23; LG&E Response to PSC DR 3-21.

²¹ See, e.g., Case No. 2017-00441, Direct Testimony of Gregory S. Lawson at 15 (Dec. 6, 2017).

a combined source of advertising funds and coordinated advertising strategy for the Companies' entire DSM-EE portfolio. With the changes in the DSM-EE portfolio and lapse of several programs, a centralized source for advertising and customer education on this package of programs was no longer needed. The Companies specifically noted in the testimony supporting the DSM-EE filing that advertising budgets would be maintained for each individual program.²³ By the Commission's own definition, those advertising activities provide material benefit to customers.

8 Q. What is your recommendation to the Commission regarding Ms. Mullinax's 9 proposed disallowance of advertising spending for demand conservation?

10 A. Ms. Mullinax's proposed adjustment should not be adopted by the Commission. 11 Under the Commission's own regulations, reasonable spending for advertising 12 designed exclusively to inform customers of ways to reduce their utility bills and 13 conserve energy provides a material benefit to customers. The Companies have not 14 taken a contrary position, either in the DSM-EE proceedings or in response to Data 15 Requests in this case. Instead, they elected not to ascribe energy savings to the CEPI 16 program. That does not mean that energy savings were not achieved due to customer 17 communications under CEPI. As programs like the recently-approved "WeCare" 18 program demonstrate, the Companies remain committed to customer education efforts 19 related to energy conservation and bill reduction, believe that they provide a material 20 benefit to customers, and the Companies will continue to devote proportional 21 resources toward those efforts.

²³ *Id.* at 15.

1

(10) Value Provided by the Companies' Membership in EPRI and EEI

2 **Q.** What is EPRI?

A. EPRI, the Electric Power Research Institute, is a non-profit organization of electric
utilities that addresses challenges related to electricity such as efficiency, safety,
reliability, and environmental protection.

6 Q. What benefits do the Companies derive from membership in EPRI?

7 A. By paying dues for membership in EPRI (\$3.5 million in 2019), the Companies 8 directly benefit from access to \$70 million of technical training and research, 9 enabling staff to minimize operations and maintenance costs, reduce fuel 10 consumption, improve accuracy of emissions monitoring, prevent equipment failures, 11 decrease outages, and lower capital expenditures. Membership in EPRI gives the 12 Companies access to EPRI training, technical manuals, and expert staff who are 13 frequently called upon to respond to technical questions and requests for information. 14 Participation in EPRI provides the Companies with the expertise necessary to keep 15 aging coal-fired generating and transmission capacity in service and running 16 efficiently as well as access to the development of emerging technologies.

17 Q. Do the Companies earn a rate of return on EPRI membership dues?

18 A. No.

Q. Does the Companies' membership in EPRI assist them in carrying out Commission guidance on research and development activities?

A. Yes, it does. As noted in the Companies' data requests responses, the Commission
has encouraged regulated utilities to pursue research and development initiatives,
whether individually or through contribution to and membership in larger
organizations. Specifically, the Commission has held that "[r]educing R&D spending

1 would be short-sighted and not in the customers' long-term interest."²⁴ The 2 Commission further noted that research and development "[b]enefits can be realized 3 whether research is sponsored solely by one utility or through a larger organization 4 funded by multiple utilities or stakeholders. The benefits of R&D may well help the 5 Applicants in fulfilling their commitments to preserve LG&E's and KU's low rates 6 and high quality service."²⁵ These are the exact type of benefits that the Companies 7 realize through their membership in EPRI.

8 Q. How would customers be impacted if EPRI costs were excluded from revenue 9 requirements?

10 Costs to ratepayers would assuredly increase. Some services provided by EPRI fulfill A. 11 federal statutory requirements and would need to be acquired independently from 12 third parties at a higher cost to ratepayers. For example, §316(b) of the Clean Water 13 Act requires the Companies to conduct fish protection studies to ensure that certain 14 cooling water intake structures do not cause adverse environmental impacts on fish 15 populations. By partnering with six other electric utilities operating coal-fired generating capacity on the Ohio River as part of EPRI Program 54, Fish Protection, 16 17 the Companies are able to spread out the cost of compliance, resulting in significant 18 cost savings to customers. If the Companies were no-longer EPRI members, these 19 federally-mandated studies would need to be performed by third parties and likely at 20 higher costs. In some cases where EPRI is the single-source provider, the Companies 21 might still need to acquire certain specific services from EPRI, but would do so

 ²⁴ In the Matter of: Joint Application of Powergen PLC, LG&E Energy Corp., Louisville Gas and Electric Company, and Kentucky Utilities Company for Approval of a Merger, Case No. 2000-00095, Order at 34-35 (May 15, 2000).
 ²⁵ Id.

without EPRI membership discounts resulting in higher costs to ratepayers for those
 services.

3 Q. Would the cost of service to customers be lowered if the Companies withdrew 4 from EPRI?

5 No. Loss of EPRI technical research and training would likely result in increased A. 6 operation and maintenance costs, increased fuel consumption, and increased 7 equipment failures over time. Although no formal cost-benefit analyses have been 8 prepared pertaining to the Companies' membership in EPRI during the past five 9 years, the Companies do conduct annual evaluations of each EPRI program based on 10 its potential to bring value to customers, and the sum of these value estimates exceeds 11 \$13 million annually. One of many examples is the Companies' participation in 12 EPRI Program 75, Integrated Environmental Controls, which performed a cost 13 comparison of Powder Activated Carbons (PACs). Using EPRI's equipment at Ghent 14 Station, the Companies were able to test the various PACs without risking the unit's 15 mercury emissions. Based on the results of these tests, the Companies saved an 16 estimated \$1.5 million in PAC costs in 2019 at Ghent alone. In this same program, 17 by using EPRI's portable catalyst test facility, Trimble County Unit 1 was able to 18 safely verify that the minimum operating temperature could be lowered, enhancing 19 the potential dispatch of the unit with an estimated savings of \$589,000 over a 30 year 20 period.

21 **O**

Q. Do the Companies regularly evaluate and modify their participation in EPRI?

A. Yes. Since 2016, the Companies have voluntarily reduced participation in EPRI by
23 29% from \$4.9 million to \$3.5 million in 2019. The Companies withdrew from

certain programs that in the Companies' judgment were not generating sufficient
 value to ratepayers. However, as set forth above, the programs for which the
 Companies remain a participant provide immense value to ratepayers.

4 Q. Which EPRI programs do the Companies' dues currently fund?

5 A. The Companies are participating in the following EPRI Programs in 2019:

Program	Program Description	2019 Funding
203	Air Quality, Characterization, Assessment and Health	\$638,354.44
75	Integrated Environmental Controls	\$566,400.59
63	Boiler Life and Availability Improvement	\$179,006.65
49	Coal Combustion Products - Environmental Issues	\$175,078.11
185	Water Management Technology	\$168,540.16
87	Materials and Repair	\$161,170.70
69	Maintenance Management and Technology	\$148,340.09
65	Steam Turbines - Generators and Auxiliary Systems	\$142,150.06
54	Fish Protection	\$136,061.93
183	Transmission Cyber Security	\$129,396.61
94	Energy Storage and Distributed Generation	\$127,343.74
196	Effluent Guidelines and Plant Wastewater Monitoring	\$125,622.27
108	Operations Management and Technology	\$119,618.36
77	Continuous Emissions Monitoring	\$111,374.06
88	Combined Cycle HRSG and Balance of Plant	\$111,245.75
64	Boiler and Turbine Steam and Cycle Chemistry	\$107,652.97
194	Heat Rate Improvement	\$90,380.27
200	Distribution Operations and Planning	\$83,528.79
104	Balance of Plant Systems and Equipment	\$54,847.00
18	Electric Transportation Technical R&D	\$43,811.08
34	Transmission & Substations Asset Management Analytics	\$41,828.29
37	Transmission Substation Protection and Control	\$22,769.73

6 7

8

Each of these programs provides significant value to ratepayers and allows the Companies to reap returns on research far in excess of the Companies' dues

9 contributions.

10 **Q.** What is EEI?

A. The Edison Electric Institute (EEI) is an association of investor-owned electric
 utilities in the United States. EEI provides numerous benefits to its members,
 including providing the opportunity for collaboration with other utilities on industry
 best practices, developing trends and technologies in the utility sector, resource
 sharing, and many other educational opportunities.

6

Q. What benefits do the Companies derive from membership in EEI?

7 A. As the Companies outlined in response to AG DR 2-65, EEI membership provides the 8 Companies with valuable information and resources that benefit the Companies' 9 operations and, as a result, benefit ratepayers. The Companies' participation in EEI's 10 mutual assistance program is a concrete example. During times of severe disruption 11 to the Companies' power delivery systems, due to weather or otherwise, the 12 Companies can leverage their participation in EEI's mutual assistance program to 13 bring much-needed resources to Kentucky to assist in restoration efforts. These 14 resources come in the form of personnel, equipment, and other assistance provided by 15 EEI mutual assistance members. Such support is invaluable in times of emergency 16 recovery. The Companies also participate in a number of other programs, including 17 the Spare Transformer Equipment Program (STEP) outlined in the Companies' 18 responses to data requests, which enhance the Companies' ability to respond to 19 threats and increase the overall reliability and resilience of the electric power system.

20 Q. Have the Companies excluded from the revenue requirement any portion of EEI 21 dues?

A. Yes, the Companies have excluded from the revenue requirement and do not seek to
 recover in these cases any dues associated with influencing legislation, consistent

1 with the Commission's previous orders on this topic. Ms. Mullinax asserts that 2 Commission precedent requires the Companies to exclude from the revenue requirement 45.35 percent of the dues paid to EEI. This is based on the 3 4 Commission's orders from Case Nos. 2003-00433 and 2003-00434, respectively, in 5 which the Commission stated that it "has reviewed the description of the various 6 activities funded by the EEI dues, and finds that the portion of the dues associated 7 with legislative advocacy, regulatory advocacy, and public relations should be excluded for rate-making purposes."²⁶ 8

9 As this language clearly indicates, the Commission excluded 45.35% of the 10 Companies' EEI dues based on information reviewed at the time of the order indicating that this was the percentage of EEI dues devoted to advocacy and public 11 12 relations. The Commission did not hold that 45.35% of the Companies EEI dues 13 should be excluded for all time going forward, but rather that dues devoted to 14 advocacy should be excluded, whatever percentage they may represent. Ms. 15 Mullinax has made no showing whatsoever that the information upon which the Commission relied nearly fifteen years ago is still valid today. 16

17 **Q**. How have the Companies determined what portion of EEI dues to exclude from

18

the revenue requirement?

19 KU proposes to exclude \$70,071.48 in EEI dues from the forecasted test period, and A. LG&E proposes to exclude \$52,553.68 in EEI dues for the same period.²⁷ These 20 21 amounts are derived directly from EEI's invoices. Those invoices specifically set out

²⁶ See, e.g. In the Matter of: An Adjustment of the Gas and Electric Rates, Terms, and Conditions of Louisville Gas and Electric Company, Case No. 2003-00433, Order at 51 (Jun. 30, 2004).

²⁷ LG&E Response to AG DR 1-92(b); KU Response to AG DR 1-92(b).

the percentage of membership dues and the percentage of industry issues support
 related to influencing legislation.²⁸ Combined, those categories account for roughly
 14 percent of the Companies' EEI membership dues, and that amount has properly
 been excluded from the revenue requirement.

5 Q. In light of your testimony, what your response to AG witness Mullinax's 6 proposal to reduce the amount of EPRI and EEI membership dues included in 7 the revenue requirement?

- 8 Ms. Mullinax's proposed adjustments should be rejected by the Commission. There A. 9 is no objective basis for Ms. Mullinax's proposed adjustments to these dues. As 10 demonstrated by my testimony and the Companies' responses to Data Requests, the 11 membership in both EPRI and EEI provide immense benefits to the Companies and, 12 by extension, their Kentucky ratepayers. These benefits far outweigh the dues paid to 13 these organizations. The cost to replace necessary research services and statutory 14 compliance provided to the Companies by EPRI would far exceed the current dues 15 paid to the organization. Likewise, the EEI dues included in base rates go only to 16 activities that support the Companies' operations and accrue to the benefit of all 17 ratepayers.
- 18

(11) Underground gas facility locates

19 Q. Has LG&E struggled in recent years to maintain 48-hour compliance with 20 underground gas facility locate requests?

A. Yes, as LG&E's response to the Commission's Fourth Set of Data Requests, No. 9
indicates, LG&E has at times not met the 48-hour response time for underground gas

²⁸ See EPRI Invoices, Attachment to LG&E Response to AG DR 1-98.

facility locate requests. The reasons for the resulting backlog are explained in detail
 in LG&E's response to Request No. 11 of the same set of data requests. Primarily,
 they relate to contractor resource adequacy available to address the high variability of
 locate request volume.

- Q. Has LG&E addressed the backlog and is it currently providing timely responses
 to underground gas facility locate requests?
- A. Yes, as of December 21, 2018, the late ticket backlog for underground facility
 requests had been entirely eliminated to due to significant expenditures for additional
 contractor resources. LG&E entered into agreements with two new contractors in
 December, and initial results with these contractors have been very good. LG&E's
 on-time completion rate improved to approximately 97 percent in January 2019.
 LG&E fully expects that positive trend to continue.

13 **Q.** Does this conclude your testimony?

14 A. Yes, it does.

VERIFICATION

COMMONWEALTH OF KENTUCKY)) COUNTY OF JEFFERSON)

The undersigned, Lonnie E. Bellar, being duly sworn, deposes and says that he is Chief Operating Officer for Louisville Gas and Electric Company and Kentucky Utilities Company and an employee of LG&E and KU Services Company, and that he has personal knowledge of the matters set forth in the foregoing testimony, and that the answers contained therein are true and correct to the best of his information, knowledge and belief.

Seller nnie E. Bellar

Subscribed and sworn to before me, a Notary Public in and before said County

and State, this 2/15 day of februa 2019.

CONTRACT FOR ELECTRIC SERVICE

This contract made and entered in and between Kentucky Utilities C	to this 4	day of	Septer	nber	, 2018	by
Global Win	Wickliffe LLC	puny) und	("Cu	stomer").		
WITNESSETH:						
Beginning Septemb	er 6, 2018	, or as	s soon thereaf	ter as conne	ction is mad	e,
Company will sell and deliver to	Customer at	the 13,800 vol	t bushings of	Company's	transformers	5
all Customer's electric capacity a	nd energy requi	rements define	ed as 3	phase, 60	0 cycle,	
alternating current, nominal volta	ge at the point o	f delivery of	13	,800	volts,	
metered and billed as	Primary	service	Э.			
Secondar	y, Primary, Transmiss	ion				
Customer requires an estimated C	ontract Capacity	of26,	,000 k	VA or kW,	as is appropi	riate.
Each month Customer will pay to	Company for al	l capacity prov	vided and ene	rgy delivere	d to Custom	er in
the preceding billing period an am	ount determine	d in accordanc	e with the			
Time of Day - Primary (TODP)	I	Rate Schedule	and, as may b	e appropriat	te, the	
	H	Rider, contract	attached if re	quired, and	the	
	F	lider, contract	attached if re	quired, and	the	
	F	Rider, contract	attached if re	quired.		

COMMENTS:

Customer's contract capacity shall be $_1,500$ kVA or kW, as is appropriate, at the effective date of this contract, but shall be adjusted on each of the adjustment dates listed below to the corresponding capacity level and shall remain at that level until the next listed adjustment date.

Adjustment Date	Adjusted Capacity Level
12/1/2018	9,400 kVA
3/1/2019	26,000 kVA

This contract shall take effect on the stated effective date and remain in effect until one year following the latest adjustment date set forth above. Thereafter, this contract will be automatically renewed for successive periods of one (1) year each, subject to termination at the end of any year upon either party giving written notice of termination to the other party at least 90 days prior to termination date.

In the event Customer fails to maintain a satisfactory payment or credit record, Customer otherwise become a new or greater credit risk, or Customer's load increases beyond 26,000 kVA, as determined by

CONFIDENTIAL INFORMATION REDACTED

KUCES082614

Company in its sole discretion, Company reserves the right to require a new or additional deposit from Customer. Customer shall immediately give Company written notice of any contemplated material increase in load beyond 26,000 kVA. If Customer fails to immediately give Company written notice of any material increase in load beyond 26,000 kVA or refuses to provide any new or additional security deposit required by Company, Company reserves the right to (1) hold Customer liable for any damage done to meters, transformers, or other equipment of Company caused by such material increase in Customer's connected load, and (2) discontinue service to Customer.

TARIFF PROVISIONS: It is mutually agreed that Company's terms and conditions and applicable rate schedule, as from time to time approved by and on file with the Public Service Commission of Kentucky, are made a part of this contract as fully as if written here.

IN WITNESS WHEREOF, the parties hereto have caused this contract to be executed by their duly authorized representatives the day and year shown above.

Section 4 – Long-term Economics of OVEC	. 27
Section 5 – Economics of the IPCA for LG&E and KU Customers	. 34
Section 6 – Conclusion and Recommendations Regarding Mr. Fisher's Testimony	. 40
Section 7 – Load Forecast Issues Raised by Mr. Baron	. 41

1		Section 1 – Introduction and Overview
2	Q.	Please state your name, position, and business address.
3	A.	My name is David S. Sinclair. I am Vice President, Energy Supply and Analysis for
4		Kentucky Utilities Company ("KU") and Louisville Gas and Electric Company
5		("LG&E") (collectively "Companies"), and an employee of LG&E and KU Services
6		Company, which provides services to KU and LG&E. My business address is 220
7		West Main Street, Louisville, Kentucky 40202. I submitted Direct Testimony in this
8		proceeding on September 28, 2018, which contained a statement of my qualifications,
9		experience, job responsibilities, and previous testimony before the Commission.
10	Q.	What are the purposes of your testimony?
11	A.	The purposes of my testimony are to: (1) respond to Jeremy I. Fisher's testimony on
12		behalf of the Sierra Club and his erroneous conclusions regarding the Companies'
13		participation with the Ohio Valley Electric Corporation ("OVEC") in a wholesale
14		power contract known as the Inter-Company Power Agreement ("ICPA"); ¹ and (2)
15		respond to Stephen J. Baron's testimony on behalf of the Kentucky Industrial Utility
16		Customers, Inc. and his inappropriate recommended adjustments to forecasted billing
17		demands and associated revenues for KU and LG&E's forecast of the Retail
18		Transmission Service ("RTS") class.
19	Q.	Are you sponsoring any exhibits to your testimony?
20	A.	Yes. I am sponsoring the following exhibit to my direct testimony:
21		Rebuttal Exhibit DSS-1Sierra Club Beyond Coal campaign

¹ OVEC and its wholly owned subsidiary, Indiana-Kentucky Electric Company, own and operate two coal-fired power plants in Ohio and Indiana and supply power to the Companies and other sponsor utilities through the ICPA, which currently has a term through June 2040.

1		Rebuttal Exhibit DSS-2	OVEC Board Meeting Agendas
2 3		Rebuttal Exhibit DSS-3	Comparison of Actual to Forecast OVEC Demand Charges
4	Q.	In your opinion, how should the	e Commission view Mr. Fisher's testimony on
5		behalf of the Sierra Club?	
6	A.	The Commission should disregard I	Mr. Fisher's testimony as it contains no analysis of
7		or recommendations on the issues	in these base rate cases. Furthermore, his two
8		"fundamental" recommendations w	yould create duplicative work for the Commission
9		and should be addressed (if at all) in	the Companies' Integrated Resource Plan ("IRP")
10		case, which the Commission has alr	ready ordered to begin later this year.
11		Specifically, the first record	mmendation asks the Commission to "expressly
12		reaffirm the Companies' obligation	to obtain Commission approval (as fair, just, and
13		reasonable) of any future OVEC-r	related changes that the Companies may wish to
14		implement and that may impact th	e Companies' ratepayers." ² The full text of this
15		recommendation has the dubious	dual distinction of being irrelevant to these
16		proceedings-Mr. Fisher does not	recommend any rate or tariff changes—and with
17		apparently asking the Commission	to exceed its statutory authority, which Daniel K.

19 Mr. Fisher's second recommendation is equally irrelevant to these proceedings: 20 he asks the Commission to initiate a new proceeding that revisits the 2011 Commission 21 approval of the ICPA and do so in a manner that seems primarily focused on engaging 22 in speculation about hypothetical future decisions that is a cross between a base rate 23 case, a fuel adjustment case, a debt authorization case, and an IRP. According to Mr.

Arbough addresses in his rebuttal testimony.

² Fisher at 6.

Fisher, this new proceeding would look at future dispatch of the OVEC units, existing and future environmental regulations, and future OVEC operating costs (e.g., fuel costs). To me, this type of data regarding what the future might look like was already filed by the Companies in their IRP on October 19, 2018 and can be addressed as part of that process.

6 Furthermore, the Companies' annual planning process is focused on providing 7 reliable, low cost electric service to our customers. That process has benefited 8 customers for decades. Therefore, initiating a case to focus exclusively on hypothetical 9 future decisions involving a single resource, in this case OVEC, is not an efficient use 10 of Commission resources. When there are real decisions to be made that require 11 Commission approval, the Companies will make the appropriate filings with the 12 Commission.

Q. Why do you believe Mr. Fisher is so focused on having the Commission initiate a new proceeding focused just on OVEC and the ICPA?

A. It's no secret: Mr. Fisher's employer, the Sierra Club, wants to shut down coal plants.
 Indeed, they have a hundred-million-dollar campaign to eradicate coal-fired energy
 from the United States: the Beyond Coal campaign.³ Their goal is explicit, as the
 following graphic taken from their home page shows:⁴

https://content.sierraclub.org/coal/. https://www.reuters.com/article/us-usa-coal-See also bloomberg/bloombergs-charity-donates-64-million-to-war-on-coal-idUSKBN1CG2M5 (showing donations to Beyond \$100 million): archived Coal campaign than of more page at https://web.archive.org/web/20190208140419/https://www reuters.com/article/us-usa-coalbloomberg/bloombergs-charity-donates-64-million-to-war-on-coal-idUSKBN1CG2M5.

⁴ <u>https://content.sierraclub.org/coal/</u> (image captured on Feb. 8, 2019). The Beyond Coal Campaign page as viewed on Feb. 8, 2019, is available on the Internet Archive at <u>https://web.archive.org/web/20190208135509/https://content.sierraclub.org/coal/</u>.

2 Therefore, when Mr. Fisher calls the OVEC generation plants "aging, outmoded," he is following his employer's lead.⁵ This is almost the precise language used on the 3 Sierra Club's website (see Rebuttal Exhibit DSS-1) to describe their Beyond Coal 4 5 campaign. The Sierra Club's website states, "Coal is an outdated, backward, and dirty 19th-century technology," hence Mr. Fisher's use of the word "outmoded" whose 6 7 synonyms are words and phrases such as old fashioned, out of date, obsolete, and 8 antiquated. Given that one of the primary objectives of the Beyond Coal campaign is "to close all coal plants in the US," it is not surprising that Mr. Fisher's testimony 9 10 supports this pre-determined outcome.

Q. How did the Sierra Club respond to the Companies' request that it provide "all
of Sierra Club's board meeting minutes and materials that relate to their Beyond
Coal campaign, analysis of coal plants, views of the future of coal plants, and views
of renewables"?⁶

⁵ Fisher at 4 line 10.

⁶ Companies' DR No. 2 to Sierra Club.

1 A. Sierra Club responded by objecting wholesale to the request. Ironically, given the 2 Sierra Club's document requests and the irrelevance of Mr. Fisher's testimony 3 regarding the Companies' rates at issue in these proceedings, one of the reasons cited 4 for their objection was, "The Companies' request implicates activities and seeks 5 materials that are wholly disconnected from Dr. Fisher's testimony and are not otherwise remotely pertinent to the ultimate question in these proceedings of whether 6 the Companies' proposed rates are just and reasonable."⁷ Since Mr. Fisher provides 7 no testimony in these proceedings regarding the "ultimate question" of whether the 8 9 Companies' proposed rates are just and reasonable, logic would suggest that the Sierra 10 Club should object to the testimony of their own witness.

11 With regard to Sierra Club's counsel's assertion that the Companies' request 12 "implicates activities and seeks materials that are wholly disconnected from Dr. 13 Fisher's testimony," his claim is demonstrably false. The Companies accepted the Sierra Club's invitation to "peruse Sierra Club's webpages, if they wish to learn about 14 general Sierra Club matters that are not related to these proceedings."⁸ What we found 15 was directly related to Mr. Fisher's testimony-though I will grant that it, like Mr. 16 17 Fisher's testimony, was wholly irrelevant to these proceedings. It took little effort to 18 find a press release from Sierra Club's Beyond Coal campaign directly addressing OVEC's Clifty Creek and Kyger Creek facilities, attacking them as "dirty, outdated 19 20 coal plants" and chastising Ohio legislators for introducing legislation related to the 21 plants' funding, which Sierra Club styled, "Mission: Ohio Coal Bailout by Any Means

⁷ Sierra Club's Response and Objection at 3.

⁸ Sierra Club's Response and Objection at 3.

1		Necessary."9 In other words, it took almost no effort to locate a publicly available
2		document obviously related to Mr. Fisher's testimony and directly responsive to the
3		Companies' request. It seems unlikely at best that Sierra Club could not have located
4		that document—and perhaps more like it—with any reasonable effort. They simply
5		chose to object rather than respond; one can only speculate why.
6		But again, I will concede that Sierra Club's effort to shutter the OVEC units is
7		irrelevant to these proceedings. Unfortunately for Sierra Club, that means Mr. Fisher's
8		testimony is equally irrelevant.
9	Q.	In your opinion as the Companies' vice president in charge of resource planning,
10		is coal a "19 th century technology"?
11	A.	No. The only thing that today's coal generating plant has in common with one from
12		the late 1800s is that it burns coal to create heat that boils water to generate steam to
13		drive a turbine and ultimately a generator. Calling coal a "19th century technology" is
14		like calling a modern wind turbine a 17th century BC technology because the
15		Babylonian emperor Hammurabi is alleged to have planned the use of wind powered
16		machines for an irrigation project. ¹⁰ In fact, according to a recent Forbes story, there
17		are over 200,000 MW of coal plants under construction in the world (comparable to
18		the existing coal capacity in the U.S.) and another 450,000 MW being planned. ¹¹
19	Q.	What are some examples of Mr. Fisher's testimony being influenced by his
20		employer's Beyond Coal campaign?

⁹ <u>https://content.sierraclub.org/press-releases/2017/05/mission-ohio-coal-bailout-any-means-necessary</u> (viewed on Feb. 14, 2019); archived at https://web.archive.org/web/20190214210433/https://content.sierraclub.org/pressreleases/2017/05/mission-ohio-coal-bailout-any-means-necessary.

 ¹⁰ <u>http://www.outwoodmill.com/history/history-windmills/</u>
 ¹¹ <u>https://www.forbes.com/sites/judeclemente/2018/11/15/global-coal-demand-increased-in-</u> 2017/#4b88d665661c

A. While Mr. Fisher attempts to justify this "shut coal down" conclusion with various
 examples and innuendo, from a factual perspective, his testimony suffers from
 confirmation bias – the tendency to interpret evidence and information as confirming
 one's existing beliefs. The following are some examples of what I mean by evidence
 of his confirmation bias:

- He goes on at length discussing the FirstEnergy Solutions ("FES") bankruptcy
 and why their rejection of the ICPA means the OVEC generating units are
 uneconomic, but he fails to mention that FES also rejected several wind
 contracts in the same bankruptcy proceeding.¹² Using his simplistic logic that
 a rejection of a contract in bankruptcy means a technology is uneconomic, I
 assume he would argue that those wind plants should also be shut down.
- He spends almost three pages (pp. 37 to 39) describing the analysis presented 12 13 by ICF on behalf of Duke Energy Ohio ("Duke") in a case in front of the Public 14 Utilities Commission of Ohio ("PUCO") that he claims shows that Duke's share 15 of the ICPA costs are uneconomic. The Companies did not participate in that 16 case and have no direct knowledge of it other than what is posted on the PUCO 17 website, but it is interesting that Mr. Fisher fails to mention that the PUCO 18 rejected Sierra Club's arguments and approved Duke's request for a rider to 19 recover its ICPA costs net of market revenues. In its order, the PUCO noted 20 the Supreme Court of Ohio (a) authorized a similar OVEC-related rider by

¹² To view the wind projects, *see* pp. 4-5 of <u>https://cases.primeclerk.com/FES/Home-DownloadPDF?id1=ODUzNjU1&id2=0</u>.

l	American Electric Power, and (b) affirmed the PUCO's finding that an OVEC-
2	related PPA has worth as a financial hedge. ¹³

3 He inappropriately compares the "all-in" cost per MWh of \$60.41 for energy 4 and capacity under the ICPA in 2017 with spot energy prices paid when the 5 Companies' were on occasion able to purchase energy at less than their own production costs and concludes that the ICPA is not economic.¹⁴ Using his 6 7 same logic, he should object to the Companies' Brown solar facility as 8 uneconomic; after all, its average all-in cost was approximately \$136/MWh in 2018.¹⁵ which is more than both spot economy energy prices and energy and 9 10 capacity from the ICPA. Using the "all-in" cost per MWh to compare different 11 types of generating technologies to each other and with economy energy 12 purchases is a nonsensical approach to economic analysis and resource 13 planning.

¹³ To view the PUCO's order, *see* <u>http://dis.puc.state.oh.us/TiffToPDf/A1001001A18L19B43028I02536.pdf</u>. To view the Supreme Court decision in the AEP case, *see* <u>http://www.supremecourt.ohio.gov/rod/docs/pdf/0/2018/2018-Ohio-4698.pdf</u>.

¹⁴ Fisher at page 20.

¹⁵ \$2.3 million annual revenue requirement for Brown solar (based on 12/31/18 net book value) divided by Brown solar's 2018 annual generation of 16,906 MWh.

¹⁶ Fisher at 35.

1		
2		
3		
4		
5		
6		
7		
8		
9		But either that did not interest Mr. Fisher or his anti-coal bias
10		did not cause him to question
11		embedded in Figure 3. ¹⁷
12	•	He alludes to OVEC cost increases and states that OVEC is uneconomic yet he
13		ignores or discounts evidence to the contrary because it does not fit with his
14		belief that coal generation needs to be "shut down." ¹⁸ He ignores the
15		information contained in OVEC's 2017 Annual Report, which shows that
16		OVEC has reduced its annual payroll costs by about \$4.3 million (6.8 percent)
17		from 2013 to 2017, in part by reducing employees from 781 to 666. ¹⁹ The same
18		chart shows OVEC's fuel cost declining from \$2.78/mmBtu in 2013 to
19		\$2.27/mmBtu in 2017 and equivalent availability increasing from 64.7 percent
20		in 2015 to 75.6 percent in 2017.

¹⁷ Fisher at 33.

¹⁸ Fisher at 45 cites one concrete instance of a cost increase: "the bankrupt FES has departed the ICPA unilaterally, and OVEC's costs to other partners have increased as a result." However, the remainder of his comments about cost increases are hypothetical (what "could" or "would" happen under certain scenarios, e.g., pp. 47-49). ¹⁹ Fisher Exhibit JIF-02 at 38.

1	• He claims the 2011 URS report missed the mark on deployment of "renewable
2	energy and storage" and that renewables, among other things, "have
3	dramatically shortened the economic life of existing coal plants - particularly
4	the OVEC units." He goes on to state that their "economic life is already
5	over" In making such claims, Mr. Fisher overlooks testimony filed on
6	January 2, 2019, by Michael Goggin on behalf of the Sierra Club in three cases
7	before the PUCO involving AEP's request to procure renewable generation. ²⁰
8	In his testimony, Mr. Goggin states:
9	\circ Wind and solar account for only 2.8 percent of generation in PJM (the
10	market where the bulk of OVEC generation is sold); ²¹
11	\circ PJM market structure and rules may be impeding renewable
12	development and PJM's capacity market is keeping energy prices lower
13	than they otherwise might be; ²²
14	• PJM's focus on fuel security in evaluating potential modifications to its
15	capacity markets would favor generation with on-site inventory and
16	disadvantage renewable generation. ²³
17	Notably, Mr. Goggin's concerns about the lack of renewable generation in PJM
18	and that it only accounts for 2.8 percent of energy hardly lead one to the conclusion
19	that the 2011 URS report missed the mark. Similarly, Mr. Goggin's testimony in total
20	is highly critical of the PJM market and its rules that he feels disadvantages renewable

²⁰ See Mr. Goggin's testimony in PUCO Case Nos. 18-0501-EL-FOR, 18-1392-EL-RDR, and 18-1393-EL-ATA at <u>https://dis.puc.state.oh.us/ViewImage.aspx?CMID=A1001001A19A02B65906J00350</u>.

1

2

generation are at odds with Sierra Club's position and Mr. Fisher's testimony that coal should be "shut down" and that renewables are rendering coal uneconomic.

To summarize, when one begins with the belief that coal plants should be retired, it causes one to see and cite only information that supports that preconceived notion and to ignore or hide facts to the contrary. This appears to have occurred with Mr. Fisher, rendering his testimony highly suspect and of no value to the issues before the Commission here.

8 Q. Is there a difference between the objective of the Sierra Club's Beyond Coal 9 campaign and the Companies' obligation to provide reliable, low-cost electricity 10 to its customers?

11 Absolutely. In mathematical terms the objective function of the Beyond Coal campaign A. 12 is to retire coal plants and deploy alternative resources at all costs to achieve that 13 objective. On the other hand, the Companies' objective function is to provide reliable, 14 low-cost electricity to our customers every second of every day, and our generation 15 fleet is planned and operated with that objective in mind. When faced with changes in 16 technology, environmental regulations, load obligations, and fuel markets, the 17 Companies clearly define the problem, develop and evaluate alternatives, and 18 recommend a future course of action to this Commission.

19 Q. Has Mr. Fisher's previous testimony in front of this Commission demonstrated
 20 his confirmation bias against coal generation?
A. Yes. In the Companies' 2011 cases regarding the installation of new environmental
 control equipment at several generating plants,²⁴ Mr. Fisher's recommendations to the
 Commission were to deny the Companies' request to install controls, which would have
 had led to the premature retirement of almost the entirety of the Companies' coal
 generation fleet.²⁵ The justification for his recommendation was as follows:

6 "Furthermore, as the entire analytical basis for the Companies" 7 proposed resource analysis is fundamentally flawed due to erroneous 8 assumptions and methodologies, the Commission should deny CPCNs and rate 9 treatment for any upgrades to the Companies' coal units at this time."

10 Q. Was the Companies' analysis in those cases "fundamentally flawed"?

11 A. No. As I stated in my rebuttal testimony on behalf of the Companies in those cases, 12 the "error" identified by Mr. Fisher was actually the result of his own misunderstanding 13 and bias.²⁶ Despite the Companies' clear explanations, he incorrectly assumed that the 14 Companies' natural gas price forecast was too high due to his comparison of the 15 Companies' price forecast expressed in nominal terms (i.e., reflecting the forecasted 16 impact of general inflation) to his own forecasts expressed in real terms (i.e., in base 17 year dollars). An analyst that was engaged in an unbiased assessment of the

Companies' financial analysis would be unlikely to make such a rudimentary mistake 1 2 as confusing real and nominal prices. Furthermore, if after having made such a mistake 3 and realizing that their analysis was at such odds with the Companies' analysis (who 4 employ a number of people with advanced degrees that are highly skilled in using 5 financial analysis tools), an unbiased analyst would have questioned whether or not the 6 difference was explained by their own mistake rather than one by the Companies. But 7 because Mr. Fisher's mistaken analysis supported his predetermined outcome that coal 8 is uneconomic and should be retired, his confirmation bias led him to testify that it was 9 the Companies' analysis that was "fundamentally flawed" rather than his own.

10 Q. Do the Companies have a preferred generating technology?

11 A. Not at all. The Companies focus on providing reliable, low-cost electric service, 12 period. We employ and utilize a wide range of technologies based on their operating 13 capabilities and relative economics to achieve that goal. For example, on February 4, 14 2019, the Companies issued a request for proposals for up to 200 MW of renewable 15 generation, and the Companies' 2018 IRP shows cases where installing renewables generation would be the least-cost option.^{27, 28} Moreover, I have personally testified in 16 17 front of this Commission in cases where the Companies were recommending retiring 18 coal plants, building natural gas-fired plants, building the Brown solar plant, installing pollution control equipment on coal units, and cancelling plans for a gas-fired plant.²⁹ 19

²⁷ https://lge-ku.com/newsroom/press-releases/2019/02/04/lge-and-ku-issue-request-renewable-energy.

²⁸ See Case No. 2018-00348, the Companies' Joint Integrated Resource Plan, Volume I, Section 5.(4), Resource Plan Summary, Table 5-15 on page 5-39.

²⁹ See, e.g., Case No. 2014-00002, Testimony of David S. Sinclair (Jan. 17, 2014)(Companies' application sought approval of Green River 5 NGCC and Brown solar; Green River 5 application withdrawn during course of proceeding); Case No. 2011-00375, Testimony of David S. Sinclair (Sept. 15, 2011)(Companies' application sought CPCN for Cane Run 7 NGCC); Case Nos. 2011-00161 and -00162, Rebuttal Testimony of David S. Sinclair (Oct. 24, 2011)(Companies' applications sought CPCNs for environmental controls for certain coal units and recommended retirement of several coal units, including the Cane Run coal units).

1		The one thing that is common across all of those cases is that the Companies' actions
2		were driven by a robust economic analysis, which evaluated a broad set of alternatives
3		over many possible futures. In other words, the math and the analysis as to the best
4		solution for our customers is what drove our decisions, not ideology or a preference for
5		a particular technology.
6		
7		Section 2 – OVEC Ownership and the ICPA
8	Q.	Mr. Fisher states in his conclusion #1, "Major decisions about investments in and
9		maintenance of these aging, outmoded plants are made through a process at
10		OVEC over which the Companies' [sic] have little information and exert relatively
11		little control." ³⁰ Do you agree with his assertion that the OVEC assets are "aging"
12		and "outmoded?"
13	A.	The absolute age of the OVEC units is certainly not in dispute but is frankly irrelevant
14		for purposes of these cases. (Also, everything and everyone is "aging," making it an
15		uninformative modifier at best.) As to whether the OVEC units are "outmoded" -
16		assuming he means something like "obsolete" or "no longer useful for modern life" -
17		these units continue to provide reliable, cost-effective service to the Companies'
18		customers. In fact, OVEC in recent years has invested in pollution control technologies
19		such as flue-gas desulfurization ("FGD") to control sulfur dioxide ("SO2") emissions
20		and selective catalytic reduction ("SCR") to control nitrogen oxides ("NOx")

³⁰ Fisher at 4.

emissions.³¹ The OVEC units, like all generating units, must comply with all
 applicable regulations in order to continue to operate.

Q. Do you agree with the second part of Mr. Fisher's conclusion that the Companies have little information and control regarding maintenance and investments at OVEC?

6 No. The Companies are well informed about decisions regarding maintenance and A. 7 investments. Two of the Companies' officers are on the OVEC Board of Directors where long-term plans and investments are reviewed and approved, and the Companies 8 9 have employees that participate in the operating committee of contract party 10 representatives, which oversees the ICPA in contract areas such as energy scheduling 11 and billing. This level of activity and information is consistent with that commonly found in closely-held, but independently operated, minority-owned entities. 12 13 Conversely, many of the Sierra Club's data requests or claims involved detailed data, 14 roles, or functions generally available or performed directly by OVEC itself and for 15 which the Companies have no day-to-day operational responsibility.

Q. Do you have any thoughts about why Mr. Fisher concludes that the Companies are uninformed regarding OVEC?

A. Sierra Club's data requests related to OVEC focused largely on specific items
 presumably intended to support its predetermined goal to shut down coal plants at all
 costs, such as retirement studies, decommissioning, environmental compliance, and
 outages. Sierra Club did not request information regarding the high level of detail that
 OVEC regularly provides to the Companies regarding its efforts to control costs while

³¹ See the 2017 OVEC annual report (p. 30 "*Environmental Matters*") at https://www.ovec.com/FinancialStatements/AnnualReport-2017-Signed.pdf.

1		maintaining high levels of performance. But I would note that in the same two board
2		packages Mr. Fisher used to produce his Figures 3 and 4 are materials and presentations
3		on such topics as:
4		• Results of continuous improvement efforts and future cost profile
5		• Update on boiler refractory wastage
6		• Budget review and approval
7		Environmental compliance update
8		Coal procurement strategy
9		Power cost projections
10		I've attached the agendas from the December 2015 and December 2016 OVEC board
11		meetings as Rebuttal Exhibit DSS-2 to illustrate the nature of the topics discussed by
12		OVEC management with the board and to show the fatuousness of Mr. Fisher's
13		conclusion #1.
14	Q.	In general, is there a difference between being an owner of OVEC and a
15		counterparty to the ICPA?
16	A.	Yes. In many ways OVEC is a unique entity in that its shareholders (as OVEC owners)
17		overlap, or are affiliated, with its main contractual counterparties (as ICPA customers).
18		Despite this unique attribute, in all other ways OVEC is much like any other
19		shareholder company in that it is the responsibility of OVEC management to run the
20		day-to-day operations of the company with guidance and input on major issues from
21		the OVEC board. In other words, OVEC's objectives are similar to that of any
22		company – to manage the assets effectively and appropriately meet their various legal
23		or economic obligations to shareholders, customers, and counter-parties/creditors.

1

Q. Does the OVEC board run the day-to-day operations of OVEC?

2 A. No. OVEC management runs the business on a day-to-day basis.

Q. Under the OVEC governance structure, what rights do the LG&E and KU officers serving as OVEC board members have to direct OVEC management to take actions?

6 As with any corporate entity, OVEC's governance process and roles are determined by A. 7 state corporate law and precedent, and its specific governing documents, such as 8 articles and bylaws. General principles of corporate law provide that the business and 9 affairs of a company are managed under the authority and direction of the board of 10 directors. Company management acts under the direction and control of the board of 11 directors. The board acts through the vote of a majority of the directors present at a 12 meeting at which a quorum is present, or by unanimous written consent in lieu of a 13 meeting. In addition to reviewing and directing management, the board sets the 14 company's strategic direction, monitors the company's operational and financial 15 performance, oversees expenses and capital projects, and deals with non-routine corporate matters. The shareholders elect the members of the board of directors. Ohio 16 17 corporate law and OVEC's articles and bylaws (Code of Regulations) do not generally 18 contain any unusual or non-standard quantitative (e.g., supermajority vote or veto 19 rights) or qualitative (e.g., limits on transaction size or type) provisions at either the 20 shareholder or board level.

Q. Do the Companies' OVEC board representatives take into consideration the long term interests of the Companies' customers and the implications of costs under the ICPA as they exercise their board authority?

A. Board members, when acting in their board capacities, have certain duties of care and
loyalty to the entities on whose boards they serve and the shareholders of such entities.
LG&E and KU's OVEC board members appropriately balance their roles as OVEC
board members with their separate functions as representatives of LG&E and KU as
ICPA counterparties. Furthermore, I would point out that it is not in OVEC's general
interest to make uneconomic decisions, despite Mr. Fisher's concerns to the contrary.

7

15

Q. In general, please describe the ICPA.

A. The ICPA is the contract that governs the provision of capacity and energy from OVEC
to the sponsors and payments by the sponsors to OVEC for such capacity and energy.
In many ways, it is just like any other power purchase agreement ("PPA") that one
might see in the wholesale electricity market. In my over two decades in the
independent power and energy marketing industry, I've negotiated and reviewed many
PPAs, and the ICPA has certain standard concepts that govern:

- Plant availability and operations (Article 4)
 - Charging for capacity and energy (Article 5)
- Billing (Article 8)
- Term (Section 9.07)

18 Q. Based on your experience in the industry, are there some aspects of the ICPA that 19 one might not typically see in a PPA?

A. Yes. Because the owners of OVEC overlap, or are otherwise affiliated, with the ICPA counterparties, the ICPA is a cost-based contract. Furthermore, because the ICPA was used as the basis for OVEC to finance its assets with essentially 100 percent debt, there are provisions such as Section 9.07 that states in part, "... no termination of the

Agreement, for whatever reason, shall release a Sponsoring Company of any
 obligations of liabilities incurred prior to such termination." Along those same lines,
 Section 11.01 says in part, "No suspension of service or termination of this Agreement
 shall relieve any Sponsoring Company of its obligations under this Agreement, which
 are absolute and unconditional."

While Sections 9.07 and 11.01 spell out certain obligations for the ICPA 6 7 sponsors, Section 9.11 states, "The rights and obligations of all the parties hereto shall 8 be several and not joint and several," which appropriately sets an important, pro-rata 9 limit on the extent of any ICPA party's obligations, such as the Companies'. Despite 10 the clear language of Section 9.11, Mr. Fisher, in his "non-lawyer" view implies that 11 somehow the Companies are directly on the hook for any or all shortfalls in OVEC 12 expenses that result from FES' rejection of the ICPA. If that were the case, then it is 13 unlikely that the rating agencies would rate OVEC debt at less than investment grade.

Finally, the ICPA contains provisions to collect the cost of ultimately decommissioning and demolishing the OVEC units, which is not often part of a standard PPA but is not unexpected given the nature of OVEC and the purpose of the ICPA.

18 I'd like to point out that none of the ICPA's provisions have changed since it19 was approved by the Commission in 2011.

20 Q. You said that OVEC has used the ICPA as the basis to finance its assets. Is that 21 common in the industry?

A. Yes. This is a standard financing mechanism for any generating plant that is not part
of a regulated rate base and has been used for decades. It is especially common today

1		for renewable projects like wind and solar generation. In order to reduce the cost of
2		capital by increasing the amount of debt used to finance a project, a long-term,
3		conservatively-structured PPA with creditworthy counterparties such as LG&E and
4		KU (or a comparable regulatory obligation or tariff requirement) is required by banks
5		and bond buyers.
6		
7		Section 3 – 2011 ICPA Amendment
8	Q.	Mr. Fisher states in his conclusion #2 that "the cost and risks of the OVEC
9		contract now is, and will continue foreseeably to be, substantially higher and
10		worse than those of alternatives." ³² He also states that the assumptions presented
11		to the Commission in 2011 when the ICPA was approved by the Commission "are
12		no longer valid today' Do you agree with this conclusion?
13	A.	Absolutely not. First of all, Mr. Fisher provides no analysis of his own, or any others
14		for that matter, regarding the Companies' future costs under the ICPA and what he
15		views as "alternatives" to it or, more importantly, the least-cost fleet to reliably meet
16		our customers' electricity needs. Mr. Fisher's secondhand citing of bankruptcy filings
17		and other consultants' testimony in other cases and jurisdictions are poor substitutes
18		for real financial analysis of real alternatives to serve the Companies' customers. As I
19		previously stated, using his "bankruptcy" standard of analysis, one would conclude that
20		renewable generation is uneconomic given the initial requests for rejection of wind and
21		solar power contracts by FES in the very same bankruptcy case involving OVEC's

³² Fisher at 4.

ICPA³³ and the potential rejection of renewable energy contracts by Pacific Gas and
 Electric Co. in its recent bankruptcy case.³⁴

Second, as I previously stated, no changes have been made to the ICPA's terms since it was approved by the Commission so there is no change in the risks associated with it nor in the Companies' rights and obligations associated with it. Furthermore, Mr. Fisher's citation of various consultants' testimony in other cases and jurisdictions have no bearing on the prudency of the Companies' recommendation and the Commission's order involving the 2011 ICPA amendment.

9 Q. In the Commission's 2011 order approving the amended ICPA, it noted that the
10 Companies wanted to extend the term from 2026 to 2040 to take advantage of
11 reduced financing costs. Did that occur?

12 A. Yes. The Companies projected that they would save approximately \$900,000 per year 13 between the extension's effective date and 2026 based on forecasted savings on debt 14 service on bonds to be issued in 2012 and deferring potential charges for 15 decommissioning and demolition ("D&D") charges. In addition to realizing the 16 interest and D&D savings, actual demand charges to the Companies for these items 17 averaged around \$2 million per year less between 2012 and 2018, compared to the 18 original forecast without the ICPA extension. This additional savings was due to 19 deferring bond principal beyond 2026 instead of amortizing it from 2012 through 2026

³³ "Motion for Entry of an Order Authorizing FirstEnergy Solutions Corp. and FirstEnergy Generation, LLC to Reject Certain Energy Contracts as of the Petition Date", Filed by FirstEnergy Solutions Corp., United States Bankruptcy Court for the Northern District of Ohio, Akron Division, Case No. 18-50757, April 1, 2018. On August 17, 2018, FES obtained an order from the bankruptcy court authorizing it to reject its Renewable Power Purchase Agreement with Maryland Solar, LLC.

³⁴ "PG&E renewable energy contracts tied up in bankruptcy battle," J.D. Morris, San Francisco Chronicle, February 3, 2019. *See <u>https://www.sfchronicle.com/business/article/PG-E-renewable-energy-contracts-tied-up-in-13584460.php.</u>*

as OVEC initially planned. On top of the originally filed savings, as shown in Rebuttal
 Exhibit DSS-3 actual total demand charges to the Companies have been dramatically
 lower compared to the original forecast by an average of \$8.5 million annually since
 2012, due to OVEC's efforts to reduce capital expenditures, operating costs, and
 financing costs.

Q. The Commission's 2011 order stated that the Companies expected to utilize the majority of the power available from OVEC, particularly during peak periods. Did that, in fact, occur?

9 A. Yes. While the Companies do not have historical data on the hour-by-hour available 10 OVEC capacity, if one assumed that 100 percent of the Companies' share was available every single hour (meaning no planned or forced outages) from 2012 through 2018, 11 12 then the implied capacity factor on the Companies' share of OVEC was 56 percent. 13 Furthermore, of the 6,018,870 MWh taken during that same period, approximately 55 14 percent were used during the on-peak period of Monday through Friday, hours ending 15 8:00 to 23:00. Thus, even though the on-peak hours represent just over 47 percent of 16 the hours in the year, the Companies' utilized over one half of their OVEC energy 17 during the higher value on-peak periods.

OVEC's historical and forecasted annual capacity factors are consistent with a number of the Companies' own coal units.³⁵ It is important to remember that the annual system load factor is typically in the mid to upper 50 percent range so only the absolute lowest cost units like Trimble County Unit 2 will tend to be fully loaded all of the time. Also, since the Companies built the natural gas-fired combined cycle Cane Run Unit

³⁵ See the Attachment to Filing Requirement Tab 16, Sec. 16(7)(c) – Item H, page 27.

7, natural gas prices have been such that it has operated at nearly full output most hours,
 thus causing other resources to be more load following. Should natural gas prices
 increase above around \$3.80/mmBtu, Cane Run Unit 7 will assume the role of hourly
 load following and coal units will tend to operate at closer to their hourly rating
 throughout the day.

Q. The Commission's 2011 order cited the Companies' view that OVEC's energy cost would compare favorably per kWh with the Companies' other generating units. Is that the case?

9 A. Yes. OVEC's energy cost in the base period and the forecasted test period is
10 approximately \$24 to 25/MWh.³⁶ OVEC's dispatch cost ranked 17th of the Companies'
11 37 generating units in November 2018.³⁷

12 Additionally, I would note that while the language of the 2011 order was 13 focused on energy only costs, OVEC's fixed costs, including its debt, compare very favorably on a per kW of capacity basis. As Mr. Fisher points out in his testimony, 14 OVEC's debt is about \$640/kW.³⁸ However, despite Mr. Fisher's assertions to the 15 contrary, that is well below the capital cost per kW of a new natural gas combined cycle 16 17 like Cane Run Unit 7, which was around \$900/kW, as well as other new generation resources the Companies evaluated in the 2018 IRP.³⁹ Furthermore, OVEC's cost per 18 19 kW will decline as debt is paid off in the future.

 $^{^{36}}$ See the response to AG 1-4(c).

³⁷ See the response to AG 1-147.

³⁸ Fisher at 48:11.

³⁹ See Case No. 2018-00348, the Companies' Joint Integrated Resource Plan, Volume III, 2018 IRP Resource Screening Analysis, Table 1 on page 4 of 14.

1

2

Q. Are the Companies aware of any analysis that would indicate that the units, with proper maintenance, will be unable to operate through 2040?

A. No. While lower natural gas prices and a growing number of new natural gas-fired
combined cycle plants in PJM (the main market for OVEC generation) have likely
impacted the dispatch of the OVEC units (just as Cane Run Unit 7 has impacted the
dispatch of the Companies' coal units), OVEC management has not indicated that this
is impacting the life of the units.

8 Q. In its 2011 order, the Commission cites findings from the URS report that: i) the 9 units are expected to be in compliance with existing and pending environmental 10 requirements, ii) FGDs will be installed on all of the units, and iii) coal combustion 11 by-products will not be regulated as a hazardous waste. Did those statements turn 12 out to be true?

A. Yes. The units are not out of compliance with existing regulations and as discussed at
 length in their 2017 Annual Report, OVEC is evaluating the compliance cost associated
 with regulations that, in many cases, are still not final almost 8 years after the URS
 report.⁴⁰ FGDs were constructed at all of the units as discussed in the 2011 order and
 finally, the EPA did not regulate coal combustion by-products as a hazardous waste.

18 Q. How would you characterize Mr. Fisher's conclusion #2?

A. As with other parts of his testimony, Mr. Fisher's testimony is misleading, this time in
 regard to events that have transpired since the Commission approved the ICPA in 2011.

21

⁴⁰ Fisher Exhibit JIF-02 at 30-34.

1		Section 4 – Long-term Economics of OVEC
2	Q.	Mr. Fisher makes a number of conclusions regarding the Companies' knowledge
3		of OVEC's projected costs and performance, FirstEnergy Solutions' bankruptcy,
4		and future environmental compliance capital requirements (#3, #5, #6, #7, #8, #9,
5		and #10). In general, do you agree with these conclusions?
6	A.	No. As I've previously stated, the Companies are well aware of OVEC's projected
7		costs and operational performance. However, as I've pointed out, the real objective of
8		Mr. Fisher and the Sierra Club is to retire coal plants through any means possible, so
9		casting aspersions on the awareness and financial analysis capabilities of the
10		Companies' management team and employees seems to be the point of these particular
11		conclusions.
12	Q.	Please provide an example where Mr. Fisher is incorrect about the Companies'
13		knowledge of OVEC's projected costs.
14	A.	I've already testified as to the board's involvement (which includes participation by the
15		Companies' board members) in reviewing and approving capital plans and budgets
16		including the potential for future environmental capital projects. Furthermore, OVEC
17		provides detailed forecasts of long-term costs in their Projected ICPA Billable Cost
18		Summaries and OVEC management and staff are available to answer specific questions
19		the Companies' employees may have regarding either actual bills or financial
20		projections.
21		Other examples include:
22		• The Companies were fully aware that OVEC management was going to be
23		meeting with rating agencies and were fully informed as to the release of those
24		ratings.

- The Companies saw the "merchant analysis" provided to the OVEC board,
 even though it has no bearing on the long-term planning of vertically integrated
 utilities like the Companies, which have an obligation to serve their customers
 irrespective of forecasts of RTO market prices.
- 5 The Companies are aware of and actively monitoring the FES bankruptcy and OVEC's responses thereto. To date, LG&E and KU believe that OVEC 6 management has engaged well-qualified bankruptcy counsel and has 7 8 reasonably and competently pursued and defended OVEC's interests in the 9 matter, under the applicable facts, circumstances, and law. Where appropriate, 10 LG&E and KU have participated directly in certain proceedings, such as a 11 collateral FERC petition, an amicus curiae bankruptcy brief that was filed in 12 opposition to the Debtors' motion for a preliminary injunction against FERC, 13 and the submission of proofs of claims against FES and FirstEnergy 14 Generation, LLC relating to their rejection of the ICPA.
- The Companies review each and every ICPA bill and make inquiries when
 appropriate. To date, LG&E and KU do not find indications that OVEC is
 improperly billing the Companies since the FES bankruptcy under the
 applicable facts, circumstances, and contract provisions. If the Companies
 detected such actions by OVEC, they would seek to enforce their rights under
 the ICPA.
- Q. Mr. Fisher testifies on page 35, lines 10-11, that, "A 'Merchant Analysis' is a fairly
 standard valuation technique used by vertically-integrated utilities to assess if an
 asset has system value." Do you agree with Mr. Fisher?

A. No. Based on my decades of experience of actually working in the energy industry,
the concept behind Mr. Fisher's "merchant analysis" is something one would see in an
energy trading company, not a vertically-integrated utility. His "merchant analysis" is
essentially a "mark-to-model" valuation of a transaction. Based on my experience,
mark-to-model is of no value to vertically integrated utilities like the Companies.

6

Q.

What do you mean by "mark-to-model?"

7 A. The term "mark-to-model" became somewhat infamous during the Enron era. A 8 trading company, like Enron, must put a market value on its portfolio at the end of each 9 trading day. The market value represents what the portfolio could be liquidated for, 10 which is easy to do for transactions that are traded on exchanges, such as July 2019 11 natural gas at Henry Hub. But transactions like the ICPA are what are known as 12 "structured transactions" in the trading world because they have a number of attributes 13 that do not involve easily tradeable commodity contracts: uncertainty around physical 14 plant operations, a term that extends beyond the time horizon where there is market 15 liquidity, a delivery location that is not liquid, etc. But because structured transactions still must be valued at the end of each trading day even without a liquid market to 16 17 determine their value, the trading company's risk group will develop a model of the 18 transaction and a model of various inputs and outputs of the transaction in order to 19 estimate its value, hence the phrase "mark-to-model."

Q. Based on your experience in the energy marketing industry, how would one go about developing a mark-to-model valuation of the ICPA?

A. The ICPA has a number of aspects that would make for a challenging, yet interesting,
exercise to develop a mark-to-model tool. First, the ICPA runs through 2040 so the

time horizon allows for a wide range of uncertainty around variables such as coal prices, electricity prices, and capacity prices. All of these could be influenced by not just the usual supply and demand factors but also future unknown and unknowable laws and regulations, changes in PJM market design, and rate of technology changes. Because uncertainty associated with these variables will increase over time, one would need to develop ways to model both the probability of events occurring and the interaction impacts of these events.

8 After having dealt with the model inputs, the ICPA model itself is essentially a 9 series of eleven call options, one from each generating unit. These call options have 10 several major aspects to them:

- The hourly "strike" or dispatch cost that also needs to recognize the physical
 operating characteristics such as minimum up and down time, start-up notice,
 minimum loading, and planned and unplanned outages.
- The continuing operation option that would evaluate uncertainty associated
 with routine maintenance costs and uncertainty around future environmental
 regulations and associated compliance costs.
- Timing and funding requirements associated with end of life closure costs.
- As you can see, a good mark-to-model tool would be much more involved than simplya single forecast of the future.
- Q. In your opinion, is the "merchant analysis" a well-developed mark-to-model value
 of the ICPA?

30

A. I have not personally reviewed the details behind the merchant valuation, but based on
 looking at the same charts that Mr. Fisher reviewed, I would say that it would not be a
 very good mark-to-model valuation. The reasons I say that are:

- The charts seem to represent only one particular forecast of the future. A robust mark-to-model valuation would look at a range of possible futures and try to assess the probability of the occurrence of various futures.
 - The charts highlighted by Mr. Fisher clearly represent

4

5

6

7

8

9

The chart seems to assume a certain dispatch of the OVEC fleet whereas a more
 robust mark-to-model valuation would attempt to model the units as 11 call
 options with uncertain strike prices (because future coal prices are not known)
 and a volatility curve about future electricity prices. The merchant analysis is
 more akin to what a trading risk manager would call an "intrinsic" value since
 it appears to just look at a static set of forecasted electricity prices.

I want to stress that I am not being critical of the merchant analysis; rather, I am being
critical of Mr. Fisher's attempt to portray it as something more than it is. The charts
are simply one forecast among many possible futures – nothing more, nothing less.

19 **Q.** Why is a market-to-model of no value to the Companies?

A. A mark-to-model tool or "merchant analysis" is appropriate for a trading company that
 needs to value its portfolio every day. In contrast, vertically integrated utilities like the
 Companies must meet the actual energy needs of customers, which requires actual
 power plants. In other words, real load does not get served by a forecast of future

1 electricity prices or depend on the daily attempt to discern the lifetime financial value 2 a particular generating asset. If that were the case, utility resource planning would 3 consist of a series of price forecasts rather than an evaluation of the physical 4 performance capabilities and economics of alternative generation technologies to serve 5 a load 8760 hours a year. Mr. Fisher's failure to recognize and understand the 6 difference between the accounting and risk management requirements of a trading 7 company and the load serving obligations of a vertically integrated utility is a truly 8 fundamental flaw in his testimony.

9 Q. What is your understanding of Mr. Fisher's Figure 5 and how does that impact 10 your view of the ICPA's economics to the Companies?

11 My understanding is that Mr. Fisher's Figure 5 reflects the cumulative present value A. 12 difference between total OVEC costs per MWh and weighted average market prices in 13 each year from his Figure 4, for the Companies' ownership share of generation 14 assuming a 65% capacity factor. Assuming that Figure 5 precisely predicts the future 15 and is applicable to the Companies (who are not merchant generators but are regulated 16 utilities) it demonstrates that the Companies' losses would be limited to \$60 million 17 with OVEC operating, compared to a potential immediate acceleration of the 18 Companies' approximately \$115 million share of OVEC's debt if OVEC were to be 19 shut down, which Mr. Fisher fails to acknowledge. Stated differently, even if the 20 analysis Mr. Fisher cites were treated as unassailable and perfectly predicted the future, 21 the Companies and their customers would stand to benefit by up to \$55 million by 22 allowing the ICPA to run its course compared to immediately retiring the generating 23 units and paying the Companies' likely pro rata obligations. Yet Mr. Fisher narrowly

interprets these market analyses only as showing potential negative acquisition value
of OVEC and concludes that this indicates the end of OVEC's life. But this would be
an incorrect financial decision even assuming all of these forecasts were to come true;
the correct financial decision would be to continue to operate OVEC as long as
revenues cover variable and stay-open costs because the margin is making a
contribution to cover some of the fixed costs. This is precisely what the data show in
the graphs used by Mr. Fisher to create his Figure 5.

8 Q. How would you characterize Mr. Fisher's conclusions #3, #5, #6, #7, #8, #9, and 9 #10?

10 A. Please see my prior responses regarding the types of information access and 11 governance roles commonly present in closely-held, yet independently operated, 12 entities. Once again Mr. Fisher's testimony is misleading and confusing regarding both 13 OVEC and the Companies' knowledge. Despite Mr. Fisher's assertions, OVEC's 14 management and board, as well as the Companies' management and employees, are 15 perfectly capable of performing the necessary analysis to determine, among other things, whether it makes economic sense in the future to install additional 16 17 environmental controls or retire the generating units. These decisions are a type of 18 financial option, and one should only exercise an option when it is "in the money" and not before. But because Mr. Fisher and the Sierra Club are only interested in one 19 20 outcome – shutting down coal plants in the US – his conclusion is that no further 21 financial analysis is required and the option should be exercised even if it is "out of the 22 money."

23

33

1		Section 5 – Economics of the ICPA for LG&E and KU Customers
2	Q.	Mr. Fisher reaches a number of conclusions (#4, #11, #12, #13) that the Companies
3		are indifferent to how the ICPA impacts their ability to provide reliable, low-cost
4		electric service to customers both day-to-day and over the long term. Do you think
5		his conclusions accurately describe the Companies' attitude and approach to the
6		OVEC assets and the execution of its rights under the ICPA?

TOAT

...

_

7 A. Absolutely not. First, it is insulting to the employees of LG&E and KU that Mr. Fisher 8 would conclude that we don't care about providing reliable, low-cost electric service 9 to our customers. The Companies have a long, well-documented record of doing just 10 that, and I can assure this Commission that our actions regarding OVEC and the ICPA 11 are consistent with that record. Second, I am the vice president who, since 2008, has 12 been responsible for long-term resource planning, real-time dispatch, wholesale market 13 activities, and day-to-day oversight of the ICPA. My team and I have exercised the 14 Companies' rights under the ICPA and have properly and prudently evaluated the ICPA 15 in our long-term planning.

Q. Does Mr. Fisher perform any modeling or reliability studies, or provide actual "evidence" to support his conclusion #13 that OVEC provides no reliability value? A. No. All he does is recalculate the summer peak reserve margin and claim that OVEC, in general, did not perform to his satisfaction during two cold snaps in 2014 and 2015. Q. Is there more to doing a reliability study than just calculating summer peak hour reserve margin?

34

A. Definitely. The Companies describe in detail their methodology for determining the
 target summer reserve margin range in their 2018 IRP Reserve Margin Analysis.⁴¹ The
 results of this analysis showed that the Companies' existing resources, including
 OVEC, are economically optimal for meeting system reliability needs.

5

6

Q.

recent January 2019 Polar Vortex?

How has OVEC performed in recent years during high load events, including the

7 A. OVEC's performance during the Companies' recent peak periods has been very good: 8 in 2016, 2017, and 2018 the Companies received 99%, 93%, and 99% of their share of 9 OVEC during the peak hour of the year, respectively. And most recently in January 10 2019, the Companies received 96% of their share of OVEC during the peak hour, which 11 occurred during the "polar vortex" morning of January 31. Furthermore, if one wants 12 to go back to the winter peak hours in 2014 and 2015 as Mr. Fisher wants to do, the 13 Companies received 85 percent and 60 percent, respectively, of their OVEC share at 14 time of system peak.

Q. How does OVEC's performance during recent high load events compare to that of the Brown solar plant?

A. First, this comparison is not very fair to Brown solar, especially concerning the winter
events, because its output is driven by light intensity, which is often not good at times
of winter peak when it is dark or solar panels can be covered by snow. Second, the
summer peak system load is typically later in the day when the sun is not as high in the
sky. Having said that, since beginning commercial operations in June 2016, Brown
solar has performed at 80 percent, 76 percent, and 94 percent of its capacity during the

⁴¹ The Companies' 2018 IRP Reserve Margin Analysis was attached to Companies' responses to AG 2-14(a) in these proceedings.

summer peak hour of 2016, 2017, and 2018, respectively, while it was at 0 percent and
only 11 percent during the winter peaks of 2016/17 and 2017/18, respectively. More
recently, during the bitterly cold morning of January 31, 2019, when customers'
demand was highest so far this year, Brown solar produced at only 7 percent of its rated
capability.

Q. Conclusions #4, #12, and #13 all essentially accuse the Companies of not properly assessing OVEC in their IRP and other long-term plans. Please explain how the Companies evaluated OVEC as a long-term resource.

9 A. Mr. Fisher's characterization of data contained in Table 9 from the Companies' 2018 10 IRP Reserve Margin Analysis is incorrect. He claims that "the OVEC units are the 11 most expensive unit in their system on a marginal cost basis at \$92/kw-yr (2021\$)."42 12 However, as the table clearly shows, and as the Companies explain, \$92/kW-yr is the 13 stay-open cost for the OVEC units. "When contemplating the retirement of an existing 14 resource, any unrecovered revenue requirements associated with the construction of the 15 unit are considered sunk; the savings from retiring a unit includes only the unit's 16 ongoing fixed operating and maintenance costs. An existing unit's ongoing fixed operating and maintenance costs are its stay-open costs."⁴³ In order to appropriately 17 18 compare unit costs, the stay-open costs and the average energy costs must be summed 19 for each unit, which is shown in the rightmost column of the table. Compared to the 20 sum of stay-open costs and average energy costs for Brown 3 (\$84/MWh), OVEC's 21 cost (\$47/MWh) is much lower. Furthermore, the retirement of the Companies'

⁴² Fisher at 30.

⁴³ Companies' 2018 IRP Reserve Margin Analysis at 8. The Companies' 2018 IRP Reserve Margin Analysis was attached to Companies' responses to AG 2-14(a) in these proceedings.

1 marginal resources (including Brown 3) was evaluated in the Reserve Margin Analysis, 2 in which the Companies determined that "the reliability and generation production cost 3 benefit for each of the Companies' marginal resources clearly exceeds the costs that would be saved by retiring these units."⁴⁴ Because the sum of stay-open costs and 4 5 average energy costs for Brown 3 are greater than for OVEC, it is reasonable to 6 conclude that the reliability and generation production cost benefit for OVEC also 7 exceeds the costs that would be saved by retirement. It is important to note that the 8 evaluation of retiring OVEC is strictly theoretical because any such retirement decision 9 would be effected by OVEC's governance process (not the Companies unilaterally). 10 The Companies' existing participation in the ICPA is binding in accordance with its 11 terms and conditions, and the specific structure and outcomes of an OVEC retirement 12 could vary greatly.

13 Q. Under the ICPA, can the Companies simply stop taking energy from their share 14 of OVEC?

15 A. Yes, we can stop scheduling energy and cease incurring the related energy charges 16 (except minimum loading, as I discuss below), but we would still have to pay our share 17 of the appropriate fixed costs as defined in the ICPA via the demand component. As I 18 stated previously, the Companies have certain pro-rata contractual obligations that 19 generally survive termination of the ICPA absent unusual circumstances (such as the 20 rights of parties to reject contracts in bankruptcy proceedings). Therefore, if the 21 Companies were to simply stop scheduling energy from OVEC that was otherwise 22 economic, meaning lower cost than other resources, then the cost of serving our

⁴⁴ See Case No. 2018-00348, the Companies' Joint Integrated Resource Plan, Volume III 2018 IRP Reserve Margin Analysis at 3.

customers would increase. That makes no sense, so we would not do that. Also, the
 ICPA includes "minimum loading" provisions (set forth in Section 5.05 of the ICPA),
 requiring each Sponsor to either schedule delivery of its portion of OVEC's "total
 minimum generating output" or pay for any increased costs caused by failure to
 schedule and take its minimum output. These costs are assigned directly to the
 responsible Sponsor, rather than spread among all Sponsors.

7 8 0.

What have been the ICPA and FES bankruptcy impacts on the Companies and their customers to date?

9 A. The impacts have varied. As previously indicated, OVEC has incurred slightly higher 10 financing-related costs, such as consulting, interest, and borrowing expenses, due to 11 adverse effects on its credit ratings. OVEC has also incurred certain costs to participate 12 in the bankruptcy proceedings. On the other hand, with FES no longer taking energy, 13 its previous share of energy is now available to be taken by the other sponsors based 14 on their Power Participation Ratio by paying just the energy costs. This means the 15 customers have the ability to get some incremental energy without paying for OVEC's 16 fixed costs that are no longer being paid by FES, but remain subject to further resolution 17 and potential claims recovery or settlement, in part, via the bankruptcy process. The 18 Companies' share of the former FES energy per hour is small, only up to 9 MW, but 19 from September 1, 2018, through January 31, 2019, the Companies have taken an 20 incremental 17,127 MWh to better serve our customers.

Q. What is your opinion of Mr. Fisher and the Sierra Club's claim in their response
 to the Commission Staff that the Companies "paid in excess of between \$9.2
 million and \$20.8 million" for capacity and energy under the ICPA in 2017?⁴⁵

4 A. It is nonsense. As I've explained previously, Mr. Fisher's desire to add fixed and 5 variable costs together and divide by energy to calculate an all-in cost for a generation 6 resource is not very useful and is generally inappropriate for financial analysis. Second, 7 his comparison of an all-in price per MWh to a market price that is based on economy 8 energy is also inappropriate and very poor financial analysis. In fact, their data response states that "market prices in 2017 were \$27.84."⁴⁶ If that price was supposed 9 10 to be indicative of what any utility could use to provide reliable electric service for the 11 year, then I believe the entire eastern US generation fleet might be uneconomic as I'm 12 aware of no generation technology that produces power all-in for just under \$28/MWh 13 every hour of the year and certainly not in a manner that could reliably serve load 8,760 14 hours a year. However, based on this bad reasoning, Mr. Fisher proceeds to do bad 15 math by comparing the \$60.41/MWh all-in cost of OVEC to this economy energy price and multiplies the difference by the volume of energy that the Companies purchased. 16 17 From this arithmetic he concludes that ratepayers paid \$25,860,580 too much, thus 18 inferring that the Companies could have simply defaulted on their ICPA fixed charge 19 contractual obligations at no cost, even assuming the use of his market energy price is 20 appropriate, which it is not. To offset his assertion that ratepayers paid in excess of \$25 million in 2017 under the ICPA, Mr. Fisher credits his calculation with a range of 21

⁴⁶ Ibid.

⁴⁵ Sierra Club Response to Commission Staff Request No. 1, p. 2.

PJM capacity prices.⁴⁷ Even this adjustment is irrelevant as the Companies are not in
 PJM and cannot purchase capacity from its market.

Q. If one wanted to properly evaluate the impact on customers' energy cost of taking power under the ICPA, what would you suggest they do?

- 5 First, as I've explained, the Companies cannot simply walk away from the ICPA, so A. 6 any analysis would have to recognize that the demand charges must be paid. Having 7 done that, one could remove the hourly ICPA energy schedules from the actual hourly 8 dispatch and re-dispatch the system. Since the Companies work very hard to 9 economically dispatch the system at all times, which the Commission reviews every 10 six months as part of the Fuel Adjustment Clause process, this exercise would show 11 that higher cost resources would have to take the place of energy from the ICPA. Thus, 12 customers' energy cost in 2017 would have been higher, not lower as Mr. Fisher asserts.
- 13

14 Section 6 – Conclusion and Recommendations Regarding Mr. Fisher's 15 <u>Testimony</u>

Q. What are your conclusions and recommendations for the Commission regarding
Mr. Fisher's testimony on behalf of the Sierra Club?

A. Mr. Fisher and the Sierra Club are attempting to use these rate cases to further the objectives of their Beyond Coal campaign. But as I noted before, none of Mr. Fisher's recommendations even mention these cases. Therefore, I recommend that the Commission completely disregard his testimony.

Furthermore, even though some aspects of his recommendations are more properly addressed in the Companies' upcoming IRP case, given the ideologically

⁴⁷ Ibid.

1		driven nature of the Sierra Club's Beyond Coal campaign (and its Beyond Gas
2		campaign), ⁴⁸ I question whether they will be able to provide any useful information or
3		insight as it relates to addressing the fundamental purpose of an integrated resource
4		plan – providing reliable, low-cost electricity to meet the future needs of our customers.
5		
6		Section 7 – Load Forecast Issues Raised by Mr. Baron
7	Q.	Do you agree with Mr. Baron's recommendation to update the forecast period
8		billing demand forecasts of the RTS class for both LG&E and KU by using the
9		actual base period values?
10	A.	No. As I stated in my direct testimony in these cases, the Companies have a very
11		thorough load forecasting process that strives to produce a reasonable forecast using
12		the best available information and forecasting tools. Mr. Baron would like to create a
13		new, simplified forecast methodology that sets the future equal to the most recent actual
14		data but only for one particular class - RTS customers. He does not explain why this
15		method is appropriate for the RTS class and no other. One can speculate that his
16		recommended changes are more outcome driven, i.e., using this particular data and
17		method would reduce the Companies' revenue requirement deficiencies, than they are
18		based on the utilization of a better load forecasting methodology. One part of any load
19		forecast process involves reflecting the most recent information; if the Companies were
20		to update all of their models with more recent data (which the Companies do every
21		year), the forecasts of all of the classes would change to some degree - some higher

 (archived_at https://web.archive.org/web/20190208195659/https://content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/creative-archive/sites/content.sierraclub.org/sevents/s

and some lower. That is the nature of the load forecasting process. But it would be
 inconsistent at best to cherry pick particular data that might benefit Mr. Baron's clients
 (large industrial customers) and suggest that the load forecast should be modified solely
 for that class.

5

6

7

Q. Do you agree with Mr. Baron's statement that the LG&E and KU RTS forecasts imply "a significant decline in economic activity for large manufacturing customers in the KU and LG&E service areas"?⁴⁹

8 No. Forecasting billed demand in the short-term is not as straightforward as Mr. Baron A. 9 suggests. Because billing demand is subject to a 12-month ratchet, one cannot simply 10 assume that changes in billing demand from year-to-year are driven solely by changes 11 in the economic fortunes of specific customers. Also, not all RTS customers are 12 manufacturers. For example, as I pointed out in my direct testimony on page 18, lines 13 5-11, the decline in LG&E RTS Base demand in the forecasted test period was 14 impacted by a seasonal weather event that caused a large increase in actual demand in 15 February 2018. As shown in Figure 1, base demands for LG&E RTS are consistent with the forecast as the 100% ratchet from February 2018 demand was appropriately 16 17 forecasted to roll off in early 2019, prior to the start of the forecasted test period. Figure 18 1 also shows that removing this temporary ratchet impact from the forecast brings the 19 billing demands in the forecasted test period in line with the historical data in the pre-20 ratchet time frame. Mr. Baron's simple use of the actual billing demand to forecast the 21 future ignores this impact.

⁴⁹ Baron at 34.

Sierra Club's Beyond Coal Campaign:

Coal is an outdated, backward, and dirty 19th-century technology.

Not only is coal burning responsible for one third of US carbon emissions—the main contributor to climate disruption—but it is also making us sick, leading to as many as 13,000 premature deaths every year and more than \$100 billion in annual health costs. The Beyond Coal campaign's main objective is to replace dirty coal with clean energy by mobilizing grassroots activists in local communities to advocate for the retirement of old and outdated coal plants and to prevent new coal plants from being built.

BEYOND COAL CAMPAIGN GOALS

- We're trying to close all the coal plants in the US. Our movement has led more than half of the coal plants to retired or commit to retire.
- We're working to replace the majority of retired coal plants with clean energy solutions such as wind, solar, and geothermal.
- We're also working to keep coal in the ground in places like Appalachia and Wyoming's Powder River Basin.

Q.

Please state your name, position and business address.

A. My name is John K. Wolfe. I am Vice President of Electric Distribution Operations
for Kentucky Utilities Company ("KU") and Louisville Gas and Electric Company
("LG&E) (collectively, the "Companies"), and an employee of LG&E and KU
Services Company, which provides services to KU and LG&E. My business address
is 220 West Main Street, Louisville, Kentucky.

7 Q. Please describe your educational and professional background.

A. A statement of my professional history and education is attached to this testimony as
Appendix A.

10 Q. Have you previously testified before the Commission?

11 A. Yes. I testified in the Companies' last rate case proceedings in Cases No. 2016-12 00370¹ and No. 2016-00371² and in Case No. 2018-00304,³ which involved the 13 Companies' application to establish a regulatory asset for extraordinary storm 14 damages.

15 Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to address the issues raised in Joseph H.
Crone's testimony. I will explain why the Company's proposed revisions to its Rate
Pole and Structure Attachments ("Rate PSA") are necessary to protect and ensure
public and line worker safety, safeguard the Company's electric distribution facilities,

¹ Electronic Application of Kentucky Utilities Company For An Adjustment Of Its Electric Rates And For Certificates Of Public Convenience And Necessity, Case No. 2016-00370 (Ky. PSC filed Nov. 23, 2016).

² Electronic Application of Louisville Gas and Electric Company For An Adjustment of Its Electric And Gas Rates and For Certificates of Public Convenience and Necessity, Case No. 2016-00371 (Ky. PSC filed Nov. 23, 2016).

³ Electronic Joint Application of Kentucky Utilities Company and Louisville Gas and Electric Company For An Order Approving The Establishment of Regulatory Liabilities and Regulatory Assets, Case No. 2018-00304 (Ky. PSC filed Sep. 12, 2018).

1		maintain reliable and safe electric service for the public, and shield the Company's
2		electric service ratepayers from bearing costs related to attachment customer service.
3	Q.	What issues does Mr. Crone raise in his testimony?
4	A.	Mr. Crone takes exception to the proposed Rate PSA provisions dealing with (1)
5		make-ready and maintenance requirements; (2) unauthorized attachments; (3) service
6		drop attachments; and (4) attachment audits.
7		Make-Ready and Maintenance Requirements
8	Q.	Let's begin with the proposed revisions to Rate PSA's requirements for make-
9		ready and maintenance requirements. What is make-ready work?
10	A.	Make-ready work is work necessary to modify existing Company facilities to make
11		the pole capable to accommodate a proposed attachment without jeopardizing public
12		and line worker safety or electric system integrity. For example, transformers, neutral
13		and secondary conductors, or street lights on a Company pole may need to be
14		repositioned before an attachment customer's facility can be attached.
15	Q.	What does the current Rate PSA provide for make-ready work?
16	A.	Upon receiving a completed application for an attachment to a Company structure,
17		the Company must complete a make-ready survey within 60 days. Upon completing
18		the make-ready survey, the Company must notify the attachment customer in writing
19		of its decision on the application, identify all necessary changes to the attachment
20		customer's proposed construction drawings, and state all conditions imposed on the
21		installation or use of attachment. Within 15 days of notifying the attachment
22		customer of the approval of its application, the Company must provide the attachment
23		customer a written statement of the costs of any necessary Company make-ready
24		work. The attachment customer must submit its payment within 15 days of receipt.

The Company then has 60 days to perform the make-ready work. If the Company fails to perform the make-ready work within that time, the attachment customer may perform that work at its expense using an approved contractor. The attachment customer must notify the Company upon completing the make-ready work. The Company may inspect such work prior to the construction of attachments and assess the cost of the inspection to the attachment customer.

7

8

0.

What is the Company's proposed revision to Rate PSA regarding make-ready work?

A. The revised Rate PSA requires that, prior to commencing make-ready work when the
Company has failed to perform such work within 60 days, an attachment customer
must notify the Company one week prior to the start of make-ready work and must
have a Company-designated inspector accompany the approved contractor
performing the make-ready work. It further requires the attachment customer to
reimburse the Company for the cost of the inspector.

Q. Why is the Company proposing that an inspector accompany an approved contractor performing make-ready work?

A. The presence of an inspector benefits all parties, including the attachment customer. The onsite inspector is focused on protecting the public safety, assuring that the interests of electric customers and property owners are considered, and ensuring service reliability. Furthermore, the constant presence of a Company inspector on site enables the attachment customer's contractor to make real-time construction adjustments that reduce construction work time when field conditions that were

1

2

unknown at the time of the application or that occurred after the application was reviewed would have otherwise brought work to a grinding halt.

To understand the need for an inspector, one must first understand the nature 3 of make-ready work. This work is performed on the Company's energized lines and 4 results in alterations and adjustments to facilities essential to the provision of electric 5 6 service. For example, electric transformers, neutral and secondary conductors, or street lights may need to be moved or raised to accommodate the attachment 7 customer's equipment. Performing this work incorrectly or in a substandard manner 8 9 places line workers and the public at serious risk, as well as increasing the likelihood of damage to the Company's distribution facilities and disruption of electric service. 10

Inspectors serve as the Company's on-site representative. They have the 11 responsibility to ensure that the contractor performs make-ready work in compliance 12 with all applicable standards. They also are the intermediaries between the contractor 13 and the Company's Distribution Control Center. They provide the contractor with 14 current and essential information regarding the distribution system. Frequently, 15 service outages must be scheduled to permit the performance of make-ready work on 16 17 the Company's facilities. Inspectors maintain constant communication with the Company's Distribution Control Center and the contractors to secure work clearances 18 and cautions on Company equipment, and coordinate any required service outages to 19 20 enable the contractor's work and minimize inconvenience to electric service customers from such outages. 21

Inspectors also have a greater knowledge of the Company's facilities and are more familiar with unique aspects of the Company's facilities. As a result, they are

more likely to spot possible problems and better equipped to assist the contractor in
 troubleshooting those problems.

Finally inspectors are the Company's eyes and ears at worksite. They provide the Company with immediate notice of any changes in at the worksite conditions that may have occurred since the Company approved the attachment customer's makeready design. This is significant since, if an attachment customer is performing the make-ready work, as many as 90 days may elapse from the time the Company approves the make-ready plans and the start of any construction.

9 10 **O**.

the make-ready work, why are inspectors needed?

If an attachment customer is using a Company-approved contractor to perform

A. A Company-approved contractor is a contractor who meets the Company's qualifications, holds the appropriate licenses, has a good safety record, understands the Company's operating procedures, and meets minimum financial requirements. The contractor's principal duty lies with the attachment customer. Its principal objective is the completion of make-ready work in a prompt manner. The contractor is not an agent of the Company nor does it represent the interests of the Company or the Company's electric service customers.

In contrast, Company inspectors place the interests of the Company's customers first. They are present to prevent unnecessary service disruptions, liaison with customers as needed, ensure that contractors do not compromise worker or public safety, enforce the Company's construction standards, and help prevent unforeseen circumstances causing delays in the attachment customer's project.

1		The use of onsite Company inspectors when contractors perform work on the
2		Company's facilities is not a new practice. It is very common and a long-standing
3		practice for the Company to have inspectors onsite accompanying contractors who
4		perform work for the Company.
5		This practice is also a feature of high-volume pole attachment plans that the
6		Commission has approved. For example, KU has a high-volume pole attachment
7		plan with Metro Fibernet LLC that requires presence of a KU-inspector onsite whose
8		cost is borne by the attachment customer and who may direct that work be performed
9		in a manner that differs from that set forth in the approved-application. ⁴ In a separate
10		proceeding before the Public Service Commission, a Metro Fibernet, LLC official
11		testified about KU's process and its ability to effectively meet the attachment
12		customer's needs. He voiced no objections to the use of an onsite inspector. ⁵
13	Q.	In your opinion will requiring inspectors to accompany contractors delay the
14		installation of attachments?
15	A.	No. KU's experience with high volume pole applications suggests that the use of an
16		onsite inspector will not delay installations. Moreover, the proposed revision
17		requiring the attachment customer to provide one week's advance notice prior to the
18		start of make-ready work is similar to the requirements that the Federal
19		Communications Commission ("FCC") imposes. Recently adopted FCC rules require

20

21

the attachment customer to provide five days advance notice before the start of "self-

help" make-ready work.

⁴ Special Contract Filing Between Kentucky Utilities Company/Metro Fibernet LLC, TFS 2018-00027 (Ky. PSC filed Jan. 18, 2018).

⁵ Direct Testimony of John Greenbank at 16-18 (filed Sep. 5, 2018 in *CMN-RUS, Inc. v. Windstream Kentucky East, LLC*, Case No. 2018-00157 (Ky. PSC May 15, 2018)). *See also* Rebuttal Testimony of John Greenbank at 3-4 (filed Oct. 12, 2018 in Case No. 2018-00157).

As to Mr. Crone's concerns regarding a lack of inspectors, the Company has not previously experienced any shortage of inspectors and has the flexibility to quickly expand its staff to meet any reasonable changes in the need for inspectors.

Q. In his testimony, Mr. Crone states that allowing a Company inspector discretion
to direct that work be performed in a manner different than that approved in
the application for attachment is "a recipe for mischief, conflict, delay and
increased costs." Do you agree with that statement?

A. No. There is no basis for this assertion. Allowing a Company inspector discretion to
direct deviations from approved make-ready plans is reasonable, likely results in
lower costs, and benefits the attachment customer by avoiding delays in construction
due to unforeseen circumstances.

12 Mr. Crone implicitly assumes that the work site conditions are static and do not change from the time the make-ready application is reviewed and the attachment 13 customer begins performing make-ready work. That assumption is not accurate. As 14 many as 150 days may elapse between the completion of the field review for the 15 proposed attachments and the commencement of work by the attachment customer's 16 17 contractor. At least 90 days will elapse between when the Company approves the make-ready designs and when the attachment customer may to perform the make-18 ready work. During that time natural events, such as severe storms, or human actors 19 20 such as other attachment customers, may alter conditions at the work site and require design changes. These changes are likely not to be detected until the contractor 21 begins the make-ready work. Having the inspector onsite allows the Company to 22 23 immediately assess changing conditions and direct appropriate changes.

1 The Company's experience does not support Mr. Crone's assertion that every change directed by an inspector creates delay and increases cost. The inspector's 2 mission is to ensure safety and good construction practices, not to impede make-ready 3 work. If an inspector finds a design change will assist or improve the construction 4 and not adversely affect safety or service reliability, he or she can suggest such 5 6 change to the contractor and approve it on the spot – thus avoiding any delay in the attachment customer's project. Moreover, a correction made during the construction 7 process is likely to be less costly and less disruptive than a change ordered after the 8 9 construction is completed and a post-inspection is conducted. Rate PSA currently permits such post-construction inspections and permits the Company to direct post-10 construction changes. Mr. Crone's testimony ignores this point. 11

Inspector-directed changes will not create "a scenario ripe for abuse that could lead to allegations of unauthorized attachments or safety violations down the road" as Mr. Crone asserts. Inspector changes will be noted on as-built drawings and the Company's GIS mapping records, thus ensuring an accurate and complete record of any inspector-directed change.

Mr. Crone's suggestion that havoc and disarray will occur as a result of disputes between attachment customer contractors and the Company's inspectors is unsubstantiated. First, discussions between contractors and inspectors regarding changes to work plans are common within the industry. Both sides generally attempt to discuss and resolve issues at the work site. If, after such discussions, the attachment customer believes the inspector-directed change is inappropriate, it may appeal that the inspector's decision to Company officials.

It is not unusual or extraordinary to invest the Company's inspector with the 1 authority to direct changes. It is best practice. FCC rules regarding an attachment 2 customer's right to self-help for make-ready work permit the representative of the 3 electric utility to make final determinations on such matters, provided the decision are 4 made on a non-discriminatory basis.⁶ In a recent a decision, the FCC defended its 5 rule, finding that the costs of the rule are "justified given its important role in 6 promoting safe and reliable work and in establishing clear lines of authority for 7 fieldwork at which multiple parties are present."⁷ 8

9

10

O. In your opinion, what effect will the proposed revisions to Rate PSA concerning make-ready work have on Charter Communications operations?

None. To my knowledge, the Company has been able to perform make-ready work 11 A. required for Charter Communications in a timely manner. I am aware of only 5 12 instances in 2018 which LG&E failed to perform make-ready work for Charter 13 Communications within 60 days.⁸ On those occasions, the Company completed the 14 make-ready; Charter Communications did not perform any make-ready work on the 15 Company's facilities due to the Company's inability to meet the deadline. In fact, the 16 Company is not aware of any instance where an attachment customer has used a 17 Company-approved contractor to complete necessary make ready work due to the 18 Company's inability to meet the 60-day timeline. Moreover, I do not currently 19

⁴⁷ CFR § 1.1412(d) ("The consulting representative of an electric utility may make final determinations, on a nondiscriminatory basis, where there is insufficient capacity and for reasons of safety, reliability, and generally applicable engineering purposes."

Accelerating Wireline Broadband Deployment by Removing Barriers to Infrastructure Investment, WC Docket No. 17-84 (Aug. 3, 2018) at 27.

Information regarding attachment customer self-help make-ready work is not currently available for KU. In its response to Commission Staff's Request for Information, Charter Communications refers only to instances in which LG&E failed to meet the 60-day standard. See Charter Communications Operating LLC's Response to Commission Staff's Initial Requests for Information, Item 2 (filed Feb. 14, 2019).

foresee any instance under normal circumstances in which Charter Communications would need to do so. However, if at any time Charter Communications or any other attachment customer elects to perform its own make-ready work, the proposed revisions to Rate PSA will increase the probability that the work will be performed safely and without adversely affecting the reliability of electric service provided to the Company's customers, and with less disruption to the attachment project.

7

Unauthorized Attachments

8 Q. Why is the Company proposing a monetary penalty for unauthorized 9 attachments to its structures?

A. The current Rate PSA provides no monetary penalty for an attachment customer's 10 failure to report attachments and obtain authorization to make attachments. At 11 present the only remedy for such practices is the removal of unauthorized 12 13 attachments. This remedy is impractical. Removal of attachments effectively penalizes the innocent users of the attachment customer's service, most of whom are 14 also the Company's customers, by depriving those users of that service. It destroys 15 16 any goodwill towards the Company as these users are likely to view the Company's actions, rather than the attachment customer's unscrupulous conduct, as the cause for 17 their loss of service. Taking no action, however, places the Companies in precarious 18 19 position as KRS 278.160 imposes a duty on the Company to take reasonable measures to ensure that rates on file with the Public Service Commission are properly 20 billed and collected. 21

The lack of any monetary penalty encourages attachment customers to game the process, to avoid applying for approval to make attachments, and to underreport actual attachments. If unauthorized attachments are discovered, an attachment

customer is currently required to pay two years of attachment fees for the unbilled service. Since the Company conduct audits only once every five years, an attachment customer can potentially avoid payment of some attachment fees even if the unauthorized attachment is discovered. The proposed penalty of \$25 for each unauthorized attachment is intended to eliminate this incentive to game the process.

6

7

Q.

Do you agree with Mr. Crone's assertion that the proposed penalty for unauthorized attachments is excessive and unreasonable?

A. No. The proposed penalty, which is less than 3.5 times the annual attachment fee of
\$7.25, is intended to discourage unauthorized attachments without being excessive. It
is smaller than those assessed in other jurisdictions.

The Oregon Public Utilities Commission, for example, permits pole owners to 11 assess a fee no greater than five times the current annual rental fee per pole if the 12 unauthorized attachment is reported by the attachment owner to the pole owner and is 13 accompanied by a permit application or is discovered through a joint inspection 14 between the pole owner and attachment owner and accompanied by a permit 15 application. If the pole owner discovers an unauthorized attachment during an 16 inspection in which the attachment owner declined to participate, a penalty of \$100 17 per pole plus five times the current annual rental fee per pole is permissible.⁹ The 18 Federal Communications Commission has reviewed the Oregon PUC's approach and 19 20 found its use in pole attachment agreements subject to the FCC's jurisdiction was reasonable.¹⁰ 21

⁹ Or. Admin. R. 860-028-0140 (2019).

¹⁰ See *Implementation of Section 224 of the Act: A National Broadband Plan for Our Future*, Docket No. 07-245, GN Docket No. 09-51, Report and Order and Order on Reconsideration, 26 FCC Rcd 5240 (2011) ("we

1		Prior to its adoption of the Oregon Model in 2011, the FCC employed for
2		eleven years a standard that permitted pole owners to assess penalties for
3		unauthorized attachments that did not exceed five times the annual attachment fee. In
4		2010, Charter Communications submitted comments to the FCC in support of
5		continued use of the five years annual fee standard for penalties. ¹¹ In light of Charter
6		Communications support for that standard, its position that a lesser penalty that is
7		excessive is difficult to understand.
8		
9	Q.	Describe the Company's methodology for identifying unauthorized attachments.
10	А.	The methodology for identifying unauthorized attachments is set forth in Term and
11		Condition 14 of the Rate PSA. It provides:
12		Upon thirty (30) days' prior notice to Attachment Customer,
13		Company may conduct an audit of its Structures to verify the
14		number, location and type of Attachment Customer's
15		Attachments. Company shall make available to Attachment
16		Customer the report of such audit. Such report shall indicate
17		Attachment Customer If the audit reveals that the number
19		of Attachments exceeds the number of Attachments shown
20		in Company's existing records, the excess number of
21		Attachments shall be presumed to be Unauthorized
22		Attachments [emphasis added].
23		Simply put, the results of the audit will be compared to the Company's billing
24		records. If the number of attachments identified as belonging to an attachment
25		customer exceeds the number in the Company's billing records, the excess
26		attachments will be presumed to be unauthorized.

would expect to find reasonable any unauthorized attachment provisions contained in agreements that do not exceed Oregon penalties").

¹¹ *Implementation of Section 224 of the Act: A National Broadband Plan for Our Future*, Docket No. 07-245, GN Docket No. 09-51, Comments of Charter Communications, Inc. at 26-27 (Aug. 16, 2010).

1 The presumption that the difference between audit results and the Company's records represents unauthorized attachments was agreed to by all parties in the 2 Company's last rate proceeding. The parties included the Kentucky Cable 3 Telecommunications Association ("KCTA"), of which Charter Communications is 4 the largest member.¹² KCTA stipulated that the current Rate PSA "was fair, just, and 5 reasonable" and would ensure "fair and uniform treatment of Attachments 6 Customers." Mr. Crone fails to identify the intervening event that rendered this term 7 of the existing Rate PSA unfair and unreasonable. 8

9 The presumption presently part of Term and Condition 14 recognizes the Company's limited control over attachment customers. Attachment customers can 10 easily place attachments on to the Company's structures without the Company's 11 authorization or notice. The Company does not have continuous surveillance on its 12 poles and facilities to monitor attachments. Rate PSA, furthermore, allows the 13 placement of some attachments without prior application or notice to the Company 14 and relies upon the post-attachment reports to the Company regarding their 15 placement. 16

The presumption also recognizes that the attachment customer has a far greater interest in ascertaining and documenting the location of its assets than the Companies. The attachments are a major asset of the attachment customer's business. Like any business owner, it has a strong business incentive to maintain and safeguard its property. A key facet of safeguarding one's property is to know its location.

¹² In his testimony, Mr. Crone states that Charter Communications has 96 percent of all cable pole attachments within LG&E and KU's service areas. Direct Testimony of Joseph H. Crone, III at 2.

1 This interest also includes maintaining records of attachment approvals and post-attachment reporting. An attachment customer has no right to attach its facilities 2 to the Companies' structures without the Companies' approval. Good business 3 practice and common sense dictate that as the attachment customer is placing its own 4 property on structures belonging to an unrelated entity must protect its assets and 5 6 business operations by maintaining documentary proof that such permission had been granted and the attachment have legal right to be located on the Companies' 7 structures. 8

9 While Term and Condition 14 creates a presumption that the difference 10 between the number of attachments found during an audit and those listed in the 11 Companies' record represent unauthorized attachments, this presumption is 12 rebuttable. An attachment customer will be provided adequate opportunity to 13 question the results of an audit and to present evidence regarding its attachments that 14 would require adjustments to the audit results.

Q. What protections will attachment customers have against incorrect or
 inaccurate attachment counts?

A. First, the Company will provide all attachment customers notice of the proposed audits and will allow attachment customers the opportunity to accompany the audit teams and observe them as they perform the audit. Throughout the audit, each attachment customer will be provided a detailed report of the audit's progress and findings, including the location of each audited attachment attributed to the attachment customer and GIS files that identify the location of the attachment

customer's attachments. At the conclusion of the audit, each attachment customer
 will be provided a final report and GIS files.

After the attachment customer has reviewed the results, it will have the opportunity to meet the Company's representatives and identify any errors or inaccuracies and provide supporting evidence. The Company will consider this evidence and make appropriate adjustments. If an attachment customer is not satisfied with these adjustments, it may file a complaint with the Public Service Commission to contest the audit's results.

9 Q. What is your response to Mr. Crone's assertion that the revised Rate PSA has no
 10 mechanism or process for an attachment customer to verify the assessment of
 11 unauthorized attachments?

12 A. The Company is not proposing any change to the existing methodology for 13 determining unauthorized attachments. This methodology was established in the 14 Company's last rate case proceeding and was agreed to KCTA. This methodology 15 does not require the Company to identify a specific attachment as authorized or 16 unauthorized.

I have in response to a prior question described the process that will be followed to permit attachment customers to challenge the audit results. Each attachment customer will have the opportunity to demonstrate the number of attachments that have been authorized to be placed on the Company's structures. Each will be provided with the audit results, including the Company's detailed accounting of each attachment, including the location and number of each pole to which an attachment has been made. An attachment customer can compare this

information to its own records and challenge the audit's findings regarding the total
 number of unauthorized attachments.

If an attachment customer is unsatisfied with the Company's action regarding tis challenge to the audit results, KRS 278.260 and the Commission's Rules of Procedure provide a means to challenge the results before the Public Service Commission.

7

8 Q. Has the Company initiated an audit of the attachments to its structures?

9 A. Yes. The Company advised all affected attachment customers of the audit in October
2018, or 30 days prior to moving into the attachment customer's territory, and
provided each attachment customer the opportunity to participate in the audit as an
observer. Despite Mr. Crone's assertion that unauthorized attachments "typically
result from inaccurate and faulty audits,"¹³ Charter Communications declined to
participate as an observer.

15

Allocation of Audit Costs

- Q. Describe the proposed revision to Term and Condition 14 of Rate PSA as it
 relates to audit costs.
- A. The Company has proposed to revise Term and Condition 14 to allow the direct assessment of attachment customers for the cost of any audit performed to verify the number, location and type of an attachment customer's attachments.
- 21 Q. How would the cost of an audit be allocated under this proposal?

¹³ Direct Testimony of Joseph H. Crone, III at 7 (filed .Jan. 16, 2019).

A. Under the proposed revision, each attachment customer is assessed a portion of an audit's cost based on its number of attachments. For example, if the total cost of an audit of the Company's structures cost \$5,000, and the audit finds that Attachment Customer A has 500 attachments, Attachment Customer B has 500 attachments, and Attachment Customer C has 1,000 attachments, then Attachment Customer A is assessed \$1,250, Attachment Customer B is assessed \$1,250, and Attachment Customer C is assessed \$2,500.

8 Q. Why should an attachment customer be directly assessed the cost of such audits?

9 A. Requiring attachment customers to assume the cost of an audit is consistent with longstanding ratemaking practices. An audit is the functional equivalent of meter 10 reading. It measures the attachment customer's use of the Company facilities much in 11 the same way that an electric meter measures a customer's use of the Company's 12 electricity. The costs related to meters and meter reading personnel and equipment 13 have long been included in the rates for electric service. The audit benefits customers 14 by ensuring that every attachment customer is paying only for the number of 15 attachments it has made, and that no Attachment Customer is receiving unlawful 16 favorable treatment by paying for less than the actual number of Attachments made to 17 the Company's poles and structures. 18

Q. Do you agree with Mr. Crone's position that an attachment customer should
 only pay for the portion of the audit that directly concerns and benefits it?

A. I agree with it in principle. The attachment customer should be directly assessed only for the cost of audits whose purpose is to verify the ownership, number, location and type of attachments on the Company's structures. If the audit serves additional

purposes, then the costs associated with those other purposes should not be included in a cost assessment. For example, one of the purposes of the audit that the Company began in October 2018 is to verify pole ownership. The portion of costs related to this purpose would not be recovered through a direct assessment of any attachment customer.

6 The audits that the Company plans to perform in the future are limited in 7 scope to enabling the Company to bill attachment customers for their use of the 8 Company's structures.¹⁴ Information from these audits will generally consist only of 9 the number, location and type of an attachment customer's attachments. These 10 planned audits will not be used to conduct required maintenance and safety 11 inspections of the Company's facilities. The Company already has separate and 12 distinct programs and processes in place that perform these functions.

I do not agree with Mr. Crone's assertion that a portion of the audit expenses should be attributed to the Company because these audits gather "revenue collection information." His statement is analogous to asserting that an electric or gas or water utility should bear a portion of the wages for meter readers and the cost associated with metering equipment because those employees and that equipment are used to bill customers for service. As I noted earlier, obtaining accurate usage information to

¹⁴ The Company's pole audit currently underway was competitively bid and priced such that the two components of the audit—verification of pole ownership and counting of attachments—can be fairly apportioned if the Commission approves the proposed revisions to Rate PSA to permit the direct assessment of the pro-rata costs of the audit to the Company's attachment customers. The Company will not seek reimbursement from its attachment customers for the portion of any audit related to pole ownership verification. If the Company collects additional data not related to attachment customers during a future audit, the audit will be priced so that the expenses for that additional data can be excluded prior to determining an attachment customer's pro rata share.

ensure accurate customer billing is a critical component of providing utility service
 and benefits the customer by ensuing accurate bills.

Moreover, the Company is only performing these audits because attachment customers have attached facilities to Company structures. There would be no need for the audits if there were no attachments. The purpose of this revision to Rate PSA is simply to ensure that the cost causer pays the costs that it causes, which is consistent with long standing ratemaking principles.

Surcharge on Repairs and Adjustments to Non-Compliant Attachments

8

9 Q. Describe the Company's proposed revisions to Term and Condition 8j of Rate
10 PSA.

- A. The Company proposes to revise Term and Condition 8j of the existing Rate PSA to 11 12 allow for assessment of a 50 percent surcharge on the cost of repairs the Company performs to correct attachments that fail to meet the Company's electric design and 13 construction standards and applicable requirements of the National Electric Safety 14 Code and all other applicable codes and laws. This provision applies only when an 15 16 attachment customer fails to repair a non-compliant attachment within 30 days after receiving written notice of the non-compliant standard from the Company. In other 17 words, the attachment customer always has the opportunity to avoid the surcharge by 18 19 first ensuring its facilities are built and maintained in accordance with applicable standards, and then by repairing its facilities within 30 days after receiving notice of 20 21 non-compliant conditions from the Company.
- 22 Q. Why is the Company proposing these revisions?

A. The Company hopes to encourage attachment customers to adopt responsible
 maintenance practices and to promptly repair non-compliant attachments rather than
 delay or defer to the Company to perform repairs.

Rate PSA currently requires an attachment customer to correct or repair non-4 compliant attachments within 30 days after receiving written notice from the 5 6 Company of the existence of the attachment. If the attachment customer fails to perform corrective measures within that time period, then the Company can 7 intervene, perform the necessary repairs to return the attachment to compliance with 8 9 applicable standards, and assess the attachment customer the cost of repair work. Currently attachment customers have no economic incentive to timely correct non-10 compliant attachments. The current Rate PSA imposes no penalty for failing to 11 correct non-compliant attachments. As a result, attachment customers simply allow 12 the non-compliant condition to continue until the Company intervenes. The proposed 13 surcharge would make reliance on the Company less economically attractive to 14 attachment customers and create an incentive for the attachment customer to 15 undertake corrective actions before the Company intervenes. 16

I7 Q. How do you respond to Mr. Crone's assertion that the proposed surcharge is unreasonable?

A. Mr. Crone asserts that the surcharge is unreasonable based on his contentions that no
 evidence supports the use of 50 percent as an appropriate incentive and because the
 Company has not established a process "to determine who caused any given out of
 specification condition, and thus who should properly bear the cost."

As to the reasonableness of the surcharge amount, it is clear that the amount must be of sufficient magnitude to encourage attachment customers to act. Where significant corrective repairs are required, the 50 percent surcharge will encourage attachment customers to act promptly and to perform the repairs or retain outside contractors to perform them. In this regard, its magnitude is consistent with achieving its stated goal. Again, it is important to note that an attachment customer has two opportunities to act before the surcharge would apply.

I disagree with Mr. Crone's assertion that as a condition to repairing a non-8 9 compliant attachment, a process must be established to determine who caused the non-compliant condition. The proposed surcharge is based upon the sound operating 10 position that an attachment customer has a duty to keep its facilities in good repair 11 and compliant with all applicable codes at all times and is not excused from this duty 12 by the actions of a third party. If its attachment represents a risk to public or worker 13 safety or to the reliability of the public's electric service because it is not in good 14 repair, the attachment customer should meet its responsibility to correct the 15 deficiencies and not foist its responsibilities off onto others. 16

17

Untagged Attachments

18 Q. Describe the Company's proposed revision to Term and Condition 8c.

A. The Company proposes to revise Term and Condition 8c to allow the assessment of any expenses that it actually incurs to identify the owner of an untagged attachment when it is required to relocate or remove that attachment or otherwise contact the attachment's owner to effect repairs and cannot readily identify the owner because the attachment is not clearly identified or tagged.

1 The Company further proposes that in those cases in which the untagged 2 attachment must be removed, relocated, or altered and the owner cannot be 3 immediately identified, the owner of the untagged attachment will be deemed to have 4 received notice of the Company's intent to remove, relocate or alter the attachment 5 upon the Company's inspection of the attachment and determination that it is 6 untagged.

7

8

Q. Why is the Company proposing to assess the attachment owner for the costs incurred to locate the attachment owner?

A. To understand the reason for this proposal, some background is required. Term and
Condition 8c of Rate PSA currently requires that all attachments be tagged. It,
however, exempts from this requirement any attachments in place prior to July 1,
2017, the date on which Rate PSA became effective. Rate PSA requires the owners
of these exempted attachments to tag those attachments as they perform work on
them.

Term and Condition 8c represents a compromise reached in the Company's last rate proceeding. In that proceeding, the Company proposed that all attachments be tagged within six months of the effective date of the proposed Rate PSA. KCTA, of which Charter Communications is the largest member, opposed any requirement for a specific date on which all attachments must be tagged. The parties ultimately agreed to require attachment owners to tag their pre-existing attachments as they perform work on those attachments, including regular maintenance and inspections.

The proposed revision to Term and Condition 8c carries forward the compromise from the last rate case proceedings. An attachment owner remains free

of a specific deadline by which it must locate and tag all attachments. However, to the extent that the Company incurs costs to identify an untagged attachment's owner when the untagged attachment must be repaired or relocated and the Company must contact that owner, the proposed revision places the costs directly resulting from the lack of tag upon the party that cause the cost rather than upon electric service customers or other attachment customers.

Attachment customers that have been diligent in tagging their facilities have 7 no reason to fear the proposed revision. Charter Communications, for example, 8 9 reports that it has tagged its fiber facilities since 1994, routinely inspects its facilities for the absence of tags and, when untagged facilities are found, tags the facility as 10 part of its maintenance work.¹⁵ Charter Communications, however, is not the only 11 entity attaching its facilities to the Company's structures. There are currently 96 12 entities that attach their facilities to KU's structures; there are 20 entities that attached 13 their facilities to LG&E's structures. Not all of these entities engage in the same 14 practices as Charter Communications. 15

Q. Why does the Company propose to deem the notice period as being to run at the time of the discovery of the untagged attachment?

A. Term and Condition 16b provides: "Upon forty-five (45) days prior written notice
 delivered to Attachment Customer, Company may replace, relocate, or remove any
 Structure and cause the alteration, relocation or removal of any Attachment,

¹⁵ Charter Communications Operating LLC's Response to Data Requests of Kentucky Utilities Company and Louisville Gas and Electric Company, Item 5 (filed Feb. 14, 2019). Charter Communications has acknowledged that it does not routinely tag its coaxial cable plant. ("Charter does not always tag its coaxial cable plant and other facilities because these facilities are distinctive and unique to Charter and other communications attachers recognize them as Charter's facilities without tags.")

consistent with normal operating, maintenance and development procedures and
 prudent utility practices."

Under normal circumstances, the Company can locate the owner of a tagged attachment in a relatively short period of time after determining the need for the replacement, removal, relocation or other action. As result, the Company can generally proceed with the proposed action within 45 days. In many cases, the proposed action affects the rights and operations of other attachment customers.

In the case of untagged attachments whose owners cannot be easily identified, 8 9 the proposed action may be delayed a significant period if the 45-day notice period does not begin to run until after the untagged attachment's owner is located. This 10 delay may significantly affect the Company's operations and those of other 11 attachment customers. The Company proposes to mitigate this delay by allowing the 12 notice period to begin at same time it would generally begin for the owner of a tagged 13 and readily identifiable attachment. Neither the Company nor other attachment 14 customers should suffer inconvenience or delay solely as result of another attachment 15 customer's failure to tag its attachment. 16

Q. In his testimony, Mr. Crone argues that the proposed revisions are
unreasonable, and the Company should instead establish a process to identify
the cause of the untagged attachment and require the appropriate party to bear
the costs and responsibility to correct the situation. What is your response?

A. I disagree. The reason that an attachment lacks a tag is of little concern when necessary maintenance work cannot be performed because the attachment's owner cannot be identified and notified. Operational efficiency and safety concerns require

that all attachments be tagged. The current version of Term and Condition 8c recognizes this principle and places responsibility upon the attachment owner to properly tag its facilities. It is incumbent upon attachment owners to properly tag their attachments and to take steps to identify and tag their untagged attachments.

If an attachment lacks a tag and its owner cannot be readily identified, the 5 6 Company must incur additional expense to ascertain the attachment's owner for valid operational reasons, including protecting the public safety or system reliability. In 7 emergency situations, such as the power restoration efforts after a severe storm, the 8 9 tags need to be there for first responders, mutual assistance crews, and other restoration workers. Assigning those types of expenses to the cost causer is entirely 10 reasonable. Moreover, other attachment customers should not be inconvenienced nor 11 have their operations unduly affected by unnecessary delays resulting from a prior 12 decision not to tag attachments or a failure to properly tag those attachments. 13

14

Service Drops

Q. Describe the proposed revisions to Term and Condition 7i of Rate PSA
 regarding service drop attachments.

A. The Company proposes to revise Term and Condition 7i to permit inspections of
 service drop attachments and assess the cost of such inspections to the attachment
 customer.

20 Q. Mr. Crone has testified that no valid reason exists to inspect service drop 21 attachment outside of a formal audit. Do you agree?

A. No. While safety concerns regarding service drop attachments will differ from the
 safety concerns regarding other types of attachments, there are still important issues
 regarding clearances and pole integrity.

2

1

Q.

Will these inspections become, as Mr. Crone asserts, an opportunity to impose needless additional costs on attachment customers?

A. No. The Company has much higher priorities than to conduct needless inspections of service drops. It does, however, require the authority to conduct inspections when a reasonable basis exists, for example when an attachment customer is not complying with applicable standards on a widespread basis. If a reasonable basis for the inspection exists, then the Company's electric service customers should not be required to assume the cost of identifying non-conforming, unsafe, or unreasonable practices.

10 If the Company seeks to assess the cost of these inspections on an attachment 11 customer, it would be required under the proposed revision to articulate a reasonable 12 basis for the inspection. If it fails to do so, an attachment customer can dispute the 13 assessment and submit a complaint regarding the assessment to the Public Service 14 Commission.

15 **Q.** Do you have a recommendation?

16 A. Yes. I recommend that the proposed revisions to Rate PSA be accepted in their 17 entirety. Acceptance of these revisions will ensure that proper incentives are 18 provided to attachment customers, promote the public safety, and protect and enhance 19 the reliability of service to the Company's customers.

- 20 Q. Does this conclude your testimony?
- 21 A. Yes, it does.

22

REBUTTAL TESTIMONY OF GREGORY J. MEIMAN VICE PRESIDENT, HUMAN RESOURCES KENTUCKY UTILITIES COMPANY AND LOUISVILLE GAS AND ELECTRIC COMPANY

Filed: February 22, 2019

1

Q. Please state your name, position and business address.

A. My name is Gregory J. Meiman. I am Vice President, Human Resources for
Kentucky Utilities Company ("KU") and Louisville Gas and Electric Company
("LG&E"), (collectively, the "Companies") and an employee of LG&E and KU
Services Company ("Service Company"). My business address is 220 West Main
Street, Louisville, Kentucky 40202.

7 Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to: (1) respond to that portion of Attorney
General witness Donna Mullinax's testimony recommending a disallowance of
certain retirement benefits; (2) respond to that portion of Kentucky Industrial Utility
Customers witness Lane Kollen's testimony recommending a disallowance of certain
retirement benefits; and (3) provide my recommendation to the Commission.

Q. Please summarize Ms. Mullinax's recommended disallowance of certain retirement benefits.

15 A. Ms. Mullinax recommends disallowance of any amounts contributed by the Companies to employees' 401(k) accounts to the extent those employees are eligible 16 17 to receive a monthly pension benefit upon retirement from the Companies' defined 18 benefit plan ("DB Plan"). She relies on the Commission's decisions in the Companies' 2016 rate cases¹ which disallowed those 401(k) matching contribution 19 20 amounts for certain employees. She also responds to four arguments the Companies 21 have made in support of recovery of those amounts.

¹ In the Matter of: Application of Kentucky Utilities Company for an Adjustment of Its Electric Rates and Certificates of Public Convenience and Necessity, Case No. 2016-00370; In the Matter of: Application of Louisville Gas and Electric Company for an Adjustment of Its Electric and Gas Rates and Certificates of Public Convenience and Necessity, Case No. 2016-00371.

Q. Do you believe that Ms. Mullinax's reliance on the Commission's decision in the
 Companies' 2016 rate cases to disallow rate recovery of 401(k) matching
 contributions to DB Plan participants is misplaced?

4 A. Yes. As I explained in my direct testimony, we respectfully ask the Commission to 5 reconsider its decision on this issue. Further, we believe the Commission's subsequent decision on the same issue in a recent Duke Energy case² ("Duke 6 7 Energy") means that Ms. Mullinax's reliance on the Companies' 2016 cases is 8 misplaced. In Duke Energy, the Commission reached a different decision than it 9 reached in the Companies' 2016 rate cases. In *allowing* recovery of 401(k) matching 10 contributions to those already participating in a *separate* pension plan (and over the same Attorney General objection Ms. Mullinax makes in the current case), the 11 12 Commission stated:

13 Duke Kentucky states that it has aggressively managed costs related to its retirement benefits program by closing the DDB 14 15 pension plans to new hires, and, for existing employees, lock and freezing final average pay benefit formulas for all non-16 union employees and transitioning those employees from a 17 18 final average pay formula to a more "Defined Contribution 19 like" cash balance benefit formula. Lastly, Duke Kentucky 20 asserts that its benefits packages, including retirement programs, as a whole are designed to be market competitive 21 and are benchmarked to ensure that is the case. 22

23

24

25

26

The Commission is in partial agreement with Duke Kentucky on this issue and concludes that Duke Kentucky's retirement plan expense should be *accepted as proposed*.³

² In the Matter of: Application of Duke Energy Kentucky, Inc., for: (1) An Adjustment of the Electric Rates; (2) Approval of an Environmental Compliance Plan and Surcharge Mechanism; (3) Approval of New Tariffs; (4) Approval of Accounting Practices to Establish Regulatory Assets and Liabilities; and (5) All Other Required Approvals and Relief, Case No. 2017-0031.

³ Case No. 2017-000321, April 13, 2018 Order, pp. 22-23 (emphasis added).

1 Thus, in Duke Energy, the Commission allowed rate recovery of 401(k) 2 matching contributions based on the following: (1) Duke Energy had aggressively 3 managed its retirement plan costs; (2) some Duke Energy employees were 4 transitioned to a "cash balance benefit formula"; and (3) Duke Energy's overall 5 benefits package, including its retirement programs, are as a whole designed to be 6 market competitive.

7 8

Q. Have the Companies aggressively managed their retirement plan costs similar to Duke Energy?

9 A. Yes. The Companies have not locked, frozen and replaced their DB Plan for a 10 portion of employees like Duke Energy did. Instead, as I explained in my direct testimony, in 2005, the Companies closed or "locked" their DB Plan to all new 11 entrants - both union and non-union employees -- for anyone hired (or rehired) after 12 December 31, 2005.⁴ This means that there have been no new participants eligible 13 14 for the DB Plan for over thirteen years. It also means that the number of eligible 15 participants in the DB Plan began decreasing in 2006, has been decreasing continuously since then, and will eventually reach zero. In fact, since the Companies 16 17 closed their DB Plan to all new employees, approximately 47% of those participating 18 in the DB Plan have left the Companies. Of those remaining, the average age is 19 approximately 54 years with approximately 28 years of experience. In sum, although 20 a portion of the employee population was grandfathered in a traditional defined

⁴ Duke Energy did not close its DB Plan to new entrants until 2014, some eight years *later* than the Companies took that same action. See the September 1, 2017 direct testimony of Duke Energy witness Thomas Silinski in Case No. 2017-000321, p. 39, where Mr. Silinski states, "Duke Energy closed its pension plans to non-union new hires in 2014, and has since negotiated closing pension participation for new hires for all union groups."
benefit, all new participants were placed in the new defined contribution structure
 starting in 2006.

I also testified⁵ that: (1) the Companies' respective defined benefit plans were 3 4 merged in 2000 as a way to save on administrative costs; (2) in 2013 and again in 5 2014, the Companies offered voluntary lump-sum elections rather than a monthly 6 benefit; and (3) in 2016, the Companies amended their DB Plan to make lump sum 7 elections instead of a monthly benefit a permanent feature. These measures have 8 effectively saved retirement plan expense and reduced employer risk. And they are 9 similar to the measures the Commission found meaningful in its Duke Energy 10 decision.

11 Q. Have the Companies transitioned any of their employees from their existing DB 12 Plan to a "cash balance pension formula" like Duke Energy?

13 No, but that is a distinction without a difference. Simply transitioning employees A. 14 from a traditional defined benefit formula to a cash balance pension formula does not 15 necessarily equate to a benefit plan equal to a 401(k) plan. The Department of Labor has stated: "Cash balance plans are defined benefit plans."⁶ Further, the Department 16 17 of Labor has emphasized the characteristics of a cash balance plan: 18 There are four major differences between typical cash balance 19 plans and 401(k) plans: a. Participation - Participation in typical cash balance plans 20 21 generally does not depend on the workers contributing part of 22 their compensation to the plan; however, participation in a

23

24

⁴⁰¹⁽k) plan does depend, in whole or in part, on an employee choosing to make a contribution to the plan.

⁵ See my direct testimony, pp. 17-18.

⁶ Cash Balance Pension Plans, U.S. Department of Labor, Employee Benefits Security Administration, January 2014 (copy attached hereto as Exhibit A).

1 b. Investment Risks - The investments of cash balance plans 2 are managed by the employer or an investment manager 3 appointed by the employer. The employer bears the risks of the 4 investments. Increases and decreases in the value of the plan's 5 investments do not directly affect the benefit amounts promised 6 to participants. By contrast, 401(k) plans often permit 7 participants to direct their own investments within certain 8 categories. Under 401(k) plans, participants bear the risks and 9 rewards of investment choices.

10 c. Life Annuities - Unlike 401(k) plans, cash balance plans are
11 required to offer employees the ability to receive their benefits
12 in the form of lifetime annuities.

13 d. Federal Guarantee - Since they are defined benefit plans, the 14 benefits promised by cash balance plans are usually insured by 15 a federal agency, the Pension Benefit Guaranty Corporation (PBGC). If a defined benefit plan is terminated with 16 17 insufficient funds to pay all promised benefits, the PBGC has authority to assume trusteeship of the plan and to begin to pay 18 19 pension benefits up to the limits set by law. Defined 20 contribution plans, including 401(k) plans, are not insured by the PBGC.⁷ 21 22

So although a cash balance pension plan is a different method of calculating a defined retirement benefit, all of the major risks, specifically investment and mortality, borne by the employer offering a traditional defined benefit plan are likewise borne by the employer in the cash balance pension plan context. Just as the cash balance is another type of defined benefit formula, the defined benefits grandfathered by the Companies are expressed in different formulas which produce the benefits upon which employees have planned.

30 Additionally, the mere fact that some of the Companies' employees will 31 receive a retirement benefit comprised of two funding sources is not the most

⁷ *Cash Balance Pension Plans*, U.S. Department of Labor, Employee Benefits Security Administration, January 2014 (emphasis added)(copy attached hereto as Exhibit A).

important question. The crux of the matter is whether the total amount received by an
employee is reasonable. Moreover, if the benefit is reasonable, it is accomplishing
the larger goal of cost-effectively managing the workforce that is diverse in its
composition when looking at tenure of the participants. When it is reasonable, the
Commission has approved recovery of that total even if it comes from more than one
funding source as shown in its Duke Energy decision.

7 Just as the Duke Energy witness correctly testified, "I believe that the value of 8 the Company's retirement benefit is what is important, rather than whether the 9 Company chooses to deliver the value through multiple components. A one dollar 10 bill has equal value to four quarters even though they are denominated in different forms."⁸ That argument was important to the Commission in allowing rate recovery 11 12 of 401(k) matching contributions for employees who also receive a defined retirement 13 benefit from another funding source. I share Duke Energy's belief on this point and I 14 further believe the Commission should reach the same conclusion in this case.

Finally, it should be noted that based upon the data provided in my direct testimony from Willis Towers Watson,⁹ elimination of the 401(k) matching benefit for those employees grandfathered in the DB Plan leads to the perverse result that those employees with greater experience and service would receive a lesser valued retirement benefit than those hired after December 31, 2005. I do not accept the proposition that it is desirable to manage our commitments to the workforce in this manner.

⁸ Case No. 2017-00321, February 14, 2018 Rebuttal Testimony of Thomas Silinski, p. 9.

⁹ See my direct testimony, p.22.

1 2 Q.

Is the Companies' overall benefits package, including its retirement programs, designed to be market competitive like Duke Energy's?

3 A. Yes. Like Duke Energy, the Companies have submitted ample evidence that their 4 overall benefits package, including retirement benefits, are consistent with market. I described the Mercer Benefits Study¹⁰ in detail in my direct testimony. The most 5 important findings Mercer reached are: (1) the Companies' total package of benefits 6 7 is aligned with utility market medians; (2) all organizations in the Mercer Study that sponsor an ongoing DB Plan also provide 401(k) matching contributions; ¹¹ (3) it is 8 9 important to measure the level of benefits offered in the aggregate as benefit plans are 10 designed holistically rather than in finite parts; and (4) it is also important to examine 11 benefit levels in the context of total remuneration (compensation and benefits) as 12 benefits and compensation are designed in tandem.

Q. Did Ms. Mullinax acknowledge the existence of the Commission's decision in Duke Energy?

15 A. No, she did mention it at all. For his part, Mr. Kollen acknowledges that the 16 Commission subsequently addressed the same issue in the Duke Energy case, and 17 concedes that, "it is not clear if, or if so, how the decision in the Duke case may affect 18 the issue or the quantification of the issue in this proceeding."¹²

¹⁰ The Mercer Benefits Study is attached to the Companies' Applications at Tab 60, Attachment 4.

¹¹ See Application, Tab 60, Attachment 4, p. 6 of 13.

¹² Kollen Direct, p. 46.

1Q.You mentioned that Ms. Mullinax offers four arguments¹³ in response to the2Companies' arguments in favor of recovery of the 401(k) matching amounts. Do3vou agree with any of her four arguments?

4 A. No. Each is flawed.

5 **Q.**

Please summarize her four arguments.

6 First, Ms. Mullinax argues that benefits packages should not be considered A. 7 holistically. Second, while admitting that she is not a "benchmarking research analyst."¹⁴ she argues that the Mercer Benefits Study is not convincing because the 8 9 comparator group Mercer used is inappropriate. Third, she argues that the 10 Companies' efforts to control the cost of benefits are not extensive enough to justify 11 recovery of the 401(k) matching expense. Fourth, she argues that the Companies' 12 position on this issue shows a "misunderstanding of the Companies' responsibility."

13 Q. As to her first argument, should benefits packages be considered holistically?

14 A. Of course they should, because that is exactly the way employees and employers 15 assess employment considerations in the real world. By their very nature, the components of total remuneration (compensation, welfare benefits, and retirement 16 benefits) are all important considerations when employment decisions are made. At 17 18 any single point in time, one particular aspect (or sub-aspect) of total remuneration 19 might be less than market or more than market. But in the Companies' experience, 20 existing and prospective employees will assess total remuneration in deciding 21 whether to accept an employment offer from the Companies and whether to continue

 $^{^{13}}$ Ms. Mullinax's four arguments are set forth at pp. 27 – 31 of her testimony.

¹⁴ See Attorney General's February 14, 2019 Response to Question 4 of the Companies' Data Requests to the Attorney General.

employment with the Companies. For example, if compensation is less than what can
 be earned elsewhere, but vacation benefits are more generous, employees may accept
 that "trade-off."

The Companies agree that all utility expenses should be maintained at fair, just, and reasonable levels. In the area of employment costs, given the constraints associated with modifying retirement benefits and the practicalities of managing a 3600-member workforce, it is both appropriate and necessary to evaluate total remuneration. Employers and employees do just that both within and outside of the regulated utility model. Finally, of course, the Companies' employment market place expert, Mercer, has opined¹⁵ that:

11 When evaluating benefits programs, it is important to look at 12 positioning in aggregate across all benefits and employee 13 levels, as benefit plans are designed holistically and not in 14 finite parts. Furthermore, it is also important to view benefits 15 in context of total remuneration (cash + benefits), as 16 compensation and benefits should be designed and assessed in 17 tandem.

18 Q. As to her second argument, did Mercer use an appropriate comparator group in

19 its study?

A. Yes, Mercer did. Ms. Mullinax criticizes the entities used in populating Mercer's comparator group because some are west of the Mississippi River, some are west of the Rocky Mountains, some are in the Northeast, and some are not equal in size to the Companies. Mercer used its "standard peer group development process"¹⁶ in formulating the comparator group. In that process, entities were selected based on

¹⁵ See Application, Tab 60, Attachment 4, p. 4 of 13.

¹⁶ See Application, Tab 60, Attachment 4, p. 2 of 13.

their similar customer size to the Companies, a local presence, or both.¹⁷ Thus, local 1 2 entities were used where possible, but the reality is that Kentucky simply does not 3 have enough entities of similar size to the Companies to form a sufficient sample 4 group size. Therefore, the group was scoped to include utilities with one-third to 5 three times the customer base of the Companies, with as many local entities included as possible.¹⁸ Finally, Mercer used utilities because, "It is Mercer's best practice to 6 7 evaluate benefits against organizations most similar to the client. Thus, utility 8 companies are the most similar to [the Companies] and are the primary market comparison."19 9

10 As part of her argument on this point, Ms. Mullinax claims that the 11 Companies can use more local employment data when they choose to as evidenced by 12 the Companies' use of more localized data when they adjusted compensation for call 13 center employees to address a turnover problem. This is comparing apples to 14 oranges. For large scale compensation or benefits studies used to measure a large 15 portion of the Companies' employee population, widespread data must be used for a 16 robust and meaningful sample size. For call center employees, whose initial hiring 17 qualifications are more basic and fungible, and for whom heightened elasticity exists 18 in response to a relative minor compensation adjustment, the Companies were able to 19 obtain and use more localized data and still achieve meaningful comparison results.

¹⁷ See the response to KU AG 1-120 and LGE AG 1-120.

¹⁸ See the response to KU AG 2-48 and LGE AG 2-48.

¹⁹ See Application, Tab 60, Attachment 4, p. 2 of 13.

Q. As to Ms. Mullinax's third argument, do you agree that the Companies' efforts
 to control the cost of employee benefits are not sufficient to justify rate recovery
 of 401(k) matching contributions for those in the DB Plan?

A. No, not at all. Contrary to Ms. Mullinax's argument on this point, the Commission
seems to have placed great importance on Duke Energy's cost control efforts. As
discussed above, the Companies have made similar cost control efforts for its
retirement benefits. In fact, as to the decision to close the DB Plan to new entrants
(for both union and non-union employees), the Companies did so eight years before
Duke Energy did, and, therefore, reduced costs to customers for a much longer period
of time.

Q. As to Ms. Mullinax's fourth argument, do you agree that the Companies have a misunderstanding of their responsibility to control retirement benefits cost?

A. Of course not. Her argument appears to be that the Companies should have
immediately ceased 401(k) matching contributions for DB plan participants as a
result of the Commission's decision in the Companies' 2016 rate cases. Ms.
Mullinax fails to understand what is required to hire and maintain a workforce
sufficient to provide safe, adequate, and reliable service.

After the decision in the Companies' 2016 rate cases and in preparation for the current cases, the Companies: (1) commissioned a robust study prepared by leading expert Willis Towers Watson to measure the entire compensation package against market which found total compensation to be at market;²⁰ (2) commissioned a robust study by leading expert Mercer to measure the entire benefits package against

²⁰ See Application, Tab 60, Attachment 3.

market which found that package to be at market;²¹ (3) developed data on the effects 1 2 of its retirement cost control efforts as a percentage of pay;²² (4) have continued to implement various welfare benefit cost control measures discussed in my direct 3 4 testimony); and (5) have been guided by the Commission's decision in the Duke 5 Energy case which was decided less than ten months after the Commission decided the Companies' 2016 cases. Thus, the Companies have provided proof of the 6 7 reasonableness of their compensation and benefit offerings and of their benefit cost 8 control measures. Against the backdrop of the Commission's Duke Energy decision 9 and in the interest of being fair to employees, the Companies' course of action since 10 their 2016 cases has been the correct and reasonable one.

11 While it is the Companies' responsibility to control costs to achieve fair, just, 12 and reasonable rates, the Companies are also responsible for providing safe, adequate, 13 and reliable service. Of course, an adequate workforce is critical in meeting that 14 obligation. And despite what Ms. Mullinax argues, the Companies have an obligation 15 to treat their employees fairly. Welfare benefits can be adjusted more readily and the 16 Companies have done just that. Retirement benefits, on the other hand, are much 17 more difficult to change for many reasons, including legal requirements and the fact 18 that employees have based major life decisions on the availability of those benefits.

Q. You mentioned that Mr. Kollen also proposed a disallowance of 401(k) matching
 contributions for DB Plan participants. Do you agree with his recommendation?
 A. No. The sole basis for Mr. Kollen's recommendation on this point is the
 Commission's decision in the Companies' 2016 rate cases. He provides no

²¹ See Application, Tab 60, Attachment 4.

²² See my direct testimony, p. 22.

1 affirmative analysis to support his recommendation. In fact, Mr. Kollen explicitly 2 recognizes that the Duke Energy decision could impact this issue.²³ For all the 3 reasons set forth above, we believe the decision on this issue should be different in 4 the Companies' current cases, especially in light of the Duke Energy decision.

5 Q. Do you have a recommendation for the Commission?

A. Yes. My recommendation continues to be the same as set forth in my direct
testimony in that I recommend the Commission permit full rate recovery for the
Companies' compensation and benefits expense. We have shown those expense
levels to be reasonable, supported by robust studies, and upon examination, there is
nothing in intervenor testimony that would lead to a contrary result.

- 11 **Q.** Does this conclude your testimony?
- 12 A. Yes, it does.

13

Rebuttal Testimony - Exhibit A 1 of 4 Meiman

Cash Balance Pension Plans

U. S. Department of Labor Employee Benefits Security Administration January 2014

What is a Cash Balance Plan?

There are two general types of pension plans — defined benefit plans and defined contribution plans. In general, defined benefit plans provide a specific benefit at retirement for each eligible employee, while defined contribution plans specify the amount of contributions to be made by the employer toward an employee's retirement account. In a defined contribution plan, the actual amount of retirement benefits provided to an employee depends on the amount of the contributions as well as the gains or losses of the account.

A cash balance plan is a defined benefit plan that defines the benefit in terms that are more characteristic of a defined contribution plan. In other words, a cash balance plan defines the promised benefit in terms of a stated account balance.

How do Cash Balance Plans work?

In a typical cash balance plan, a participant's account is credited each year with a "pay credit" (such as 5 percent of compensation from his or her employer) and an "interest credit" (either a fixed rate or a variable rate that is linked to an index such as the one-year treasury bill rate). Increases and decreases in the value of the plan's investments do not directly affect the benefit amounts promised to participants. Thus, the investment risks are borne solely by the employer.

When a participant becomes entitled to receive benefits under a cash balance plan, the benefits that are received are defined in terms of an account balance. For example, assume that a participant has an account balance of \$100,000 when he or she reaches age 65. If the participant decides to retire at that time, he or she would have the right to an annuity based on that account balance. Such an annuity might be approximately \$8500 per year for life. In many cash balance plans, however, the participant could instead choose (with consent from his or her spouse) to take a lump sum benefit equal to the \$100,000 account balance.

If a participant receives a lump sum distribution, that distribution generally can be rolled over into an IRA or to another employer's plan if that plan accepts rollovers.

The benefits in most cash balance plans, as in most traditional defined benefit plans, are protected, within certain limitations, by federal insurance provided through the Pension Benefit Guaranty Corporation.

How do Cash Balance Plans differ from traditional pension plans?

While both traditional defined benefit plans and cash balance plans are required to offer payment of an employee's benefit in the form of a series of payments for life, traditional defined benefit plans define an employee's benefit as a series of monthly payments for life to begin at retirement, but cash balance plans define the benefit in terms of a stated account balance. These accounts are often referred to as "hypothetical accounts" because they do not reflect actual contributions to an account or actual gains and losses allocable to the account.

How do Cash Balance Plans differ from 401(k) plans?

Cash balance plans are defined benefit plans. In contrast, 401(k) plans are a type of defined contribution plan. There are four major differences between typical cash balance plans and 401(k) plans:

- a. **Participation** Participation in typical cash balance plans generally does not depend on the workers contributing part of their compensation to the plan; however, participation in a 401(k) plan does depend, in whole or in part, on an employee choosing to make a contribution to the plan.
- b. Investment Risks The investments of cash balance plans are managed by the employer or an investment manager appointed by the employer. The employer bears the risks of the investments. Increases and decreases in the value of the plan's investments do not directly affect the benefit amounts promised to participants. By contrast, 401(k) plans often permit participants to direct their own investments within certain categories. Under 401(k) plans, participants bear the risks and rewards of investment choices.
- c. Life Annuities Unlike 401(k) plans, cash balance plans are required to offer employees the ability to receive their benefits in the form of lifetime annuities.
- d. **Federal Guarantee** Since they are defined benefit plans, the benefits promised by cash balance plans are usually insured by a federal agency, the Pension Benefit Guaranty Corporation (PBGC). If a defined benefit plan is terminated with insufficient funds to pay all promised benefits, the PBGC has authority to assume trusteeship of the plan and to begin to pay pension benefits up to the limits set by law. Defined contribution plans, including 401(k) plans, are not insured by the PBGC.

Is there a federal pension law that governs these plans?

Yes. Federal law, including the Employee Retirement Income Security Act (ERISA), the Age Discrimination in Employment Act (ADEA), and the Internal Revenue Code (IRC), provides certain protections for the employee benefits of participants in private sector pension plans.

If your employer offers a pension plan, the law sets standards for fiduciary responsibility, participation, vesting (the minimum time a participant must generally be employed by the employer to earn a legal right to benefits), benefit accrual and funding. The law also requires plans to give basic information to workers and retirees. The IRC establishes additional tax qualification requirements, including rules aimed at ensuring that proportionate benefits are provided to a sufficiently broad-based employee population.

The Department of Labor, the Equal Employment Opportunity Commission (EEOC), and the IRS/Department of the Treasury have responsibilities in overseeing and enforcing the provisions of the law. Generally, the Department of Labor focuses on the fiduciary responsibilities, employee rights, and reporting and disclosure requirements under the law, while the EEOC concentrates on the portions of the law relating to age discriminatory employment practices. The IRS/Department of the Treasury generally focuses on the standards set by the law for plans to qualify for tax preferences.

Are there requirements that apply if my employer converts my current plan to a Cash Balance Plan?

Yes; however, employers are not required to establish pension plans for their employees because the private pension system is voluntary. In addition, employers are allowed substantial flexibility in deciding whether to terminate or amend their existing plans. Therefore, employers generally may change by plan amendment their traditional pension plans and the benefit formulas they use.

Federal law does place restrictions on plan changes generally. For example, advance notification to plan participants is required if, as a result of the amendment, the rate that plan participants may earn benefits in the future is significantly reduced. Additionally, there are other legal requirements that have to be satisfied, including prohibitions against age discrimination. In addition, while employers may amend their plans to cease future benefits or reduce the rate at which future benefits are earned, they generally are prohibited from reducing the benefits that participants have already earned. In other words, an employee generally may not receive less than his or her accrued benefit under the plan formula at the effective date of the amendment. For

Rebuttal Testimony - Exhibit A 3 of 4 Meiman

example, assume that a plan's benefit formula provides a monthly pension at age 65 equal to 1.5 percent for each year of service multiplied by the monthly average of a participant's highest three years of compensation, and that the plan is amended to change the benefit formula. If a participant has completed 10 years of service at the time of the amendment, the participant will have the right to receive a monthly pension at age 65 equal to 15 percent of the monthly average of the participant's highest three years of compensation when the plan amendment is effective. This pre-amendment benefit (including related early retirement benefits) is protected by law and cannot be reduced.

In addition, there are additional restrictions that apply specifically in the case of an amendment that converts a plan formula to a cash balance plan formula. Specifically, participants must receive the sum of the preamendment benefit plus benefits under the new cash balance formula (as a result, there cannot be a "wear away" period during which the participant does not accrue additional benefits, as could occur if participants were merely entitled to the greater benefit). Furthermore, all benefits under a cash balance plan (including benefits accrued prior to a conversion) must be fully vested after 3 years of service.

What happens to the assets in a plan when an employer converts its traditional defined benefit plan formula to a Cash Balance Plan formula?

When an employer amends its plan to convert the plan's traditional defined benefit plan formula to a cash balance plan formula, the plan's assets remain intact and continue to back all of the pension benefits under the plan. Employers cannot remove funds from the plan, unless the plan has been terminated and has assets remaining after payment of all of the benefits under the plan.

How am I affected if I leave my job at a company that just changed its pension plan from a traditional defined benefit formula to a Cash Balance Plan formula?

If you have worked long enough to be vested under the plan, you should receive the sum of (1) the accrued benefit under the formula in effect before the amendment, and (2) the additional benefits (see response to question 6 above) you earned under the plan formula in effect after the amendment. However, you may have to wait until a retirement age under the plan to receive your benefit.

Is my employer required to give me a choice of remaining under the old formula rather than automatically switching me to the new Cash Balance Plan formula?

Neither ERISA nor the IRC requires employers to give employees the choice of remaining in the old formula. Employers have several options, including:

- a. Providing no choice, replacing the old formula and applying the new formula to all participants.
- b. Allowing employees to remain under the old formula, while restricting new hires to the new formula
- c. Stipulating that certain employees who have reached a specific length of service or who have reached a certain age may choose to stay with the old formula

The law permits employers to have such flexibility, but whatever option applies has to satisfy legal requirements.

Under each of these options, benefits already earned by the participants, as of the effective date of the amendment that converts the old formula to a cash balance formula, may not be reduced.

What information is my employer required to give me to explain the new Cash Balance Plan formula, and when should I receive this information?

Many employers voluntarily provide helpful information about these conversions in advance of the change becoming effective. Make sure you have all the information that the employer has provided. If you are still not sure if you have enough information to understand the plan change, you have a right to contact your plan administrator and ask for more information or help in understanding the change and any choices you have in conjunction with the change.

Plan administrators are generally required to give at least 45 days' advance notice of plan amendments that significantly reduce the rate at which plan participants earn benefits in the future.

After the plan is amended, the plan administrator is required to provide all plan participants with a Summary of Material Modifications to the plan or a revised Summary Plan Description. This document will summarize the changes to your plan.

In addition, under the Age Discrimination in Employment Act (ADEA), an employer requiring an employee to sign a waiver of rights and claims when choosing between plans is required to provide enough information to enable the employee to make a knowing and voluntary decision to waive ADEA rights. In most cases, an employee must be given at least 21 days to sign the waiver and at least 7 days to revoke the agreement.

Will the conversion of my pension plan formula have an effect on my retiree health benefits?

Often, pension plans and health plans are operated independently and are administered separately. However, sometimes eligibility for retiree health benefits depends upon eligibility for pension benefits. If you have questions about your health benefits you should contact your health plan administrator. Be aware that, like pension plans, health plans generally can be amended or terminated.

What should I do if I believe my benefits under the old formula have been inappropriately reduced or that my rights have been violated?

You should immediately contact the plan administrator and discuss your concerns. Be sure to review your individual benefit statement or the information used to calculate your benefit to determine if it is correct — such as employment date, length of service, and salary.

If your concerns are not adequately addressed, or you still have questions about your situation, you should contact one of our offices.

In addition, employees who believe that they have been subject to discriminatory treatment because of their age, race, color, religion, sex, national origin, or disability may file a charge of discrimination with the Equal Employment Opportunity Commission (EEOC).

Return on Equity	16

1

Q.

Please state your name, position and business address.

A. My name is Daniel K. Arbough. I am the Treasurer for Kentucky Utilities Company
("KU") and Louisville Gas and Electric Company ("LG&E) (collectively, the
"Companies"), and an employee of LG&E and KU Services Company, which
provides services to KU and LG&E. My business address is 220 West Main Street,
Louisville, Kentucky.

7

Q. What is the purpose of your rebuttal testimony?

The purpose of my testimony is to rebut certain arguments made in the direct 8 A. testimony of intervenors in this case. Specifically, I will explain that (1) the 9 Kentucky Industrial Utility Customers, Inc.'s ("KIUC") witness Mr. Kollen's 10 adjustment to long-term debt is unreasonable; (2) Mr. Kollen's adjustment to 11 normalize transmission and distribution capital expenditures is unwarranted and 12 would disallow the recovery of prudently incurred expenditures; (3) the KIUC and 13 United States Department of Defense ("USDOD") proposals to extend the 14 depreciable lives of the coal-fired generating units is not prudent, (4) the Attorney 15 General's ("AG") witness Ms. Mullinax's adjustment to directors and officers 16 liability expense would deprive the Companies from recovering the costs of an 17 ordinary business expenditure; (5) Ms. Mullinax's adjustment to reduce outside 18 counsel expense is unreasonable; (6) the Sierra Club's witness Mr. Fisher's testimony 19 regarding OVEC debt is inaccurate and misrepresents the Companies' obligations; 20 and (7) provide a copy of the most recently issued Regulatory Research Associates 21 report regarding returns on equity. 22

23

Long-Term Debt

24 Q. Please summarize Mr. Kollen's adjustment to the Companies' long-term debt.

A. 1 The Companies have forecast long-term debt issuances that will occur no later than May 2019. KU is expected to have a 30-year debt issuance of \$300 million, and 2 LG&E a 30-year debt issuance of \$500 million. In addition to a credit spread of 3 1.25%, the Companies included a forecast rate of 3.65% for the 30-year Treasury 4 yield in calculating the weighted average cost of long-term debt for these issuances. 5 6 Mr. Kollen has proposed an adjustment to use the 30-year Treasury yield as of January 10, 2019 in calculating the costs associated with the projected issuance, 7 which was 3.0%.¹ Mr. Kollen alleges that this adjustment is appropriate because 8 9 Treasury yields have fallen since the Companies filed their cases.

10 (

Q. Do you agree with Mr. Kollen's adjustment?

A. No, as Mr. Kollen's adjustment is unreasonable. The Treasury yield is not fixed and 11 changes daily. Mr. Kollen offers no evidence that the January 10, 2019 Treasury 12 yield bears any relationship to the forecast Treasury yields in May 2019. As such, the 13 3.0% yield on January 10, 2019 is an arbitrarily selected date that is not reflective of 14 known and measurable conditions. Mr. Kollen's selected yield is already stale given 15 that the yield moves daily. Mr. Kollen admitted in response to Commission Staff's 16 data request that the yield may change before publication of the final orders in these 17 proceedings.² 18

19

Q. Can you further describe the volatility in the 30-year Treasury yields?

¹ Direct Testimony and Exhibits of Lane Kollen on behalf of the Kentucky Industrial Utility Customers, Inc. ("Kollen Direct") dated January 2019 at 52.

² See the response to Question No. 3 from Commission Staff to KIUC.

A. Certainly. The Treasury yields have experienced material volatility in the last year.
 The graphic below shows the 30-year yields from February 1, 2018 through January
 31, 2019.

5 Q. How did the Companies forecast the 3.65% Treasury yield for May 2019 debt 6 issuances?

7 A. Rather than selecting the yield on any specific date, the Companies analyzed the expected trends in the yield between the date of the Companies' rate case filing and 8 May 2019. Most significantly, the Companies considered that the Federal Reserve 9 10 was expected to raise the federal funds target rate twice between the Companies' rate case filing and May 2019. The Companies obtained forecasted 30-year treasury 11 yields from several banks in arriving at the 3.65% rate used in the filing. As can be 12 seen from the above graph, interest rates declined unexpectedly by .60% during 13 November and December and recent volatility suggests they could rise by that 14 amount between now and the expected May bond issuance. As such, the Companies 15 continue to believe their forecast of 3.65% is reasonable. 16

17 Q. Is there another reason that Mr. Kollen's adjustment is unreasonable?

3

1 A. Yes. While Mr. Kollen proposes utilizing the Treasury yield from January 10, 2019, 2 he does not propose a similar adjustment for the credit spread that has generally increased since the Companies' rate case filing. The Companies utilized a credit 3 spread of 1.25% for the long-term debt to be issued in May 2019, but credit spreads 4 have also been very volatile in recent months. Investment grade utility spreads have 5 been as low as .85% to as high as 1.45% in the past year. It is unreasonable and 6 results-oriented to only propose an adjustment to the portion of debt costs that Mr. 7 Kollen believes to be declining, while ignoring the other key component of the 8 interest rate the Companies will ultimately pay. For these reasons, I recommend that 9 Mr. Kollen's adjustment be denied. 10 **Transmission and Distribution Capital Expenditures** 11 12 **O**. Please summarize Mr. Kollen's adjustment to normalize transmission and distribution capital expenditures. 13 A. Mr. Kollen recommends that the Commission normalize the forecast transmission and 14 distribution capital expenditures based on the average of the Companies' inflation-15 adjusted actual transmission capital expenditures for 2014 through 2017.³ Mr. Kollen 16 alternatively proposes that the Commission normalize the forecast transmission and 17 distribution capital expenditures based on the Companies' actual 2017 capital 18 expenditures.⁴ 19 Do you agree with Mr. Kollen's adjustment? 20 0. 21 A. No, because it is an extreme position that directly conflicts with the Commission's

treatment of normalization adjustments and is antithetical to the use of a forward-

⁴ *Id*.

³ Kollen Direct at 20.

looking test year. The Commission has correctly disfavored normalization
 adjustments because they are susceptible to manipulation, argument and subjectivity.
 Mr. Kollen's proposed adjustment is particularly unreasonable given that he does not
 contest any aspect of the Companies' budgeting process that led to the forecasted
 expenditures or any of the individual transmission and distribution projects in the
 budget.

Q. Would normalizing transmission and distribution capital expenditures be comparable to the other kinds of normalization adjustments the Commission has approved?

No. There are only two normalization adjustments the Commission has approved in 10 A. electric rate cases involving the Companies: storm damage and injuries and damages. 11 12 These two exceptions exist because the revenues or expenses being normalized are essentially random occurrences without any upward or downward trend that is 13 incorporated into the adjustment. For example, neither LG&E nor KU can predict or 14 affect what storms may occur. Furthermore, with storm damage, and injuries and 15 damages there is a central tendency for events to fall within a range that will typically 16 17 equal a mean value when measured over time. Although the severity of storms varies from year to year, the average values of these random variables are stable and 18 predictable over time. Although the Companies certainly endeavor to minimize 19 20 injuries and the effect of storms on their service areas, these events will occur and in no discernible pattern. For these reasons, there is no reason to think that any given 21 specific test year's storm or injuries and damages expenses are indicative of future 22

1

2

cost because what is "normal" can only be understood in reference to a long span of time and data, objectively measured and calculated.

Mr. Kollen expressly concedes that transmission and distribution capital 3 expenditures are not random nor unpredictable and actually *contrasts* these costs with 4 His direct testimony asks whether transmission and distribution storm damage. 5 capital expenditures are "controllable costs." Mr. Kollen readily admits "Yes, except 6 in the event of damage, such as an ice or other storm event, or untimely age-related 7 and/or environmental deterioration. With these exceptions, capital expenditures are 8 9 incurred as the result of a budget process in which capital projects are identified and then prioritized based on various factors, primarily need and capital constraints."5 10 Mr. Kollen admits that these costs are not like the types of expenses for which 11 normalization adjustments have been approved, nor does he take issue with the 12 Companies' budgeting process or prioritization of individual transmission and 13 distribution capital expenditures. As explained in Mr. Bellar's rebuttal testimony, 14 these projects are critical to the ongoing operation of the Companies' provision of 15 reliable electric service. 16

17

Q. Please explain how this adjustment conflicts with a forecast test period.

A. Certainly. When filing rate cases, the Companies have the right to choose to use either a historical test period or a forward-looking test period to support their applications. The Companies could have utilized a historical test period of twelve consecutive calendar months, or a forward-looking test period corresponding to the first twelve consecutive calendar months the proposed increase would be in effect

⁵ *Id.* at 17-18 (emphasis added).

after the maximum suspension provided in KRS 278.190(2). The proposed normalization adjustment, which is based on data from 2014 to 2017, directly conflicts with the express purpose of the forward-looking test period the Companies have utilized because it is based on historical data that occurred up to *six years* before the forecast test period in these cases end.

Q. Has Mr. Kollen demonstrated that the forecast test year level of transmission and distribution capital expenditures is not representative of the going-forward level of expense?

No. As explained more fully by Mr. Bellar, the Companies are in need of the planned 9 A. capital expenditures, as LG&E and KU are in the midst of a long-term plan to 10 improve and modernize their electric transmission and distribution infrastructure. 11 These efforts are critical to providing safe and reliable electric service and are not 12 For example, certain expenditures will be incurred pursuant to 13 discretionary. Certificates of Public Convenience and Necessity granted to the Companies by the 14 Commission. Mr. Bellar's direct and rebuttal testimony discusses these projects in 15 great detail. Nevertheless, Mr. Kollen arbitrarily proposes to reduce KU's 16 jurisdictional revenue requirement by \$7.021 million and LG&E's by \$3.768 million 17 based solely on a historical data set range that Mr. Kollen selected simply to reduce 18 this expense. 19

His selection of a three-year period also illustrates why normalization adjustments have been historically disfavored by the Commission because the averaging calculation can be manipulated through the selection of the period to create bias and achieve a desired end-result. Normalizing transmission and distribution

7

1 capital expenditures is an example of such manipulation, because it wrongly assumes that the expense is relatively static over time. As explained by Mr. Bellar, the 2 Companies have aging transmission and distribution assets that are past their useful 3 lives that may present safety and reliability risks to the system and need to be 4 addressed. Mr. Kollen's selective adjustment should be rejected because the 5 6 Companies must incur these costs in providing service to customers, and Mr. Kollen has failed to demonstrate that any of the costs will be imprudently or excessively 7 incurred. 8

9 10

11

Q. You assert that there are only two instances where normalization adjustments are utilized. Isn't the generator outage cost recovery methodology a normalization?

A. No. Normalization adjustments take an average of historical costs and assume that 12 the future will mirror the past. The generator outage cost recovery methodology used 13 14 in the 2016 rate cases for each Company was designed to set rates based on costs that vary widely each year but occur in an eight-year cycle. The methodology includes 15 both forward-looking periods and historical costs, and allows the Companies to 16 17 recover those costs in a smoothed manner thereby reducing volatility in rates. A normalization adjustment is most appropriate when the future costs are volatile and 18 cannot be forecasted accurately. The generator outage expense and the capital 19 20 expenditures for transmission and distribution can both be forecasted, and have been forecasted, by the Company in this proceeding. 21

22

Q. Do you have a view on the recommendations proposed by KIUC and USDOD witnesses to extend the depreciable lives of the assets?

Depreciation

8

1 A. I disagree with the proposals of the KIUC and USDOD witnesses to extend the depreciable lives of the coal-fired generating assets. The Companies have had their 2 cash flows negatively impacted by the Tax Cuts and Jobs Act in 2018, and deferring 3 depreciation costs will continue to stress the Companies' credit metrics. In addition, 4 the rating agencies are very interested in the timeliness of recovery of costs. On page 5 7 of Exhibit DKA-4 to my Direct Testimony, Standard and Poor's definition of a 6 "strong" regulatory assessment includes the following description: "The utility can 7 fully and timely recover all its fixed and variable operating costs, investments and 8 9 capital costs (depreciation and a reasonable return on that asset base)." Further down on that same page the description for an "adequate" regulatory assessment includes 10 the following: "The utility is exposed to delays or is not, with sufficient certainty, 11 able to recover all of its fixed and variable operating costs, investments, and capital 12 costs (depreciation and a reasonable return on that asset base) within a reasonable 13 time." Continuing to defer the recovery of prudently incurred capital costs is not an 14 appropriate approach to maintain the financial strength of the Companies. 15

16

Directors and Officers Liability Insurance

17 Q. Please summarize Ms. Mullinax's proposed adjustment to directors' and 18 officers' ("D&O") liability insurance.

A. Ms. Mullinax has proposed removing one-half of the Companies' D&O liability
 insurance expense.⁶ Ms. Mullinax alleges that by maintaining D&O insurance
 "shareholders would benefit from payouts under the policy that would otherwise

⁶ Direct Testimony of Donna H. Mullinax of January 16, 2019 on behalf of The Office of Attorney General Louisville/Jefferson County Metro Government & Lexington-Fayette Urban County Government ("Mullinax Direct") at 31.

reduce the company's below-the-line net income" "[s]hould a legal action be brought against a director and/or officer."⁷ Ms. Mullinax concedes, however, that "ratepayers benefit because having the insurance improves the ability of the company to attract and retain qualified directors and officers."⁸ Ms. Mullinax does not allege the amount of the coverage or the premiums the Companies forecast incurring is unreasonable in any manner or present any affirmative analysis supporting her judgment.

8 Q. Do you agree with Ms. Mullinax's adjustment?

9 A. No, as D&O insurance is an ordinary business expense that Ms. Mullinax readily acknowledges is necessary to retaining qualified directors and officers. 10 Ms. Mullinax's argument that a legal action could result in the reduction of the 11 12 Companies' below-the-line net income is unavailing; countless hypothetical events could potentially reduce net income but that has no bearing on whether an expense is 13 properly recovered from ratepayers. It is incumbent on the Companies to maintain 14 sufficient insurance coverage to mitigate the risks of doing business. This includes 15 liability coverage for its employees in the field, and D&O insurance for its directors 16 and officers. 17

18 Q. Has the Commission denied this proposed adjustment in a prior LG&E rate 19 case?

⁷ Mullinax Direct at 32.

⁸ Id.

1	А.	Yes. In Case No. 90-158, the AG proposed to assign 50% of the cost of D&O
2		liability insurance to LG&E's shareholders. ⁹ As in this case, the AG argued that the
3		protection provided by the insurance was for both the shareholder and ratepayer. ¹⁰
4		The Commission rejected this adjustment: "While there may be some benefits to
5		shareholders, the main beneficiaries are the ratepayers. This insurance allows LG&E
6		to induce highly qualified individuals to serve on its Board of Directors. We feel it is
7		not proper or reasonable to include this adjustment." ¹¹ The Commission's reasoning
8		remains sound, as Ms. Mullinax concedes that D&O insurance is necessary to
9		attracting and retaining qualified directors and officers. As such, this adjustment
10		should be denied.
11		Outside Counsel Expense
12	Q.	Please describe Ms. Mullinax's proposed adjustment to outside counsel expense.
13	A.	Although Ms. Mullinax's testimony suggests she proposed eliminating the entire
14		\$1.56 million that the Companies forecasted for the outside services necessary to
15		defend the Companies in two environmental litigation matters, she, in fact, is only
16		eliminating 50% of that amount in her adjustment 3.10.12
17	Q.	Is Ms. Mullinax's adjustment reasonable?

No, it is not. The Companies routinely face legal challenges regarding environmental 18 A. matters from issue-focused groups and must defend the Companies in such lawsuits. 19 Environmental groups use litigation to achieve certain policy objectives. Defending 20 against these lawsuits is a cost of doing business that the Companies cannot avoid, 21

⁹ In the Matter of: Adjustment of Gas and Electric Rates of Louisville Gas and Electric Company (Case No. 90-158) (Ky. PSC Dec. 21, 1990). ¹⁰ Id.

1		and, unfortunately, has become recurring for the Companies and other utilities across
2		the country. The projected costs are consistent with prior cases, and are prudent
3		expenditures. Failing to aggressively defend the Companies in these cases could
4		result in costs that are multiples of the legal costs Ms. Mullinax is questioning.
5		<u>OVEC</u>
6	Q.	Are you responding to certain arguments made by Dr. Fisher on behalf of the
7		Sierra Club?
8	A.	Yes. While Mr. Sinclair is responding to the majority of Dr. Fisher's claims
9		regarding the Companies' power purchases from the Ohio Valley Electric
10		Corporation ("OVEC"), I will address Dr. Fisher's arguments regarding the charges
11		the Companies are paying to OVEC pursuant to the 2011 Inter-Company Power
12		Agreement ("ICPA") that was approved by the Commission.

14 15 16 17 18 19 20 21 22 23	Α .	The Companies, along with other utilities, are owners of OVEC and buyers of power under the ICPA. The role as a buyer of power has been referred to as being a sponsor of OVEC. By being a sponsor, the Companies have had access to low-cost energy to serve their customers. The arrangement is governed by the ICPA. With Commission approval, the Companies entered into an ICPA with the other OVEC sponsors in 2004, and the current version of ICPA in 2011. The Companies' combined power participation ratio ("PPR") of OVEC's power and associated costs is approximately 8%. Each sponsor pays a monthly demand charge that is comprised of (1) fixed operation and maintenance expenses, (2) debt service including the amortization of debt balances and interest expense, (3) taxes, and (4) decommissioning costs. The

fuel costs. Finally, the sponsors pay a monthly transmission charge. Each sponsor is
 obligated to pay its PPR multiplied by the total of each cost.

Q. Please describe Dr. Fisher's allegations regarding the Companies' obligations for OVEC's debt.

Dr. Fisher erroneously suggests that the Companies are acting as guarantors for 5 A. OVEC's debt.¹³ When the Companies sought approval of the ICPA in 2011, it was 6 plainly explained in the verified applications that LG&E and KU "[have] not and will 7 not act as guarantor for OVEC's debt or other securities; however, the Amended 8 ICPA requires the Sponsors to pay for replacement costs, additional facility costs, 9 post-retirement benefits costs, and the costs associated with decommissioning the 10 OVEC units."¹⁴ In addition to this representation, the entire ICPA was reviewed and 11 12 approved by the Commission and has not been amended since that time. The ICPA expressly states that the sponsors' liability is not joint and several. 13

Q. Given these representations and the terms of the ICPA, why does Dr. Fisher suggest that the Companies are guaranteeing OVEC's debt?

A. Dr. Fisher's allegations are based on a misunderstanding of the ICPA and the impact
of FirstEnergy Solutions' ("FES") bankruptcy on the Companies. FES is an OVEC
sponsor that filed for bankruptcy in March 2018. FES's PPR of OVEC is 4.85%.
FES petitioned the bankruptcy court to permit it to reject the ICPA to obtain relief
from the payments associated with its 4.85% PPR, and the bankruptcy court's
decision on that issue is presently being litigated on appeal. Dr. Fisher alleges that

¹³ Direct Testimony of Jeremy I. Fisher, PhD on behalf of Sierra Club on January 16, 2019 ("Fisher Direct") at 13.

¹⁴ Verified Applications in Case Nos. 2011-00099 and 2011-00100.

1 the Companies, along with the other OVEC sponsors, are paying the costs associated with FES' 4.85% PPR, which shows that the Companies and other sponsors are 2 guaranteeing OVEC's debt by making up the costs associated with FES's share.¹⁵ 3 4 **Q**. Is Dr. Fisher correct? 5 No. At present, because FES has not been paying its monthly costs to OVEC, OVEC A. is only recovering 95.15% of its costs. The Companies are not paying the costs 6 associated with the bankrupt sponsor, and as explained in the proceedings in which 7 the Commission approved the ICPA, have not and will not act as guarantors for 8 9 OVEC's debt. Mr. Fisher suggests that since January 2017, OVEC started billing its sponsors 10 Q. to establish a debt reserve fund to cover the shortfall created by the FES debt. Is 11 this correct? 12 In October 2016, Moody's updated its rating methodology for Joint Action 13 A. No. Agencies, which are jointly owned assets that provide reliable and competitively 14 priced energy or energy related services typically through asset ownership. OVEC is 15 such a Joint Action Agency. Moody's measures a Joint Action Agency's financial 16 strength in part based on the Agency's fixed obligation charge coverage ratio, which 17 measures a Joint Action Agency's ability to repay annual debt service costs from 18 recurring revenues net of recurring expenses, excluding one-time revenues or 19 extraordinary charges. Moody's expressed a strong preference for Joint Action 20 Agencies to maintain a debt service reserve account totaling one year's maximum 21 debt service. After reviewing this rating methodology that was issued in October 22

¹⁵ Fisher Direct at 13-14.

2016, in January 2017 - more than a year before FES filed for bankruptcy protection OVEC began creating a reserve that will eventually cover a year of its debt service
 costs. A copy of the Moody's methodology is attached as Rebuttal Exhibit DKA-1,
 and the debt service reserve discussion can be found on page 20 of the exhibit. The
 Companies have been paying their PPR share – and no more – of the debt service
 reserve.

Q. Mr. Fisher suggests that by ceasing to purchase power from OVEC, the Companies' financial obligations would terminate. Is this accurate?

A. No, it is not. As explained above, the Companies pay a monthly variable energy
charge and a fixed demand charge. The majority of the costs are fixed; as such, if the
Companies cease purchasing power from OVEC, the Companies' customers will
continue paying for most of the costs as required by the ICPA but receive none of the
energy. For example, during the forecast period, 67% of KU's and LG&E's costs
from OVEC will be fixed.¹⁶ As such, the majority of the costs will continue until the
fixed costs, which include the debt service costs, are retired.

Q. Mr. Fisher recommends that the Commission "expressly reaffirm the
 Companies' obligation to obtain Commission approval" of "any additional
 OVEC debt obligations."¹⁷ Do you agree with this recommendation?

A. No, I do not. The issuance of OVEC debt does not fall within KRS 278.300, given
that it is not a Kentucky utility. As such, this Commission's approval is not required.

¹⁶ KU's Response to Item No. 45 of Commission Staff's Second Request for Information; LG&E's Response to Item No. 54 of Commission Staff's Second Request for Information.
¹⁷ Fisher Direct at 6.

1		LG&E and KU will continue to obtain any necessary regulatory approvals for the
2		issuance or assumption of securities, and any amendments to the ICPA.
3		<u>Return on Equity</u>
4	Q.	Has Regulatory Research Associates recently released updated return on equity
5		reports?
6	A.	Yes, Regulatory Research Associates recently released an updated report that
7		contains return on equity ("ROE") reports for investor owned utilities through
8		December 31, 2018. A copy of the report is attached as Rebuttal Exhibit DKA-2.
9		The table at the bottom of page 9 of this exhibit shows that the average ROE awarded
10		in 2018 for vertically integrated utilities such as the Companies was 9.68% and the
11		median ROE awarded was 9.75%. Mr. McKenzie discusses the report further in his
12		rebuttal testimony.
13	Q.	Does this conclude your testimony?
14	A.	Yes, it does.

VERIFICATION

COMMONWEALTH OF KENTUCKY)) COUNTY OF JEFFERSON)

The undersigned, **Daniel K. Arbough**, being duly sworn, deposes and says that he is Treasurer for Kentucky Utilities Company and Louisville Gas and Electric Company and an employee of LG&E and KU Services Company, and that he has personal knowledge of the matters set forth in the foregoing testimony, and that the answers contained therein are true and correct to the best of his information, knowledge and belief.

1h.a. Daniel K. Arbough

Subscribed and sworn to before me, a Notary Public in and before said County

and State, this day of _ februar 2019.

Summary

This rating methodology replaces "US Municipal Joint Action Agencies" last revised on October 3, 2012. We have updated some outdated links and removed certain issuer-specific information.

This methodology explains our approach to credit ratings assigned to revenue bonds of US municipal Joint Action Agencies (JAA). JAAs are formed by a group of U.S. municipal utilities (participants) to provide reliable and competitively priced energy or energy related services typically through asset ownership. The methodology identifies the four key ratings drivers for take-or-pay projects and five key rating drivers for all-requirement agencies as shown below:

- >> Participant Credit Quality and Cost Recovery Framework
- » Asset Quality (Take-or-Pay) / Resource Risk Management (All-Requirement)
- » Competitiveness
- » Financial Strength and Liquidity
- » Willingness to Recover Costs With Sound Financial Metrics (All-Requirement)

This methodology is intended as a reference tool to use when evaluating credit profiles within the industry, helping companies, investors, and other interested market participants understand how key qualitative and quantitative risk characteristics are likely to affect rating outcomes.

This methodology should enable the reader to understand the qualitative considerations and financial information and ratios that are usually most important for ratings in this sector.

This report includes a detailed rating grid, the purpose of which is to provide a reference tool that can be used to approximate credit profiles within the JAA sector. The grid provides summarized guidance for the factors that are generally most important in assigning ratings to these issuers. The weights shown for each factor in the grid represent an approximation of their importance for rating decisions but actual importance may vary significantly. In addition, ratings are based on our forward-looking expectations, which may be different than historical results. As a result, a grid-indicated rating is not expected to match the actual rating of each issuer.

The publication includes the following sections:

- About the Rated Universe: An overview of the Joint Action Agency sector »
- About the Rating Methodology: A description of our rating methodology, including a detailed » explanation of each of the key factors that drive our ratings
- Grid Limitations and Other Considerations: Comments on the rating methodology's limitations, » including a discussion of other rating considerations that are not included in the grid
- » Appendices: Tables including the scorecard, issuers covered in this update and definitions of key ratios

About the Rated Universe

Joint Action Agencies are formed by a group of U.S. municipal utilities (participants) to provide reliable and competitively priced energy or energy related services. Most rated JAAs were formed to provide power, though we also rate JAAs that provide natural gas, electric transmission, or telecommunications services for energy assets. The participating municipal utility systems share an obligation established through a longterm contractual arrangement to cover the JAA's operating, capital, and debt service costs. Some JAA issuers have multiple distinct project ratings that are rated on a standalone basis.

The credit quality of the JAA sector averages in the 'A' category primarily due to the member participants' strong credit quality, JAA's unregulated rate setting ability and long-term contracts with participants. Competitive rates, sound asset quality and conservative resource risk management are other factors supportive of the average sector rating. This business model suggests a fundamentally high probability of timely debt service payment.

Take-or-Pay Projects

Our approach to rating the sector divides |AAs into two broad types consisting of take-or-pay projects or all-requirement agencies. Typical characteristics of take-or-pay projects are contracts that extend to at least debt maturity, a single asset or group of assets defined upfront for the life of the debt, fixed participants' share for the life of the contract, no firm obligation by the project to deliver any energy resource, and participants' obligation to pay their respective share of all costs including debt service even if the project is not completed, operating, or capable of operating.

All-Requirement Agencies

All-requirement agencies also generally obligate participants to take the underlying energy resource and pay for their respective share of the JAA's costs through at least debt maturity similar to take-or-pay projects. That said, all-requirement agencies share many similarities with Generation and Transmission Cooperatives (G&T Cooperatives) such as an obligation to meet all of the energy resource needs of its participants. Some partial-requirements agencies are sufficiently similar to all-requirement agencies and they fall within this methodology.

Given its supply obligation, an all-requirement agency will have an energy resource portfolio typically This publication does not announce consisting of an evolving mixture of supply contracts and physical assets to match the energy resource a credit rating action. For any requirements of its participants. The evolving resource needs of the participants expose the all-requirement credit ratings referenced in this agency to the potential for insufficient or excess energy resource. Additionally, a participant's share of a JAA publication, please see the ratings could change over time depending on a participant's energy resource needs relative to other members. Furthermore, the entrance of new members or the exit of existing members could also change participants'

tab on the issuer/entity page on www.moodys.com for the most updated credit rating action information and rating history.
shares. All-requirement contracts sometimes include a provision allowing a participant member to end its participation though that member typically remains responsible for its share of the outstanding debt.

While this methodology primarily applies to JAAs, we will consider applying this methodology to municipal energy projects that have identical or substantially similar characteristics to a JAA take-or- pay project.

However, this methodology does not apply to municipal energy projects that do not have typical 'take- orpay' contract terms (e.g. unconditional payment obligation of the participants to pay for operating, capital, and debt service cost irrespective of whether the project is completed, operating, or capable of operating). For example, for a project with an offtake contract that has conditional payments or material limitations on the obligation by its participants, Moody's will apply the '<u>Power Generation Projects</u>', '<u>Generic Project</u> <u>Finance</u>', or other appropriate methodology. These methodologies may be accessed through a link provided in the Related Research section below.

About This Rating Methodology

Our approach to rating Joint Action Agencies for both take-or-pay projects and all-requirement agencies as outlined in this rating methodology, incorporates the following steps:

1. Identification of the Key Rating Factors

We have identified the following four key rating factors when assigning ratings to take-or-pay projects.

Take-or-Pay Projects

- » Participant Credit Quality and Cost Recovery Framework (45%)
- » Asset Quality (15%)
- » Competitiveness (15%)
- » Financial Metrics (25%)
 - Adjusted Days Liquidity on Hand (10%)
 - Debt Ratio (5%)
 - Fixed Obligation Charge Coverage Ratio (10%)

All-requirement agencies broadly share similar factors to take-or-pay projects; however, the 'Ability' and Willingness to Recover Costs and Maintain Financial Metrics' is incorporated as Factor 5.

All-Requirement Agencies

- » Participant Credit Quality and Cost Recovery Framework (25%)
- » Resource Risk Management (10%)
- » Competitiveness (15%)
- » Financial Metrics (25%)
 - Adjusted Days Liquidity on Hand (10%)
 - Debt Ratio (5%)
 - Fixed Obligation Charge Coverage Ratio (10%)

Willingness to Recover Costs With Sound Financial Metrics (25%)

2. Measurement or Estimation of Factors in the Scorecard

We explain below how each factor and sub factor are calculated or estimated for the grid and the weighting for each individual factor and sub factor. We also explain the rationale for using each particular factor, and the ways in which we apply them during the rating process. The information used in scoring the factors and sub factors in the grid is found in or calculated from information in company financial statements, derived from other observations or estimated by our analysts.

Our ratings are forward looking and incorporate our expectations for future financial and operating performance. In assigning ratings, we attempt to look through the energy industry's characteristically volatile financial metrics, which can be caused by weather variations and fuel or commodity price changes. The rating process also makes extensive use of historic financial statements. Such historic results help us understand the pattern of a JAA's financial and operating performance and how a joint action agency compares to its peers. Analysts will use three-year average results to assess financial metrics, in order to mitigate one-time factors that might skew results. We also utilize financial projections to ascertain management's planning capability better, as well as expectations for future financial performance, rate levels, and capital and debt requirements. All financial measures incorporate our standard adjustments to the balance sheet and income statement.

3. Mapping Factors to Rating Categories

After identifying the measurement criteria for each factor, we match a JAA's performance on each factor and sub-factor to one of our rating categories ranging from 'Aaa' to 'B'. In this report, we provide a range or description for each of the measurement criteria. For example, we specify what level of fixed obligation charge coverage ratio is generally representative of an 'Aa' versus an 'A' rating. In other words, there is only one rating from the grid for each factor, multiple rating choices for sub-factors are not incorporated. We will further determine the JAA's position within the rating category for Factor 1. For example, participant credit quality at 'A1' is at the high end of the 'A' category and would thus score at 'A1'.

4. Determining the Overall Grid-Indicated Rating

Aaa	Aa	Α	Baa	Ba	В
1	3	6	9	12	15

To determine the overall grid-indicated rating, each of the assigned scores for the factors and sub-factors generally is converted into a numeric value based on the following scale:

For the scoring of participant credit quality, we will utilize the interpolated numeric value that corresponds to the applicable participant credit quality. For example, participant credit quality of A1 would be scored at the interpolated numeric score of 5. The ability to distinguish between a strongly or weakly positioned participant credit quality remains an important driver of JAA ratings especially for take-or-pay projects.

Once each factor and sub-factor is scored, each factor's or sub-factor's corresponding numeric value is multiplied by its assigned weight and then summed to produce a composite weighted average score. This weighted average score is then mapped to the ranges specified in the table below, and the alpha- numeric rating is determined based on where the total score falls within the ranges.

Grid-Indicated Rating	Aggregate Weighted Total Factor Score	
Aaa	x < 1.5	
Aa1	1.5 ≤ x < 2.5	
Aa2	2.5 ≤ x < 3.5	
Aa3	3.5 ≤ x < 4.5	
A1	4.5 ≤ x < 5.5	
Α2	5.5 ≤ x < 6.5	
A3	6.5 ≤ x < 7.5	
Baa1	7.5 ≤ x < 8.5	
Baa2	8.5 ≤ x < 9.5	
Baa3	9.5 ≤ x < 10.5	
Ba1	10.5 ≤ x < 11.5	
Ba2	11.5 ≤ x < 12.5	
Ba3	12.5 ≤ x < 13.5	
B1	13.5 ≤ x < 14.5	
B2	14.5 ≤ x < 15.5	
ВЗ	15.5 ≤ x < 16.5	
Caa1	16.5 ≤ x < 17.5	
Caa2	17.5 ≤ x < 18.5	
Caa3	18.5 ≤ x < 19.5	
Ca	x ≥ 19.5	

As an example of how the grid works, an issuer with a composite weighted average score of 5.8 would have a grid-indicated rating of A2. We use the same procedure to derive the grid-indicated rating for each of the factors that are embedded in the discussion of the methodology. The composite weighted grid-indicated rating is then reviewed against the current rating and against any of the outlier factors that may have skewed the rating higher or lower. This comparison allows us to better assess the reasoning behind the weighting of a particular factor.

5. Limitations of the Grid and Other Rating Considerations

This section discusses limitations in the use of the grid to map against actual ratings and additional factors that are not included in the grid that can be important in determining ratings.

The Broad Rating Factors

Our analysis of a take-or-pay project focuses on four broad factors while the analysis of an all- requirement agency incorporates an additional fifth factor:

- » Participant Credit Quality and Cost Recovery Mechanism
- » Asset Quality (Take-or-Pay Project) or Resource Risk Management (All-Requirement Agency)
- » Competitiveness
- » Financial Strength and Liquidity
- » Willingness to Recover Costs With Sound Financial Metrics (All-Requirement Agency)

Rating Factor 1: Participant Credit Quality and Cost Recovery Mechanism

Why It Matters

Fundamental to the credit rating of a joint action agency is the long-term contract with its participants that allows the JAA to recover all of its costs including debt service. Since the participants typically bear all of the operating, capital, and debt service costs, the underlying participant credit quality is a major driver of the JAA's credit quality, especially for take-or-pay projects.

Given the importance of the participant credit quality, a typical JAA's rating will generally be capped to no more than two notches higher than the weighted average participant credit quality since the participants are the primary source of cash flow. If the weighted average participant credit quality is near or at speculative grade, the JAA's rating is likely to be capped at the weighted average participant credit quality for all requirement agencies or at the 'weak link' participant credit quality for a take-or- pay project (see section 'How We Measure Participant Credit Quality and Cost Recovery Framework for the Grid' for definition of 'weak link' participant).

Factor 1 also considers the joint action agency's cost recovery framework. Most joint action agencies and their participants have the statutory authority to establish their own rates and charges locally without external regulation, which provides greater certainty to timely and full cost recovery. This strength is further bolstered for most JAAs by minimum bond security covenants that require current revenues to match current expenses, including payment of debt service.

On the other hand, cost recovery or governance issues that complicate timely and full cost recovery will override the participants' credit strength since these issues become the prevailing risk consideration. To the extent the scoring for Factor 1 is 'Baa' or lower due to cost recovery or governance issues, we will likely place greater weight on Factor 1.

Although Southern Montana Electric Generation and Transmission (not rated) is not a JAA, its default in late 2011 which was partially caused by extensive member disputes serves as a recent example of the importance of proper governance and cost recovery. The largest example remains Washington Public Power Supply System's (WPPSS) Projects 4 and 5 defaults caused by members challenging their contractual obligations. A rate regulated JAA or a JAA whose participants are rate regulated would be viewed as having a weaker cost recovery framework since any rate changes will need third party regulatory approvals. The bankruptcy filings of Cajun Electric Power Cooperative, Wabash Valley Power Association and Big Rivers Electric Corporation in the 1980's and 1990's were partially due to insufficient rate relief by its state regulators. While these examples are of G&T cooperatives, they still represent worthy examples of the added uncertainty and risk caused by third party rate regulation.

We emphasize the relatively stronger importance of participant credit quality for take-or-pay projects vs all-requirements projects in two ways. First, for take-or-pay projects we give Factor 1a weight of 45% versus a 25% weighting for all-requirement agencies, reflecting the take-or-pay project's narrow business profile and stronger contract terms. Second, the final score for each of Factors 2, 3, and 4 for take-or-pay projects is generally arrived at in two steps. In the first step, we determine scores for each of the underlying asset quality (Factor 2), competitiveness (Factor 3) and financial strength (Factor 4). We call these initial scorings the 'baseline factor assessments'. The second step involves comparing each of the baseline factor assessments to the Factor 1 score. The scores for Factors 2, 3, and 4 are then adjusted to be the higher of either the baseline factor assessment or the Factor 1 score. As noted below, there are certain exceptions.

Thus, if the assessment of Factor 1 is higher than that of the baseline factor assessments of Factors 2, 3, and 4, for a well performing, competitive take-or-pay project with strong contracts, participant credit quality

will effectively represent 100% of the weight in the scorecard before notching considerations. For example, a take-or-pay project with 1.1x fixed charge coverage ratio (Factor 4(c)) would have a baseline factor assessment of 'Baa' for Factor 4(c); however, assuming Factor 1 was mapped to 'A', the final scoring for Factor 4(c) would be 'A'. The same process would be followed for Factors 4(a) and 4(b), as well as for Factors 2 and 3. The approach described above only applies if the individual baseline factor assessment is at least commensurate with a 'Baa' category and the approach does not apply if the baseline factor assessment is 'Ba' category or lower. This reflects our view that speculative grade characteristics such as poor asset quality or uncompetitive costs increase the probability that the underlying take-or-pay contract could ultimately be challenged or that some other credit negative action might be taken.

For all-requirement agencies, we incorporates a fifth factor, 'Willingness to Recover Costs With Sound Financial Metrics' (see Factor 5) given the lower weight attributed to Factor 1.

How We Measure Participant Credit Quality and Cost Recovery Framework for the Grid

We compute the weighted average participant credit quality by multiplying the percentage of the municipal utility's share in the joint action agency by the participant's credit rating or equivalent assessment, using the 10-year global corporate idealized probability of default curve. We use our published credit ratings as a measure of participant credit quality and in the absence of an underlying published credit rating, we utilize multiple approaches to assess participant credit quality (see section 'Evaluating Unrated Participants in JAAs').

For take-or-pay projects, we will generally cap Factor 1 to the lower of (a) the weighted average participant credit quality or (b) no more than 2 notches above the weak link participants' credit quality. Typically, the 'weak link' is the participant that straddles the lower 20th percentile and upper 80th percentile of all participants ranked by credit quality. We selected this threshold since the typical 25% step up provision in a take-or-pay contract allows participant reflects the higher default probability associated with weaker participant credit quality. For example if the average participant credit quality was Aa2 but the 'weak link' participant was rated A3, Factor 1 would likely be scored at A1. If the step up is lower than 25%, we will consider the appropriate threshold to arrive at the 'weak link' participant. For example, a take-or-pay project with a 15% step up would allow for participants with an aggregate 13% share to default. Thus, in this example, we would factor in the credit quality of a participant that straddles the lower 13th percentile and upper 87th percentile of all participants ranked by credit quality.

Factor	Weight	Aaa	Aa	Α	Baa	Ba	В
Factor 1: Participant Credit Quality and Cost	45%	Participant credit quality at cap is at 'Aaa'. JAA &	Participant credit quality at cap is 'Aa'. JAA &	Participant credit quality at cap is 'A'. JAA &	Participant credit quality at cap is 'Baa' OR	Participant credit quality at cap is 'Ba' OR	Participant credit quality at cap is 'B' OR
Recovery Framework		participant rates are unregulated.	participant rates are unregulated.	participant rates are unregulated.	JAA or majority of participant rates are regulated.	Below average governance or cost recovery.	Consistent record of poor governance or cost recovery.

Take-or-Pay Projects (45% weight)

We will also consider whether the JAA or its participants are rate regulated and the extent of the rate regulation. If the JAA or the majority of its participants are fully rate regulated, Factor 1 could be scored in the 'Baa' category even if the participant credit quality is higher than the 'Baa' category since a JAA's regulated rate setting could pose challenges to timely cost recovery.

Additionally, we will consider the cost recovery framework and governance issues that have led or could lead to extensive delays in rate changes, under-recovery of costs, member challenges to their contractual obligations, or other credit negative outcomes. For example, participants challenging their contractual obligation are likely to map at the 'B' category and override participant credit quality.

For all-requirement agencies, Factor 1 does not explicitly incorporate the weakest participant since participants' shares can change over time due to changing resource requirements or the exit and entrance of new participants over time. Likewise, many contracts do not explicitly cap non-defaulting member step up obligations, so stronger participants may be asked to increase contributions in case a weak participant fails to pay. Additionally, an all-requirement agency's contract allows the JAA to raise rates to recover its costs and often its contract will contain an explicit provision that allows the JAA to raise rates due to a defaulting member. If the all-requirement agency is unable to recover a defaulted participant's share of the JAA costs, we may place greater weight on the weakest participant's credit quality in scoring Factor 1.

All-Requirement Agencies (25% weight)

Factor	Weight	Aaa	Aa	Α	Baa	Ва	В
Factor 1: Participant Credit Quality and Cost	25%	Weighted average 'Aaa' participant credit quality.	Weighted average 'Aa' participant credit quality.	Weighted average 'A' participant credit quality.	Weighted average 'Baa' participant credit quality.	Weighted average 'Ba' participant credit quality.	Weighted average 'B' participant credit quality.
Framework		JAA & participant rates unregulated.	participant rates unregulated.	JAA & participant rates unregulated.	JAA or majority of participant rates are regulated.	Below average governance or cost recovery.	Consistent record of poor governance or cost recovery.

Rating Factor 2: Asset Quality (Take-or-Pay Project) or Resource Risk Management (All-Requirement Agency)

Why it Matters

The primary rationale for the creation of a joint action agency is the cost effective delivery of an energy resource such as power, natural gas, or some other energy related service such as electric transmission. The underlying quality of the asset or resource risk management has a direct impact on quality of service, leverage capacity, competitiveness and customer satisfaction. Participant support for the JAA rooted in customer satisfaction can translate into greater willingness to establish the revenue requirements needed to keep the JAA in sound financial condition. JAAs must keep the confidence of their governing board and the participants. A lack of operational success could lead to questions as to the rationale for establishing the JAA in the first place. Poorly operating assets or poor resource risk management are likely to drive higher all-in costs for the energy resource while also potentially inducing participants to seek alternate energy resources to meet their needs. An inability of the joint action agency to ultimately deliver its resource at competitive rates could cause the participants to challenge their contractual obligations.

If a take-or-pay project's baseline factor assessment scores to at least 'Baa', the final scoring for Factor 2 will generally be the higher of (a) the score used in Factor 1 or (b) the baseline factor assessment. This

approach reflects our view that the strong asset quality minimizes the likelihood that the participants could seek to challenge their obligations under the take-or-pay contract.

However, certain assets with significant event risk such as nuclear plants or assets with 'Ba' or lower characteristics do not benefit from the typical positive lift of its participant credit quality in the final scoring for Factor 2. For these types of assets, the scoring will be at the baseline factor assessment. This reflects our view that the increased asset risk could lead to asset non-performance and ultimately increases the possibility that participants will challenge their contractual obligations or take some other negative action.

Factor 2 has a slightly higher weight for take-or-pay projects relative to all-requirement agencies since takeor-pay projects typically are a single asset, which heightens operating risk. On the other hand, allrequirement agencies typically have a portfolio approach with a combination of assets, contracts and market purchases.

How We Measure Asset Quality or Resource Risk Management for the Grid

When considering asset quality for take-or pay projects, we will consider the asset diversity, technology of the project, and the quality of the operator. While take-or-pay projects are typically single assets, we consider multiple assets a credit positive since the operational diversity reduces the negative impact of a single asset outage. The underlying technology or equipment providing the resource is also a major consideration and we review aspects such as the equipment provider, equipment warranties, and operational history. We will also consider the resource operator's ability to operate the asset to ensure cost-effective and reliable operations. To the extent possible, we review the JAA's operating statistics for the relevant energy resource. For example, we will review statistics such as availability factor (% of time a unit is operational); capacity factor (% of rated capacity the generation unit runs); and heat rates (efficiency of a generator to convert fuel into electrical energy) for power generation assets.

For take-or-pay projects, the 'Aaa' and 'Aa' categories generally apply to simple, proven assets with little to no moving components such as electric transmission lines. An 'A' category would typically represent a diverse portfolio of proven, strongly operating assets covering a range of technologies. portfolios with limited diversification or single asset such as a well operating gas fired plant with a known and reputable operator would likely be scored in the 'Baa' category. Assets that would typically be in the 'Ba' or 'B' categories could include but are not limited to assets with poor operating history; projects with new, unproven technology; or projects that require sizeable new investment to meet new regulatory rules.

Factor	Weight	Aaa	Aa	Α	Baa	Ва	В
Factor 2: Asset Quality	15%	Diversified portfolio of simple, proven assets and minimal reinvestment requirement.	Simple, proven asset(s) and minimal reinvestment requirement.	Diverse portfolio of proven assets across technologies	Standard, commercially proven asset(s).	Asset(s) with some operating challenges.	Largely unproven technology or poorly performing asset(s).

Take-or-Pay Projects (15% weight)

For all-requirement agencies, we assess energy resource risk management, which is broader than asset quality since all-requirement agencies typically meet their participants' resource requirements through a combination of assets and short to long-term contracts or mostly contractual arrangements. To assess resource risk management, we will consider the overall energy resource supply mix, asset quality, energy resource supply contract terms and counterparties, and the JAA's strategic plans to ensure affordable and reliable energy resource for its participants. In the context of the overall energy resource supply mix, maintaining a diverse energy resource mix increases the JAA's flexibility to manage resource demand while

limiting the JAA's exposure to volatile commodity and energy market prices, disruptions in the delivery of a single resource, or increased costs associated with a particular asset, like the cost of environmental compliance.

If an all-requirement agency heavily relies on third party resource suppliers under short and long-term contracts, we will consider the diversity and quality of the energy resource suppliers. Additionally, key underlying terms of supply contracts such as maturity, payment provisions, and amount of contracted resource will be assessed. For Factor 2, the 'Aaa' and 'Aa' rating category will be considered for all-requirement agencies that have long term supply contract(s) that typically have the following characteristics: strong 'Aaa' or 'Aa' counterparties; contract terms that extends to at least debt maturity; prices at or below market prices; and a supply contract covering all or most of the all-requirement agency's load. If counterparties are typically rated in the 'A' category and the all-requirement agency maintained a portfolio of medium to long term contracts on a rolling basis to ensure energy resource supply and price stability, the scoring for Factor 2 could be commensurate with an 'A' category. A supply portfolio with 'Baa' counterparties and consisting mostly of shorter term contracts would be commensurate with 'Baa'. The 'Ba' or 'B' category for Factor 2 typically reflect suppliers rated below investment grade or poor resource management such as high exposure to short term markets or expensive supply contracts.

For all-requirement agencies, we score Factor 2 typically based on the weakest element in the JAA's resource risk management. For example, if a power JAA had single asset or fuel concentration ranging from 56% to 75% but had wholesale market purchases at 10%, we would likely score Factor 2 in the 'Baa' category since the asset or fuel concentration is the dominant risk.

Factor	Weight	Aaa	Aa	Α	Baa	Ва	В
Factor 2: Resource Risk Management	10%	Exceptional energy resource risk management Less than 10% market purchases. OR Diverse, proven assets. Single asset or fuel less than 20% of supply. OR Long-term, competitive supply contract with Aaa rated supplier.	Very strong energy resource risk management. 10-20% from market purchases. OR Diverse, proven portfolio. Single asset or fuel comprises 20- 40% of the energy resource mix. OR Long- term, competitive supply contract with Aa rated supplier.	Strong energy resource risk management. 20-30% from market purchases. OR Proven assets. Single asset or fuel comprises 41- 55% of the energy resource mix. OR Well managed portfolio of supply contracts with 'A' rated suppliers.	Average energy resource risk management. 30-40% from market purchases. OR Single asset or fuel provides 56- 75% of the energy resource mix. OR Adequately managed supply portfolio with 'Baa' rated suppliers.	Below average energy resource risk management. 40-60% from market purchases. OR Single asset or fuel provides over 76 - 100% of the energy resource mix. OR Adequately managed supply portfolio with 'Ba' or lower rated suppliers.	Poor energy resource risk management. More than 60% from market purchases. OR Assets with unproven technology or history of problems OR Poorly managed supply portfolio with 'Ba' or lower rated suppliers.

All-Requirement Agencies (10% weight)

Rating Factor 3: Competitiveness

Why it Matters

An important credit factor in JAA ratings is the competitiveness of the energy resource provided to its participants. Competitive resource costs represent a core rationale for a participant's role as offtaker in a JAA. We view a combination of both legal and economic incentives serving as the strongest leverage for participants to pay. Competitive prices also provide the JAA greater flexibility to raise rates compared to a JAA whose rates are already high.

On the other hand, high rates could cause pressure on the JAA's management to either lower rates or not raise rates when necessary. High rates also could negatively affect the credit quality of the participants since energy resource costs typically represent the majority of the final cost to the retail customers. High energy costs could negatively affect the participant distribution utility's ability to retain retail customers leading to lower load and higher rates to spread the same fixed costs over a lower sales base.

In the worst case scenario, participants could challenge their obligations to a joint action agency. WPPSS's \$2.25 billion bond default in 1983 on Projects 4 and 5 remains an iconic example of a successful challenge.

We also recognize the ability of a JAA's participants to access major wholesale energy markets over the last decade. The increased alternatives for participants have increased the importance of price competitiveness as a key credit factor. Because of these greater supply options, we expect municipally- owned utilities to evaluate the financial benefits of a relationship with a JAA more closely.

How We Measure Competitiveness for the Grid

Our evaluation of a take-or-pay project's cost competitiveness takes into consideration the project's rate (including debt service) to its members relative to what a participant would have to pay in the wholesale market on a historic and forward-looking basis, typically over a 3-year period. In volatile market conditions, we will consider longer periods spanning a commodity price cycle that seeks to smooth the market ups and downs to determine the long-term future competitive position of the asset. We estimate regional market price benchmarks from publicly available industry data such as the Energy Information Administration (EIA) and third party data service providers, as well as data from across our portfolio of other rated issuers. We will consider other benefits that a take-or-pay project provides to its participants such as renewable power that helps meet state or local renewable portfolio standards, the project's fit within the overall participants' energy resource portfolio, or the participants' need for the asset for reliability purposes. These other benefits could result in the scoring of a project's baseline competitiveness up to the 'Baa' category even though its rates relative to market are commensurate with 'Ba' or lower. For example, a wind project with all-in costs substantially above the prevailing market price of power could be scored at 'Baa' if the wind project is an important renewable asset that allows the municipal utility participants to meet their state-mandated renewable portfolio requirements.

For take-or-pay projects, an asset that has competitive rates through all parts of the market cycle would be in the 'A' to 'Aaa' categories depending on the extent of its low rates. Assets typically in the 'Baa' category are competitive in an average market environment but could be up to 50% more expensive relative to market prices during a cyclical downturn. The 'Ba' is typically for assets that are competitive only in a high price environment while the 'B' category represents uncompetitive rates in nearly all conditions.

Factor	Weight	Aaa	Aa	Α	Baa	Ba	В
Factor 3:	15%	Extremely	Very	Competitive	Competitive	Competitive	Uncompetitive
Competitive- ness		competitive asset through market cycle.Rates more than 50% below market. OR Very strong monopoly position with no alternative.	competitive asset through market cycle. Rates more than 30% to 50% below market. OR Strong monopoly position with very unlikely alternatives over the long term.	asset through market cycle. Rates 0% to 30% below market. OR Quasi monopoly with plausible alternatives over the medium to long term.	asset during average market. Rates up to 50% above market lows.	asset during market highs. Rates could be 100% above market lows.	asset in nearly all price environments. Rates more thar 100% above market lows.

Take-or-Pay Projects (15% total)

As the competitiveness of a take-or-pay project or all-requirement agency falls into the 'Ba' category or lower, the rating committee could attribute greater weight to Factor 3 given the increased probability of adverse outcomes such as participants challenging their contract obligations.

If there is no wholesale market benchmark for the underlying characteristics of the assets (e.g. electric transmission lines), we will consider the asset's monopoly position, the benefit that the asset provides to the participants, and the importance of the asset.

If a take-or-pay project's baseline factor assessment scores to at least 'Baa', the final scoring for Factor 3 will generally be the higher of (a) the score used in Factor 1 or (b) the baseline factor assessment. This approach reflects our view that the asset's competitive position minimizes the likelihood that the participants could seek to challenge their obligations under their take-or-pay contract. Baseline factor assessments at 'Ba' or lower do not benefit from this approach.

For all-requirement agencies, we will primarily consider rates charged by comparable energy resource providers in the region on a historic and forward-looking basis typically over a 3-year period. For power all-requirement agencies, we will consider peer rates charged by other power all-requirement agencies, G&T cooperatives, or other comparable rates. To the extent wholesale energy market information or peer rate data is unavailable, we also evaluate a JAA participants' retail rates against regional competitors as an indirect measure of the JAA's competitiveness since energy costs typically represent a sizeable component of retail rates.

Take-or-Pay Projects (15% total)

Factor	Weight	Aaa	Aa	Α	Baa	Ва	В
Factor 3: Competitiveness	15%	Rates more than 25% below average	Rates below average by more than 10% to 25%	Rates 10% below average to less than 5% above average	Rates above average by 5% to less than 25%	Rates above average by 25% but not more than 50%	Rates at least 50% above average

Rating Factor 4: Financial Strength and Liquidity

We have identified three key financial ratios that we consider the most useful in evaluating a JAA's financial profile. The three ratios measure liquidity, leverage, and cash flow coverage:

- » Adjusted Days Liquidity on Hand Ratio
- » Debt Ratio
- » Fixed Obligation Charge Coverage Ratio

Why it Matters

We evaluate the financial performance and position of a JAA to determine its ability to manage business risks while assuring payment of debt service. Strong liquidity and cash flow metrics indicate greater resiliency by a JAA to withstand unexpected events such as asset outages, volatility of commodity prices, economic downturn, deterioration in participants' credit quality or even disputes among participants. Strong financial metrics also provides an issuer with more time to implement any necessary rate changes and also to change rates over a longer period of time to minimize rate impact. Conversely, low liquidity and cash flow metrics force greater emphasis on a JAA's rate setting, possibly leading to more frequent and larger rate changes.

Additionally, we utilize the debt ratio as a measure of an issuer's leverage which indicates the extent of debt service costs embedded in a JAA's overall cost structure. The higher the debt and debt service, the higher the likely all-in costs and ultimately the rates a JAA will have to charge its members to recover costs. Additionally, the debt ratio indicates the extent of asset coverage for bondholders.

Furthermore, joint action agencies typically are obligated under their bond documents to meet certain financial parameters such as minimum fixed charge or debt service coverage and we take a positive view of financial performance that exceeds the minimum requirements. We review several years of financial statements in order to assess a JAA's track record over time. We also evaluate ratios to determine trends and to assess the relationships to peer medians while seeking to balance quantitative measures with qualitative factors discussed in this report.

As described in Factor 1, if a take-or-pay project's baseline financial metrics score to at least 'Baa', the final scoring for Factor 4 will generally be the higher of (a) the score used in Factor 1 or (b) the baseline factor assessment, which reflects our view that the take-or-pay project is performing equal to or better than the base case expectations.

How We Measure Financial Strength for the Grid

Financial Strength: Liquidity – Adjusted Days Liquidity on Hand Ratio (10% weight)

The assessment of liquidity to meet day-to-day operating cash flow requirements and as a cushion against unexpected situations is a key element in the financial analysis of a JAA and includes both internal and external sources of liquidity. The sources of funds are compared to the JAA's operating cash flow needs over the next year and beyond. We use a measure called the adjusted days liquidity on hand ratio which is calculated based on a JAA's available adjusted liquidity, including unrestricted cash and investments and unrestricted bank lines of credit, times 365 days divided by the JAA's annual operating and maintenance expenses.

The primary difference between the traditional days cash on hand ratio and the new adjusted days liquidity on hand ratio is the inclusion of unrestricted bank lines and certain legally required reserves as available

liquidity. We may review each bank line agreement on a case-by-case basis to determine whether or not the agreement satisfies our criteria in order to be included in our assessment of a JAA's liquidity.

The highest "Aaa" and "Aa" scores under this sub-factor would be assigned to those JAAs that are financially strong with robust levels of internal liquidity and little to no reliance on external funding sources such as bank lines.

Evaluation of a Bank Line

We will incorporate available bank lines into the calculation of a JAA's liquidity based on the strength of the bank line. As part of the assessment, we will typically consider three main factors: the tenor, the counterparty's credit quality, and any restriction or covenants that could affect the bank line's availability during periods of unexpected market events or JAA credit stress.

We will consider the bank line provider's credit quality as part of our assessment since the liquidity benefit of the bank line is limited if the bank is unable to provide funds when needed by the JAA. As such, we will likely exclude bank lines provided by banks of unknown or weak credit quality.

We will also evaluate the tenor of the agreement since shorter dated credit lines represent greater renewal risk. Typically, longer dated tenors are more favorable from a credit perspective. If the external liquidity line is expiring in less than a year and we view a renewal or replacement as unlikely, the external liquidity line could be excluded even if it is free from draw restrictions or covenants.

Additionally, our analysis includes a review of loan documentation for any language that might weaken the quality of the facility by potentially blocking a borrower's access, such as a material adverse change (MAC) clause. A MAC clause is a legal provision within a credit agreement that gives lenders the right to refuse to fund a commitment should the borrower experience sufficiently adverse business or economic developments. These adverse conditions can include numerous undefined factors the bank could cite to delay or avoid the funding requirement. We will include the bank line only to the extent we believe the terms of the bank line contain no material restrictions to ensure the line's availability at the time of a potential draw on the facility.

Financial Strength: Leverage -Debt Ratio (5% weight)

We utilize the debt ratio to measure the JAA's leverage (the ratio of net funded debt divided by net fixed assets plus net working capital). We also compare the absolute level of the JAA's current debt ratio to the median for similar JAAs and evaluate the likely future trend in the ratio. Net working capital is defined as cash and investments plus receivables expected to be collected minus current liabilities unrelated to debt.

We recognize that a JAA's capital structure is heavily reliant on debt since a joint action agency is typically all debt funded at inception. As a result, a JAA's debt ratio is usually much higher than other municipal infrastructure issuers such as public power utilities with generation. The ratings can accommodate higher relative leverage because of the participants' contractual obligation to the JAA to pay for all costs including debt service and timely cost recovery process given the lack of third party rate regulation.

A JAA that is highly leveraged may have less financial flexibility and higher, less competitive rates compared to a less leveraged JAAs with similar amounts of owned resources relative to their size. High leverage may also prevent or limit a JAA's ability to construct or acquire new energy sources or maintain existing facilities.

Financial Strength: Cash Flow Coverage - Fixed Obligation Charge Coverage Ratio (10% weight)

We analyze short and long-term trends in financial performance to assess the stability and resiliency of the JAA. We use the fixed obligation charge coverage ratio to measure a JAA's ability to repay annual debt

service costs from recurring revenues net of recurring expenses, excluding one-time revenues or extraordinary charges. The fixed charge coverage ratio is similar to debt service coverage ratio but also incorporates "debt like "obligations related to the ownership of resource assets through a take-or-pay contact.

Our fixed obligation charge coverage ratio subtracts the debt portion of the take-or-pay contractual payment from the JAA's operating expenses when calculating net revenues, and subsequently adds the debt portion of the take-or-pay contractual payment to the total debt service costs when calculating coverage.

The fixed obligation charge coverage ratio facilitates uniform comparisons of JAAs that finance generation assets on balance sheet with JAAs that finance assets off balance sheet through a separate take-or-pay project. We use the fixed obligation charge coverage ratio in the analysis of financial results to provide a more consistent comparison of JAAs, regardless of the approach to financing energy resource ownership.

A consistent and stable fixed obligation charge coverage ratio provides increased resiliency to withstand revenue and expense volatility. A stable or improving fixed obligation charge coverage ratio is an important indicator of financial stability. Declines in the coverage ratio could be indicative of financial strain or an unwillingness or inability to raise rates to fully recover the cost of service, which, in turn, could contribute to a weakening in credit quality.

For take-or-pay projects, financial performance with fixed obligation charge coverage ratios below 1.0 are modeled as 'B' for Factor 4(c) and the rating scorecard output is unlikely to be reliable to within 1-2 notches of an actual rating. A take-or-pay project that sustains below 1.0 times fixed obligation charge coverage is not consistent with investment grade characteristics and violates a fundamental assumption of timely and full cost recovery. Under-recovery of actual costs by a take-or- pay project will also likely result in Factor 1 being scored at 'Ba' or lower since difficulties in cost recovery override participant credit quality. That said, we would adjust the fixed obligation charge coverage ratio calculation for any technical factors such as accounting adjustments, timing of payments or other unusual technical issues, which could obfuscate the in-substance level of coverage.

The difference in scoring for financial metrics for all-requirement agencies and take-or-pay projects reflects the fundamentally different approaches between take-or-pay projects and all-requirement agencies as outlined in this methodology. For take-or-pay projects, the typically stronger metrics for a given sub factor reflect greater comparability to project financings especially at the higher end of the range of financial metrics. Additionally, all-requirement agencies' financial metric ranges were set to provide greater comparability to G&T cooperatives, which have many similarities to all-requirement agencies that provide power, and public power with generation.

Rating Factor 5: Willingness to Recover Costs with Sound Financial Metrics (All-Requirement Agencies)

Why it Matters

Independent and local rate-setting authority guided by sound bond covenants and governance is a fundamental credit strength and a heavily weighted rating factor. An all-requirement agency's business profile is significantly more dynamic relative to that of a take-or-pay project and faces greater potential need for rate changes similar to G&T cooperatives and public power utilities with generation resulting in the addition of a fifth rating factor. For example, an all-requirement agency's participants could experience resource demand growth that requires the JAA to acquire or build new energy resources.

An all-requirement agency's willingness to recover costs while maintaining a financial buffer to help mitigate the impact of modest credit stress events demonstrates the stability and certainty of cash flows inherent in a JAA's business model. On the other hand, unwillingness or inability to establish sufficient rates to maintain sound financial metrics would be contrary to the cash flow stability expected in a JAA. Generally, the willingness to implement rate increases will, at some point, affect the relative financial performance of the JAA as measured in Factor 4. Without sound rate-setting that is predictable and timely, cash flow to service debt or financial liquidity may be compromised. As such, we believe that this rating factor is often a leading indicator of the direction of future financial performance for a JAA. This highlights that some entities may have a high tolerance for exposure to risks readily anticipated through more conservative management practices and policies.

How We Measure Willingness to Recover Costs for the Grid

We evaluate the governing board's rate-setting process for its transparency and timeliness in setting the rates. A key measure is the demonstrated record of willingness to charge the rates required to recover operating and capital costs, provide a cushion for fixed obligation charge coverage ratio, and maintain sound liquidity. The number of days it takes to implement new rates and collect the additional revenues is also a major consideration.

The longer and more complicated the process, the more pressure the delay in raising rates may put on a JAA's liquidity. In the end, the willingness to establish timely new rates to meet the appropriate cost recovery requirement is weighted heavily in this rating factor. This is of particular importance when considering an all-requirement agency's capital program and whether future rates will be sufficient to manage increased debt service requirements. An all-requirement agency's willingness to enact rates and charges sufficiently and quickly to maintain the associated financial metrics for a JAA's rating category would result in a higher rating assigned to this rating factor. In cases where the management has established planning targets for financial metrics that are lower than the associated financial metrics for a JAA's willingness at a level higher than its financial metrics may indicate.

We may also map Factor 5 higher than the financial metrics may indicate based on the joint action agencies' and participants' demonstrated commitment and ability to maintain financial stability and resiliency. For example, an automatic monthly adjustment at both the JAA and its participants for changes in energy resource costs is an important rating consideration given the fluctuations in energy costs over the past decade. Such adjustment mechanisms serve to narrow the potential drain on the JAA and its participants' liquidity and the resulting impact on credit quality. Another example would be a JAA increasing its liquidity in advance of a construction project to mitigate incremental construction risk.

All-Requirement Agencies (25% total)

Factor	Weight	Aaa	Aa	Α	Baa	Ba	В
Factor 5: Willingness to Recover Costs with Sound Financial Metrics	25%	Strong rate setting record. Rates set to maintain financial metrics in the 'Aaa' category.	Above average rate setting record. Rates set to maintain financial metrics in the 'Aa' category.	Adequate rate setting records Rates set to maintain financial metrics in the 'A' category.	Below average rate setting records. Rates set to maintain financial metrics in the 'Baa' category.	Below average rate setting records. Rates set to maintain financial metrics in the 'Ba' category.	Record of insufficient rate relief and history of under recovery.

Limitations of the Grid and Other Rating Considerations

This section discusses limitations in the use of the grid to map against actual ratings and additional factors that are not included in the grid that can be important in determining ratings.

The purpose of the rating grid is to provide a reference tool that can be used to approximate credit profiles within this sector. The grid provides summarized guidance for the factors that are generally most important in assigning ratings to these issuers and represents a decision to favor simplicity that enhances transparency and to avoid greater complexity that might enable the grid to map more closely to actual ratings. Accordingly, the four to five rating factors in the grid do not constitute the exhaustive treatment of all the considerations that are important for ratings in the JAA sector. The data we apply for purposes of grid analysis are primarily historical but our ratings are forward looking and may involve forward looking forecasts. In some cases, our expectations for future performance may be informed by confidential information that we cannot publish or otherwise disclose. In other cases, we estimate future results based upon past performance, industry trends, demand and price outlooks, peer actions, and other factors. As a result, the grid indicated rating is not expected to match the actual rating of each issuer in each case.

In choosing the factors for this rating methodology grid, we did not include certain important factors that are common to assessing an issuer's credit quality, such as the quality and experience of management, assessments of governance, and the quality of financial reporting and information disclosure. The assessment of these factors can be highly subjective and variable over time. Therefore, ranking these factors by rating category in the grid would in some cases suggest too much precision in the relative ranking of particular issuers against all other issuers that are rated in various industry sectors. We note, however, that these excluded factors do affect those that are included in the grid (such as management's experience affecting an issuer's revenue performance over time)

Ratings may include additional factors that are difficult to quantify or that only have a meaningful effect in differentiating credit quality in some cases. Such factors include environmental compliance, nuclear decommissioning trust obligations, and financial controls. While these are important considerations, it is not possible to precisely express these in the rating methodology grid without making the grid excessively complex and significantly less transparent.

Actual ratings assigned may also reflect circumstances in which the weighting of a particular factor will be different from the weighting suggested by the grid. For example, there may be instances where a JAA's competitiveness will be given greater consideration in the assigned rating than what is indicated by the weighting in the grid.

This variation in weighting rating considerations can also apply to factors that we choose not to represent in the grid. For example, management quality is a consideration frequently critical to ratings though it may not, in other circumstances, have a substantial impact in discriminating between two issuers with a similar credit profile. As an example of the limitations, ratings can be heavily affected by conservative management that reduces business risk and thus reduces default risk but two identical companies might be rated the same if their only differentiating feature is that one has a conservative management while the other has an extremely conservative management.

Other Rating Considerations

We consider other factors in addition to those discussed in this report, but in most cases understanding the framework presented herein will enable a good approximation of our view on the credit quality of companies in the JAA sector. We consider additional factors, including future operating and financial performance that may deviate from historic performance, the quality of the management, financial controls, event risk and seasonality. The analysis of these factors remains an integral part of our rating process.

Management Quality

The quality of management is an important factor supporting an issuer's credit strength. We normally meet with senior executives to assess management's business strategies, policies, and philosophies and evaluates management's performance relative to performance of competitors and our projections. Once established, a record of consistency provides us with insight into management's likely future performance in stressed situations and can be an indicator of management's tendency to depart significantly from its current business philosophy.

Financial Controls

We rely on the accuracy of audited financial statements to assign and monitor ratings. Such accuracy is only possible when companies have sufficient internal controls, including centralized operations and the proper tone at the top, and consistency in accounting policies and procedures.

Weakness in the overall financial reporting processes, financial statement restatements or delays in reporting filings can be indications of a potential breakdown in internal controls.

Event Risk

We also recognize the possibility that an unexpected event could cause a sudden and sharp decline in an issuer's fundamental creditworthiness. Typical special events include capital restructuring programs, litigations, outages, and extreme weather, among others.

Notching Conventions

While the factors and sub-factors within the grid are designed to include the key rating drivers reflecting the fundamental risks of JAAs, the grid alone cannot capture some of the wide-ranging factors that may impact the credit rating.

The notching factors are designed to adjust, either upwards or downwards, a JAA's indicated rating based on other considerations not adequately addressed in the rating grid. Our analysts may or may not assign a

notch upwards or downwards to a rating as this is a case by case assessment determined by a rating committee. Unless specifically provided for in this methodology (e.g. diversity), the extent of notching by a rating committee may exceed more than one notch since these considerations (e.g. contractual structure) can potentially encompass a wide deviation from the assumptions incorporated in this methodology.

Contractual Structure and Legal Environment

JAAs that have unusually strong or weak offtake contract terms, legal structures, or inherent legal environments could be notched higher or lower. For example, a court validated offtake contract that incorporates a general obligation pledge of the municipal city in addition to the municipal utility's revenues would be considered exceptionally strong resulting in up to a 1-notch lift. Additionally, an all-requirement contract with exceptionally strong provisions, such as take-or-pay features, could benefit from a positive adjustment up to 1 notch.

On the other hand, a downward notching adjustment could be made for weak contractual features such as a lack of a participant step-up provision or similar feature in a multi-party contract. The importance of the step-up provision was highlighted when <u>Massachusetts Municipal Wholesalers</u> <u>Electric Company's</u> Project No 6's (MMWEC) participants in Vermont successfully challenged their take-or-pay contracts. In this case, MMWEC had to exercise the step up provision resulting in the Massachusetts participants taking the Vermont participants' share and assuming the associated costs. Another weak contractual feature is a limitation in the offtake contract. An example is a project that has an inflation indexed annual payment cap, which can be a requirement under state law. This limitation is unusual compared to a typical take-or-pay project and this feature reduces the effectiveness of a cost pass-through mechanism under its contract.

For take-or-pay projects, the flexibility to add assets by increasing leverage or partially or fully commingle funds with other businesses could be viewed as a downward notching consideration.

Concerns regarding the legal structure such as a JAA's undivided ownership interest in a project with coowners that are of significantly weaker credit quality could result in a downward notching adjustment.

Participant Diversity and Concentration

In conjunction with a significant step-up provision, a diverse participant pool is a source of credit enhancement and could result in an upward adjustment by up to one notch to the grid-indicated rating. A diverse participant pool with low participant concentration serves to mitigate the potential risk of one or more of a JAA's participants defaulting since the non-defaulting participants would be required to step up their respective share to cover the defaulted member's share. The larger group of participants with low concentration would allow a greater number of participants to default. That said, the diversity benefit is limited to no more than one notch since regional and sector concentration results in meaningful correlation among participants. Additionally, a lack of a step-up provision is likely to result in no upward notching for diversity while a step up provision for less than 25% could result in lower notching than indicated.

Participant diversity is measured by three equally weighted factors: (1) total number of participants, (2) aggregate share of small participants (participants with less than 1% share of the JAA) and (3) aggregate share of the five largest participants. A joint action agency that has diversity measures all or mostly in the 'strong' category would benefit from a 1-notch lift while those that average in the 'medium' category would benefit from a 0.5 notch lift.

Weight	Participant Diversity and Concentration	Strong	Medium	Low
1/3	Total number of participants	More than 30	20 to 30	Less than 20
1/3	Aggregate share of small participants (participants with less than 1% share of a JAA)	Greater than 10%	5% to 10%	Less than 5%
1/3	Aggregate share of the five largest participants	Less than 40%	40% to 50%	More than 50%

Construction Risk

We assess each JAA's construction risks and may adjust the grid-indicated rating if there is unmitigated or insufficiently mitigated risk. Construction delays and cost overruns were major drivers of energy related municipal debt defaults Washington Public Power Supply System's (WPPSS) Projects 4 and 5, which defaulted on approximately \$2.25 billion of debt in 1983, is the most notable example of massive construction delays and cost overruns that precipitated the largest municipal bond payment default in history at that time.

In our evaluation of construction risk, we look to third-party consulting engineers to provide an assessment of the risks associated with a particular project. The review of a well-defined project feasibility study or independent engineer's report is often a critical component of our evaluation. Factors such as the contractor's experience and financial strength, previous experience by the joint action agency in managing construction projects, and raw construction risk are key drivers of our overall construction risk assessment. Raw construction risk can vary from projects using small, simple cycle turbines to large, complex nuclear projects. The greater the raw construction risk, the higher the probability of construction delays and cost overruns. Inclusion of first-of-kind engineering is viewed as an additional risk contributor.

Our assessment will also consider typical construction risk mitigants such as an engineering, procurement and construction (EPC) contract that is fixed price, date certain, and lump price payment with liquidated damages provisions. Performance and payment bonds or letter of credit backing a contractor's obligations can be a key credit consideration depending on the contractor's credit quality. A joint action agency that has extensive and recent experience in managing comparable construction projects is also considered a strength.

Debt Service Reserve, Debt Structure and Financial Engineering

While a typical JAA benefits from a debt service reserve sized to one year of maximum annual debt service, some JAAs have no reserves or reserves with less than one year of debt service. We believe that fully funded maximum annual debt service reserve funds are an important part of revenue bondholder security, particularly given multiple party contractual arrangements and asset concentration in a typical joint action agency. The lack of a debt service reserve fund could result in a grid-indicated rating being adjusted downward. The grid-indicated rating may be adjusted down by one notch for JAAs with less than six months of debt service reserve fund while a half notch downward adjustment is made for joint action agencies with at least a 6 month debt service reserve but less than a full year. Debt service reserves backed by low rated or unrated financial guarantors are assumed to have no value.

As an alternative to notching, we will consider subtracting the difference between a fully funded annual debt service reserve and the actual debt service reserve funding level maintained by the JAA from adjusted days liquidity on hand in cases where the JAA maintains unrestricted liquidity beyond normal working capital requirements. If the pre-notched scorecard output is not affected by the revised adjusted days liquidity on hand, no notching adjustment might be applied for lack of a one- year debt service reserve. For example, a notching adjustment for lack of a debt service reserve might not be made if an all-requirement

agency's liquidity drops from 400 adjusted days liquidity on hand to 260 adjusted days liquidity on hand after netting a full year of debt service.

We will also evaluate the existing and projected debt structure and may adjust the grid-indicated rating if unmitigated risks are identified. We will look at the bond covenanted legal protections (e.g. rate covenant), the debt amortization schedule, and the exposure to variable rate debt and interest rate swap agreements. We will evaluate debt management and interest rate swap policies, board oversight of interest rate swaps, and a JAA's disclosure of the risks and exposures associated with its debt.

We evaluate exposure to unhedged variable rate instruments in relation to the JAA's liquidity and its debt management record, including the absolute level of variable rate debt. We also closely evaluate the potential for financial stress related to a change in short-term interest rates, credit market volatility, and/or a tightening of available internal and external liquidity. We assess the joint action agency's interest rate swap derivatives and the circumstances under which the JAA will be required to post collateral and the right of the joint action agency's swap counterparty to terminate the swap should certain events occur, such as a downgrade of the JAA below a certain rating level.

We will also review the JAA's bond security provisions and if they are weak against the typical and standard provisions, this may affect the credit rating. For example, rate covenants that do not contain at least a sum sufficient provision will be viewed as a major credit negative.

Unmitigated Exposure to Wholesale Power Markets

JAAs that have excess energy resource supply or were established to supply the energy resource on a wholesale basis have potential additional credit risks should the JAA's financial operations not include mitigation factors to limit the impact of wholesale market price volatility. Wholesale exposure for a take-or-pay project is highly unusual though it could have wholesale exposure indirectly through its participants. On the other hand, an all-requirement agency could have varying degrees of wholesale exposure depending on expected customer needs and supply arrangements. Some power all- requirement agencies have used margins from selling excess power into wholesale energy markets to limit participant rates. Reliance on significant wholesale margins exposes the JAA to significant cash flow volatility and ultimately contributes to participant rate volatility and could present challenges to a JAA's willingness to raise rates on a timely basis. Exposure to the wholesale power market may result in an adjustment to the grid-indicated rating unless it is mitigated by wholesale power contracts with sound counterparties, strong available liquidity that could withstand a period of lower wholesale energy margins, and a timely and transparent rate-setting process.

Evaluating Unrated Participants in JAAs

Most JAAs include both rated and unrated participants. If the participant is not rated but the general obligation of the municipality that owns the utility is rated, we will also consider the municipality's rating and make a notching adjustment to determine the utility's credit quality based on the utility's operational and financial performance. For unrated entities that have at least a 5% share of a JAA and are not owned by a rated municipality, we will apply non-public, internal ratings on the unrated municipal utility.

If information is insufficient to assign a non-public, internal rating on the municipal utility as described above or for unrated participants with less than 5% share in the JAA, we will apply the Quantitative Ratings Estimator (QRATE) to assess the municipality's credit quality and make at least one notch downward adjustment to reflect the limited information utilized in the QRATE model and enterprise risk. In cases where the QRATE model is used and the participants share is at least 3% or greater, we will take a two notch downward adjustment on the QRATE.

Appendix A: Take-or-Pay Projects Factor Grid

Factor	Sub-Factor / Description	Weight	Aaa	Aa	А	Ваа	Ва	В
1. Participant Credit Quality and Cost Recovery Framework	-Participant credit quality -Cost recovery structure and governance	45%	Participant credit quality at cap is at 'Aaa'. JAA & participant rates are unregulated.	Participant credit quality at cap is 'Aa'. JAA & participant rates are unregulated.	Participant credit quality at cap is 'A'. JAA & participant rates are unregulated.	Participant credit quality at cap is 'Baa'. OR JAA or majority of participant rates are regulated.	Participant credit quality at cap is 'Ba'. OR Below average governance or cost recovery.	Participant credit quality at cap is 'B'. OR Consistent record of poor governance or cost recovery.
2. Asset Quality	-Asset diversity, complexity and history	15%	Diversified portfolio of simple, proven assets and minimal reinvestment requirement.	Simple, proven asset and minimal reinvestment requirement.	Diverse portfolio of proven assets across technologies.	Standard, commercially proven asset(s).	Asset(s) with some operating challenges.	Largely unproven technology or poorly performing asset(s).
3. Competitiveness	-Cost competitiveness relative to market	15%	Extremely competitive asset through market cycle.Rates more than 50% below market. OR Very strong monopoly position with no alternative.	Very competitive asset through market cycle. Rates 30% to 50% below market. OR Strong monopoly position with very unlikely alternatives over the long term.	Competitive asset through market cycle.Rates 0% to 30% below market. OR Quasi monopoly with plausible alternatives over the medium to long term.	Competitive asset during average market. Rates up to 50% above market lows.	Competitive asset during market highs.Rates could be 100% above market lows.	Uncompetitive asset in nearly all price environments.Rates more than 100% above market lows.
4. Financial Strength and Liquidity	4(a) Adjusted days liquidity on hand(days)	10%	<u>></u> 250	175 <u>< x</u> < 250	100 <u>< x</u> < 175	30 <u>< x</u> < 100	15 <u>< x</u> < 30	< 15

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold rating from \$1,500 of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be reckless and inappropriate for retail investors to use MOODY'S credit ratings or publications when making an investment decision. If in doubt you should contact your financial or other professional adviser.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

RRA Regulatory Focus Major Rate Case Decisions – January – December 2018

Despite a rising interest rate environment and increased volatility in financial markets in the U.S., the equity returns authorized energy utilities nationwide continued to fall in 2018. Based on data gathered by Regulatory Research Associates, a group within S&P Global Market Intelligence, the average ROE authorized electric utilities was 9.59% in rate cases decided during 2018, somewhat below the 9.74% average for cases decided in 2017. There were 48 electric ROE determinations in 2018 versus 53 in 2017. This data includes several limited-issue rider cases. Excluding these cases from the data, the average authorized ROE was 9.55% in rate cases decided in 2018, somewhat below the 9.68% average in 2017. The difference between the ROE averages including rider cases and those excluding the rider cases is largely driven by ROE premiums of up to 200 basis points approved by the Virginia State Corporation Commission in riders related to certain generation projects (see the <u>Virginia Commission Profile</u>).

The average ROE authorized gas utilities was also 9.59% in cases decided during 2018 versus 9.72% in 2017. There were 41 gas cases that included an ROE determination in 2018, versus 24 in 2017. The 2017 data includes an 11.88% ROE approved for an Alaska utility that was more than 130 basis points above the next-highest ROE for a gas utility that year. Absent this "outlier," the 2017 gas ROE average is 9.63%.

In 2018, the median ROE authorized in all electric utility rate cases was 9.57%, largely in line with the 9.60% median observed in 2017. For gas utilities, the median authorized ROE in cases decided in 2018 was 9.60%, equal to the 9.60% in 2017.

From a longer-term perspective, interest rates, as measured by the 30-year U.S. Treasury bond yield, fell almost steadily from the early 1980s until 2015 or so, placing downward pressure on authorized ROEs. Even though the decline has been less dramatic in the period since 1990, average authorized ROEs fell below 10% for gas utilities in 2011 and for electric utilities in 2014. While the U.S. Federal Reserve has begun to unwind its monetary policy and raise interest rates, authorized ROEs have continued to fall modestly.

Data compiled Jan. 28, 2019.

S&P Global Market Intelligence

RRA Regulatory Focus: Major Rate Case Decisions

Source: Regulatory Research Associates, a group within S&P Global Market Intelligence

Rate case activity has been brisk with almost 140 cases decided in 2018, slightly above the level in 2017. In fact, since 2010 rate case activity has been robust, with 100 or more cases adjudicated in seven of the last nine calendar years. This count includes electric and gas cases where no ROEs have been specified; however, withdrawn cases are not included in this count.

Increased costs associated with environmental compliance, generation and delivery infrastructure upgrades and expansion, renewable generation mandates, storm and disaster recovery, cybersecurity and employee benefits argue for the continuation of an active rate case agenda over the next few years. In addition, the need to address the impacts of the 2017 federal tax reform has caused rate case agendas to be more active than previously expected.

In addition, rising interest rates could also contribute to increased rate case activity. As the Federal Reserve moves forward with its policy initiated in 2015 to gradually raise the federal funds rate, utilities will face higher capital costs and need to initiate rate cases to reflect these higher capital costs in rates.

So far, authorized ROEs have continued to decline despite increases in interest rates in 2017 and 2018. The Federal Reserve increased the federal funds rate three times in 2017 and four more times in 2018, including the most recent change in December 2018. At that time, policymakers signaled that two more hikes are likely in 2019. However, recent commentary from Federal Reserve Chairman Jerome Powell indicates a willingness to be "patient" about hikes in 2019, with the course of policy to be dependent on data and market conditions. However, it is important to note that increases in the fed funds rate do not necessarily move in lockstep with longer-term treasuries. Thus far in 2019, the yield on the 30-year Treasury bond has decreased somewhat as the recent U.S. government shutdown and trade concerns have stoked fears of slower economic growth.

2

RRA Regulatory Focus: Major Rate Case Decisions

Similarly, authorized ROEs do not move in lockstep with interest rates, and it may be some time before a noticeable change in average authorized ROEs is discernible. Aside from the fact that the normal process of filing and completing rate cases takes time, intervenors continue to argue that factors such as limited-issue riders and decoupling mechanisms reduce risk and warrant lower authorized ROEs. In addition, anecdotally, RRA has observed instances where the company has argued for a higher ROE authorization based on the changes in broader interest rates, and the commission has found that the prevailing change in interest rates was not significant enough to warrant a specific adjustment to the authorized ROE.

Capital structure trends

To offset the negative impact of federal tax reform, many utilities in 2018 sought higher equity ratios, and the authorized equity ratios adopted by utility commissions were modestly higher than the levels observed in 2017. The average authorized equity ratio for electric utility cases nationwide was 48.95% in 2018, versus 48.90% in 2017. The average allowed equity ratio for gas utilities nationwide was 50.09% in 2018, versus 49.88% in 2017.

The aforementioned averages include allowed equity ratios adopted by utility commissions in Arkansas, Florida, Indiana and Michigan — jurisdictions that authorize capital structures that include cost-free items or tax credit balances. Excluding these jurisdictions, the average authorized equity ratio for electric utilities nationwide was 50.53% in cases decided during 2018 versus 50.02% in 2017. By comparison, for gas utilities, the average allowed equity ratio was 51.47% in 2018 versus 51.13% in 2017.

Taking a longer-term view, equity ratios have generally increased over the last 15 years — the average equity ratio approved in electric rate cases decided during 2004 was 46.95%, while the average for gas utilities was 45.81%. Many commissions began approving more equity-rich capital structures in the wake of the 2008 financial crisis.

A more granular look at ROE trends

The discussion thus far has looked broadly at trends in authorized ROEs; the sections that follow provide a more granular view based upon the types of proceedings/decisions in which these ROEs were established.

Source: Regulatory Research Associates, a group within S&P Global Market Intelligence

RRA Regulatory Focus: Major Rate Case Decisions

RRA has observed that there can be significant differences between the ROE averages from one subcategory of cases to another.

As a result of electric industry restructuring, certain states unbundled electric rates and implemented retail competition for generation. Commissions in those states now have jurisdiction only over the revenue requirement and return parameters for delivery operations.

Comparing electric vertically integrated cases versus delivery-only proceedings over the past 12 years, RRA finds that the annual average authorized ROEs in vertically integrated cases typically are about 30 to 65 basis points higher than in delivery-only cases, arguably reflecting the increased risk associated with ownership and operation of generation assets.

Based on rate cases concluded in 2018, the industry average ROE for vertically integrated electric utilities was 9.68%, versus 9.8% for cases decided in 2017. For electric distribution-only utilities, the industry average ROE authorized in 2018 was 9.38% versus 9.43% in 2017.

Settlements have frequently been used to resolve rate cases over the last several years, and in many cases, these settlements are "black box" in nature and do not specify the ROE and other typical rate case parameters underlying the stipulated rate change. However, some states preclude this type of treatment, and so, settlements must specify these values if not the specific adjustments from which these values were derived.

For both electric and gas cases, RRA has found no discernible pattern in the average authorized ROEs in cases that were settled versus those that were fully litigated. In some years, the average authorized ROE was higher for fully litigated cases, in others, it was higher for settled cases, and in a handful of years, the authorized ROE was similar for both fully litigated and settled cases.

RRA Regulatory Focus: Major Rate Case Decisions

Over the last several years, the annual average authorized ROEs in electric cases that involve limited-issue riders were typically meaningfully higher than those approved in general rate cases, driven by the ROE premiums authorized in Virginia. Limited-issue rider cases in which a separate ROE is determined have had limited use in the gas industry, as most of the gas riders rely on ROEs approved in a previous base rate case.

The table on page 7 shows the average ROE authorized in major electric and gas rate decisions annually since 1990 and by quarter since 2014, followed by the number of observations in each period. The tables on page 8 indicate the composite electric and gas industry data for all major cases, summarized annually since 2004 and by quarter for the past six quarters.

Included in the tables beginning on page 9 of this report are comparisons since 2007 of average authorized ROEs for settled versus fully litigated cases, general rate cases versus limited issue rider proceedings and vertically integrated cases versus delivery-only cases.

The individual electric and gas cases decided in 2018 are listed starting from page 11, with the decision date shown first, followed by the company name, the abbreviation for the state issuing the decision, the authorized rate of return, the ROE and the percentage of common equity in the adopted capital structure. Next, RRA indicates the month and year in which the adopted test year ended, whether the commission utilized an average or a year-end rate base and the amount of the permanent rate change authorized. The dollar amounts represent the permanent rate change ordered at the time decisions were rendered. Fuel adjustment clause rate changes are not reflected in this study.

The simple mean is utilized for the return averages. In addition, the average equity returns indicated in this report reflect the ROEs approved in cases that were decided during the specified time periods and are not necessarily representative of either the average currently authorized ROEs for utilities industrywide or the returns actually earned by the utilities.

The table and graph below track the average and median equity return authorized for all electric and gas rate cases combined by year for the last 29 years. As the table indicates, since 1990 authorized ROEs have generally trended downward, reflecting the significant decline in interest rates and capital costs that has occurred over this time frame. The combined average and median equity returns authorized for electric and gas utilities in each of the years 1990 through 2018 and the number of observations for each year are presented in the accompanying tables.

RRA Regulatory Focus: Major Rate Case Decisions

Please note: In an effort to align data presented in this report with data available in S&P Global Market Intelligence's online database, earlier historical data provided in previous reports may not match historical data in this report due to certain differences in presentation, including the treatment of cases that were withdrawn or dismissed.

RRA Regulatory Focus: Major Rate Case Decisions

1		
	Foo	tnotes
	А	Average.
		Order followed stipulation or settlement by the parties. Decision particulars not necessarily precedent
	В	setting or specifically adopted by the regulatory body.
	CWIP	Construction work in progress.
	D	Applies to electric delivery only.
	DCt	Date-certain rate base valuation.
	Е	Estimated.
	F	Return on fair value rate base.
	ppl	Interim rates implemented prior to the issuance of final order, normally under bond and subject to refund.
	LIR	Limited-issue rider proceeding.
	М	"Make-whole" rate change based on return on equity or overall return authorized in previous case.
	R	Revised.
	Te	Temporary rates implemented prior to the issuance of final order.
	Tr	Applies to transmission service.
	U	Double-leverage capital structure utilized.
	YE	Year-end.
	Z	Rate change implemented in multiple steps.
	*	Capital structure includes cost-free items or tax credit balances at the overall rate of return.
	1	Decision adopted a company filing specifying a \$99.3 million plant-specific retail revenue requirement. According to the company, this results in an annual rate reduction of approximately \$26.8 million.
	2	Rate change was approved under Rider R, which is the mechanism through which the company recovers its investment in the Bear Garden power plant.
	3	Rate change was approved under Rider W, which is the mechanism through which the company recovers its investment in the Warren County generation facility.
	4	Rate change was approved under Rider S, which is the mechanism through which the company recovers its investment in the Virginia City Hybrid Energy Center.
	5	Rate change was approved under Rider GV, which is the mechanism through which the company recovers its investment in the Greensville County generation facility.
	6	Rate change was approved under Rider B, which is the mechanism through which the company recovers the costs associated with the conversion of the Altavista, Hopewell and Southampton power stations to burn biomass fuels.
	7	Reduction ordered to the nuclear construction cost recovery tariff associated with the company's two new units being built at its Vogtle plant.
	8	Proposed acquisition of the Beech Ridge II and Hardin wind generation facilities and an associated rider were rejected. No initial revenue requirement had been proposed.
	9	Rate case dismissed.
	10	Rate change was approved under Rider DSM, which is the mechanism through which the company is permitted to collect a cash return on demand-side management program costs.
	11	Rate change was approved under Rider RAC-EE, which is the mechanism through which the company recovers its investment in energy efficiency programs.
	12	ROE to be used for certain riders and AFUDC purposes is 9.5%.
	13	Rate change was approved under Rider US-2, which is the mechanism through which the company recovers its investment in three utility-scale solar facilities: Scott Solar, Whitehouse Solar and Woodland Solar.
	14	Rate change was approved under Rider BW, which is the mechanism through which the company recovers its investment in the Brunswick Power Station.
	15	Rate change pertains to the company's Citrus County CC natural gas plant that is nearing completion.

(continued on next page)

Footnotes

- 16 Case was dismissed without prejudice.
- 17 Rate change was approved under the company's joint expanded net energy cost proceeding.
- 18 Decision freezes electric rates at 2017 levels for 2018 and 2019.
- Case involves company's transmission, distribution and storage system improvement charge, or TDSIC, rate 19 adjustment mechanism.
- Settlement called for no change to the company's base rates or the revenue requirement under the 20 company's transmission cost recovery factor.
- Rate change was approved under Rider U, which is the mechanism through which the company recovers its 21 investment in projects to underground certain "at risk" distribution facilities.
- 22 Annual rate adjustment under the company's performance-based ratemaking plan.
- Case established the rates to be charged to customers under the company's compliance and system improvement adjustment, or CSIA, mechanism, which includes both federally mandated pipeline-safety 23 initiatives and projects that are permitted under the state's TDSIC statute.
- Reflects updates to the company's gas system reliability surcharge rider since its most recent base rate 24 case.
 - Rate change was approved under the company's Strategic Infrastructure Development and Enhancement, or STRIDE, program rider. Total is to be phased in over five years; each annual adjustment is subject to review and true-up.
- Case involves the company's investment made under Virginia Steps to Advance Virginia Energy
- 26 infrastructure program.

25

- 27 Case involves the company's pipe replacement program rider.
- Case involves the company's CSIA mechanism and projects that are permitted under the state's TDSIC 28 statute.
- Pertains to investments made under the company's CSIA mechanism and projects that are permitted 29 under the state's TDSIC statute.
- 30 Freezes gas rates at 2017 levels for 2018 and 2019.
- 31 Rate case withdrawn.
- Case relates to the company's investment in its STRIDE program; revenue requirements are collected 32 through the infrastructure replacement and improvement surcharge, or IRIS.
- 33 Rate change under company's performance-based ratemaking plan.
- 34 Case involves company's gas system reliability surcharge.
- 35 Rate change under company's annual rate mechanism.
- 36 Case involves company's accelerated main replacement program rider.
- 37 Rate case parameters reflect company's Northern operations.
- 38 Rate case parameters reflect company's Southern operations.

Exhibit No. Description

14	State Allowed ROEs – Walters Group
15	Expected Earnings Approach - Walters Group

- 16 **Revised Walters Risk Premium**

I. INTRODUCTION

1	Q1.	PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.
2	A1.	My name is Adrien M. McKenzie, and my business address is 3907 Red River,
3		Austin, Texas 78751.
4	Q2.	ARE YOU THE SAME ADRIEN M. MCKENZIE THAT PREVIOUSLY
5		SUBMITTED PREFILED DIRECT TESTIMONY IN THIS CASE?
6	A2.	Yes, I am.
7	Q3.	WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?
8	A3.	My testimony to the Kentucky Public Service Commission ("KPSC") addresses the
9		testimony of Mr. Christopher C. Walters on behalf of the United States Department
10		of Defense and all other Federal Executive Agencies ("DOD"), and Mr. Gregory W.
11		Tillman on behalf of Walmart Inc. ("Walmart") concerning the fair rate of return on
12		equity ("ROE") that Louisville Gas and Electric Company ("LGE") and Kentucky
13		Utilities Company ("KU") should be authorized to earn on its investment in
14		providing electric and gas utility service. ¹
15		Ms. Donna H. Mullinax, on behalf of the Kentucky Office of Attorney
16		General, the Louisville/Jefferson County Metro Government, and the Lexington-
17		Fayette Urban County Government, and Mr. Lane Kollen, on behalf of the
18		Kentucky Industrial Utility Consumers do not present expert testimony on the ROE
19		issue. Rather, they prepare their accounting and other rate case schedules based on
20		the assumption that the ROE for the Companies is maintained at the current level of
21		9.70% authorized in their prior rate cases before the KPSC, Case Nos. 2016-00370
22		and 2016-00371.

¹ I refer to LGE and KU collectively as "LGE/KU" or "the Companies."

Finally, I note that all of the above-mentioned witnesses ultimately accept LGE/KU's capital structure proposal. In light of this, and based on the discussion in my direct testimony supporting the proposed capital structure,² I do not address this issue further here.

5

Q4. PLEASE SUMMARIZE DOD'S ROE RECOMMENDATION.

A4. Mr. Walters recommends an ROE of 9.35% for the Companies. In arriving at this
proposal, he relies primarily on discounted cash flow ("DCF"), risk premium, and
capital asset pricing model ("CAPM") approaches. Within his DCF analysis, he
presents two different constant growth studies and one multi-stage growth study. He
develops an ROE range of 9.0%-9.7%, with the low end of the range based on a
combination of his DCF and CAPM results and the upper end based on his risk
premium results; his recommendation of 9.35% is the midpoint of this range.³

Q5. DOES MR. TILLMAN CONDUCT AN INDEPENDENT EVALUATION OF A FAIR ROE FOR LGE/KU?

A5. No. Mr. Tillman does not conduct any analyses of the cost of equity. His testimony
is limited to a presentation of selected data concerning previously authorized ROEs.
Based on this limited review, Mr. Tillman expresses his concern that the Companies'
10.42% requested ROE is "excessive."⁴

² McKenzie Direct at 31-34.

³ Walters Direct at 45-46.

⁴ Tillman KU Direct at 10.

A. DOD's ROE Recommendation Fails to Meet Regulatory Standards

1 Q6. PLEASE SUMMARIZE YOUR RESPONSE TO DOD'S ROE TESTIMONY.

A6. At 9.35%, Mr. Walters' recommendations is simply too low. It would be one of the lowest ROEs allowed for a vertically-integrated utility in the past three years.⁵ In addition, it falls 35 basis points below LGE/KU's currently allowed ROE. In light of increases in capital market costs since the time of LGE/KU's last case, this outcome is not logical. The table below summarizes this change in interest rates:

REBUTTAL TABLE 1 INTEREST RATE INCREASES FROM PRIOR LGE/KU CASE

		Current	
	Case (a)	Rates (b)	<u>Increase</u>
10-Yr. Treasury	2.19%	2.89%	0.70%
30-Yr. Treasury	2.80%	3.17%	0.37%
A Utility	3.94%	4.42%	0.48%
Baa Utility	4.32%	4.96%	0.64%

LG&E/KU Prior Current

Sources: https://fred.stlouisfed.org/categories/115; Moody's Investors Service.

(a) For June 2017, corresponding to the final order period in Case Nos. 2016-00370 and 2016-00371.

9

7 8

(b) Average yield for three months ending January 2019.

10 As the table shows, interest rates have increased approximately 40 to 70 basis points

- 11 since the decision period in LGE/KU's last case. With interest rates significantly
- 12 higher, an ROE recommendation that is so far below the level awarded in the
- 13 Companies' previous case is not realistic.

⁵ For vertically-integrated electric utilities (like LGE/KU) there have been only seven allowed ROEs at or below 9.35%, out of 70 total cases, from 2016 through 2018. S&P Global Market Intelligence, *RRA Regulatory Focus: Major Rate Case Decisions*, Regulatory Research Associates (Jan. 31, 2019; Jan. 30, 2018; Jan. 18, 2017).

Q7. HOW DOES MR. WALTERS' RECOMMENDATION COMPARE TO ROES ALLOWED BY OTHER STATE COMMISSIONS?

A7. It is considerably lower. As referenced earlier, over the past several years, there has
been a small number of ROEs (7 out of 70 total cases) allowed by other state
commissions for vertically-integrated utilities in the low 9.0% range. The table
below summarizes the average allowed ROE since 2016:

REBUTTAL TABLE 2 TRENDS IN ALLOWED ROES

7

8

9

	Average
	Allowed
<u>Year</u>	ROE
2016	9.77%
2017	9.80%
2018	<u>9.68%</u>
Average	9.75%

Source: S&P Global Market Intelligence, *RRA Regulatory Focus: Major Rate Case Decisions*, Regulatory Research Associates (Jan. 31, 2019; Jan. 30, 2018; Jan. 18, 2017). The data is for vertically-integrated utilities.

10 Mr. Walters' ROE recommendation, at 9.35%, is 40 basis points below what 11 other state regulatory commissions across the country are allowing. This is an 12 important comparison. Allowed ROEs provide one gauge of reasonableness for the 13 outcome of a cost of equity analysis. In considering utilities with comparable risks, 14 investors will always seek to provide capital to the opportunity with the highest 15 expected return. If a utility is unable to offer a return similar to that available from other investment opportunities of equivalent risks, investors will become unwilling 16 17 to supply the utility with capital on reasonable terms.

1	Q8.	MR. WALTERS PRESENTS ALLOWED ROE DATA IN HIS TESTIMONY. ⁶
2		SHOULD HIS DATA BE USED IN THE CONTEXT OF THIS CASE?
3	A8.	No. His allowed ROE information is for all electric utilities, including delivery-
4		only companies. Of course, the Companies are vertically-integrated in that their
5		operations also include generation facilities. As S&P Global Market Intelligence
6		(the source for both of our allowed ROE data) states:
7 8 9 10 11 12		Comparing electric vertically integrated cases versus delivery-only proceedings over the past 12 years, RRA finds that the annual average authorized ROEs in vertically integrated cases typically are about 30 to 65 basis points higher than in delivery-only cases, arguably reflecting the increased risk associated with ownership and operating of generation assets. ⁷
13		Mr. Walters' allowed ROE data is potentially misleading and should be ignored in
14		the context of this proceeding.
15	Q9.	HOW DOES DOD'S ROE PROPOSAL COMPARE TO AUTHORIZED
16		RETURNS FOR THE SPECIFIC UTILITIES IN THE PROXY GROUP HE
17		USES TO ESTIMATE THE COST OF EQUITY?
18	A9.	The current authorized rates of return for the electric utilities in Mr. Walters' proxy
19		group, as reported by the Value Line Investment Survey ("Value Line"), are shown
20		on McKenzie Exhibit No. 14. As documented there, the firms in the proxy group of
21		comparable risk utilities referenced by Mr. Walters are currently authorized an
22		average ROE of 9.74%. It is unreasonable for Mr. Walters to presume that the
23		Companies could attract capital for investment at an allowed ROE that falls so far
24		below the opportunities available from utilities he himself found were comparable
25		to them.

⁶ Walters Direct at 4-5.
⁷ S&P Global Market Intelligence, *RRA Regulatory Focus: Major Rate Case Decisions*, Regulatory Research Associates (Jan. 31, 2019) ("RRA").

Q10. ARE YOU RECOMMENDING THAT THE KPSC USE ALLOWED RETURNS TO ESTABLISH THE COMPANIES' ROE DIRECTLY?

A10. No. As discussed in my direct testimony,⁸ although allowed ROEs are commonly
referenced as a general guidepost, this data falls short of the comprehensive
analyses necessary to ensure that required regulatory standards are achieved.
Nonetheless, it is important to understand that there would be a disincentive for
investors to provide equity capital to LGE/KU if the Commission were to apply an
unreasonably low ROE, compared to entities of comparable, or even lesser risk.

9 Q11. WHAT **OTHER BENCHMARKS INDICATE** THAT DOD'S ROE IS TOO LOW TO BE **CONSIDERED** 10 RECOMMENDED 11 **REASONABLE?**

A11. Expected earned rates of return for other utilities provide another useful benchmark to gauge the reasonableness of Mr. Walters' ROE recommendation. The expected earnings approach is predicated on the comparable earnings test, which was developed as a direct result of the Supreme Court decisions in *Bluefield*⁹ and *Hope*¹⁰. This test recognizes that investors compare the allowed ROE with returns available from other alternatives of comparable risk.¹¹

18 Importantly, the expected earnings approach explicitly recognizes that 19 regulators do not set the returns that investors earn in the capital markets. 20 Regulators can only establish the allowed return on the value of a utility's 21 investment, as reflected on its accounting records. As a result, the expected earnings

⁸ McKenzie Direct at 63-66.

⁹ Bluefield Water Works & Improvement Co. v. Pub. Serv. Comm'n, 262 U.S. 679 (1923) ("Bluefield").

¹⁰ Fed. Power Comm'n v. Hope Nat. Gas Co., 320 U.S. 591 (1944) ("Hope").

¹¹ I refer to the comparable earnings and expected earnings methods interchangeably in this testimony. While comparable earnings methods tend to rely on historical data and expected earnings methods rely on projected data, the underlying principles are similar in both approaches.

MCKENZIE - 7

1 approach provides a direct guide to ensure that the allowed ROE is similar to what 2 other utilities of comparable risk will earn on invested capital. This opportunity cost 3 test does not require theoretical models to indirectly infer investors' perceptions 4 from stock prices or other market data. As long as the proxy companies are similar 5 in risk, their expected earned returns on invested capital provide a direct benchmark for investors' opportunity costs that is independent of fluctuating stock prices, 6 market-to-book ratios, debates over DCF growth rates, or the limitations inherent in 7 8 any theoretical model of investor behavior.

9

Q12. HAS THE EXPECTED EARNINGS APPROACH BEEN RECOGNIZED AS A

10 VALID ROE BENCHMARK?

Yes. This method predominated before the DCF model became fashionable with 11 A12. academic experts, and it continues to be used around the country.¹² A textbook 12 13 prepared for the Society of Utility and Regulatory Financial Analysts labels the comparable earnings approach the "granddaddy of cost of equity methods." ¹³ The 14 author points out that the comparable earnings method is "easily understood" and 15 16 firmly anchored in the regulatory economics underlying the *Bluefield* and *Hope* 17 cases, and notes that the amount of subjective judgment required to implement this 18 method is "minimal," particularly when compared to the DCF and CAPM methods.

¹² For example, the Virginia State Corporation Commission is required by statute (Virginia Code § 56-585.1.A.2.a) to consider the earned returns on book value of electric utilities in its region in establishing a floor and ceiling for the allowed ROE. Similarly, FERC concluded that, "The returns on book equity that investors expect to receive from a group of companies with risks comparable to those of a particular utility are relevant to determining that utility's market cost of equity." *Coakley v. Bangor Hydro-Elec. Co.*, Opinion No. 531-B, 150 FERC ¶ 61,165 at P 128 (2015). FERC continues to support reliance on expected earned rates of return in its proposed ROE methodology for electric utilities. See *e.g.*, *Coakley v. Bangor Hydro-Elec. Co.*, 165 FERC ¶ 61,030 (2018).

¹³ David C. Parcell, *The Cost of Capital – A Practitioner's Guide*, 115-16 Society of Utility and Regulatory Financial Analysts (2010).

MCKENZIE - 8

1		Similarly, New Regulatory Finance concluded that, "because the investment
2		base for ratemaking purposes is expressed in book value terms, a rate of return on
3		book value, as is the case with Comparable Earnings, is highly meaningful." ¹⁴ The
4		Federal Energy Regulatory Commission ("FERC") has concluded that the expected
5		earnings approach "can be useful in validating our ROE recommendation given
6		its close relationship to the comparable earnings standard that originated in Hope,
7		and the fact that it is used by investors to estimate the ROE that a utility will earn in
8		the future." ¹⁵ More recently they reiterate this position stating "[b]ecause investors
9		rely on Expected Earnings analyses to help estimate the opportunity cost of
10		investing in a particular utility, we find this type of analysis useful in determining a
11		utility's ROE." ¹⁶
12	Q13.	WHAT ROE IS IMPLIED BY THE EXPECTED EARNINGS APPROACH
13		FOR MR. WALTERS' PROXY GROUP OF ELECTRIC UTILITIES?
14	A13.	The year-end returns on common equity projected by Value Line over its forecast
15		horizon for the firms in Mr. Walters' proxy group are shown on McKenzie Exhibit
16		No. 15. As shown there, reference to expected earnings implied an annual average
17		cost of equity for his comparison group of 11.0%, once adjusted to a mid-year

basis.¹⁷ These book return estimates are an "apples to apples" comparison to the
ROE recommendations of Mr. Walters.

¹⁴ Roger A. Morin, *New Regulatory Finance*, Pub. Util. Reports, Inc. (2006) at 395.

¹⁵ Opinion No. 531 at P 147 (2014).

¹⁶ *Coakley v. Bangor Hydro-Elec. Co.*, 165 FERC ¶ 61,030 (2018), Appendix.

¹⁷ As explained in my Direct testimony (p. 45, 68), because the returns reported by Value Line are based on end-of-year book values, an adjustment factor is necessary to match earnings with an average book value over the year. As shown on McKenzie Exhibit No. 51, the average of the unadjusted values is 10.7%.

1 WHAT IS THE EXPECTED DIRECTION OF INTEREST RATES AND HOW 014. 2 DOES THIS IMPACT THE EVALUATION OF A FAIR ROE IN THIS 3 **PROCEEDING?**

4 As mentioned earlier, interest rates have increased and are expected to climb further. A14. 5 With apprehension surrounding future Federal Reserve actions, uncertainties 6 regarding the impact of the Tax Cuts and Jobs Act ("TCJA") and future fiscal 7 policies, the potential for expanding federal deficits, and world-wide geopolitical 8 exposures, the potential for significant volatility and higher capital costs is clearly 9 evident to investors. The table below compares current interest rates on 10-year and 10 30-year Treasury bonds, triple-A rated corporate bonds, and double-A rated utility 11 bonds with the average of near-term projections from Value Line, IHS Global 12 Insight, Blue Chip Financial Forecasts, and the EIA:

13 14

REBUTTAL TABLE 3 INTEREST RATE TRENDS

		Dec. 2018	<u>2019</u>	<u>2020</u>
	10-Yr. Treasury	3.0%	3.4%	3.6%
	30-Yr. Treasury	3.2%	3.6%	3.8%
	Aaa Corporate	4.0%	4.5%	4.6%
15	Aa Utility	4.2%	5.1%	5.3%

17	As the table shows, invest	cors continue	to antic	ipate significantly higher
18	interest rates over the near-term.	These projec	tions are	from forecasting services
19	that are highly regarded and w	idely referen	nced, as	I discuss in my direct
20	testimony. ¹⁸ The interest rate incre	eases shown i	in the figu	re above are on the order

¹⁸ McKenzie Direct at 28-29.

MCKENZIE - 10

1 of 60-110 basis points through 2020, which implies higher long-term capital costs 2 over the period when rates established in this proceeding will be in effect. 3 Q15. IS IT NECESSARY THAT INTEREST RATE FORECASTS, LIKE THOSE SHOWN ABOVE, BE PERFECTLY ACCURATE IN ORDER TO BE 4 **RELIED ON?** 5 6 A15. No. When estimating investors' required rate of return, what investors expect, not 7 what actually happens, is what matters most. While the projections of various 8 services may be proven optimistic or pessimistic in hindsight, this is irrelevant in 9 assessing expected interest rates and how they might influence LGE/KU's allowed 10 ROE. Any difference in actual rates as compared to analysts' forecasts is beside the 11 point. What is most important is that investors share analysts' views when the 12 forecasts were made and incorporate those views into their decision making process, 13 not the actual rates that ultimately transpire. 14 DOES MR. WALTERS' ACKNOWLEDGE THAT INTEREST RATES ARE Q16. **PROJECTED TO INCREASE?** 15 16 Yes. In his testimony, he presents a table of Blue Chip Financial Forecasts which A16. 17 indicates that both short-term and long-term are expected to increase through the first quarter of 2020.¹⁹ In fact, he states that for long-term rates, there is "a 18 consensus increase of 3.1% to 3.7%."²⁰ 19 20 Also, in his CAPM and risk premium analyses, Mr. Walters relies on 21 projected 30-year Treasury rates. The rate he uses is 3.7%. Given that the current 22 30-year Treasury rate is around 3.1%, Mr. Walters is clearly recognizing that long-23 term interest rates are on the rise.

¹⁹ Walters Direct at 10.

Q17. WHAT OTHER EVIDENCE INDICATES THAT DOD'S RECOMMENDED ROE FAILS TO MEET REGULATORY STANDARDS?

3 A17. As discussed in my direct testimony, expected rates of return for firms in the competitive sector of the economy are also relevant in determining the appropriate 4 return to be allowed for rate-setting purposes.²¹ The idea that investors evaluate 5 utilities against the returns available from other investment alternatives - including 6 7 the low-risk companies in my non-utility group – is a fundamental cornerstone of 8 modern financial theory. Aside from this theoretical underpinning, any casual 9 observer of stock market commentary and the investment media quickly comes to 10 the realization that investors' choices are almost limitless. It follows that utilities 11 must offer a return that can compete with other risk-comparable alternatives, or 12 capital will simply go elsewhere.

In fact, returns in the competitive sector of the economy form the very foundation for utility ROEs because regulation purports to serve as a substitute for the actions of competitive markets. The Supreme Court has recognized that the degree of risk, not the nature of the business, is relevant in evaluating an allowed ROE for a utility.²² The cost of capital is based on the returns that investors could realize by putting their money in other alternatives, and the total capital invested in utility stocks is only the tip of the iceberg of total common stock investment.

²¹ McKenzie Direct at 74-78.

²² Fed. Power Comm'n v. Hope Nat. Gas Co., 320 U.S. 591 (1944).

1	Q18.	DOES MR. WALTERS PRESENT ANY OBJECTIVE EVIDENCE THAT
2		WOULD SUPPORT A FINDING THAT YOUR NON-UTILITY GROUP IS
3		RISKIER THAN THE COMPANIES IN HIS PROXY GROUP?
4	A18.	No. He presents no evidence that would contradict the principles underlying my
5		reference to DCF cost of equity estimates for the non-utility group; nor does he
6		dispute the results of my analysis.
7	Q19.	WHAT ARE THE RESULTS OF YOUR ROE ANALYSIS FOR THE NON-
8		UTILITY GROUP?
9	A19.	As shown on McKenzie Exhibit 12, page 3, from my Direct testimony the average
10		ROEs for the non-utility group range from 9.9%-11.0%.
11	Q20.	WHAT ELSE SHOULD BE WEIGHED IN EVALUATING THE
12		REASONABLENESS OF MR. WALTERS' RECOMMENDED ROE?
13	A20.	As discussed earlier and in my direct testimony, in addition to the potential for
14		upward pressure on interest rates stemming from fiscal stimulus, the TCJA also may
15		have negative implications for the financial strength of regulated utilities. On June
16		18, 2018, Moody's Investors Service ("Moody's") announced that it was changing
17		the utility sector outlook from stable to negative. ²³ Moody's stated that:
18 19 20 21 22		The change in outlook primarily reflects a degradation in key financial credit ratiosThe change in outlook also reflects uncertainty with respect to the timing and extent of potential changes in regulatory recovery provisions, authorized returns and equity layers or self-help options by individual companies in response to
<u>_</u> _		lower cash flow.

 ²³ Moody's Investors Service, Announcement: Moody's changes the US regulated utility sector outlook to negative from stable (June 18, 2018).
 ²⁴ Id.

1 The change in fundamental sector outlook reflects a declining financial trend and 2 evidences an increase in the level of uncertainty that investors associate with the 3 utility industry.

4 Q21. BASED ON YOUR COMPARISON OF DOD'S ROE RECOMMENDATION 5 WITH ACCEPTED BENCHMARKS AND IN LIGHT OF THE PROSPECT 6 FOR HIGHER INTEREST RATES AND THE IMPACT OF THE TCJA, 7 WHAT DO YOU CONCLUDE?

8 A21. Based on these comparisons, DOD's recommendations are below a reasonable 9 outcome. Interest rates have increased since the Companies' last cases when they 10 were granted an ROE of 9.70%, rendering ROE proposals at this level, or below, 11 illogical and unfair. In addition, a fundamental standard underlying the regulation 12 of public utilities, as set forth by the Supreme Court's *Bluefield* and *Hope* decisions, 13 requires that the Companies must have the opportunity to earn an ROE comparable 14 to contemporaneous returns available from alternative investments of similar risk if 15 they are to maintain their financial flexibility and ability to attract capital. The 16 Companies must offer investors the opportunity to earn a return that is comparable 17 to those available from other investments of comparable risk.

If a utility is unable to offer a return similar to the returns available from other opportunities of comparable risk, investors will become unwilling to supply capital to the utility on reasonable terms. For existing investors, denying the utility an opportunity to earn what is available from other similar risk alternatives prevents them from earning their cost of capital. Both of these outcomes violate regulatory standards.

Q22. WHAT OTHER PITFALLS ARE ASSOCIATED WITH AN ROE THAT FALLS BELOW ACCEPTED REGULATORY BENCHMARKS?

3 A22. Adopting an ROE for the Companies that is below the ROEs for comparable (or 4 lower risk) utilities could lead investors to view the KPSC's regulatory framework 5 as unsupportive, an outcome that would undermine investors' willingness to support 6 future capital availability for investment in Kentucky. Security analysts study 7 regulatory orders in order to advise investors where to invest their money. As S&P 8 Global Ratings concluded, "[t]he regulatory framework/regime's influence is of 9 critical importance when assessing regulated utilities' credit risk because it defines 10 the environment in which a utility operates and has a significant bearing on a 11 utility's financial performance."25

12 If the KPSC's actions instill confidence that the regulatory environment is 13 supportive, investors will provide the necessary capital, even in times of turmoil in 14 the financial markets. It is only rational for potential investors to consider the 15 regulatory treatment afforded to LGE/KU in evaluating whether to commit new 16 capital to Kentucky jurisdictional utilities, and at what cost. Moreover, customers 17 and the service area economy enjoy the benefits that come from ensuring that the 18 utility has the financial wherewithal to take whatever actions are required to ensure 19 reliable service. In evaluating the Companies' ROE in this case, the KPSC has an 20 opportunity to show that it recognizes the importance of continuity and a balanced 21 regulatory regime.

²⁵ Standard & Poor's Corporation, *Key Credit Factors For The Regulated Utilities Industry*, RatingsDirect (Nov. 19, 2013).

II. RESPONSE TO DOD WITNESS WALTERS

1	Q23.	PLEASE SUMMARIZE YOUR RESPONSE TO DOD'S ROE TESTIMONY.
2	A23.	There are a number of serious deficiencies in Mr. Walters' quantitative applications.
3		I demonstrate that his ROE recommendation is biased downward and lacks
4		credibility based on the following:
5 6 7		• Mr. Walters starts with the same group proxy group that I use, but then wrongfully excludes five companies, several of which have DCF results at the higher end of the range.
8 9		• Mr. Walters' DCF approach is weakened because he includes illogical low-end estimates in his final results.
10 11		• He ignores a readily available and widely followed source of analysts' growth rates in his DCF methodology.
12 13 14		• He relies on a multi-stage growth DCF model that wrongly assumes growth in Gross Domestic Product ("GDP") is an upper limit on utility growth.
15 16 17		• His risk premium analysis is flawed because he rejects the well- documented, inverse relationship between equity risk premiums and interest rate levels.
18 19 20 21		• The CAPM results reported by Mr. Walters are suspect because they are based on historical data, they fail to correct for an observed bias in the CAPM result, and they ignore the impact of company size on expected returns.
22		Furthermore, his criticisms of my flotation cost adjustment, and my Expected
23		Earnings and Non-Utility DCF approaches are without merit. Taken as a whole,
24		these flaws mean that Mr. Walters' recommended ROE falls well below a fair and
25		reasonable level for LGE/KU.
26		A. Proxy Group
27	Q24.	WHAT ARE THE PROBLEMS WITH DOD'S PROXY GROUP?
28	A24.	Mr. Walters starts with the same group proxy group that I use, but then removes five
29		companies. He eliminates Algonquin Power & Utilities Corp. ("Algonquin")
30		because "it is not part of the Value Line universe and is headquartered in Canada."

1 He eliminates Avangrid, Inc. ("Avangrid") because "more than 80% of its stock is 2 owned by its ultimate parent company, Iberdola S.A. ("Iberdola"), a holding 3 company headquartered in Spain." He eliminates Emera Inc. ("Emera") because "it is headquartered in Canada and, while it is part of the Value Line universe, it is not 4 categorized as being part of the Electric Utility industry." Fortis Inc. ("Fortis") is 5 6 excluded "for being a Canada-based company." Finally, he removes The Southern 7 Company ("Southern Company") for "its divestiture of Gulf Power and Pivotal Utility Holdings."²⁶ As I explain, these exclusions are not valid. 8

9 Q25. ALGONQUIN HAS NOT YET BEEN INCLUDED IN THE VALUE LINE 10 ELECTRIC UTILITY INDUSTRY. WOULD INVESTORS NONETHELESS 11 REGARD ALGONQUIN AS HAVING RISKS AND OPERATIONS 12 COMPARABLE TO THOSE OF OTHER ELECTRIC UTILITIES?

13 Yes. The historical stock price and dividend data necessary to apply the DCF model A25. 14 are available, and analysts' consensus earnings per share ("EPS") growth estimates are also published for Algonquin. Headquartered in Ontario, Canada, Algonquin is 15 16 a North American diversified generation, transmission, and distribution utility with 17 approximately \$10 billion in total assets. Algonquin provides regulated utility 18 services to over 782,000 customers in California, Iowa, Illinois, Missouri, Montana, 19 Arkansas, Georgia, and Texas. Algonquin completed its acquisition of Empire 20 District Electric Company (Empire District) on January 1, 2017, which more than 21 doubled its size.²⁷ Since that time, a majority of Algonquin's revenues, earnings,

²⁶ All references in this answer are from Walters Direct at 16-17.

²⁷ Empire District was included in Value Line's electric utility industry group prior to its merger with Algonquin.

and assets have been related to its regulated utility operations,²⁸ and investors would
 regard Algonquin as a comparable investment alternative that is relevant to an
 evaluation of investors' required rate of return.

Moreover, inclusion in Value Line's electric utility group is not a 4 5 requirement. A company's inclusion in the electric utility group is a sufficient condition for inclusion in a DCF proxy group but is not a necessary condition of 6 7 inclusion. While Value Line is a widely-followed, independent investor service, 8 there are other reliable sources that investors rely upon. The objective in 9 assembling a proxy group is not to find reasons to exclude individual companies; 10 rather, it is to identify all of the publicly traded utilities that investors would view as 11 comparable-risk investment opportunities. While Value Line's industry groups may serve as a useful springboard, this single source is not the final arbiter that defines 12 13 the universe of alternative opportunities available to investors. Other well-14 recognized investment information sources relied on by investors, including Yahoo! Finance and Zacks Investment Research ("Zacks"), classify Algonquin as an 15 16 electric or public utility, and there is no basis to distinguish between Algonquin and 17 other firms accepted as comparable.

²⁸ For example, Algonquin reported that during 2017 regulated utility operations accounted for 84% of total revenues, 94% of pre-tax earnings (ex. corporate losses), and 69% of total assets. Over 90% of Algonquin's consolidated revenue, EBITDA and assets are derived from operations in the U.S. In addition, Algonquin's dividend is denominated in U.S. dollars and Algonquin's common shares are listed on the New York Stock Exchange. <u>https://www.sec.gov/cgi-bin/viewer?action=view&cik=1174169&accession_number=0001628280-18-002905&xbrl_type=v#</u>.

1 Q26. HAS THE FAILURE TO CONSIDER ALGONQUIN IN THE PROXY 2 **GROUP BEEN RECOGNIZED AS A FATAL FLAW THAT UNDERMINES** 3 THE VERACITY OF DCF RESULTS? 4 Yes. The question of whether or not to include Algonquin in the proxy group was a A26. key point of contention in FERC Docket No. EL16-64-002, the most recent section 5 6 206 complaint against the transmission owning members of the ISO New England 7 Inc. (NETOs). There, I submitted testimony detailing why it was appropriate to 8 include Algonquin in the proxy group. The Presiding Judge agreed, concluding: 9 The Commission's point of performing a DCF analysis in these cases 10 is to define the actual and complete distribution of those "business 11 undertakings which are attended by corresponding, risks and uncertainties" that are comparable to the NETOs, as Bluefield says, 12 13 and to determine where the NETOs' current ROE falls in that 14 existing distribution. Under this standard, Algonquin is no different from a business or financial risk standpoint than many of the other 15 16 companies that have been included by all the DCF experts in their proxy groups.²⁹ 17 * * 18 19 In view of the deliberate omissions of Algonquin, these analyses are deficient.³⁰ 20 21 The Presiding Judge ruled that the complainants' analyses in that case were "fatally defective,"³¹ in large part based on the omission of Algonquin from the proxy group. 22 Q27. SHOULD BEING "CANADA-BASED" AUTOMATICALLY RULE OUT A 23 24 **CANDIDATE FOR THE PROXY GROUP?** 25 A27. No. Mr. Walters cites this reason for excluding Algonquin, Emera, and Fortis. Mr. 26 Walters does not offer any specific evidence to suggest that investors discriminate

³¹ *Id.* at P 206.

²⁹ Belmont Mun. Light Dept.v. Cent. Me. Power Co., 162 FERC ¶ 63,026 at P 217 (2018) (emphasis in original).

³⁰ *Id.* at P 218.

between companies headquartered in Canada and U.S.-based firms when allocating
 capital. As noted above, Algonquin provides regulated utility services to over
 782,000 customers in California, Iowa, Illinois, Missouri, Montana, Arkansas,
 Georgia, and Texas.

As for Emera, its acquisition of TECO Energy, Inc. ("TECO") in 2016 added Florida and New Mexico operations to its rate-regulated businesses. Emera's operations are thus dominated by its U.S.-based utilities in Florida, Maine, and New Mexico, which together accounted for approximately 82% of consolidated net income in 2017.³²

10 Value Line classifies Fortis in its "Electric Utility Central" industry group. 11 Similarly, Zacks includes Fortis in its "Utilities >> Utility - Electric Power" 12 industry group, which is identical to the classification afforded to all but one of the firms included in Mr. Walters' proxy group.³³ 13 In contrast to Mr. Walters' 14 generalized alarm over Fortis' address in Newfoundland, Canada, Value Line makes 15 no mention of the potential risks associated with the company's status as a Canadian 16 corporation. Instead, Value Line chiefly discusses the outlook for Tucson Electric, 17 ITC Holdings, and Central Hudson Gas & Electric, three of Fortis' U.S. subsidiaries. 18 In fact, while Fortis may be incorporated in Canada, approximately 64% of the 19 company's net earnings and 60% of its assets were associated with its U.S.-based utilities.34 20

Under these circumstances, it cannot be argued seriously that Algonquin,
 Emera, and Fortis do not operate in the United States, even if they are headquartered
 in Canada. The KPSC should afford no weight to Mr. Walters' unsubstantiated

³² Emera Inc., 2017 Form 40-F, Exhibit 99.2 at 9.

³³ Sempra Energy is classified in the "Utilities >> Utility – Gas Distribution" group.

³⁴ Fortis Inc., 2017 Annual Report at 66.

1	assertion that these companies' status as Canadian firms would somehow disqualify
2	them from being considered by investors as comparable investment opportunities to
3	LGE/KU.

4 Q28. DID MR. WALTERS UNDERTAKE ANY ANALYSIS TO DETERMINE THE 5 RELATIVE PORTION OF U.S. OPERATIONS FOR EACH COMPANY HE 6 EXCLUDES FOR BEING "CANADA BASED?"

A28. No. When asked to explain his contention that being "headquartered in Canada"
warrants exclusion from the proxy group, all Mr. Walters could point to were the
annual returns for several global stock market indexes.³⁵ Of course, the returns on
these market indexes say nothing about the relative risks of the individual utilities
that are at issue here. Mr. Walters granted that he "did not undertake any analysis to
compare the relative portion of U.S. operations for each company."³⁶

13

14

15

Q29. MR. WALTERS ALSO CITES EMERA'S INCLUSION IN THE VALUE LINE "POWER INDUSTRY" SECTOR AS A REASON TO ELIMINATE IT. DO YOU AGREE?

16 A29. No. The historical stock price and dividend data necessary to apply the DCF 17 approach are available for Emera, as are the consensus EPS growth rates from IBES 18 and other comparable sources. Emera is primarily engaged in electricity generation, 19 transmission, and distribution; gas transmission and distribution; and utility energy 20 services, and serves approximately 2.5 million customers. Emera completed its 21 acquisition of TECO on July 1, 2016. As Value Line reported, as a result of the 22 addition of TECO's regulated utilities in Florida and New Mexico, "the percentage of profits coming from regulated businesses rises to more than 90%."³⁷ 23

 ³⁵ Response to LGE/KU First Set of Data Requests, Case Nos. 2018-00295/2018-00294, Data Request No. 8.
 ³⁶ Id.

³⁷ The Value Line Investment Survey (Mar. 24, 2017).

	Similarly, investment service, CFRA, highlighted Emera's primary focus on
	electric utility operations, and classified Emera in its "Electric Utilities" industry
	group, ³⁸ and Emera reports as an "Electric Utility" under the Standard Industrial
	Classification Code (4911). ³⁹ Thus, investors would regard Emera as a comparable
	investment alternative that is relevant to an evaluation of the required rate of return
	for the Companies, regardless of Value Line's decision to keep them in their Power
	industry.
Q30.	DOES THE DOD PROVIDE SUFFICIENT REASONING FOR EXCLUDING
	AVANGRID FROM THE PROXY GROUP?
A30.	No. Through its operating subsidiaries, including Central Maine Power, New York
	State Electric & Gas, Rochester Gas and Electric, and United Illuminating, Avangrid
	is engaged in regulated electric transmission and distribution utility operations in
	Connecticut, Maine, and New York. Avangrid is included in Value Line's electric
	utility industry group. The stock price, dividend, growth, and other information
	necessary to apply the ROE estimation approaches are all available for Avangrid.
	Mr. Walters eliminated Avangrid from consideration, however, because of its
	relationship with Spanish parent company, Iberdola.
Q31.	IS MR. WALTERS' CONCERN ABOUT AVANGRID AND ITS
	CONNECTION WITH IBERDOLA VALID?
A31.	No. While Mr. Walters correctly observes that the majority of Avangrid's common
	Q30. A30. Q31. A31.

21

stock is owned by Iberdrola, he presents no reasoned explanation as to why this

³⁸ CFRA, *Emera Incorporated*, Quantitative Stock Report (Jun. 24, 2017). CFRA, founded as the Center for Financial Research and Analysis, is one of the world's largest providers of institutional-grade independent equity research, acquired the equity and fund research arm of S&P in October 2016.
 ³⁹ See, e.g., Emera Inc., 2017 SEC Form 40-F.
 https://www.sec.gov/Archives/edgar/data/1127248/000119312518101807/d555438d40f.htm.

MCKENZIE - 22

- distinguishes the valuation reflected in Avangrid's stock prices from those of other
 publicly traded electric utilities.
- 3 Q32. MR. WALTERS CITES THE "POTENTIAL FOR INVESTOR-REQUIRED
 4 PREMIUMS BEING REFLECTED IN THE STOCK PRICE" AS A REASON
 5 TO EXCLUDE AVANGRID FROM THE PROXY GROUP.⁴⁰ DOES HE
 6 PROVIDE ANY EVIDENCE TO INDICATE THAT THIS "POTENTIAL" IS
 7 LEGITIMATE?
- A32. No. In fact, Mr. Walters admits that he "has not identified specific investor required
 premiums" and "does not have quantitative evidence of such premiums."⁴¹

10 Q33. IS THERE ANY INDICATION THAT IBERDROLA'S OWNERSHIP 11 INTEREST IS VIEWED NEGATIVELY BY THE INVESTMENT 12 COMMUNITY?

13 No. For example, other than noting Iberdrola's continued ownership stake in A33. 14 Avangrid, Value Line makes no mention of considerations related to Avangrid's ownership structure or any potential risk implications associated with Iberdrola's 15 16 position as majority stockholder. In fact, Value Line does not raise the issue of 17 Iberdrola's majority ownership; nor does Value Line in any way validate Mr. 18 Walters' suggestion that Avangrid's ownership structure might somehow affect its 19 valuation. Value Line's sole objective is to provide investors with the most complete portrayal of the risks and expectations associated with the common stocks 20 21 it covers. If Iberdrola's ownership constituted an important consideration relevant 22 to investors' evaluation, Value Line would be expected to note it, but they do not.

⁴⁰ Walters Direct at 16.

⁴¹ Response to LGE/KU First Set of Data Requests, Case Nos. 2018-00295/2018-00294, Data Request No. 7.

1 Similarly, while independent investment research firm CFRA outlined key 2 risks to its anticipated stock price performance for Avangrid, including regulatory 3 rulings, the service area economy, changes in interest rates, and operational concerns, the issue of corporate governance is notably absent.⁴² Fitch noted that 4 while "there is a moderate-to-strong linkage between the ratings of Avangrid and its 5 6 parent, . . . Avangrid is publicly traded and has independent treasury functions, its own access to the equity market, and a separate management team."⁴³ Meanwhile, 7 8 Moody's observed that:

9 Although we acknowledge that [Avangrid] is an important 10 component of [Iberdrola's] overall growth strategy, we believe that 11 [Avangrid] will largely be run independently. . . . Additionally, the 12 presence of ring fencing provisions at all the utilities limits 13 [Iberdrola's] flexibility with regards to its ability to draw 14 distributions from the entities, and our expectation that the aforementioned obligations under the [Guarantee and Support 15 16 Agreement] will likely be transferred to [Avangrid] from [Iberdrola] 17 both act to further de-link the two companies. That said, we continue to acknowledge that majority ownership from [Iberdrola] remains a 18 19 credit positive. Particularly since it provides an additional venue to access liquidity at an advantageous price.⁴⁴ 20

It is also worth noting that <u>all</u> of the transactions that established the stock prices for Mr. Walters' proxy firms are also for minority interests. Moreover, there are wide-ranging protections applicable to minority owners in all publicly traded firms, including the requirements of the Public Company Accounting Reform and Investor Protection Act of 2002 (also known as Sarbanes-Oxley), provisions of federal securities laws, such as Section 10 of the Securities Exchange Act of 1934,

⁴² CFRA, Avangrid, Inc., Stock Report (Jun. 24, 2017).

⁴³ Fitch Ratings, Ltd., Avangrid, Inc., Full Rating Report (Oct. 19, 2016).

⁴⁴ Moody's Investors Service, Avangrid, Inc., Credit Opinion (Apr. 29, 2016) (emphasis supplied).

and the rights of minority shareholders to undertake a derivative action to redress
 any harm to the corporation.

The Presiding Judge in FERC Docket No. EL16-64-002, recently rejected arguments similar to Mr. Walters' policy argument regarding the impact of Iberdrola's ownership, instead agreeing with testimony that I filed stating: "Avangrid should be included in [the] proxy group."⁴⁵

Q34. MR. WALTERS SUGGESTS THAT SOUTHERN COMPANY SHOULD BE ELIMINATED DUE TO MERGER ACTIVITY. IS THERE ANY MERIT TO THIS ARGUMENT?

10 A34. No. In support of his position, Mr. Walters says only that "I excluded Southern Company for its divestiture of Gulf Power and Pivotal Utility Holdings."⁴⁶ On May 11 12 21, 2018, Southern Company entered into definitive transactions valued at 13 approximately \$6.5 billion for the sale of Gulf Power Co., Florida City Gas, and 14 ownership interests in two natural gas-fired generating plants to NextEra Inc. 15 ("NextEra"). While these transactions are not inconsequential, the notion that a 16 merger or acquisition requires *per se* that a firm be excluded from the proxy group 17 should be rejected. Companies involved in a merger should be accepted as proxies 18 where there is no evidence that the data used to apply the DCF approach is distorted. 19 Mr. Walters has presented no basis for arguing that the sale of Gulf Power to 20 NextEra has resulted in any distortion to the inputs used to apply the DCF model.

In fact, there is no indication that this transaction has resulted in any significant, ongoing influence on Southern Company's stock price during the analysis period that would lead to distortion in the resulting DCF values. Rebuttal

⁴⁶ Walters Direct at 17.

⁴⁵ Belmont Mun. Light Dept. v. Cent. Me. Power Co., 162 FERC ¶ 63,026 at P 192 (2018).

Figure 1 below compares the closing price of Southern Company's common stock
 with the Dow Jones Utility Average ("DJUA") from May 1, 2018 through
 December 31, 2018:⁴⁷

REBUTTAL FIGURE 1 SOUTHERN CO. STOCK PRICE V. DOW JONES UTILITY AVERAGE

7 As illustrated above, Southern Company's closing stock price mirrored the 8 trend in the utility industry generally, and there is no basis to assert that the dividend 9 yield data for Southern Company is distorted. Similarly, IBES growth rates for 10 Southern Company published by Yahoo! Finance before the announcement of the transaction are comparable to the values throughout the remainder of 2018.⁴⁸ Given 11 12 that its closing stock price generally mirrored the broader trend in the utility 13 industry, and the fact that there have been no dramatic changes in growth 14 expectations or dividend policies for the utility, there is no evidence to suggest that

4 5

6

⁴⁷ The transaction closed January 1, 2019.

⁴⁸ *Yahoo! Finance* reported a growth rate of 2.70% on April 3, 2018 for Southern Company. This compares to the 1.36% value I obtained on November 17, 2018.

1		the transaction has led to any distortion of the DCF inputs and Southern Company is
2		properly retained in the proxy group.
3		B. Discounted Cash Flow Model
4	Q35.	HOW DOES MR. WALTERS APPLY THE CONSTANT GROWTH DCF
5		MODEL?
6	A35.	Mr. Walters applies the constant growth DCF model using forward-looking
7		estimates of EPS growth based on consensus forecasts of securities analysts, as well
8		as considering a sustainable, "br" growth rate. This is comparable to the method
9		discussed in my testimony.
10	Q36.	IS THERE AN OBVIOUS FLAW IN MR. WALTERS' CONSTANT GROWTH
11		DCF ANALYSIS?
12	A36.	Yes. Mr. Walters fails to remove illogical values from his final constant growth
13		DCF results. As I discuss in my Direct Testimony, when applying quantitative
14		methods to estimate the cost of equity, it is essential that the resulting values pass
15		fundamental tests of reasonableness and economic logic. Accordingly, DCF
16		estimates that are implausibly low or high should be eliminated when evaluating the
17		results of this method. Simply removing the obvious low-end value from the DCF
18		results presented on Walters Exhibit CCW-4 (NorthWestern Corp. at 5.91%)
19		increases his constant growth DCF average by 21 basis points, from 9.06% to
20		9.27%.
21	Q37.	IS THERE ANOTHER SHORTCOMING IN MR. WALTERS' CONSTANT
22		GROWTH DCF ANALYSIS?
23	A37.	Yes. Mr. Walters elected to average all individual growth rates together, and then
24		compute a single DCF estimate for each company. Each growth rate represents a

stand-alone estimate of investors' future expectations, and each value should be
evaluated on its own merits. The fact that an average of several growth rates might

MCKENZIE - 27

1

produce a DCF estimate that could be considered reasonable does not absolve the need to evaluate each underlying growth rate separately.

2

3 For example, consider a utility with a dividend yield of 3.5% and three hypothetical growth estimates of 0.0%, 6.5%, and 14.0%. Under Mr. Walters' 4 5 method, the DCF estimate would be computed by adding the 6.8% average of the three individual growth rates to the dividend yield, resulting in a cost of equity 6 7 estimate of 10.3%. The problem with this method is that it disguises the fact that 8 two of the underlying growth rates -0.0% and 14.0% – do not provide a meaningful 9 guide to investors' expectations. Rather than averaging the good with the bad, each 10 implied cost of equity estimate (in this example, 3.5%, 10.0%, and 17.5%) should be evaluated on a stand-alone basis.⁴⁹ Mr. Walters simply calculated the average of 11 the individual growth rates with no consideration for the reasonableness of the 12 13 underlying data. Because Mr. Walters failed to perform this essential step, his DCF 14 analysis included individual growth rates that do not reflect investors' expectations. 15 Therefore, his results are biased downward.

16 Q38. CAN YOU SHOW THE DOWNWARD BIAS IN MR. WALTERS' 17 CONSTANT GROWTH ANALYSIS?

A38. Yes. For example, Mr. Walters reports a Reuters growth rate of 2.87% for
Consolidated Edison.⁵⁰ Combining this growth rate with his corresponding
dividend yield of 3.79% results in a cost of equity estimate of 6.66%. This implied
cost of equity does not sufficiently exceed yields on current and projected public
utility bonds. As a result, this illogical growth measure should have been removed
from Mr. Walters' constant growth DCF analysis.

 $^{^{49}}$ The implied cost of equity estimates are calculated as the sum of the dividend yield (3.5%) and the respective growth rates (0.0%, 6.5%, and 14.0%).

⁵⁰ Walters Exhibit CCW-3.

Q39. DOES MR. WALTERS LEAVE OUT A READILY AVAILABLE, WIDELY RESPECTED SOURCE OF ANALYSTS' GROWTH RATES?

3 A39. Yes. Mr. Walters failed to include EPS growth rate estimates from Value Line in his 4 analysis. He uses Value Line as an underlying source for many of his calculations, 5 such as to compute the annualized dividend and sustainable growth terms for his 6 DCF models and the average beta for his CAPM studies. Value Line is readily 7 available and is widely followed by investment professionals. It is a wellrecognized source of expected growth rates and Mr. Walters' DCF analysis suffers 8 9 because he does not consider them.

10 Q40. WHAT IS THE PROBLEM WITH MR. WALTERS' MULTI-STAGE 11 GROWTH DCF ANALYSIS?

12 A40. This analysis should be completely rejected. There is no merit to Mr. Walters' claim 13 that each company's growth would converge to the maximum sustainable growth 14 rate for a utility company as proxied by consensus analyst's projected growth for the 15 U.S. GDP of 4.19%. He incorrectly claims that GDP growth sets a "maximum sustainable long-term growth rate" for a utility.⁵¹ As I discuss below, there is no 16 17 link between Mr. Walters' GDP growth rate ceiling and the actual expectations of 18 investors in the capital markets, which are the determining factor in any analysis of 19 a fair ROE.

20 Q41. WHAT ARE THE PRIMARY MISCONCEPTIONS UNDERLYING MR. 21 WALTERS' REFERENCE TO GDP GROWTH?

A41. Mr. Walters' use of long-term GDP growth as an upper bound to the DCF growth
 rate for companies in his proxy group is not justified. There are several reasons why
 GDP growth is not relevant in applying the DCF model:

⁵¹ Walters Direct at 22.

1 2 3		• Practical application of the DCF model does not require a long- term growth estimate over a horizon of 25 years and beyond – it requires a growth estimate that matches investors' expectations.
4 5 6		• Evidence supports the conclusion that investors do not reference long-term GDP growth in evaluating expectations for individual common stocks, including those in the electric utility industry.
7 8 9 10		• The theoretical proposition that growth rates for all firms converge to overall growth in the economy over the very long horizon does not guide investors' views, and growth rates for electric utilities can and do exceed GDP growth.
11 12 13		• There is no evidence that investors' growth expectations for regulated electric utilities have begun to converge to that of the economy.
14	Q42.	THE DCF MODEL IS BASED ON THE ASSUMPTION OF AN INFINITE
15		STREAM OF CASH FLOWS. WHY WOULDN'T A TRANSITION TO GDP
16		GROWTH MAKE SENSE?
17	A42.	This view confuses the theory underlying the DCF model with the practicalities of
18		its application in the real world. Analytical models such as the DCF model are
19		inherently abstractions of reality. The underlying theory requires any number of
20		assumptions, many of which differ considerably from the situation that confronts
21		actual investors in the capital markets. For example, apart from a constant growth
22		rate into perpetuity, the theory underlying the DCF model also requires that
23		dividends, earnings, and stock prices grow at exactly the same rate forever. ⁵²
24		Such strict assumptions are never met in practice. While this notion of long-
25		term growth should presumably relate to the specific firm at issue, or at the very
26		least to a particular industry, there are no long-term growth projections available for
27		the companies in Mr. Walters' proxy group or for the electric utility industry as a

28

whole. Rather than applying the DCF model in a way that is consistent with the

⁵² Other theoretical models also rest on unrealistic assumptions that play no role in their practical application. For example, underpinning the CAPM is the assumption that there are no income taxes.

information that is available to investors and how they use it, the use of GDP growth
seeks to mold investor behavior around the theoretical assumptions of a financial
model. The only relevant growth rate is the growth rate used by investors.
Investors do not have clarity to see far into the future, and there is little to no
evidence to suggest that investors share the view that growth in GDP must be
considered a limit on earnings growth over the long-term.

7 Q43. ARE LONG-TERM GDP GROWTH RATES COMMONLY REFERENCED 8 AS A DIRECT GUIDE TO FUTURE EXPECTATIONS FOR SPECIFIC 9 FIRMS?

A43. No. Certainly, investors consider broad secular trends in economic activity as one
 foundation for their expectations for a particular industry or firm. But the idea that
 investment advisory services view GDP growth as a direct guide to long-term
 expectations for a particular firm – much less every firm in an entire industry – is
 not borne out by evidence.

15 In contrast to this notion, in the financial media one observes many 16 references to three-to-five year EPS growth forecasts for individual companies and 17 very few references to long-term GDP forecasts. Long-term GDP growth rates are 18 simply not discussed within the context of establishing investors' expectations for 19 individual firms. For example, Value Line reports are routinely relied on as an important guide to apply the DCF model to utilities.⁵³ But despite Mr. Walters' 20 21 suggestion that GDP has a fundamental role in shaping investors' growth estimates, 22 Value Line does not even mention trends in GDP in its evaluation of the firms in the 23 electric utility industry. Value Line's singleness of purpose is to inform investors of

⁵³ As noted in *New Regulatory Finance*, "Value Line is the largest and most widely circulated independent investment advisory service, and influences the expectations of a large number of institutional and individual investors." Roger A. Morin, *New Regulatory Finance*, 71 (Pub. Util. Reports, Inc., 2006).
1 the pertinent factors that impact future expectations specific to each of the common 2 stocks it covers. If the trajectory of GDP growth out to the year 2050 and beyond 3 had direct relevance in investors' evaluation of utility common stocks, it would be 4 logical to assume that Value Line or other securities analysts would give at least 5 passing mention to this fact. But they do not.

6

Q44. HOW MUCH CONFIDENCE WOULD INVESTORS BE LIKELY TO 7 PLACE ON LONG-TERM GDP PROJECTIONS?

8 A44. Very little. Investors understand the complexities and inherent inaccuracies 9 involved in forecasting, and that such uncertainties are significantly compounded 10 for a long-term time horizon. Consider the example of IHS Global Insight, which is 11 perhaps the world's foremost econometric forecasting service. IHS Global Insight 12 currently publishes GDP projections for the U.S. economy for the next thirty years, 13 but for other important economic variables (e.g., bond yields) their forecast simply 14 holds projected values constant after a five-year horizon. As a result, in addition to 15 the fact that there is no evidence to suggest that common stock investors reference 16 GDP growth rates in their analysis of a specific utility's prospects, the difficulties in 17 making long-term forecasts suggest they would be foolhardy to do so.

18 IS MR. WALTERS ABLE TO POINT TO ANY INVESTMENT ADVISORY 045. 19 **REPORTS THAT DISCUSS THE IMPLICATIONS OF EXPECTED GDP** IN **CONNECTION** WITH THEIR 20 GROWTH **EVALUATION** OF 21 INDIVIDUAL STOCKS OR THAT ADVISE INVESTORS TO CONSIDER 22 GROWTH IN GDP AS A CEILING ON THE LONG-RUN GROWTH RATE 23 FOR A UTILITY STOCK?

24 No. When asked whether he was aware of such evidence, Mr. Walters refers to A45. generalized statements that might apply to hypothetical growth "into perpetuity" but 25

MCKENZIE - 32

1 2 was unable to provide advisory reports that mention GDP growth in connection with their analysis of specific utility stocks.⁵⁴

3

4

Q46. IS THERE EVIDENCE THAT LONG-TERM GDP GROWTH RATES UNDERSTATE INVESTORS' EXPECTATIONS FOR UTILITIES?

5 A46. Yes. Actual historical growth rates for individual firms in Mr. Walters' own proxy group refute the notion that long-term growth for utilities is constrained by GDP. 6 7 For example, Value Line reports that Eversource Energy and CMS Energy each achieved earnings growth over the last 10 years of 10.0%.55 8 Meanwhile, 9 NorthWestern Corp. had 10-year EPS growth of 8.0%. These values for Mr. 10 Walters' own proxy firms indicate that utilities can and do achieve growth over 11 extended periods far in excess of the GDP growth rate he suggests as a limit in the multi-stage DCF model. 12

Q47. DO EXPECTATIONS FOR THE UTILITY INDUSTRY SUPPORT A LONG TERM TREND TOWARDS GDP GROWTH?

A47. No. Growth rates for electric utilities are not expected to collapse beyond the next five years. At least in part, growth in the electric utility industry is created by additional infrastructure investment. Contrary to the assumption that growth trends will somehow mirror GDP, investors recognize that the electric utility industry has entered a cycle of significant capital spending on utility infrastructure.

Q48. WHAT UNDERLYING FUNDAMENTALS SUPPORT INVESTORS' CONCLUSION THAT UTILITIES ARE EMBARKING ON A PERIOD OF GROWTH THAT WILL OUTPACE THE ECONOMY AS A WHOLE?

23 A48. The president of the Edison Electric Institute ("EEI") observed:

⁵⁴ Response to LGE/KU First Set of Data Requests, Case Nos. 2018-00295/2018-00294, Data Request Nos. 10-11.

⁵⁵ The Value Line Investment Survey (Oct. 26, Nov. 16, & Dec. 14, 2018).

1 2 3		The improved credit quality greatly supports the continued elevated capital expenditures, which set a new record high of \$113.6 billion in 2017. ⁵⁶
4		More recently, Regulatory Research Associates concluded that:
5 6 7 8 9		The nation's electric and gas utilities are investing in infrastructure to upgrade aging transmission and distribution systems, build new natural gas, solar, and wind generations and implement new technologies. We expect considerable levels of spending to serve as the basis for solid profit expansion for the foreseeable future. ⁵⁷
10	Q49.	DOES MR. WALTERS' OWN TESTIMONY SUPPORT THE PREMISE
11		THAT THE GROWTH IN THE UTILITY INDUSTRY WILL EXCEED
12		EXPECTED GROWTH IN GDP FOR THE FORESEEABLE FUTURE?
13	A49.	Yes. On page 7 of his testimony, he refers to an RRA update which continues to
14		emphasize the strong growth expected for the industry. A few excerpts are
15		highlighted below: ⁵⁸
16 17 18 19		• Projected 2018 capital expenditures for the 50 gas and electric utilities in the RRA universe has stayed mostly steady at about \$133.8 billion, an all-time high for the sector and nearly 14% higher than the prior forecast of \$117.5 billion last fall.
20 21 22 23		• CapEx projections for the longer term increased modestly from our previous analysis in April 2018, rising to \$118.9 billion for 2019 and \$105.1 billion for 2020, as companies' plans for future projects solidified and new opportunities arose.

⁵⁶ Thomas R. Kuhn, *President's Letter*, EEI 2017 Financial Review.
⁵⁷ S&P Global Market Intelligence, *RRA Financial Focus – Utility Capital Expenditures Update*, Regulatory Research Associates (Apr. 20, 2018).

⁵⁸ Walters Direct at 7.

Q50. DID A FOUNDER OF THE DCF APPROACH SUPPORT THE USE OF A GENERIC LONG-TERM GROWTH RATE, SUCH AS THE GDP GROWTH UNDER MR. WALTERS' MULTI-STAGE APPROACH?

A50. No. Professor Myron J. Gordon, who pioneered the use of the DCF approach,
concluded that reference to a generic long-term growth rate, such as Mr. Walters
advocates, was unsupported.⁵⁹ More specifically, Dr. Gordon concluded that any
assumption of a single time horizon for a transition to a generic long-term growth
rate was highly questionable and failed to reduce error in DCF estimates. Instead,
Dr. Gordon specifically recognized that, "it is the growth that investors expect that
should be used" in applying the DCF model, and he concluded:

11A number of considerations suggest that investors may, in fact, use12earnings growth as a measure of expected future growth."60

13 Similarly, a more recent study reported in the *Journal of Investing* 14 determined that there is no correlation between stock market returns or earnings 15 growth and GDP, suggesting that investors' expectations built into observable share 16 prices are driven by valuation measures, and not expected economic growth.⁶¹

17 Q51. ARE THERE COMPUTATIONAL ERRORS THAT ALSO BIAS MR. 18 WALTERS' MULTI-STAGE DCF COST OF EQUITY ESTIMATES 19 DOWNWARD?

A51. Yes. As noted above, under his multi-stage DCF approach Mr. Walters predicted the cash flows that would accrue to investors over the next 200 years. To arrive at his estimated cost of equity, Mr. Walters used the internal rate of return ("IRR")

⁵⁹ Myron J. Gordon, *The Cost of Capital to a Public Utility*, 100-01 (MSU Pub. Util. Studies, 1974).

⁶⁰ *Id.* at 89.

⁶¹ Joachim Klement, *What's Growth Got to Do with It? Equity Returns and Economic Growth*, 74:78 Journal of Investing (Summer 2015).

1 function available in Microsoft's Excel spreadsheet program to determine the 2 discount rate (*i.e.*, investors' required rate of return) that would equate these cash 3 flows with the current market price of the stock.⁶² This IRR calculation, however, 4 assumes that annual cash flows are received at the end of each year, which is 5 inconsistent with the periodic dividend payments that investors receive over the 6 course of the year and results in a downward bias in the implied cost of equity.

7 Q52. DOES THE SEVERITY OF DOD'S MULTI-STAGE DCF RESULTS GIVE 8 SOME INDICATION AS TO THE DISCONNECT BETWEEN LONG-TERM 9 GDP GROWTH AND REALISTIC ESTIMATES OF INVESTORS' 10 EXPECTATIONS?

A52. Yes. Mr. Walters' recommended ROE range from his multi-stage DCF approach is
7.79%-8.07%. This result is not credible and should be rejected on its face. It is
over 100 basis points below his final ROE recommendation. Based on the same
benchmarks that I discussed earlier, this outcome is well below any reasonable
standard for a regulated electric utility ROE. The unreasonableness of his multistage DCF results is a direct indication of the disconnect between the long-term
GDP growth rate and realistic growth expectations for utility companies.

18

C. Utility Risk Premium

19 Q53. DO THE RESULTS OF MR. WALTERS' RISK PREMIUM APPROACH 20 BASED ON AUTHORIZED RETURNS PROVIDE A RELIABLE GUIDE TO 21 A FAIR ROE FOR LGE/KU?

A53. No. Mr. Walters' risk premium analysis is fatally flawed because he fails to
 incorporate the inverse relationship between interest rates and equity risk premiums
 in his analysis of historical authorized rates of return. There is considerable

⁶² Walters public workpaper: Exhibit CCW-2 - CCW-9, CCW-15 -16.xlsx.

1		empirical evidence that when interest rates are relatively high, equity risk premiums
2		narrow, and when interest rates are relatively low, equity risk premiums are greater.
3		This inverse relationship between equity risk premiums and interest rates has been
4		widely reported in the financial literature. As summarized in New Regulatory
5		Finance:
6 7 8 9 10 11		Published studies by Brigham, Shome, and Vinson (1985), Harris (1986), Harris and Marston (1992, 1993), Carelton, Chambers, and Lakonishok (1983), Morin (2005), and McShane (2005), and others demonstrate that, beginning in 1980, risk premiums varied inversely with the level of interest rates – rising when rates fell and declining when rates rose. ⁶³
12		New Regulatory Finance noted that, taken together, studies in the financial literature
13		imply that a 100 basis point change in bond yields would imply a 50 basis point
14		increase in the equity risk premium. ⁶⁴
15		As shown on Walters Exhibits CCW-11 and CCW-12, current interest rates
16		are significantly less than those prevailing in the late 1980s and early 1990s. Given
17		that interest rates are currently lower than the average over his study period, current
18		equity risk premiums should be relatively higher, which Mr. Walters' analysis
19		entirely ignores.
20	Q54.	WHAT COST OF EQUITY ESTIMATE IS INDICATED IF MR. WALTERS'
21		RISK PREMIUM APPROACH IS CORRECTED TO ACCOUNT FOR THIS
22		INVERSE RELATIONSHIP?
23	A54.	I begin with the data from Mr. Walters' two risk premium exhibits CCW-11 and
24		CCW-12. The only adjustment I make to this data is to account for the inverse
25		relationship between interest rates and risk premiums. Since rates are now

⁶³ Roger A. Morin, *New Regulatory Finance*, 128 (Pub. Util. Reports, Inc., 2006).
⁶⁴ *Id.* at 129.

1	(historically) low, an upward adjustment to the base risk premium is critical. As
2	shown on McKenzie Exhibit No. 16, adjusting Mr. Walters' risk premium analysis
3	to account for this inverse relationship results in a current cost of equity estimate for
4	the Companies of 10.05% using Treasury yields (page 1), or 10.01% based on
5	public utility bond yields (page 3).

6 Q55. WHAT OTHER FLAWS ARE ASSOCIATED WITH MR. WALTERS' RISK 7 PREMIUM APPLICATION?

A55. Mr. Walters subjectively chooses to truncate the data available to apply his risk
premium approach by ignoring all observations prior to 1986. Mr. Walters explains
that this period is selected "because public utility stocks consistently traded at a
premium to book value during that period,"⁶⁵ but such manipulation of this data
runs counter to the assumptions underlying the study of historical risk premiums.
Ibbotson Associates noted the pitfalls of such a subjective approach:

14Some analysts estimate the expected risk premium using a shorter,15more recent time period on the basis that recent events are more16likely to be repeated in the near future ... This view is suspect ... 66

By choosing a truncated time period for his risk premium study, Mr. Walters
unnecessarily introduces a subjective bias that taints his analysis and artificially
lowers his results.

D. Capital Asset Pricing Model

20 Q56. WHAT ARE THE WEAKNESSES IN MR. WALTERS' CAPM STUDIES?

A56. Mr. Walters' CAPM analysis has several shortcomings. Most significantly, it is
 based almost exclusively on historical data, even though the analysis should be

⁶⁵ Walters Direct at 34.

⁶⁶ Ibbotson Associates, 2005 Yearbook, Valuation Edition at 80.

MCKENZIE - 38

1		forward-looking. He fails to correct for an observed bias in the CAPM result.
2		Finally, his analysis ignores the impact of company size on expected returns.
3	Q57.	CAN YOU EXPAND ON THE FUNDAMENTAL PROBLEM ASSOCIATED
4		WITH THE APPROACH THAT MR. WALTERS USES TO APPLY THE
5		CAPM?
6	A57.	The CAPM application presented by Mr. Walters is based primarily on historical
7		rates of return, not current projections. Like the DCF model, risk premium methods
8		- including the CAPM - are ex-ante, or forward-looking models based on
9		expectations of the future. As a result, in order to produce a meaningful estimate of
10		investors' required rate of return, the CAPM approach must be applied using data
11		that reflects the expectations of actual investors in the market. The primacy of
12		current expectations was recognized by Morningstar, one of the sources relied on by
13		Mr. Walters to apply the CAPM:
14 15 16 17 18 19		The cost of capital is always an expectational or forward-looking concept. While the past performance of an investment and other historical information can be good guides and are often used to estimate the required rate of return on capital, the expectations of future events are the only factors that actually determine cost of capital. ⁶⁷
20		By failing to look directly at the returns investors are currently requiring in the
21		capital markets, as I do on Exhibit Nos. 7 and 8 to my direct testimony, the 7.32% to
22		8.33% historical CAPM range developed by Mr. Walters ⁶⁸ falls woefully short of
23		investors' current required rate of return.

.

⁶⁷ Morningstar, *Ibbotson SBBI*, 2013 Valuation Yearbook at 21.
⁶⁸ Walters Direct at 45.

1	Q58.	IS THERE GOOD REASON TO ENTIRELY DISREGARD THE RESULTS
2		OF HISTORICAL CAPM ANALYSES SUCH AS THOSE PRESENTED BY
3		MR. WALTERS?
4	A58.	Yes. Applying the CAPM is complicated by the impact of the Federal Reserve
5		policies on investors' risk perceptions and required returns. As the Staff of the
6		Florida Public Service Commission concluded regarding historical applications of
7		the CAPM:
8 9 10 11 12 13		[R]ecognizing the impact the Federal Government's unprecedented intervention in the capital markets has had on the yields on long-term Treasury bonds, staff believes models that relate the investor-required return on equity to the yield on government securities, such as the CAPM approach, produce less reliable estimates of the ROE at this time. ⁶⁹
14		Similarly, in Orange & Rockland Utilities, FERC determined that CAPM
15		methodologies based on historical data were suspect because whatever historical
16		relationships existed between debt and equity securities may no longer hold. ⁷⁰
17		FERC concluded that historical risk premiums are downward biased given recent
18		trends of low yields for Treasury bonds. ⁷¹
19		As a result, there is every indication that the historical CAPM approach fails
20		to fully reflect the risk perceptions of real-world investors in today's capital
21		markets, which would violate the standards underlying a fair rate of return by failing
22		to provide an opportunity to earn a return commensurate with other investments of
23		comparable risk.

1	Q59.	WHAT IS T	THE PRIMARY DIFFEREN	CE BETV	VEEN MR. W	ALTER	S' SO-
2		CALLED	"FORWARD-LOOKING"	CAPM	ANALYSIS	AND	THE
3		APPROAC	H DESCRIBED IN YOUR D	IRECT TH	ESTIMONY?		
4	A59.	As Mr. Walt	ers observes, the appropriate m	arket retur	n ("R _m ") to use	in apply	ing the

5 CAPM is the "[e]xpected return for the market portfolio."⁷² The fundamental 6 difference between my approach and that of Mr. Walters is that, while my analysis 7 actually looks to the future return expectations of investors in the capital markets, 8 Mr. Walters' "forward-looking" CAPM is actually based almost entirely on 9 historical data. As Mr. Walters explains:

I estimated the expected return on the S&P 500 by adding an expected inflation rate to the long-term <u>historical</u> arithmetic average real return on the market.⁷³ [emphasis added]

In other words, the relatively small portion of Mr. Walters' "forward-looking"
market return constituting inflation is based on projected data, but the actual return
on the market itself is <u>completely backward looking</u>.

Mr. Walters essentially presents two variants of a CAPM using historical data. Neither one of these approaches is consistent with the assumptions of the CAPM because as noted above, the CAPM seeks to determine the expected return, and is predicated on the forward-looking expectations of investors. Mr. Walters' use of historical returns in the CAPM is inconsistent with the underlying presumptions of the model.

10

11 12

⁷² Walters Direct at 39.

⁷³ *Id.* at 41.

Q60. WHAT ABOUT MR. WALTERS' CRITICISM THAT YOUR FORWARD LOOKING ESTIMATE OF THE MARKET RATE OF RETURN IS NOT REASONABLE?⁷⁴

4 A60. As noted earlier, the use of forward-looking expectations in estimating the market 5 risk premium is well accepted in the financial literature and has been recognized by other regulators. Mr. Walters' criticism of my forward-looking CAPM approach 6 7 seems to hinge on the fact that this method produces an equity risk premium for the 8 S&P 500 that is higher than the historical benchmarks he cites. But estimating investors' required rate of return by reference to current, forward-looking data, as I 9 10 have done, is entirely consistent with the theory underlying the CAPM 11 methodology. As noted earlier, the CAPM is an ex-ante, or forward-looking model 12 based on expectations of the future. As a result, in order to produce a meaningful 13 estimate of required rates of return, the CAPM is best applied using data that 14 reflects the expectations of actual investors in the market. Rather than look 15 backwards to a risk premium based largely on historical data, as Mr. Walters 16 advocates, my analysis appropriately focused on the expectations of actual investors 17 in today's capital markets.

All quantitative methods used to estimate the cost of equity have their own strengths and weakness. Mr. Walters does not suggest that the CAPM model is "wrong" to focus on forward-looking projections instead of backward, historical results, nor does he claim that looking to the future, as I have done, is a misapplication of the CAPM. Instead, Mr. Walters simply believes that the result of applying the CAPM in a manner that is consistent with the underlying assumptions produces a result that he views as being too high.

⁷⁴ *Id.* at 53.

1	Q61.	HAVE OTHER REGULATORS RELIED ON A FORWARD-LOOKING DCF
2		APPROACH SIMILAR TO THE ONE PRESENTED IN YOUR DIRECT
3		TESTIMONY AS A MEANS OF ESTIMATING THE MARKET COST OF
4		EQUITY?

A61. Yes. I base my CAPM approach on the methods used by the Staff at the Illinois
Commerce Commission, whose witnesses have routinely relied on a forwardlooking market rate of return estimate to apply the CAPM. For example, Illinois
Staff witness Rochelle Langfeldt employed an expected market return based on an
analysis analogous to the approach described in my direct testimony:

- Q. How was the expected rate of return on the market portfolio estimated?
- 12 A. The expected rate of return on the market was estimated by 13 conducting a DCF analysis on the firms composing the S&P 500 Index ("S&P 500"). ... Firms not paying a dividend as of June 14 28, 2001, or for which neither Zacks nor IBES growth rates were 15 16 available were eliminated from the analysis. The resulting company-specific estimates of the expected rate of return on 17 common equity were then weighted using market value data from 18 Salomon Smith Barney, Performance and Weights of the S&P 19 500: Second Quarter 2001. The estimated weighted averaged 20 21 expected rate of return for the remaining 365 firms composing 22 78.31% of the market capitalization of the S&P 500 equals 15.31%.75 23

10

11

Moreover, the market cost of equity relied on in my analysis represents a weighted average expected return for the dividend paying firms in the S&P 500. Growth expectations for some firms fall below expected trends GDP, while projections for other firms are considerably more optimistic. Similarly, the composition of the S&P 500 is not static and growth rates for one company may

 ⁷⁵ Direct Testimony of Rochelle Langfeldt, Illinois Commerce Commission Docket No. 01-0423 at 23-24 (2001).

moderate over time, while for others they may increase. On balance, however, the
growth rates used in my study are representative of the consensus expectations for
the dividend paying firms in the S&P 500 Index as a whole. This contradicts Mr.
Walters' position that investors' growth expectations should be constrained by
forecasted GDP growth when estimating the market cost of equity.

6 Q62. DOES MR. WALTERS FAIL TO CONSIDER OTHER IMPORTANT 7 FACTORS IN APPLYING THE CAPM?

8 A62. Yes. Mr. Walters fails to reflect the size adjustment in his CAPM application. 9 According to the CAPM, the expected return on a security should consist of the 10 riskless rate, plus a premium to compensate for the systematic risk of the particular 11 security. The degree of systematic risk is represented by the beta coefficient. The 12 need for the size adjustment arises because differences in investors' required rates of 13 return that are related to firm size are not fully captured by beta. To account for this, 14 Morningstar has developed size premiums that need to be added to the theoretical 15 CAPM cost of equity estimates to account for the level of a firm's market 16 capitalization in determining the CAPM cost of equity. Accordingly, Mr. Walters 17 should have incorporated an adjustment to recognize the impact of size distinctions 18 between his proxy companies, as measured by the average market capitalization.

Q63. IS THERE ANY MERIT TO MR. WALTERS' CONTENTION THAT A SIZE ADJUSTMENT SHOULD NOT BE APPLIED TO UTILITIES?⁷⁶

A63. No. First, Mr. Walters implies that I am proposing to apply a general size risk
premium in arriving at a fair ROE for LGE/KU; but this is not correct. Rather, this
adjustment merely corrects for an observed inability of the CAPM to fully reflect
the impact of size distinctions by market capitalization that the beta value does not

⁷⁶ Walters Direct at 55-56.

1 otherwise capture, but which is acknowledged by empirical research. My 2 consideration of the impact of firm size does not adjust for KU's or LGE's size 3 relative to the proxy group; nor is it applied to the results of the DCF, risk premium, 4 or expected earnings approaches. Rather, it is specifically tied to the CAPM 5 because empirical research indicates that beta does not capture an increment of risk 6 related to firm size.

Mr. Walters' observation that the "size adjustments relied on by Mr. 7 8 McKenzie reflects companies that have unadjusted beta estimates well in excess of 1.00" says nothing at all about the relevance of a size adjustment.⁷⁷ Of course, there 9 10 are any number of specific factors that distinguish a utility's risks from other firms 11 in the non-regulated sector, just as there are important distinctions between the 12 circumstances faced by airlines and drug manufacturers. But under the assumptions 13 of modern capital market theory on which the CAPM rests, these considerations are 14 reduced to a single risk measure - beta - which captures stock price volatility 15 relative to the market. Within the CAPM paradigm, the degree of regulation, the 16 nature of competition in the industry, the competence of management, and every 17 other firm-specific consideration are boiled down to a single question; namely, how 18 much does the stock's price fluctuate in relation to the market as a whole? Beta is 19 the measure of that variability, and research demonstrates that beta does not fully 20 account for the impact of firm size.

The fact that the size premiums reported by *Duff & Phelps* were not estimated on an industry-by-industry basis provides no basis to ignore this relationship in estimating the cost of equity for utilities. Utilities are included in the companies used by *Duff & Phelps* to quantify the size premium, and firm size has

⁷⁷ *Id.* at 55.

1		important practical implications with respect to the risks faced by investors in the
2		utility industry. As Duff & Phelps concluded:
3 4 5 6 7		Despite many criticisms of the size effect, it continues to be observed in data sources. Further, observation of the size effect is consistent with a modification of the pure CAPM. Studies have shown the limitations of beta as a sole measure of risk. The size premium is an empirically derived correction to the pure CAPM. ⁷⁸
8	Q64.	MR. WALTERS REJECTS YOUR USE OF THE EMPIRICAL CAPITAL
9		ASSET PRICING MODEL ("ECAPM") BECAUSE HE SAYS IT AMOUNTS
10		TO DOUBLE COUNTING WHEN USED WITH VALUE LINE ADJUSTED
11		BETAS. ⁷⁹ WHAT IS YOUR RESPONSE?
12	A64.	As I state in my Direct Testimony, ⁸⁰ the ECAPM is simply a variant of the
13		traditional CAPM approach that is designed to correct for an observed bias in the
14		CAPM result. The modification reflected in the ECAPM is distinct from the Value
15		Line adjustment of estimated betas for the demonstrated tendency to regress toward
16		the mean. The Value Line adjustment is intended to make betas estimated based on
17		historical returns better estimates of forward-looking betas. Further, while Mr.
18		Walters asserts that there is "no academic support" for the use of adjusted betas in
19		alternative versions of the CAPM, ⁸¹ this is not accurate. For example, On the
20		CAPM Approach to the Estimation of A Public Utility's Cost of Equity Capital noted
21		that "[t]he assertion that risk premiums are proportional to NYSE betas is shown to
22		result in downward (upwards) biased predictions of the cost of equity for a public
23		utility having a NYSE beta that is less (greater) than unity," and concluded that

⁷⁸ Duff & Phelps, 2016 Valuation Handbook, 4-27 (2016).
⁷⁹ Walters Direct at 58-59.
⁸⁰ McKenzie Direct at 55-58.
⁸¹ Walters Direct at 61.

adjusted betas, such as those published by Value Line, are "better predictors than are
 unadjusted betas."⁸²

The ECAPM reflects a distinct refinement to adjust for a systematic tendency of low beta portfolios to over-earn and high beta portfolios to under-earn relative to the predictions of the CAPM capital market line. This is illustrated graphically in the figure below:

7

8

9

The ECAPM reflects a refinement to adjust for a systematic tendency of low beta portfolios to over-earn and high beta portfolios to under-earn relative to the predictions of the CAPM capital market line. In other words, even if a firm's beta value were estimated with perfect precision, the CAPM would still understate the return for low-beta stocks and overstate the return for high-beta stocks. The ECAPM and the use of adjusted betas represent two separate and distinct issues in estimating returns, and both are useful for improving the traditional CAPM results.

⁸² Robert Litzenberger, Krishna Ramaswamy, and Howard Sosin, *On the CAPM Approach to the Estimation of A Public Utility's Cost of Equity Capital*, 369-393 Journal of Finance (May 1980).

1		E. Other ROE Issues
2	Q65.	MR. WALTERS ACCUSES YOU OF "MANIPULATING" YOUR DCF
3		RESULTS BECAUSE YOU REMOVED SEVERAL LOW-END VALUES
4		FROM YOUR RESULTS AND ONLY REMOVED ONE HIGH-END
5		ESTIMATE. ⁸³ IS THIS A VALID CRITICISM?
6	A65.	No. I evaluate low-end values against the observable returns available from long-
7		term bonds. But the fact that there are numerous results that fail this test of
8		reasonableness says nothing about the validity of estimates at the upper end of the
9		range of results, and there is no basis to discard an equal number of values from the
10		top of the range. In my Exhibit No. 5, I retained an upper end cost of equity
11		estimate of 16.4%, but I also kept low-end estimates in the 7.0% range which are
12		assuredly far below investors' required rate of return.
13	Q66.	MR. WALTERS SUGGESTS THAT USING THE MEDIAN WOULD BE A
14		BETTER APPROACH THAN REMOVING OUTLIERS IN DEALING WITH
15		EXTREME DCF RESULTS. ⁸⁴ DO YOU AGREE?
16	A66.	No. Similar to my earlier discussion of Mr. Walters' DCF averaging technique, I
17		believe that each ROE result represents a stand-alone estimate of investors' future
18		expectations, and each value should be evaluated on its own merits. The fact that a
19		median of several outcomes might produce a DCF estimate that could be considered
20		reasonable does not absolve the need to evaluate each underlying return separately.
21		Without considering the underlying data, and including ROE estimates that do not
22		reflect investor expectations, Mr. Walters' median approach biases his results
23		downward.

_

⁸³ Walters Direct at 51.
⁸⁴ *Id.* at 51.

Q67. MR. WALTERS CONTENDS THAT THE EXPECTED EARNINGS ANALYSIS YOU USED IS NOT A REASONABLE METHOD FOR ESTIMATING A FAIR ROE FOR LGE/KU.⁸⁵ DO YOU AGREE?

4 The appeal of the expected earnings approach is that it does not require A67. No. 5 theoretical models to indirectly infer investors' perceptions from stock prices or other market data. As long as the proxy companies are similar in risk, their 6 7 expected earned returns on invested capital provide a direct benchmark for 8 investors' opportunity costs that is independent of fluctuating stock prices, marketto-book ratios, debates over DCF growth rates, or the limitations inherent in any 9 10 theoretical model of investor behavior.

Q68. DO YOU AGREE WITH MR. WALTERS THAT A METHODOLOGY HAS TO DEPEND ON MARKET DATA TO BE USEFUL IN EVALUATING INVESTORS' REQUIRED RETURN?⁸⁶

14 A68. No. Mr. Walters wrongly contends that because the expected earnings approach is 15 based on accounting data and not market data, it should be rejected. While I agree 16 that market-based models are certainly important tools in estimating investors' 17 required rate of return, in my opinion, this in no way invalidates the usefulness of 18 the expected earnings approach. In fact, this is one of its advantages. As discussed 19 earlier, a very simple, conceptual principle is that when evaluating two investments 20 of comparable risk, investors will choose the alternative with the higher expected return. If LGE/KU is only allowed the opportunity to earn a 9.35% return on the 21 22 book value of its equity investments, as recommended by Mr. Walters, while other

⁸⁵ *Id.* at 65.

⁸⁶ *Id.* at 65-66.

1	utilities are expected to earn an average of 11.0%, ⁸⁷ the implications are clear – the
2	Companies' investors will be denied the ability to earn a return commensurate with
3	other opportunities of comparable risk.

4 5

O69. DO

DO YOU AGREE WITH MR. WALTERS' FLOTATION COST DISCUSSION?

No. Mr. Walters rejects a flotation cost adjustment because he claims it "is not 6 A69. based on known and measurable LG&E costs."⁸⁸ Mr. Walters seems to agree that 7 8 flotation costs can be included in the cost of equity analysis as a part of the cost of 9 raising capital, but he argues that such an adjustment should be rejected in this case. 10 KU and LGE have been and will continue to invest significant amounts of equity 11 capital to serve the public. The equity capital necessary to support this investment is 12 supplied by proceeds from past stock issues and through retained earnings. The 13 earnings base of this equity is permanently reduced by the amount of past flotation 14 costs. Without a flotation adjustment, these legitimate costs of providing utility 15 service will be excluded for ratemaking purposes and will further undercut the 16 Companies' ability to earn their authorized ROE.

17

III. RESPONSE TO WALMART WITNESS TILLMAN

18 Q70. DOES MR. TILLMAN CONDUCT AN INDEPENDENT EVALUATION OF A 19 FAIR ROE FOR LGE/KU?

A70. No. Mr. Tillman does not conduct any analyses of the cost of equity. His testimonyis limited to a presentation of selected data concerning previously authorized ROEs.

⁸⁷ The average expected return on book equity for 2021-23 calculated for Mr. Walters' proxy group, as shown on McKenzie Exhibit No. 15.

⁸⁸ Walters Direct at 49.

MCKENZIE - 50

1		Based on this limited review, Mr. Tillman expresses his concern that a 10.42% ROE
2		for LGE/KU is "excessive." ⁸⁹
3	Q71.	DO YOU AGREE WITH MR. TILLMAN THAT ALLOWED ROES
4		PROVIDE ONE BENCHMARK WORTHY OF CONSIDERATION IN THE
5		KPSC'S EVALUATION?
6	A71.	Yes, I do. Importantly, however, such comparisons of allowed ROEs are only one
7		consideration. While this data can be useful in the KPSC's deliberations, it is not a
8		substitute for the detailed analyses presented in my direct testimony.
9	Q72.	DOES THE DATA PRESENTED BY MR. TILLMAN CONFIRM YOUR
10		CONCLUSION THAT DOD'S ROE RECOMMENDATION IS TOO LOW?
11	A72.	Yes. Mr. Tillman cites an average allowed ROE for vertically-integrated utilities of
12		9.75% for 2016 through the present, ⁹⁰ which confirms my earlier conclusion that the
13		9.35% ROE recommendations of Mr. Walters falls well below average returns
14		authorized for other utilities and is insufficient to meet the requirements of
15		regulatory standards.
16	Q73.	DO YOU AGREE WITH THE INFERENCE THAT MR. TILLMAN DRAWS
17		FROM HIS REVIEW OF ALLOWED ROES?
18	A73.	No. While a review of historical authorized ROEs can provide a general
19		benchmark, it is not a substitute for a thorough analysis of the cost of capital, such
20		as that contained in my direct testimony and supporting LGE/KU's 10.42%
21		requested ROE. As discussed in detail earlier, data concerning historical allowed
22		ROEs reported by RRA can be informative, but do not substitute for a
23		comprehensive application of primary methods.

⁸⁹ Tillman KU Direct at 10.
⁹⁰ *Id.* at 16. This is the same data that I reference in Rebuttal Table 2 above.

1Q74. YOU PREVIOUSLY NOTED THAT RRA DATA MAY NOT BE2REPRESENTATIVE OF THE CIRCUMSTANCES APPLICABLE TO A3SPECIFIC CASE.⁹¹ CAN YOU PROVIDE A RELEVANT EXAMPLE?

Yes. Capital market conditions prevailing during the rate proceedings that make up 4 A74. 5 historical average returns are one factor that is not necessarily comparable to the 6 facts of this case. As I noted earlier, higher interest rates since LGE/KU's last 7 proceeding are one objective fact that support an increase in the Companies' 8 allowed ROE. Similarly, interest rates have increased since the time of the 9 regulatory decisions on which Mr. Tillman's data is based. Specifically, I compared 10 average public utility bond yields for the three months ended January 2019 with 11 those for the three-month period immediately preceding the month of each ROE decision underlying the 9.68% average for 2018 reported on page 3 of GWT-5.92 12 13 This comparison indicates that long-term capital costs have increased since the time 14 of these decisions, with utility bond yields now being approximately 40 basis points 15 higher, on average.

16 Q75. FROM YOUR POSITION AS A REGULATORY FINANCIAL ANALYST,

17 WHAT DO YOU MAKE OF MR. TILLMAN'S ADMONITION (PP. 8-9) TO

18 **CONSIDER CUSTOMER IMPACTS WHEN ESTABLISHING A FAIR ROE?**

A75. First, it is important to note that the determination of the ROE is made by investors in the capital markets and is not predicated on any notion of costs or savings to customers. The U.S. Supreme Court's regulatory standards embodied in the *Hope* and *Bluefield* decisions represent a balance between the interests of customers and investors, by setting forth the guidelines as to a fair ROE. Meanwhile, Mr. Tillman

⁹¹ McKenzie Direct at 63-66.

 $^{^{92}}$ This ROE corresponds to those reported by RRA for vertically integrated electric utilities.

wrongly suggests that a lower ROE is *per se* in customers' benefit. This is not the
case. While a downward-biased ROE may provide the illusion of customer
"savings" in the form of a lower revenue requirement in the short-term, the longterm impact of an inadequate ROE can be injurious to customers and the Kentucky
economy.

6 As discussed earlier, there is a very real connection between the ROE and 7 the availability of capital, and Mr. Tillman ignores the negative impact that an 8 inadequate ROE would have on investment. The ROE is the primary signal to 9 investors, not only with respect to attracting new capital investment, but also in 10 supporting existing utility operations. If the utility is unable to offer a competitive 11 ROE, existing shareholders will suffer a capital loss as investors take advantage of 12 other, more favorable opportunities, and the utility's stock price would fall. 13 Moreover, as investors' confidence is undermined, the ability of utilities to access 14 equity capital markets and expand investment will suffer. While the Companies 15 would undoubtedly continue to meet its service obligations to customers, a 16 downward-biased ROE would send an unmistakable signal to the investment 17 community as they consider whether to commit capital in Kentucky, and at what 18 cost.

Q76. DO YOU AGREE WITH MR. TILLMAN'S ASSESSMENT REGARDING THE IMPACT OF CONSTRUCTION WORK IN PROGRESS ("CWIP")?

A76. No. While Mr. Tillman attempts to distinguish the risks of the Companies based on
 the opportunity to include CWIP in rate base, this is hardly novel or unique to the
 LGE/KU and has been widely utilized since the 1970s to address the impact of
 construction costs on utilities' financial integrity.

MCKENZIE - 53

1 **Q77. WHAT IS CWIP?**

2 A77. CWIP consists of investment in facilities built to meet service obligations that are 3 not yet physically providing service. For an electric utility, CWIP can be sizeable as 4 a result of the capital intensity of utility infrastructure investment and the extended 5 construction periods involved with these facilities. During the construction phase, 6 the utility must pay capital carrying costs (interest, dividends, etc.) on the 7 investment in new facilities. These capital carrying costs are typically accrued for 8 future recovery in the form of Allowance for Funds Used During Construction 9 ("AFUDC"), which is included in rate base at the time the facilities are placed in 10 service. Alternatively, regulators may allow CWIP to be included in rate base and 11 thus permit the utility an opportunity to recover these capital costs through current 12 rates.

13

Q78. WHAT IS THE FINANCIAL IMPACT OF CWIP?

14 A78. If CWIP is included in rate base, the utility's revenue requirements are increased by 15 the capital costs associated with the new construction. As a result, since customers 16 pay the capital carrying costs of CWIP in current rates, capitalized AFUDC is not 17 added to plant cost. From the utility's standpoint, including CWIP in rate base 18 improves a utility's cash flow and increases revenue requirements during the 19 construction phase; however, this increase is offset in the future by the lower rate 20 base that results from eliminating capitalized AFUDC. To finance the costs of 21 construction, utilities such as LGE/KU must obtain financing in the form of 22 common equity or long-term debt. If CWIP is not included in rate base, no cash is 23 generated from current rates to meet the interest and dividend payments associated 24 with these securities, which in turn must be financed.

The uncertainties that investors associate with cost deferrals and a deterioration in earnings quality are significant, especially in the case of a large 1 construction program, and many of the key indicators relied on by securities 2 analysts and bond rating agencies focus on measures of cash flow. As a result, the 3 greater risk associated with higher levels of non-cash earnings (*i.e.*, AFUDC) would 4 ultimately be reflected in higher rates of return required by investors. Investors 5 recognize that including CWIP in rate base is an important tool that supports the 6 utility's financial integrity and attenuates some of the financial risks associated with 7 new infrastructure investment.

8 Q79. IS THERE ANY MERIT TO MR. TILLMAN'S CONTENTION (P. 13) THAT 9 INCLUDING CWIP IN RATE BASE "SHIFTS RISKS ONTO 10 RATEPAYERS?"

No. Including CWIP in rate base will ease the financial pressure associated with the 11 A79. 12 Companies' capital projects by improving cash flow and providing greater 13 regulatory certainty. While instrumental in supporting financial integrity and the 14 ability to attract capital, including CWIP will not have a significant impact on the overall investment risks of LGE/KU or investors' required rate of return. Including 15 16 CWIP in rate base changes only the timing of cost recovery for projects included in 17 CWIP. Accordingly, CWIP does not shift risks to ratepayers, as alleged by Mr. 18 Tillman.

19 Q80. HAVE OTHER REGULATORS RECOGNIZED THE POTENTIAL 20 BENEFITS ASSOCIATED WITH INCLUDING CWIP IN RATE BASE?

A80. Yes. Investors recognize that it is not uncommon for regulators to include CWIP in
rate base when establishing rates. A study by the Edison Electric Institute observed
that:

The inclusion of CWIP in rate base improves cash flow and reduces future rate shocks. This practice also reduces the losses that a utility experiences making large plant additions under historical test year rates. Monitoring by the Edison Electric Institute has found that states that have recently allowed the inclusion of CWIP in rate base include CO, FL, GA, IN, KS, KY, LA, MI, MO, NC, NM, NV, SD,
 TN, VA, and WV.⁹³

3 Accordingly, the cost of equity estimates developed for the proxy companies already 4 reflects any impact associated with the opportunity to earn a return on CWIP. FERC has also recognized that including CWIP balances the interest of investors and 5 6 customers, and the KPSC has routinely allowed electric utilities to include CWIP in rate base.⁹⁴ FERC noted in Order No. 679 that including CWIP in rate base 7 8 provides "up-front regulatory certainty, rate stability and improved cash flow" that encourage investment by "easing the financial pressures" associated with 9 construction programs.⁹⁵ 10

Q81. IS MR. TILLMAN'S POSITION WITH RESPECT TO CWIP CONSISTENT WITH ESTABLISHED PRECEDENT IN KENTUCKY?

13 No. As discussed in Mr. Blake's rebuttal testimony, Mr. Tillman's recommendations A81. 14 conflict with the KPSC's long-established support for including CWIP without any 15 downward adjustment to the Companies' ROE. Mr. Tillman has presented no 16 evidence that would suggest the KPSC's longstanding practice no longer benefits 17 customers or would otherwise undermine a constructive regulatory policy that is widespread in the industry. Moreover, while CWIP is supportive of LGE/KU's 18 19 credit standing, it does not allow recovery of a return on construction expenditures 20 outside of a rate proceeding. As a result, there can be a significant lag between the 21 time that expenditures are incurred and when they are included in CWIP, which is 22 exacerbated for utilities with large capital expenditure programs, such as the

⁹³ Edison Electric Institute, Forward Test Years for US Electric Utilities (August 2010).

⁹⁴ Construction Work in Progress for Public Utilities; Inclusion of Costs in Rate Base, Order No. 298, FERC Stats. & Regs. ¶ 30,455 (1983), order on reh'g, 25 FERC ¶ 61,023 (1983).

⁹⁵ Promoting Transmission Inv. through Pricing Reform, Order No.679, 116 FERC ¶ 61,057at P 115 (2006). See also, Promoting Transmission Inv. through Pricing Reform, Order No. 679-A, 117 FERC ¶ 61,345 at PP 114-115 (2006), order on reh'g and clarification, 119 FERC ¶ 61,062 (2007).

MCKENZIE - 56

Companies. Mr. Tillman fails to address these realities, which further disprove his
 assessment and recommendations.

3 Q82. MR. TILLMAN POINTS TO THE USE OF FORECAST TEST YEARS AS A 4 RISK-REDUCING RATE MECHANISM FOR LGE/KU. WOULD THIS 5 FEATURE IMPLY A LOWER ROE FOR THE COMPANIES IN THIS 6 CASE?

7 A82. No. As I point out in my Direct Testimony, investors recognize that the use of 8 adjustment mechanisms and future test years is widely prevalent in the utility 9 industry, and the relative impact is already considered in the data for my proxy 10 group. As a result, any mitigation in risks associated with LGE/KU's ability to 11 attenuate regulatory lag through adjustment mechanisms or their election of a future 12 test year is already reflected in the results of the quantitative methods presented in 13 my testimony. The KPSC's adjustment mechanisms and the Companies' election to 14 use a future test year act to level the playing field, placing LGE/KU on equal footing with its peers in the industry. As a result, no adjustment to the ROE is justified or 15 16 warranted.

17 Q83. YOU PREFACED YOUR TESTIMONY WITH THE OBSERVATION THAT

18 NEITHER MS. MULLINAX OR MR. KOLLEN PRESENTED ANY

19 ANALYSES OF A FAIR ROE FOR LGE/KU. DOES THEIR TESTIMONY IN

20 ANY WAY SUPPORT A CONTINUATION OF THE EXISTING 9.7% ROE?

A83. No. As Ms. Mullinax made clear, "[t]he OAG/Cities are not supporting ROE
 testimony in these proceedings."⁹⁶ Accordingly, while the 9.70% ROE established
 in Case Nos. 2016-00370 and 2016-00371 provided one basis on which to illustrate

⁹⁶ Mullinax Direct at 11.

MCKENZIE - 57

a hypothetical revenue deficiency, her testimony provides no evidence to justify a
 continuation of this ROE in this proceeding.

Similarly, Mr. Kollen noted that "KIUC has not retained an expert to perform an independent study of the required return on equity."⁹⁷ Nevertheless, Mr. Kollen opines that the KPSC should "simply continue the present authorized 9.7% return on equity."⁹⁸ As "support," Mr. Kollen offers an *ad hoc* reference to the DCF study contained in my testimony, as well as to RRA data for allowed ROEs. Neither of these general observations provide a basis for a continuation of the existing 9.70% ROE.

10 Q84. WHAT PARTICULAR CONCERN DO YOU HAVE WITH RESPECT TO 11 MR. KOLLEN'S TESTIMONY?

12 A84. Apart from my response to the use of RRA data, which is fully articulated earlier in 13 rebuttal to Mr. Walters and Mr. Tillman, there is no justification for Mr. Kollen's 14 suggestion that it would be appropriate to rely solely on the results of the DCF 15 model in evaluating a fair ROE for LGE/KU. The actual return investors require is 16 unobservable. Different methodologies have been developed to estimate investors' 17 expected and required return on capital, but all such methodologies are merely 18 theoretical tools and generally produce a range of estimates, based on different 19 assumptions and inputs. The DCF method is only one theoretical approach to gain 20 insight into the return investors require; there are numerous other methodologies for 21 estimating the cost of capital and the ranges produced by the different approaches 22 can vary materially.

⁹⁷ Kollen Direct at 53.

⁹⁸ *Id.* at 55.

1	In my experience, investors, financial analysts, and regulators routinely
2	consider the results of alternative approaches. It is widely recognized that no single
3	method can be regarded as a panacea; with all approaches having advantages and
4	shortcomings. As FERC has noted, "[t]he determination of rate of return on equity
5	starts from the premise that there is no single approach or methodology for
6	determining the correct rate of return." ⁹⁹ Similarly, a publication of the Society of
7	Utility and Regulatory Financial Analysts concluded that:

8 [N]o single model is so inherently precise that it can be relied on 9 solely to the exclusion of other theoretically sound models. Each model requires the exercise of judgment as to the reasonableness of 10 11 the underlying assumptions of the methodology and on the reasonableness of the proxies used to validate the theory. Each 12 model has its own way of examining investor behavior, its own 13 14 premises, and its own set of simplifications of reality. Each method 15 proceeds from different fundamental premises, most of which cannot be validated empirically. Investors clearly do not subscribe to any 16 singular method, nor does the stock price reflect the application of 17 any one single method by investors.¹⁰⁰ 18

- 19 No single approach provides a fail-safe means to estimate investors' required ROE
- 20 and Mr. Kollen's suggestion to contrary should be rejected.

21 Q85. MR. KOLLEN CLAIMS THAT THE KPSC HAS BASED ITS FINDINGS

22 ENTIRELY ON THE RESULTS OF THE DCF MODEL.¹⁰¹ IS THIS AN

- 23 ACCURATE CHARACTERIZATION?
- A85. No. As support for his assertion, Mr. Kollen cited two orders from 1989 and 1992.¹⁰² Meanwhile, in Case No. 2016-00370, the KPSC concluded that "[b]ased

⁹⁹ Nw. Pipeline Co., Opinion No. 396-C, 81 FERC ¶ 61,036, at 61,188 (1997).

¹⁰⁰ David C. Parcell, *The Cost of Capital – A Practitioner's Guide*, 84 (Society of Utility and Regulatory Financial Analysts, 2010).

¹⁰¹ Kollen Direct at 54.

¹⁰² Kentucky Industrial Energy Customers, Inc. Response to Kentucky Utilities Company and Louisville Gas and Electric Company's Initial Data Requests, Question No. 4.

1 on the <u>entire record</u> developed in this proceeding, we find that KU's required ROE 2 falls within a range of 9.20 percent to 10.20 percent."¹⁰³ The KPSC explicitly noted 3 the various alternative methodologies employed by the witnesses in that 4 proceeding,¹⁰⁴ while making no pronouncements regarding the relative merits of any 5 one approach. In fact, it would have been impossible for the KPSC to arrive at an 6 ROE range of 9.20% to 10.20% based only on the results of the DCF model.¹⁰⁵

7 Q86. HAVE OTHER REGULATORY AGENCIES RECOGNIZED THE 8 IMPORTANCE OF CONSIDERING ALTERNATIVES TO THE DCF 9 MODEL WHEN EVALUATING A FAIR ROE?

A86. Yes. FERC recently proposed significant modifications to its approach for
 determining allowed ROEs for electric utilities under its jurisdiction, announcing its
 intention to give equal weight to the results of the DCF model and the exact same
 CAPM, risk premium, and expected earnings approaches presented in my direct
 testimony in this proceeding.¹⁰⁶ As FERC concluded:

15The Commission should not limit itself to using only the DCF model16or restrict itself when applying judgment to ROE model results.17Since state regulatory commissions, corporate finance professionals,18and investors use multiple methods and exercise judgment when19estimating the cost of equity, it is perfectly reasonable for the20Commission to rely on multiple models and exercise judgment when21setting the base ROE in this proceeding.

¹⁰³ Kentucky Public Service Commission, Case No. 2016-00370, Order at 18 (Jun. 22, 2017) (emphasis supplied). The KPSC made a similar finding in Case No. 2017-00321. After restating the results of the DCF, CAPM, ECAPM, and risk premium approaches to exclude flotation costs, the KPSC noted again that its authorized ROE was "[b]ased on the entire record." Kentucky Public Service Commission, Case No. 2017-00321, Order at 40 (Apr. 13, 2018).

¹⁰⁴ *Id.* at 16.

¹⁰⁵ The DCF range supported by Mr. Baudino, on behalf of the Kentucky Industrial Utility Customers, Inc., was 8.51% to 9.53%; by Dr. Woolridge, on behalf of the Office of Attorney General, was 8.55% to 8.9%; while the average values produced by my DCF application ranged from 8.4% to 9.5%.

¹⁰⁶ Coakley Mass. Attorney Gen. v. Bangor Hydro-Elec. Co., 165 FERC ¶ 61,030 (2018).

¹⁰⁷ Id. at P 37 (quotations omitted).

1	Mr. Kollen's misguided suggestion that the DCF model provides support for a
2	continuation of the existing 9.70% ROE is inconsistent with the KPSC's recent
3	findings, as well as sound regulatory practice and capital market evidence, and
4	should be rejected.

5 Q87. DOES THIS CONCLUDE YOUR PRE-FILED REBUTTAL TESTIMONY?

6 A87. Yes.

VERIFICATION

1

Q. Please state your name, position, and business address.

2 A. My name is Christopher M. Garrett. I am the Controller for Kentucky Utilities 3 Company ("KU") and Louisville Gas and Electric Company ("LG&E") and an 4 employee of LG&E and KU Services Company, which provides services to LG&E 5 and KU (collectively "Companies"). My business address is 220 West Main Street, 6 Louisville, Kentucky 40202.

7 0.

What are the purposes of your rebuttal testimony?

8 A. The purposes of my rebuttal testimony are to rebut intervenor testimony on the issues 9 of (1) the use of capitalization as the Companies' method of valuation; (2) 10 depreciation; (3) scheduled outages; and (4) various other matters. I also provide an 11 adjustment to the Companies' revenue requirements due to the November ice storm 12 and execution of refined coal agreements.

13

I. **USE OF CAPITALIZATION AS THE METHOD OF VALUATION**

14 Q. Do any intervenors argue that the Companies' use of capitalization is 15 inappropriate?

16 A. Yes. Kroger witness Bieber identifies that capitalization is larger than rate base and 17 argues that the use of capitalization is inappropriate. Mr. Bieber is the only witness 18 that contests the Companies' use of capitalization as the appropriate method of 19 valuation. In fact, AG witness Mullinax states that she calculated the return 20 requirement based on capitalization and "defer[s] to . . . the Companies' approach."¹

21 Q. Does Mr. Bieber argue that the Companies should use rate base as their method 22 of valuation?

¹ AG Response to Commission Staff 1-2.

1 A. No. Mr. Bieber does not seem to suggest that the Companies should use rate base as 2 their valuation methodology, but instead simply argues that the Companies should not 3 earn a return on the portion of their proposed capitalization that is in excess of rate 4 Because Mr. Bieber fails to identify that any portion of the Companies' base. 5 capitalization was imprudent, the Commission should reject Mr. Bieber's result-6 oriented request to disallow the Companies' reasonable and prudent costs to serve 7 customers.

8 Q. Has Kroger witness Bieber submitted written testimony to any regulatory 9 commission regarding the difference between rate base and capitalization?

10 A. No. In response to a data request from the Companies, Mr. Bieber provided the cases 11 in which he has submitted written testimony.² Mr. Bieber has not submitted written 12 testimony about the difference between rate base and capitalization to this 13 Commission or any other regulatory commission. Indeed, Mr. Bieber's total 14 experience testifying before regulatory commissions is limited to fewer than ten other 15 cases.

16 Q. Does capitalization remain the most appropriate valuation methodology for the 17 Companies?

A. Yes. Like the use of Construction Work in Progress described in the Rebuttal
Testimony of Kent W. Blake, the Companies have used capitalization for decades.
The Companies have committed to capitalization because of their belief that it is the
most objective measure of valuation that reflects the actual value of assets used to
provide service to customers. While capitalization and rate base are essentially the

² Kroger/Walmart Response to KU/LG&E 1-1.

same in this proceeding, rate base relies on a theoretical calculation, i.e. a lead lag
study, to determine the extent to which the Company funds its working capital. In
contrast, capitalization does not require the use of a lead lag study as it represents the
actual capital invested in the business and is the more objective valuation method.

5 Unlike Mr. Bieber suggests, the Companies are not using capitalization 6 because it produces a higher revenue requirement in this case. In fact, the Companies 7 have supported the use of capitalization in many cases in which capitalization 8 produced a lower revenue requirement. And further, the Companies have committed 9 to continuing to use capitalization in future cases, even if it produces a valuation that 10 is lower than rate base.³

Q. Does Kroger witness Bieber provide any evidence to show that the Companies' longstanding use of capitalization is unreasonable or imprudent?

13 No. Kroger witness Bieber relies on the sole fact that rate base exceeds capitalization A. 14 to justify a departure from the Companies' historic practice of using capitalization. 15 Mr. Bieber fails to present any substantial evidence to otherwise support his position or critique the detailed rate base - capitalization reconciliation provided by the 16 17 Companies in their applications and subsequent data requests. Instead, Mr. Bieber 18 simply assumes that the difference between rate base and capitalization somehow 19 shows the investment in facilities are not used or useful in providing service or is 20 evidence of unreasonable amounts of capitalization. Neither is correct or supported 21 by this record. The Companies' historic use of capitalization is especially important 22 as KRS 278.290 and Commission precedent require the Commission to consider a

³ KU Response to AG 1-30; LG&E Response to AG 1-30.

utility's historic method of property valuation when fixing the value of property. As I
identified in my direct testimony, the Commission stated in Case No. 2000-00080 that
it "will consider using an approach different than that previously used" only if a
justification exists.⁴ Mr. Bieber attempts to distinguish this case by noting that the
Commission approved the lower valuation methodology for the utility in Case No.
2000-00080. Mr. Bieber ignores the fact that the valuation methodology selected by
the Commission was also the valuation methodology the utility had historically used.

8 Q. Should the Commission consider Kroger witness Bieber's argument about assets 9 that are "used and useful" in providing service to customers?

10 A. No. Throughout his testimony, Mr. Bieber argues that capitalization reflects a 11 valuation in excess of the assets that are "used and useful" in providing service to 12 customers. The Commission has made clear that this standard is not a requirement, 13 explaining that the Commission "is under no statutory obligation to apply a used and 14 useful standard exclusively, or any other single, rigid standard."⁵

And Kentucky courts have equally made clear that the mechanical application of the "used and useful" standard by the Commission is not a requirement, with the Court of Appeals stating: "A strict adherence to 'used and useful' is not necessary for the courts to determine if PSC rates are lawful and reasonable."⁶

⁴ In the Matter of: The Application of Louisville Gas & Electric Company to Adjust and to Increase Its Charges for Disconnecting Service, Reconnecting Service and Returned Checks, Case No. 2000-00080, Order at 9 (Ky. PSC Sept. 27, 2000). The Commission considered whether LG&E had presented sufficient evidence to support changing the property valuation methodology it had traditionally used.

⁵ In the Matter of: An Investigation of Big Rivers Electric Corporation's Rates for Wholesale Electric Service, Case No. 9885, Order at 8 (Ky. PSC Aug. 10, 1987); In the Matter of: Big Rivers Electric Corporation's Notice of Changes in Rates and Tariffs for Wholesale Electric Service and of a Financial Workout Plan, Case No. 9613, Order at 36 (Ky. PSC Mar. 17, 1987).

⁶ Nat'l-Southwire Aluminum Co. v. Big Rivers Elec. Corp., 785 S.W.2d 503 (Ky. App. 1990).

1		The portions of KRS Chapter 278 applicable to these proceedings do not
2		require the application of the "used and useful" standard to this issue. Only where a
3		utility serves two or more municipalities is the commission required to apply the used
4		and useful standard. ⁷
5		Having said this, there is no basis to support the argument that capitalization
6		reflects a valuation in excess of the assets that are used and useful in providing
7		service to customers.
8	Q.	Does Mr. Bieber's proposed revenue requirement adjustment justify a departure
9		from the Companies' longstanding history of using capitalization?
10	A.	No. Mr. Bieber has failed to present any substantial evidence to support his position.
11		His recommendation is simply result-oriented without the support of any affirmative
12		evidence showing that the differences between capitalization and rate base are
13		unreasonable, imprudent, or the result of unregulated operations. The difference
14		between the two numbers alone does not justify a departure from the Companies'
15		long-standing, historical practice. Furthermore, the difference between capitalization
16		and rate base that Mr. Bieber identifies is incorrect and overstated. The Companies
17		made a subsequent filing on January 11, 2019 to reduce capitalization for the debt
18		issuance issue discussed below, making the difference between rate base and
19		capitalization approximately one percent of each company's rate base and
20		capitalization, as shown below. ⁸

 ⁷ KRS 278.290(3).
 ⁸ KU Supplemental Response to PSC 1-53 – Schedule A (Ky. PSC Jan. 11, 2019); LG&E Supplemental Response to PSC 1-53 – Schedule A (Ky. PSC Jan. 11, 2019). KU and LG&E also filed supplemental responses to PSC 1-53 on February 15, 2019, which updated Schedule B-5.2. The table reflects the updated schedule B-5.2. values filed on February 15, 2019.

			KU	LG&E Electric	LG&E Gas
		Capitalization	\$4,078,343,555	\$2,575,355,911	\$783,383,775
		Rate Base	\$4,053,646,882	\$2,542,261,745	\$773,415,175
		Difference	\$24,696,673	\$33,094,166	\$9,968,600
		% of Capitalization	0.61%	1 20%	1 27%
		% of Rate Rase	0.01%	1.29%	1.27%
1		These differences are	e not substantial enou	gh to justify an abrup	t departure from the
2		Companies' long-star	nding use and more ob	jective measure of cap	italization.
3			II. <u>DEPREC</u>	<u>CIATION</u>	
4			A. Exter	nsion of Asset Lives	
5	Q.	Please briefly des	cribe the adjustmen	nts proposed by K	IUC and USDOD
6		regarding their pro	oposals to reduce de	epreciation expense	by extending asset
7		lives.			
8	А.	Both KIUC and US	SDOD request the ex	stension of asset live	s for certain steam
9		generation plant. K	UC witness Kollen a	rgues that the Commis	ssion should use 65-
10		year lives to set the c	lepreciation rates for a	all of the Companies' of	coal-fired generating
11		units. USDOD with	ness Selecky argues	that the depreciation	lives of five of the
12		Companies' coal-fin	red generation units	should be increase	d by three years.
13		Additionally, KIUC	witness Kollen reject	s the Companies' pro	posal to shorten the
14		depreciation lives for	ash ponds and recom	mends the Commission	on use the remaining
15		lives of the generatin	g stations based on the	e 2015 depreciation stu	dy.
16	Q.	Do the Companies	agree with the ext	ensions to asset live	es that intervenors
17		recommend?			

A. No. The Companies dispute the intervenor-proposed asset lives. Mr. Bellar and Mr.
 Spanos explain in their rebuttal testimonies why the Companies' depreciation lives
 are appropriate and do not need to be modified.

4 Q. Does the extension of plant lives create savings for ratepayers?

5 A. No. Depreciation expense is simply the recovery of capital investments made by the 6 Companies. Lower depreciation expense is exactly offset by higher net plant, causing 7 customers to pay higher capital costs on the net plant, such that on a present value 8 basis, assuming the Companies' weighted average cost of capital matches the 9 discount rate used, the customer should be indifferent to depreciation rates. While 10 KIUC witness Kollen and USDOD witness Selecky may wish to reduce depreciation 11 rates for current customers in the short-term, any extension in asset lives passes the 12 depreciation cost on to future customers. Shifts like this proposal in depreciation 13 policies can affect the timing of cost recovery, but not the magnitude of cost recovery. 14 In other words, it is a matter of paying now, or paying more (in nominal value terms) 15 later.

Furthermore, the intervenor requests to extend depreciation rates are made without any apparent concern for the effect of this treatment on the Companies' cash flow, capital needs, financial position, or impact on customers in the future. These potential issues could lead to increased costs for ratepayers.

Q. Do the Companies' proposed depreciation rates minimize intergenerational inequities?

A. Yes. It is important that depreciation rates be set at a level that minimizes inter-generational inequities. In other words, the customers who benefit from the energy

7

produced by the Companies' power plants should pay for the cost of those plants as opposed to leaving that cost to be borne by future generations. The Companies commissioned Mr. Spanos to perform a depreciation study on the Companies' steam generation assets to ensure depreciation rates are set at a level that minimizes intergenerational inequities and provides for the full recovery of the cost of these power plants.

O.

B. Brown Unit 1 and 2 Ash Pond Depreciation Rate

9

7

8

Please describe KU's error in the calculation of the Brown Unit 1 and 2 ash pond depreciation rate.

A. As KIUC witness Kollen identifies, the weighted average depreciation rate for Brown
1 and 2 is 2.32%. In its calculation of depreciation expense, KU incorrectly used a
24.68% depreciation rate. KU calculated the amount of this error in discovery⁹ and
included the correction in its supplemental response to PSC 1-53 filed on January 11,
2019.

15

C. Ash Pond Depreciation Rates

16 Q. Please describe the Companies' omission of ash pond depreciation rates.

A. The Companies stopped recording depreciation expense for the ash ponds effective July 1, 2017. In discovery, the Companies explained that the ash pond rates were inadvertently listed as a zero rate as part of the settlement agreement in the 2016 rate cases.¹⁰ As a result of the Commission's order in Case No. 2016-00026, whereby the closure costs would be amortized for ratemaking purposes rather than recovered through depreciation rates, the ash pond assets were moved to separate depreciation

⁹ KU Response to KIUC 1-35.

¹⁰ KU Response to KIUC 1-34; LG&E Response to KIUC 1-32.

1

2

groups in the previous depreciation study, which resulted in the omission. The depreciation study filed in this case corrects this omission.

3 Q. Were customers harmed by this inadvertent omission?

4 A. No. Customers are not paying additional depreciation on the ash ponds due to the 5 omission in the settlement agreement in the 2016 rate cases. Those depreciation rates approved in Case No. 2016-00026, despite this flaw, were the depreciation rates used 6 7 to calculate the depreciation expense currently embedded in retail rates. Further, 8 based on group depreciation, assets are recovered over the life of the assets within the 9 group. Thus, not every asset is individually depreciated. Additionally, rates are 10 established in rate cases after assets have been placed in service, which means that the 11 entire group of assets are recovered over the life of the group. The life of the ash 12 ponds were not previously presented in the last depreciation study. Therefore. 13 earnings were not overstated by the amount of the omission.

14 Q. How does KIUC witness Kollen propose to account for this issue?

A. KIUC witness Kollen argues that the failure to record the ash pond depreciation
expense since July 1, 2017 through the beginning of the test year on April 30, 2019
results in the understatement of accumulated depreciation and the overstatement of
capitalization. Mr. Kollen recommends that the Commission reduce common equity
capitalization by the error in accumulated depreciation.

The Companies strongly disagree with this adjustment for the reasons noted above. Customer rates and KU's depreciation expense reflect the depreciation rates approved in Case No. 2016-00026. Thus, there is no adjustment in capitalization to be made. Furthermore, even if an adjustment in capitalization were to be made, it would not be taken against only the common equity portion of capitalization but
 rather across all sources of capitalization in accordance with the Companies' balanced
 capital structures.

4 5

D. Revenue Requirement Calculations for Book Depreciation Changes

Q. Do the calculations proposed by KIUC witness Kollen and USDOD witness
Selecky account for all of the revenue requirement impacts associated with a
change in book depreciation?

9 A. No. Mr. Kollen's and Mr. Selecky's calculations for the proposed adjustments to 10 book depreciation fail to adjust rate base and capitalization for the reduction in 11 depreciation expense. Such an adjustment is necessary because any reduction in 12 depreciation expense recovery in revenues causes a corresponding increase in 13 capitalization and rate base for the reduction in accumulated depreciation less the 14 increase in accumulated deferred income tax ("ADIT"). Additionally, when book 15 depreciation expense is decreased as a result of using longer depreciable lives, the 16 revenue requirement is increased by the lower excess ADIT amortization. 17 "Protected" excess ADIT is reduced (refunded to customers) over the remaining book 18 lives of property that gave rise to the deferred taxes using the Average Rate 19 Assumption Method ("ARAM"). For any change made to extend the book lives of 20 property, an adjustment is required to reduce the excess ADIT amortization to avoid a 21 potential normalization violation. The corresponding capitalization and excess ADIT 22 adjustments were not included as part of either Mr. Kollen's or Mr. Selecky's 23 proposed adjustments. The impact of these corrections to the revenue requirement 24 are shown in Rebuttal Exhibit CMG-1.

	III. <u>SCHEDULED OUTAGES</u>
Q.	Does KIUC witness Kollen claim a normalization adjustment should be made to
	the Companies' revenue requirements for scheduled generation outage expense?
A.	Yes. KIUC witness Kollen asserts that the planned generation outage expense in the
	test year does not represent the going forward level of this expense based on historical
	data.
Q.	Please briefly describe the Companies' use of the eight-year average of generator
	outage expenses.
A.	As I explained in my direct testimony, the Companies used historical expenses for
	years 2015 through 2018 ¹¹ and forecasted expenses for years 2018 through 2022 to
	develop the eight-year methodology for recovering the outage expense included in the
	forecasted test year.
	The evidence shows that the eight-year methodology has worked well,
	provides a transparent method of recovery of the Companies' prudently incurred costs
	without the volatility, and avoids the over- or under-recovery issues associated with
	normalization adjustments.
Q.	Have the Commission and the Companies generally rejected normalization
	adjustments like those KIUC witness Kollen presents for planned generation
	expense?
A.	Yes. The Commission and the Companies historically have not used normalization of
	operations and maintenance expenses for ratemaking purposes, because such
	adjustments are susceptible to manipulation by the periods chosen or the data
	Q. A. Q. Q. A.

¹¹ 2018 includes six months of actual (January-June) and six months of forecasted (July-December) outage expense.

included for the adjustment. Allowing such selective and result-oriented adjustments
 would give rise to a series of selective adjustments, the purpose of which would be to
 try to offset one another for the benefit of either the customer or the shareholders.

It is for this good reason that the Commission has declined to allow such selective adjustments in the past; the exceptions are only for good cause, such as for storm damages and injuries and damages. The normalization concept is susceptible to being manipulated to achieve a certain outcome. Approval of this proposed adjustment would be a significant change to the established rate-making process.

9 **Q.** Do normalization adjustments introduce greater subjectivity into the 10 ratemaking process?

A. Yes. *All* normalization adjustments introduce subjectivity into the rate case process
 that would not otherwise exist because every normalization adjustment is based upon
 a time period typically selected on the basis of judgment. Subjectivity and the risk of
 selective manipulation are inextricably entangled with normalization adjustments.

15 Q. What is your recommendation regarding outage normalization?

A. For the reasons stated above, it is my recommendation that the Commission deny the
KIUC adjustment to normalize planned generation outage expense.

As discussed, the Companies recognize that outage expense may vary from period to period given the eight-year cycle and nature of the work. However, the Companies are unable to capitalize these costs absent the Commission granting deferral accounting treatment.

22

12

1 2		IV. <u>THE COMPANIES REBUT VARIOUS OTHER INTERVENOR</u> <u>ADJUSTMENTS</u>
3 4		A. Overstatement of Capitalization for First Mortgage Bond Issuances
5	Q.	Please describe the error in the Companies' calculation of the thirteen-month
6		average of Capitalization and why the Companies' subsequent correction
7		appropriately adjusts the short-term debt component of capitalization.
8	A.	As the Companies explained in discovery, ¹² the Companies inadvertently omitted
9		offsetting reductions to short-term debt balances when calculating total capitalization
10		related to the forecasted issuance of First Mortgage Bonds ("FMB") in May 2019.
11		This resulted in the approximate overstatement of Kentucky jurisdictional
12		capitalization by \$22 million for KU, \$18 million for LG&E Electric operations, and
13		\$5 million for LG&E Gas operations. ¹³ The impact of the omission on the
14		Companies' revenue requirements is a decrease of \$0.964 million for KU; a decrease
15		of \$0.912 million for LG&E's Electric operations; and a decrease of \$0.173 million
16		for LG&E's Gas operations. The Companies identified this correction in their
17		supplemental responses to PSC 1-53 filed on January 11, 2019. The issuance of the
18		long-term debt at these levels and retirement of the short-term debt is consistent with
19		the Companies' long standing business practice of using short-term debt until it rises
20		to a level that can be cost-effectively refinanced in the form of long-term debt.

 ¹² KU Response to KIUC 2-24; LG&E Response to KIUC 2-23.
 ¹³ KU attachment to Response to Kroger/Walmart 2-1; LG&E attachment to Response to Kroger/Walmart 2-1. The capitalization impact is significantly smaller than the size of the FMB issuance because only one of the 13-monthends (4/30/2019) used in the average short-term debt capitalization calculation was misstated.

Q. Please describe the errors in KIUC witness Kollen's quantification of the effects
 of the overstatement of Capitalization related to the issuance of First Mortgage
 Bonds.

4 A. KIUC witness Kollen argues that the Companies' error overstated KU's revenue 5 requirement by \$0.944 million and LG&E's electric revenue requirement by \$1.393 million. With respect to his calculation for LG&E electric operations, he reduced 6 7 capitalization by net proceeds (principal less debt issuance costs) from LG&E's \$500 8 million FMB issuance, rather than the amount of the gross issuance of \$500 million 9 that would be used to retire short-term debt of \$300 million (the other \$200 million 10 will be used to redeem LG&E's \$200 million term loan). The impact of this caused 11 Mr. Kollen to overstate the reduction to capitalization by \$12 million (\$195 million / 12 13 months * 80.33% Electric Jurisdictional Factor) for LG&E Electric operations. 13 For KU, he also used net issuance proceeds rather than the full \$300 million FMB 14 issuance. The impact of this caused Mr. Kollen to understate the reduction to 15 capitalization by \$0.2 million (\$3 million / 13 months * 93.77% KY Jurisdictional 16 Finally, in his calculation, he incorrectly reduced the long-term debt Factor). 17 component of capitalization rather than the short-term debt component of 18 Mr. Kollen's calculation to reduce the long-term debt portion of capitalization. 19 capitalization will not allow the Companies to appropriately recover their full interest 20 costs on the FMB long-term issuances that will occur no later than May 1, 2019.

21

B. Cash Working Capital

Q. Does AG witness Mullinax incorrectly apply a cash working capital adjustment
 to capitalization?

14

1 A. Yes. In Ms. Mullinax's Schedules 1.1, she proposes the same adjustments to 2 jurisdictional rate base and jurisdictional capitalization which is rather confusing and odd given that the majority of Ms. Mullinax's adjustments relate to cash working 3 4 capital derived from the lead lag study. As the Companies explained in discovery, cash working capital is a component of rate base, not capitalization.¹⁴ Adjustments 5 for cash working capital only impact rate base because capitalization already includes 6 7 the funding of working capital. Accordingly, Ms. Mullinax's adjustments to 8 capitalization relating to the lead lag study are incorrect in application and should be 9 rejected.

10

C. Baseline ECR Beneficial Reuse Operating Expense Credit

11 Q. Please explain the baseline ECR beneficial reuse operating expense credit.

12 A. In this proceeding, KU proposes to remove all beneficial reuse revenues and expenses 13 from its base rates, and have all beneficial reuse revenues and expenses flow through 14 the Environmental Cost Recovery (ECR) mechanism. As previously approved, KU 15 runs all beneficial reuse revenues and expenses through its ECR mechanism; 16 however, at the time of that approval, KU had a credit associated with beneficial 17 reuse at its Ghent plant included in base rates. KU's current ECR filings include an adjustment to remove this credit in order to avoid double counting. With base rates 18 19 being set in the current proceeding, KU proposed to simplify its ECR filings by 20 removing this adjustment.

Q. Do the Companies agree with AG witness Mullinax's proposed adjustment regarding the ECR beneficial reuse operating expense credit?

¹⁴ KU Response to Kroger/Walmart 1-6(c); LG&E Response to Kroger/Walmart 1-6(c).

A. No. Ms. Mullinax proposes simply to reinstate the credit that existed in a past rate
 case. While this unnecessary complication provides the appearance of a reduction in
 base rates, that impact will be offset by an increase of the same amount in ECR
 filings, with no net impact on the bills of KU's retail customers.
 D. Amortization of Storm Damage Regulatory Assets
 O. Please describe the July 2018 Storm regulatory asset.

- A. In Case No. 2018-00304, the Commission approved the Companies' requests to
 establish regulatory assets to account for the expenses incurred by the Companies to
 repair and restore service caused by severe thunderstorms beginning on July 20, 2018
 ("July 2018 Storm"). The Commission ordered that the amortization and rate
 recovery of the regulatory assets be determined in the Companies' pending rate cases.
- 12 Q. Do you have additional information about the actual expenses the Companies
 13 incurred for the July 2018 Storm?
- A. Yes. KU and LG&E have established regulatory assets in the amount of \$4,791,953
 and \$2,463,048, respectively, for the July 2018 Storm as of January 31, 2019.
- Q. Over how many years have the Companies proposed to amortize the July 2018
 Storm regulatory assets?
- A. Consistent with the amortization periods of the Companies' similar storm regulatory
 assets, the Companies have requested amortization of the July 2018 Storm over five
 years.¹⁵ This results in annual amortization of \$958,391 and \$492,610 for KU and

¹⁵ See, e.g., In the Matter of: Application of Louisville Gas and Electric Company for an Order Approving the *Establishment of a Regulatory Asset*, Case No. 2011-00380, Order (Ky. PSC Dec. 27, 2011). Following Case No. 2011-00380, KU proposed a 5-year amortization period in Case No. 2012-00221 for the amortization of the 2011 Windstorm Regulatory Asset, which was approved in the settlement agreement. The Commission also approved a 5-year amortization period for the 2003 Ice Storm Regulatory Asset in Case No. 2003-00434.

LG&E, respectively, and represents an increase of \$13,736 for KU and \$14,515 for
 LG&E in the forecasted test year compared to the original filing.

Q. Over what period does AG witness Mullinax argue that the Companies should amortize the July 2018 Storm regulatory assets?

5 A. Ms. Mullinax recommends that the regulatory assets for the July 2018 Storm be 6 amortized over ten years instead of the five years the Companies proposed. Ms. 7 Mullinax provides little support for her recommendation and relies solely on the Commission's approval of a non-unanimous stipulation that set forth a ten-year 8 9 amortization period for the Companies' regulatory assets for the 2008 Wind Storm 10 and the 2009 Winter Storm. That stipulation specified that it "shall not have any precedential value in this or any other jurisdiction."¹⁶ And the ten-year amortization 11 12 period was agreed to in exchange for other valuable consideration as part of the 13 Accordingly, the stipulation certainly is not evidence of the stipulation. reasonableness to the ten-year period. Ms. Mullinax ignores the fact that the 14 15 Commission has consistently approved the amortization of the Companies' similar storm regulatory assets over five years and provides no affirmative evidence to 16 17 support the ten-year period.

18 When asked for further explanation of why a ten-year amortization period is 19 more appropriate for the storm damage regulatory asset, Ms. Mullinax advances only

¹⁶ In the Matter of: Application of Kentucky Utilities Company for an Adjustment of Base Rates, Case No. 2009-00548, Appendix A: Stipulation and Recommendation, Section 6.12, p. 19 (Ky. PSC July 30, 2010); In the Matter of: Application of Louisville Gas and Electric Company for an Adjustment of Electric and Gas Base Rates, Case No. 2009-00549, Appendix A: Stipulation and Recommendation, Section 6.12, p. 19 (Ky. PSC July 30, 2010); 30, 2010).

1		an argument lacking evidence that recovery of the storm costs over a longer period
2		contributes to rate stability. ¹⁷
3	Q.	Does LG&E have a pending request for establishment of a regulatory asset for
4		storm damage?
5	A.	Yes. In Case No. 2019-00017, LG&E requests authority for the establishment of a
6		regulatory asset to account for expenses incurred to repair damage and restore service
7		to its customers caused by the ice storm on November 14, 2018 ("November 2018 Ice
8		Storm"). Should the Commission grant authority to establish the regulatory asset for
9		the November 2018 Ice Storm, LG&E requests that it be amortized over a five-year
10		period consistent with the July 2018 Storm.
11	Q.	Do you have additional information about the estimated expenses LG&E
12		incurred for the November 2018 Ice Storm?
13	A.	Yes. LG&E has estimated the expenses incurred for the November 2018 Ice Storm to
14		be approximately \$6,477,082. Based on a five-year amortization period, the Company
15		requests \$1,295,416 in amortization costs be recovered through base rates in this
16		proceeding.
17		E. Amortization of Tax Reform Regulatory Liabilities
18	Q.	Do the Companies agree with AG witness Mullinax's recommendation to
19		amortize unprotected excess ADIT over a six-year period?
20	A.	No. The Companies propose a 15-year amortization period, which the Companies
21		have shown is appropriate.

¹⁷ AG Response to Commission Staff 1-1.

Q. Why is a 15-year amortization period for the unprotected excess ADIT appropriate?

3 A. As the Companies explained in Case No. 2018-00034, excess ADIT balances are 4 largely driven by differences in book and tax accounting for pension expense. In 5 Case Nos. 2014-00371 and 2014-00372, amortization of actuarial gains and losses in 6 the Companies' pension expense was set at 15 years and that ratemaking treatment 7 was carried forward in Case Nos. 2016-00370 and 2016-00371. In executing the 8 original Offer and Acceptance of Satisfaction in Case No. 2018-00034, the parties 9 discussed and agreed to use a 15-year amortization period for non-property-related 10 excess ADIT to be consistent with the ratemaking treatment being provided to the 11 amortization of actuarial gains and losses in the Companies' pension expense. This 12 approach minimizes intergenerational inequities by allowing the customers paying for 13 the pension costs to receive the corresponding tax benefits. Ms. Mullinax iterates the 14 importance of the matching principle, but ignores that a 15-year amortization period 15 best minimizes intergenerational inequities.

In the original *Offer and Acceptance of Satisfaction* in Case No. 2018-00034, the parties, including the Attorney General, also considered and agreed to the 15-year amortization period with awareness of the stress that the Tax Cuts and Jobs Act placed on the credit metrics and ratings of utilities across the country.

Q. Did the Companies propose the same amortization period for excess ADIT created by state tax reform?

19

A. Yes. The Companies proposed the same methodology for the amortization of the
 excess ADIT created by the reduction in the state corporate income tax rate in Case
 No. 2018-00304.

4

5

Q. If the amortization period for unprotected excess ADIT is changed in this proceeding, should rate base and capitalization also be adjusted?

A. Yes. The regulatory liability for excess ADIT is included in both capitalization and
 rate base, therefore, any change in the amortization period would result in a
 corresponding change in capitalization and rate base. Ms. Mullinax incorrectly failed
 to make an adjustment to capitalization and rate base for her proposed change in the
 amortization period as part of her revenue requirement calculation.¹⁸

11

F. Interest Synchronization

12 Q. Do the Companies agree with AG witness Mullinax's recommended interest 13 synchronization adjustment?

A. No. Ms. Mullinax calculates her interest synchronization adjustment by multiplying
her recommended capitalization by the weighted cost of debt. Because the
Companies disagree with Ms. Mullinax's recommended capitalization, they also
disagree with her interest synchronization adjustment.

18

V. <u>REFINED COAL AGREEMENTS</u>

- 19 Q. Are there any other updates the Companies would like to make to their revenue
 20 requirements?
- A. Yes. The Companies recently executed refined coal agreements at its TrimbleCounty and Mill Creek generating stations.

¹⁸ AG Response to Commission Staff 1-2(b).

1	Q.	What is the effect of the refined coal agreements on the Companies' revenue
2		requirements?
3	A.	As shown on Rebuttal Exhibit CMG-2, the refined coal agreements decrease LG&E's
4		revenue requirement by approximately \$7.8 million. The reduction to KU's revenue
5		requirement is approximately \$1.7 million.
6	Q.	Does this conclude your testimony?
7	A.	Yes, it does.

8

VERIFICATION

COMMONWEALTH OF KENTUCKY))) **COUNTY OF JEFFERSON**

The undersigned, Christopher M. Garrett, being duly sworn, deposes and says that he is Controller for Kentucky Utilities Company and Louisville Gas and Electric Company and an employee of LG&E and KU Services Company, and that he has personal knowledge of the matters set forth in the foregoing testimony, and that the answers contained therein are true and correct to the best of his information, knowledge and belief.

hristopher M. Garrett

Subscribed and sworn to before me, a Notary Public in and before said County

and State, this Alt day of _ februar 2019.

III.	LIFE SPANS OF COAL-FIRED POWER PLANTS	- 4	-
IV.	ASH PONDS	14	-

I. INTRODUCTION AND PURPOSE

1	Q.	PLEASE STATE YOUR NAME AND ADDRESS.
2	A.	My name is John J. Spanos. My business address is 207 Senate Avenue, Camp Hill,
3		Pennsylvania.
4	Q.	ARE YOU ASSOCIATED WITH ANY FIRM?
5	A.	Yes. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants,
6		LLC ("Gannett Fleming").
7	Q.	ARE YOU THE SAME JOHN J. SPANOS WHO PREVIOUSLY FILED
8		TESTIMONY IN THIS PROCEEDING?
9	A.	Yes.
10	Q.	WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY IN THIS
11		PROCEEDING?
12	A.	In my rebuttal testimony, I respond to the depreciation-related recommendations of
13		Kentucky Industrial Utility Customers ("KIUC") witness Lane Kollen and United States
14		Department of Defense and all other Federal Executive Agencies ("DoD/FEA") witness
15		James Selecky. There are two specific depreciation issues I will address. The first is the
16		life spans for the Company's coal-fired steam power plants. Both Mr. Kollen and Mr.
17		Selecky have recommended longer life spans than those I have proposed, which, for the
18		plants in question, my proposed life spans are the same as the current life spans used for
19		each facility. Given the numerous factors influencing the economics of operating coal-
20		fired generation, I do not believe that their proposals to increase the life spans for these
21		facilities are appropriate. The second is the service life of the Company's ash ponds
22		which will be closed in the coming years. Only Mr. Kollen has raised this issue. He
23		recommends depreciating these assets over a period of time that is longer than their

JOHN J. SPANOS REBUTTAL

2		regulatory principles and will result in intergenerational inequity.
		II. THE LIFE SPAN METHOD
3	Q.	WHAT IS THE OBJECTIVE OF DEPRECIATION?
4	A.	The objective of depreciation is to allocate, in a systematic and rational manner, the full
5		cost of an asset (original cost less net salvage) over its service life. The Uniform System
6		of Accounts ("USofA") requires this in General Instruction 22-A:
7 8 9		<i>Method</i> . Utilities must use a method of depreciation that allocates in a systematic and rational manner the service value ¹ of depreciable property over the service life of the property.
10		Thus, the USofA confirms that depreciation represents the allocation of the full costs of
11		a company's assets (original cost less any net salvage) over their service lives – that is,
12		over the period of time the assets are providing service. Costs are allocated over the
13		service lives of the assets so that customers pay for the costs of the assets that provide
14		them service. Current customers should not pay for the costs of assets that have already
15		been retired or those that will not receive a benefit. Similarly, future customers should
16		not have to pay for the costs of assets that are no longer in service because current
17		customers pay too little for their service.
18	Q.	Please explain the concept of a "life span."
19	A.	For certain types of facilities, referred to as "life span property," all assets at the facility
20		will be retired concurrently. A textbook example of a life span property is a power plant.
21		When the plant is retired, all assets at the plant will be retired (whether installed the day

service lives. His proposal is inappropriate as it is inconsistent with GAAP and

1

22 the plant went into service or were placed into service recently). The retirement of the

¹ The USofA defines service value as the original cost less net salvage. Code of Federal Regulations, Title 18, Chapter 1, Subchapter C, Part 101, Definitions.

entire facility is referred to as the "final retirement" or "terminal retirement." The period
 of time from the original year the plant was placed into service to the final retirement is
 the "life span" of the facility.

4 Not all assets at a facility will be retired as final retirements. Some components 5 of life span property will be replaced during the life span of the overall facility. When 6 such assets are retired or replaced, they are referred to as "interim retirements." New 7 assets installed subsequent to the original installation of the facility up to the test year 8 date are referred to as "interim additions." Interim retirements need not be minor items. 9 For example, the Company will replace boiler feed pumps at its coal-fired power plants 10 prior to the final retirement of the facilities. The retired feed pumps will be interim 11 retirements and the new boiler feed pumps that replace the retired pumps will be interim 12 additions.

13 Q. HOW IS DEPRECIATION DETERMINED FOR LIFE SPAN PROPERTY IN 14 ORDER TO MEET THE OBJECTIVE OF DEPRECIATION YOU SET FORTH 15 ABOVE?

16 A. The life span method allows for costs to be equitably allocated over the life span of the 17 facility as well as over the lives of interim retirements. When the life span method is 18 used, a "probable retirement date" is estimated. The probable retirement date represents 19 the point in time in the future when it is most probable that the life span facility will be 20 retired. The use of a probable retirement date allows depreciation to be calculated so that 21 each vintage of assets at the facility will be depreciated by the time of the estimated 22 retirement date. As a result, both the original installation and interim additions that have 23 occurred to date are recovered over the appropriate period of time.

24 The life span method also allows for the estimation of interim retirements. This

is most commonly achieved with the use of "interim survivor curves," which estimate
what percentage of plant will be retired each year. However, in some instances, such as
interim retirements of larger assets such as ash ponds, it is necessary to separately identify
large interim retirements and depreciate these assets over their expected useful life.

III.LIFE SPANS OF COAL-FIRED POWER PLANTS

5 Q. WHAT HAVE YOU PROPOSED FOR THE LIFE SPANS OF THE COMPANY'S 6 COAL-FIRED POWER PLANTS?

7 A. For the Company's coal plants, the life spans I have proposed are consistent with the life
8 spans used for the Company's current depreciation rates, with the exception of Brown
9 Units 1 and 2 which will be retired in 2019.

10 Q. HOW ARE LIFE SPANS TYPICALLY ESTIMATED?

A. A power plant is typically retired as the result of an economic decision. As a plant ages
and becomes more expensive to operate, and as new technologies become more efficient
and economical relative to existing generation, it eventually becomes economical to
replace the existing plant. The retired plant may be able to physically operate for a longer
period of time but it would be a more costly option to keep the plant in service.

16 Thus, the process of estimating the life spans of the Company's power plants is 17 more than determining how long a plant could physically last, but must also consider the 18 economic decision as to when to replace the plant with newer generation. Factors 19 considered in determining life span estimates include the life spans and experience of 20 other similar facilities for the Company and others in the industry; an understanding of 21 technological, regulatory and operational changes that could impact the life of a facility; 22 and an understanding of other factors that impact the economics of operating a facility, 23 such as fuel prices for both the plant at issue and for competing sources of generation.

JOHN J. SPANOS REBUTTAL

Q. IN ESTIMATING THE LIFE SPANS FOR LG&E AND KU'S FACILITIES, WERE THESE TYPES OF FACTORS CONSIDERED?

A. Yes. The estimation of life spans for the Company's facilities incorporated these types
of factors. The Companies performed their own analyses of the most appropriate life
span for each facility.² I also performed an independent review based on my experience
and knowledge of other facilities in the industry. In my judgment, the recommended
retirement dates in the depreciation studies represent the most reasonable probable
retirement dates for each facility.

Importantly, the life spans recommended for the Company's coal plants at issue
in this proceeding are the same as those currently used for the Company. Due to a number
of factors, such as new technologies of generation, low natural gas prices and
environmental recommendations, I do not believe it would be appropriate to increase the
life spans of the Company's coal-fired generating facilities. Doing so would risk having
too long of life spans, resulting in intergenerational inequity and the risk of stranded costs
if the plants are retired earlier than the retirement dates used for depreciation purposes.

16 Q. WHAT HAVE MR. KOLLEN AND MR. SELECKY PROPOSED FOR THE LIFE

17 SPANS OF THE COMPANY'S COAL PLANTS?

A. Both have proposed to increase the life spans for many of the Company's coal plants.
Mr. Kollen states that he recommends "that the Commission use 65-year [life spans] to
set the depreciation rates for the Company's coal-fired units."³ Mr. Selecky states that

² See the response to US DOD 2-2.

³ Kollen at 49:24-25. I note that this statement in his testimony is not entirely accurate. For certain plants his life spans are different from 65 years.

1 he proposes "that the currently approved life span for Mill Creek 1 and 2, Brown 3 and 2 Ghent 1 and 2 be increased by three years."⁴

3

0. WHAT ARE THE BASES OF THEIR PROPOSALS?

4 Α. Mr. Kollen's proposal is based on two primary factors: 1) his interpretation of a business 5 planning document produced by the Company and 2) the life spans of the Clifty Creek 6 and Kyger Creek power plants. Mr. Selecky's proposal is based primarily, if not entirely, 7 on his misinterpretation of email correspondence between myself and the Company.

8 DO EACH OF THEIR PROPOSALS RESULT IN LONGER LIFE SPANS THAN **Q**.

9 **THOSE USED FOR THE COMPANY'S CURRENT DEPRECIATION RATES?**

10 A. Yes. In each case, Mr. Kollen and Mr. Selecky have proposed to increase the life spans 11 of these coal-fired facilities.

IS IT REASONABLE TO LENGTHEN THE LIFE SPANS OF THE COMPANY'S 12 **Q**. 13 **COAL PLANTS?**

14 A. No. In my judgment, particularly based on the experience of both LG&E and KU as well 15 as others in the industry, it is not appropriate to increase the life spans of the Company's 16 coal plants. Across the country, many coal plants have been retired earlier than expected 17 and many have had shorter life spans than 65-years. The same is true of the Company's 18 experience. In 2015, the Companies retired multiple coal units and the Company plans 19 to retire Brown Units 1 and 2 in 2019. The Company also retired the Pineville plant in 20 2002 and Cane Run Units 1, 2 and 3 in 1985. Most of these had a life span of less than 21 60 years, as can be seen in the table below.

22

⁴ Selecky at 23:12-13.
Table 1: Life Spans of Retired or Planned to Be Retired LG&E and KU Coal-Fired
Power Plants

Unit	In-Service Year	Retirement Year*	Life Span
Cane Run Unit 1	1954	1985	31
Cane Run Unit 2	1956	1985	29
Cane Run Unit 3	1958	1985	27
Cane Run Unit 4	1962	2015	53
Cane Run Unit 5	1966	2015	49
Cane Run Unit 6	1969	2015	46
Tyrone Unit 1	1947	2007	60
Tyrone Unit 2	1948	2007	59
Tyrone Unit 3	1953	2013	60
Green River Unit 1	1950	2003	53
Green River Unit 2	1950	2003	53
Green River Unit 3	1954	2015	61
Green River Unit 4	1959	2015	56
Brown Unit 1	1956	2019	63
Brown Unit 2	1963	2019	56
Pineville	1951	2002	51

3 4 5 *Retirement year represents the year unit no longer was generating electricity. This is not the same date assets were removed from service as shown in the depreciation study.

6 As can be seen in the table, the plants that the Company has retired have had shorter life 7 spans than 65 years (and also had life spans that were shorter than the 63 years Mr. 8 Selecky proposes). Further, the average life span of these retired plants was 9 approximately 50 years, which is even shorter than the life spans I have proposed for 10 most of the Company's remaining coal-fired power plants. Additionally, while some of 11 the older plants have had longer life spans, the Company's newer plants have tended to 12 have shorter experienced life spans (with the exception of Cane Run Units 1, 2 and 3), 13 which is consistent with the experience of many in the industry. For example, all of the 14 plants in the table above that were installed since 1960 have had life spans less than 60 15 years.

The shorter life spans for plants built over the last 40 years is due to the many additional
 factors, such as the influx of renewable energy sources, lower natural gas prices,
 environmental regulations and efficiencies of coal.

4

5

Q. WHY HAVE NEWER COAL-FIRED POWER PLANTS TENDED TO HAVE SHORTER LIFE SPANS THAN OLDER PLANTS?

6 A. As I noted above, three of the primary factors that have resulted in the retirement of coal-7 fired power plants have been new technologies of generation (both efficient gas 8 combined cycle plants and renewables), low fuel prices for natural gas generation and 9 environmental regulations. The impact of these factors on existing coal-fired generation 10 became significant in the mid-to-late 2000s, whereas these factors did not have as much 11 of an impact prior to this time period. Thus, a power plant installed in the 1940s would 12 have been in service for 60 years before these factors began to significantly impact the 13 economics of the plant. This allowed older plants to attain longer life spans. However, 14 a plant placed in service in the 1970s or 1980s would be much younger (20 or 30 years 15 of age) in the mid-to-late 2000s, which has tended to, on average, result in shorter life 16 spans for newer coal-fired power plants.

17 Q. MR. KOLLEN DISCUSSES TWO PLANTS, CLIFTY CREEK AND KYGER
18 CREEK, IN SUPPORT OF HIS PROPOSAL TO INCREASE THE LIFE SPANS
19 FOR LG&E AND KU'S PLANTS. IS HIS ARGUMENT PERSUASIVE?

A. No. Mr. Kollen's discussion of the experience of these two plants does not change that
both Company-specific and industry-wide information supports shorter life spans than
he has proposed. As shown in Table 1, the Company's experience has shown that
LG&E's and KU's plants have typically experienced shorter life spans than what Mr.
Kollen expects for Clifty Creek and Kyger Creek. Indeed, as Mr. Kollen notes, Clifty

Creek and Kyger Creek were both installed in the mid-1950s. All of the Company's
plants installed in this timeframe (Cane Run 1, 2, and 3, Tyrone Unit 3, Green River
Units 3 and 4 and Brown Unit 1) have been retired or are planned to be retired and on
average had life spans in the 55-year range. This information is more relevant to the
determination of the life spans of the Company's power plants than the two plants cited
by Mr. Kollen.

7 Further, there are a number of examples of power plants of the same vintage as 8 the Company's remaining fleet of coal plants that either have retired or are planned to be 9 retired that had or will have shorter life spans than those proposed by Mr. Kollen (and 10 proposed by the Company). The Company's generating units that are at issue in this 11 proceeding have all been installed since 1971 (Brown Unit 3 is the oldest coal-fired unit 12 expected to remain in service beyond 2019). There have been a number of plants 13 installed since 1971 that either have been or are planned to be retired. For example, 14 Nevada Power has retired its Reid Gardner plant and plans to retire the Navajo plant (of 15 which it is a co-owner) by the end of 2019. The life spans of the six units at these plants 16 (each has three units) range from 37 to 48 years. Indianapolis Power & Light retired its 17 Harding Street Station Units 1 and 2 in 2016, resulting in a 43-year life span. 18 MidAmerican Energy closed its Neal Unit 2 plant in 2015, resulting in a life span of 43 19 years. Public Service Company of Oklahoma's Northeastern Unit 4 plant was retired in 20 2016 and had a life span of 36 years. The Saint John's River Power Park ("SJRPP") 21 plant was retired in 2018. The two units at this plant had life spans of 30 and 31 years.

Additionally, the Boardman plant in Oregon is planned to be retired by end of 2020, which will result in a 40-year life span. Duke Energy Progress's Asheville plant is planned to be closed in 2019, resulting in a 48-year life span. Public Service Company

1		of Oklahoma plans to retire its Northeastern Unit 3 plant in 2026, resulting in a life span
2		of 46 years. These are just a few examples of coal-fired units being retired many years
3		prior to age 65.
4	Q.	HAS THERE BEEN RECENT ANNOUNCEMENTS OF COAL FIRED PLANT
5		RETIREMENTS IN KENTUCKY LESS THAN 65 YEARS?
6	A.	Yes. Tennessee Valley Authority has announced the closure of units at their Paradise
7		and Bull Run facilities. The Paradise facility will retire in 2020 and the three units will
8		have a life span between 50 and 54 years. The Bull Run facility will have a life span of
9		56 years.
10		
11	Q.	WHAT OTHER REASON DOES MR. KOLLEN CITE IN SUPPORT OF HIS
12		RECOMMENDED LIFE SPANS?
12 13	A.	RECOMMENDED LIFE SPANS? Mr. Kollen also cites to a planning document to support a 65-year life span. However,
12 13 14	A.	RECOMMENDED LIFE SPANS? Mr. Kollen also cites to a planning document to support a 65-year life span. However, the Company has explained that the document he cites was not intended to provide
12 13 14 15	A.	RECOMMENDED LIFE SPANS? Mr. Kollen also cites to a planning document to support a 65-year life span. However, the Company has explained that the document he cites was not intended to provide detailed estimates of the life spans of the Company's facilities. ⁵ Instead, it is for planning
12 13 14 15 16	A.	RECOMMENDED LIFE SPANS? Mr. Kollen also cites to a planning document to support a 65-year life span. However, the Company has explained that the document he cites was not intended to provide detailed estimates of the life spans of the Company's facilities. ⁵ Instead, it is for planning capital expenditures for the Company's fleet of plants. Because the estimated life spans

12 13 14 15 16 17 18 19 20 21	A.	RECOMMENDED LIFE SPANS? Mr. Kollen also cites to a planning document to support a 65-year life span. However, the Company has explained that the document he cites was not intended to provide detailed estimates of the life spans of the Company's facilities. ⁵ Instead, it is for planning capital expenditures for the Company's fleet of plants. Because the estimated life spans of the Company's facilities extend beyond a typical capital and operational planning period, there is not the need for detailed life span estimates for the Company's generating plants in the planning document cited by Mr. Kollen. However, as noted by the Company in the response to Question No. 33 in KIUC's first set of interrogatories (which Mr. Kollen has attached to his testimony), the Company

⁵ See KU's response to KIUC Data Request Set 1, Question No. 33.

and the PPL Climate Assessment Report. Both of these are more relevant to determining
life spans than the planning document to which Mr. Kollen refers. Further, as noted in
the same response, the Company reviewed the life span estimates in more detail for the
depreciation study. The resultant life spans, which for the plants in question are the same
as the life spans currently used for each facility, are the most appropriate estimates and
should continue to be used.

7 Q. CAN YOU SUMMARIZE THE FUNDAMENTAL FLAWS OF MR. KOLLEN'S 8 DEPRECIATION POSITION?

9 A. Yes. First, Mr. Kollen selects an arbitrary 65-year life span for all units which does not 10 consider any planning for meeting generating requirements or unit capabilities. Second, 11 his calculations just extend the remaining lives to a life span of 65 years without properly 12 calculating the interim survivor curve and net salvage components. A longer life span 13 creates more interim retirements and more net salvage, which requires more depreciation 14 expense than he has proposed. Third, he changes the recovery pattern of the ash ponds 15 to the life spans currently in place instead of calculating the rates to the 65-year life span 16 he is proposing for the related units. This contradicts with the arguments he makes in his 17 testimony. Finally, he has attempted to make depreciation expense a results-oriented 18 exercise without truly following the concept and definition of depreciation. These flaws 19 in his calculations incorrectly reduce this proposed position by \$15 million for the two 20 companies. These flaws cannot be considered a reasonable approach.

Q. WHY HAS MR. SELECKY PROPOSED LONGER LIFE SPANS FOR SOME OF THE COMPANY'S COAL UNITS?

A. Mr. Selecky's proposal is based primarily on his interpretation of an email I had sent to
the Company regarding discussions held prior to the completion of the analysis of the

1		life spans for the Company's assets. The email alluded to three-year increases in life
2		spans for Mill Creek 1 and 2, Brown 3 and Ghent 1 and 2. However, Mr. Selecky's
3		discussion of this email does not place it in the proper context and, in fact, my statements
4		in this email does not lead to his conclusion that the life spans for these units should be
5		increased.
6	Q.	WHAT DOES MR. SELECKY STATE ABOUT THIS EMAIL?
7	A.	Mr. Selecky states that "[i]n reviewing emails from Mr. Spanos to Company
8		representatives, I discovered that Mr. Spanos had intended to increase the lives of these
9		five units."
10	Q.	IS THIS AN ACCURATE SUMMARY OF WHAT YOUR EMAIL STATED?
11	A.	No. Additionally, while I can understand that the language in the email may be somewhat
12		ambiguous without the proper context, this context was in fact explained to Mr. Selecky
13		in discovery. ⁷ His testimony is contrary to the context provided to him in discovery.
14	Q.	WHAT DID THE EMAIL CITED BY MR. SELECKY STATE?
15	A.	The email in question was addressed to Sara Wiseman, Manager of Property Accounting
16		for LG&E and KU. It stated:
17		Sara:
18 19 20 21		This creates an issue from our last discussion. We had planned to extend Mill Creek 1 and 2, Brown 3 and Ghent 1 and 2 by 3 years. Does that mean we should not do that step and keep the retirement dates you supplied today.
22 23		With that said, I am available most of the rest of the week except this afternoon.
24		John

 ⁶ Selecky at 23:19-20.
 ⁷ See the response to US DOD-2 Question No. 8, which Mr. Selecky attached to his testimony in Exhibit JTS-11.

1

Q. WHAT IS THE CONTEXT OF THE EMAIL?

A. During the conduct of the depreciation study, I had conversations with LG&E and KU
personnel regarding the life spans. As noted above, LG&E and KU had been performing
analyses of the proper life spans for these facilities. Based on a discussion prior to this
email, my understanding was that the Company's analysis would support an increase to
the life spans of three years for these facilities. Based on this understanding, we had
planned to run calculations with these increased life spans. However, the Company's
analysis did not actually support an increase in life spans for these accounts.

9 Q. WHY DO YOU BELIEVE MR. SELECKY HAS INTERPRETED THIS EMAIL 10 DIFFERENTLY?

11 A. Mr. Selecky has selectively interpreted my email incorrectly. My email does not indicate 12 that I believed that increases in the life spans was more appropriate than keeping them 13 the same as in the previous depreciation study (which is what was ultimately decided). 14 Rather, based on an earlier discussion, I had planned to perform calculations with the 15 longer life spans because that was my understanding of the Company's analysis at the 16 time. As noted in the email, this understanding was not consistent with the conclusion 17 of the Company's analysis. Additionally, my statement that "this creates an issue from 18 our last discussion" was not intended to convey that I disagreed with the decision to keep 19 the life spans the same. Indeed, as noted in the discussion above, the experience of LG&E 20 and KU and others in the industry would, if anything, support shorter life spans (not 21 longer life spans). Instead, the "issue" to which I referred in the email was completing 22 calculations by the deadlines established for preparing for the rate case. Because of the 23 need to rework calculations I had performed, I was concerned with the timing of the 24 completion of my final calculations.

1 Q. DOES MR. SELECKY PROVIDE ANY OTHER REASONS IN SUPPORT OF 2 HIS PROPOSAL?

- A. Mr. Selecky provides few other reasons in support of his proposal on page 24 of his
 testimony. I have responded earlier in my testimony to the few he discusses.
- 5 Q. DOES MR. SELECKY PROVIDE WORKPAPERS TO SUPPORT HIS
 6 DEPRECIATION POSITION?
- A. No. The only depreciation workpapers provided by Mr. Selecky was the responses to
 discovery provided by the Company. In other words, Mr. Selecky has not performed any
 of his own depreciation analysis.
- 10 Q. WHAT DO YOU CONCLUDE WITH REGARD TO THE LIFE SPANS OF THE
- 11 COMPANIES COAL-FIRED POWER PLANTS?
- A. Based on a number of factors discussed above, the life spans used in the depreciation
 study, which are the same as currently approved for the Company, are most appropriate
 to use for the development of depreciation rates in this proceeding.
- 15

IV. ASH PONDS

16 Q. WHAT HAVE YOU PROPOSED FOR THE COMPANY'S ASH PONDS?

- A. The Company plans to close and remediate the ash ponds for Brown, Ghent 1, Mill Creek
 and Trimble County in the coming years. Accordingly, these assets will reach the end of
 their service life in the next few years. My proposal is that, consistent with the USofA
 and accounting principles, the costs for these ash ponds should be recovered over their
 remaining service lives.
- 22 Q. WHAT ARE THE REMAINING SERVICE LIVES FOR THE ASH PONDS?
- A. The remaining service lives are from now until the ponds are closed.

Q. WHY SHOULD THE COSTS FOR ASH PONDS BE RECOVERED OVER THEIR SERVICE LIVES?

A. As noted in Section II, the General Instruction 22-A of the USofA requires that "[u]tilities
must use a method of depreciation that allocates in a systematic and rational manner the
service value of depreciable property over the service life of the property" (emphasis
added). Because the end of the service lives of ash ponds corresponds with their closure
date, the costs of ash ponds should be recovered by the time they are closed.

8 If, instead, the recovery of ash pond costs were deferred until after they are closed, 9 then future customers would have to pay for assets that are no longer providing electric 10 service. This would be inequitable, particularly because those future customers would 11 also have to pay the costs of dry-ash disposal equipment that will replace the ash ponds. 12 It is not equitable to ask future customers to pay for two generations of ash disposal 13 equipment, while not having current and past customers pay their fair share of the ash 14 ponds that provided service to them.

15

Q. WHAT IS MR. KOLLEN'S PROPOSAL?

A. Mr. Kollen proposes that "the Commission set depreciation rates to recover the remaining
net book value over the remaining lives of the generating units, consistent with the
Companies' prior depreciation studies."⁸ That is, Mr. Kollen proposes that the costs of
these ash ponds be depreciated over a period of time that is much longer than the ponds'
service lives.

Q. MR. KOLLEN NOTES THAT IN PREVIOUS DEPRECIATION STUDIES THE ASH PONDS WERE DEPRECIATED OVER THE LIFE SPANS OF THE

⁸ Kollen at 51:5-7.

RESPECTIVE GENERATING UNITS. WHY HAVE YOU CHANGED THE DEPRECIABLE LIVES OF THESE ASH PONDS?

A. I have proposed to change the service lives used for depreciation because the expected
service lives of these assets have changed. Previously, the expectation for the Companies
(and for most coal-fired facilities) was that ash ponds would be closed when the power
plant was closed. However, we now know that this will not be the case. Because the
service lives of the ash ponds are known to be shorter than the life spans of the facilities,
the depreciation rates need to be changed to incorporate this information.

9 Q. WHAT SUPPORT DOES MR. KOLLEN PROVIDE TO SUPPORT HIS 10 PROPOSAL FOR ASH PONDS?

A. Mr. Kollen provides very little support for his proposal. Other than noting that the previous depreciation study used the life spans of the related facilities, Mr. Kollen states that GAAP does not require an increase to the "depreciation rates to reflect the forecast closure dates" and that "[t]here is no compelling reason to increase the depreciation rates and accelerate the recovery of the remaining costs given the fundamental fact that the Companies will recover these costs as well as a return on those costs until they are fully recovered."⁹

Mr. Kollen is incorrect on both of these assertions. First, as discussed above, there are multiple compelling reasons to recover the costs of ash ponds over their service lives, including the requirements of the USofA and that deferring recovery of these costs (as Mr. Kollen proposes) will result in intergenerational inequity. Mr. Kollen's statement to the contrary actually provides another reason to reject his proposal. If the recovery of

⁹ Kollen at 50:20 - 51:10

1	these costs are deferred, then future customers will have to pay a return on the
2	unrecovered costs (in addition to paying for the return of these costs) after the ash ponds
3	are retired, which makes his proposal even more inequitable.
4	Mr. Kollen's assertion with regard to GAAP requirements is also fundamentally
5	incorrect. Paragraph 360-10-35-4 of FASB ASC states the following:
6 7 9 10 11 12 13 14 15	The cost of a productive facility is one of the costs of the services it renders during its useful economic life. <u>Generally accepted accounting</u> <u>principles (GAAP) require that this cost be spread over the expected</u> <u>useful life of the facility in such a way as to allocate it as equitably as</u> <u>possible to the periods during which services are obtained from the use of</u> <u>the facility.</u> This procedure is known as depreciation accounting, a system of accounting which aims to distribute the cost or other basic value of tangible capital assets, less salvage (if any), over the estimated useful life of the unit (which may be a group of assets) in a systematic and rational manner. It is a process of allocation, not of valuation.
16	Thus, there is a GAAP requirement that the depreciation rates for ash ponds be increased
17	to recognize the closure dates of ash ponds, because GAAP requires these costs to be
18	spread over the "expected useful life of the facility." Because the useful lives of the ash
19	ponds will end upon their closure, GAAP requires these costs to be recovered through
20	depreciation by the dates of the pond closures. Also, as noted above, the USofA has a
21	similar requirement that costs be allocated over the service lives of the facilities.
22	Thus, Mr. Kollen's proposal is one that contravenes both regulatory ¹⁰ and GAAP
23	requirements. Given that he has not provided any reason to deviate from these
24	requirements, other than his own opinion that the Commission should not follow these
25	requirements, there is no valid reason to adopt Mr. Kollen's position. Instead, the

¹⁰ I note here that in KIUC's response to LG&E and KU's First Set of Interrogatories, Question No. 7, Mr. Kollen acknowledges that "[t]he USOA instructions generally require that plant be depreciated over its estimated service lives."

1		depreciation rates I have proposed for ash ponds, which will recover their costs over their
2		expected service lives, are most appropriate.
3		
4		VIII. CONCLUSION
5	Q.	IN YOUR OPINION, ARE THE DEPRECIATION RATES SET FORTH IN
6		YOUR DEPRECIATION STUDIES THE RATES THE KENTUCKY PUBLIC
7		SERVICE COMMISSION SHOULD ADOPT IN THIS PROCEEDING FOR
8		LG&E AND KU?
9	А.	Yes, these rates appropriately reflect the rates at which the value of LG&E and KU's
10		assets are being consumed over their useful lives. These rates are an appropriate basis
11		for setting electric and gas rates in this matter and for the Companies to use for booking
12		depreciation and amortization expense going forward.
13	Q.	DOES THIS CONCLUDE YOUR PRE-FILED REBUTTAL TESTIMONY?
14	А.	Yes.
15		

VERIFICATION

COMMONWEALTH OF PENNSYLVANIA)) SS: COUNTY OF CUMBERLAND)

The undersigned, **John J. Spanos**, being duly sworn, deposes and says that he is President (formerly Senior Vice President) of Gannett Fleming Valuation and Rate Consultants, LLC, that he has personal knowledge of the matters set forth in the foregoing testimony and exhibits, and the answers contained therein are true and correct to the best of his information, knowledge and belief.

m J. Apanos

Q. Please state your name, position, and business address.

A. My name is Robert M. Conroy. I am the Vice President of State Regulation and
Rates for Kentucky Utilities Company ("KU") and Louisville Gas and Electric
Company ("LG&E") (collectively "Companies") and an employee of LG&E and KU
Services Company, which provides services to KU and LG&E. My business address
is 220 West Main Street, Louisville, Kentucky 40202.

7 Q. What is the purpose of your rebuttal testimony?

8 A. The purpose of my rebuttal testimony is to address certain errors by the Attorney 9 General's witness Donna H. Mullinax; various intervenors' arguments concerning 10 rate design, tariff issues, and revenue allocation; several proposed revenue and rate 11 base adjustments, including the claim by Ms. Mullinax that certain gas construction 12 work by LG&E requires a certificate of public convenience and necessity; several 13 issues raised by Joseph H. Crone III testifying for Charter Communications Operating, LLC; several issues raised by the Kentucky School Boards Association 14 15 ("KSBA"); and low-income advocates' concerns.

16

Ms. Mullinax's Rounding Errors

Q. Ms. Mullinax reduces her recommended electric revenue increases by amounts
she asserts are the same the Companies used "due to rounding in the Solar
Share and Electric Vehicle programs shown in their schedules."¹ Is she correct
in how she characterizes and uses the amounts she cites to reduce revenue
requirements?

¹ Mullinax at 13.

A. No. As an initial matter, Ms. Mullinax incorrectly states, "The Companies' calculated-electric-operations revenue deficiencies are less than the Companies' revenue requests."² On the contrary, as I stated in my direct testimony, all of the Companies' revenue requests are less than the Companies' revenue deficiencies, not the other way around.³

More importantly and as I explained in my direct testimony, the proposed 6 7 increase in forecasted test period electric revenues for each of the Companies differs 8 from-and is less than-the electric revenue deficiency for two separate and 9 unrelated reasons: (1) the number of decimal places in the proposed charges cannot 10 be carried out far enough to exactly equal the revenue deficiency; and (2) it is necessary to adjust revenues by imputing revenues for the Solar Share and Electric 11 Vehicle programs as discussed in the direct testimony of Mr. Seelye.⁴ The first item 12 13 does indeed result from rounding; rates carried to a reasonable number of decimal 14 places and applied to billing determinants will almost never exactly equal a revenue 15 requirement. But that rounding effect is not an adjustment to the revenue 16 requirement; rather, it is a concession to the mathematical reality that revenue 17 requirements and rates applied to billing determinants do not exactly match.

18 The second item is a true reduction to the electric revenue requirement for 19 each of the Companies resulting from the imputation of revenue for the Solar Share 20 and Electric Vehicle programs discussed in the direct testimony of Mr. Seelye.⁵ 21 LG&E's Schedule M-2.1-E shows the correct amount of revenue to impute for the

² Mullinax at 13.

³ Conroy Direct at 11-12 and 38.

⁴ Conroy Direct at 11.

⁵ Conroy Direct at 11-12.

Solar Share and Electric Vehicle programs for LG&E, namely \$90,078. Likewise,
 KU's Schedule M-2.1 shows the correct amount of revenue to impute for the Solar
 Share and Electric Vehicle programs for KU, namely \$199,767.

Ms. Mullinax erroneously conflates the rounding effect and the imputed revenue from the Solar Share and Electric Vehicle programs into a single "rounding in the Solar Share and Electric Vehicle programs" value for each of the Companies that overstates the appropriate revenue adjustment for KU (\$203,466) and understates the appropriate revenue adjustment for LG&E (\$87,527).⁶ The Commission should disregard Ms. Mullinax's conflated adjustments and use the Companies' revenue imputation values instead to make the appropriate revenue requirement adjustments.

Q. Does Ms. Mullinax make a rounding error regarding her calculation of LG&E's gas revenue requirement?

13 Yes. Ms. Mullinax applies the Companies' calculated rounding amount (\$865) to her A. calculated revenue deficiency to arrive at her recommended revenue increase.⁷ The 14 15 error is clear: Because Ms. Mullinax did not attempt to create rates based on her calculated revenue deficiency, she cannot have applied those rates to billing 16 17 determinants to have arrived at a rounding amount. Simply applying the Companies' 18 calculated rounding amount to her proposed revenue deficiency is not a valid method 19 for arriving at a recommended revenue increase. To do that requires the extra work 20 of creating rates and applying them to billing determinants, which work Ms. Mullinax 21 has not done. The Commission should therefore disregard the rounding adjustment 22 Ms. Mullinax applies to her recommended LG&E gas revenue increase.

⁶ Mullinax Exh. DHM-1 at 2 (KU Schedule 1); Mullinax Exh. DHM-2 at 2 (LG&E-E Schedule 1).

⁷ Mullinax Exh. DHM-3 at 2 (LG&E-G Schedule 1).

1		Rate Design and Tariff Issues
2	Q.	Has any party contested the Companies' proposed rate design for their
3		secondary and primary time-of-day electric service (Rates TODS and TODP)?
4	A.	No. Gregory W. Tillman states on behalf of Walmart, Inc. that he does not oppose
5		the Companies' proposed changes to the Rate TODS billing determinants.8
6		Similarly, James T. Selecky states on behalf of the United States Department of
7		Defense and all other Federal Executive Agencies ("DoD-FEA") that he does not
8		oppose the Companies' proposed Rate TODP rate design. ⁹ Because no party opposes
9		the Companies' proposed changes to the rates designs for Rates TODS and TODP,
10		the Companies ask that they be approved.
11	Q.	Mr. Selecky proposes to add a 60-minute demand exemption provision to
12		LG&E's Retail Transmission Service rate (Rate RTS), which exemption
13		currently exists for Rate TODP. ¹⁰ Do you agree with his proposal?
14	A.	No. The Companies made the cited revision to Rate TODP to achieve a stipulation in
15		the Companies' 2016 rate cases, not because there was a cost-of-service justification
16		for the concession. As I noted in my rebuttal testimony in those cases, the underlying
17		reason for a customer's demand does not affect the fact of the demand, and it is the
18		fact of the demand, or more importantly the fact that the demand could occur, that
19		causes a utility to incur costs to build facilities of sufficient capacity to handle
20		customers' demands, regardless of the demands' various causes. Therefore, from a
21		pure cost-causation perspective, Mr. Selecky's proposal continues to lack support.

 ⁸ Tillman at 23-24.
 ⁹ Selecky at 19.
 ¹⁰ Selecky at 20-21.

I would also note that the Rate TODP provision Mr. Selecky seeks to expand has not been used a single time since the Companies put it in place following their 2016 rate cases. It has therefore been a nullity to date, and the Companies see no reason to expand it now; indeed, because it has not been used and has no cost-ofservice justification, the Commission should consider directing the Companies to remove the exemption from the Companies' Rate TODP tariff provisions.

Q. Have you prepared a summary exhibit indicating changes that the Companies
have made to their tariffs since they filed their applications in these proceedings,
have proposed to make to their tariffs during the pendency of these proceedings,
and will make to the Companies' tariffs during the remaining pendency of these
proceedings?

12 A. Yes. Since the Companies filed their proposed tariffs in these proceedings on 13 September 28, 2018, there have been numerous tariff filings unrelated to these 14 proceedings in which changes to language, rates, or terms and conditions have been 15 approved and are or will be effective prior to the conclusion of these proceedings. 16 For example, the Commission issued Orders in Case No. 2017-00441 on October 5, 17 2018 and October 25, 2018 in which the DSM tariff sheets were modified. In 18 addition, there have been a number of changes to language during responses to data 19 requests throughout these proceedings. To ensure the Commission and all parties 20 have a succinct summary of all such changes, I have caused to be prepared the exhibit 21 attached to my testimony as Conroy Rebuttal Exh. RMC-1.

22

Revenue Allocation

Q. Has the testimony of the intervenors that addressed revenue allocation caused
you to change your position about the Companies' proposed revenue allocation?

A. No. Of the four intervenor witnesses that addressed revenue allocation (Stephen J.
 Baron, Mr. Selecky, Mr. Tillman, and Glenn A. Watkins), only Messrs. Selecky and
 Watkins opposed the Companies' proposed revenue allocation approach.

Notably, the proposed alternative revenue allocations of Messrs. Selecky and
Watkins are opposed to each other. Mr. Selecky believes residential customers' rates
should be increased relatively more, with more revenue being allocated to residential
customers and away from all other non-lighting rate classes.¹¹ Though the
Companies agree with reducing interclass subsidies, Mr. Selecky's proposal does not
comport with the ratemaking principle of gradualism.

10 Contrary to Mr. Selecky, Mr. Watkins argues that "any overall revenue 11 increase (or decrease) granted in this case be assigned to individual rate classes and 12 schedules on an equal percentage basis," which would have the effect of relatively 13 decreasing the Companies' proposed revenue allocation to residential customers and relatively increasing the revenue allocation to all other customer classes.¹² But the 14 15 basis for Mr. Watkins's position is that the Companies' cost of service study is fatally 16 flawed and therefore cannot be used to allocate revenue, and in the absence of a cost of service study one should allocate revenue in equal proportions to all rate classes.¹³ 17 18 Mr. Seelye explains at length why Mr. Watkins is incorrect about the Companies' 19 cost of service study, but it is also important to note that there are now two other cost 20 of service studies in the record of this proceeding, and they both agree directionally

¹¹ Selecky at 12-13.

¹² Watkins at 21.

¹³ Watkins at 20-21.

with the Companies' study.¹⁴ Therefore, there is ample cost-of-service support for 1 2 the Companies' proposed revenue allocations.

When considering Mr. Selecky's and Mr. Watkins's testimony and proposals 4 on this issue, I believe it is a sign of the reasonableness of the Companies' revenue allocations that these two intervenors have argued for diametrically opposed changes to the Companies' proposal.

7 The other two intervenors' witnesses who addressed revenue allocation did 8 not oppose the Companies' approach, at least conceptually. Mr. Baron states 9 regarding the Companies' proposed revenue allocation methodology, "Conceptually, I do support the Companies' approach."¹⁵ He nonetheless argues for a modification 10 11 to it that would leave the residential customer increase (Tier I) relatively the same, 12 relatively increase the revenue increase allocated to smaller non-residential rate 13 classes (Tier II) and decrease the revenue increase allocated to large, primarily industrial customers (Tier III).¹⁶ He asserts his proposed allocations would actually 14 15 result in essentially the same level of bill impact to residential customers, but would shift revenue away from industrial customers and onto commercial customers.¹⁷ This 16 17 is hardly surprising; Mr. Baron is a witness for industrial customers. But it is also 18 faulty because Mr. Baron's rationale for modifying the Companies' proposed revenue 19 allocation depends on taking into account the separate and temporary bill credit being 20 provided to customers through April 2019 concerning the federal Tax Cuts and Jobs

3

5

6

¹⁴ See Baron at 8-19; Selecky at 13-19.

¹⁵ Baron at 24.

¹⁶ Baron at 28.

¹⁷ Baron at 29-30.

Act ("TCJA").¹⁸ That credit and the methodology for applying the credit does not 1 2 affect the cost to serve customers on a prospective basis, and it does not affect class rates of return on a prospective basis. Moreover, the Companies have fully accounted 3 4 for the TCJA and recent changes to Kentucky income taxes in their proposed rates 5 and revenue allocations. Therefore, I do not believe the Commission should adopt Mr. Baron's recommended modification to the Companies' proposed revenue 6 7 allocation, and I would note again Mr. Baron's fundamental agreement with the 8 Companies' revenue allocation methodology.

9 Finally, Mr. Tillman states, "At the proposed revenue requirement, Walmart does not oppose the Company's revenue allocation."¹⁹ He does recommend using ¹/₄ 10 11 of any reduction to the Companies' revenue request to reduce interclass subsidies and 12 using the remaining ³/₄ to reduce revenue requirements proportionately for all rate 13 classes. Though this is the most reasonable of the intervenors' proposed alternatives, 14 the Companies believe their proposed allocation best comports with ratemaking 15 principles of gradualism and rate continuity, and it is therefore the most appropriate 16 revenue allocation even if the Commission approves a revenue increase for the 17 Companies that is less than requested.

18

Operating Income Issues

Q. Testifying on behalf of the Kentucky Industrial Utility Customers, Inc.
("KIUC"), Lane Kollen proposes to revise the current sharing of off-system sales
margins from the current ratio of 75% to customers and 25% to the Companies

¹⁸ Baron at 24-31.

¹⁹ Tillman KU at 23; Tillman LG&E at 21.

to a ratio of 90% to customers and 10% to the Companies.²⁰ How do you
respond?

A. I do not agree with Mr. Kollen's proposal. He provides no justification or
explanation for his proposal; he merely asserts he believes changing the ratio to the
Companies' detriment will not affect their incentive to engage in off-system sales.

With all due respect to Mr. Kollen, the current 75%-25% off-system sales 6 7 margins splitting arrangement was negotiated and agreed to by all parties to the 8 Companies' 2014 rate cases, including the KIUC, the party on whose behalf Mr. Kollen is testifying in this proceeding.²¹ That splitting of margins was and is highly 9 10 favorable to customers. It appears the Commission agreed because it approved the settlement reached in those cases, which created the Off-System Sales Adjustment 11 Clause for each of the Companies and removed off-system sales margins from base 12 13 rates entirely; it is now addressed entirely through the Companies' Fuel Adjustment Clauses.²² Therefore, in addition to being entirely unsupported, Mr. Kollen's 14 15 proposal is of dubious propriety to address in these base-rate cases.

Also, I would note that volatility in off-system sales margins, upon which Mr.
 Kollen remarks, occurs largely due to weather changes.²³ The Companies' forecast
 of such margins assumes normal weather in the forecasted test year.

²⁰ Kollen at 28-30.

²² Case Nos. 2014-00371 and 2014-00372, Order (June 30, 2015).

²³ Kollen at 29.

1

Purchased Power Adjustment Rider Proposal

Q. Mr. Kollen proposes a Purchased Power Adjustment Rider to recover or refund
 purchased power expense that is more or less than what is recovered through
 base rates.²⁴ Do the Companies agree with his proposal?

5 A. The Companies agree that a purchased power rider may have some merit; however, it 6 should be implemented in a manner that is simple and straightforward similar to the 7 manner in which the Off-System Sales Adjustment Clause discussed previously was 8 implemented. It would certainly stand to reason that a tracker for volatile purchased 9 power demand costs would be logical just as purchased power energy costs flow 10 through a tracking mechanism and would remove any unintended incentives on how 11 the Companies may negotiate the components of future purchased power contracts. 12 The Companies believe implementing such a rider, which could result in either a 13 credit or charge depending on whether actual purchased power demand charges are 14 less than or greater than the amounts embedded in base rates, could be beneficial for 15 customers and the Companies by ensuring cost recovery, but no more as it relates to 16 Commission-approved purchased-power agreements.

17

Merger Mitigation Depancaking

Q. Both Ms. Mullinax and Mr. Kollen address the Companies' Merger Mitigation Depancaking expenses.²⁵ What is the Companies' position on this issue?

A. It is important to bear in mind that the Companies continue to pay merger mitigation
 de-pancaking ("MMD") transmission rates; they have merely asked the Federal
 Energy Regulatory Commission ("FERC") for relief from those obligations for the

²⁴ Kollen at 30-32.

²⁵ Mullinax at 45-47; Kollen at 32-34.

1 benefit of their retail customers. Receiving a favorable FERC order-and when the 2 issue might finally be resolved following a FERC order—is not at all certain. Indeed, 3 FERC recently issued an order tolling the time for it to act on the Companies' request 4 for 180 days; FERC's order is now due by July 29, 2019, likely assuring the outcome 5 of that proceeding will not be known before rates set in these proceedings will take effect.²⁶ It is therefore appropriate to retain the Companies' MMD costs in the 6 7 Companies' base rates. Indeed, the MMD expense was a condition imposed upon the 8 Companies by FERC upon their exit from the Midwest Independent Transmission 9 System Operator, Inc. ("MISO") and was necessary to continue mitigation concerns resulting from the 1998 merger of KU and LG&E.²⁷ Under the doctrine of federal 10 11 preemption, state commissions with jurisdiction over retail sales may not disallow 12 recovery of FERC-approved rates, terms, or conditions imposed upon a seller of 13 wholesale power. The MMD expense falls squarely within that category and is 14 therefore not subject to exclusion from the revenue requirement by the Commission.

However, while the Companies could argue that the consideration of a future change in one single component of cost of service is akin to single-issue ratemaking, the Companies do believe there is some merit in Mr. Kollen's position that the appropriate means of addressing the possibility that FERC will reduce or eliminate the Companies' MMD obligations is a regulatory liability.²⁸ This approach would provide a means by which the Companies' retail customers receive all of the benefits, with no regulatory lag, if the Companies are successful in their proceeding at FERC.

²⁶ FERC Docket Nos. EC98-2-001 and ER18-2162-000, 166 FERC 61,068, Order Tolling Time for Action on Request under Federal Power Act Section 203 (Jan. 30, 2019).

²⁷ MISO is now the Midcontinent Independent System Operator.

²⁸ Kollen at 32-34.

1 That approach also adheres much more closely to the known-and-measurable 2 ratemaking standard than does Ms. Mullinax's proposal to remove MMD costs from 3 rates and address such costs in the future with a regulatory asset.²⁹ Ms. Mullinax's 4 approach would all but ensure under-recovery of such costs for at least some time 5 after new rates go into effect.

6

Late Payment Charge

Q. How do you respond to Ms. Mullinax's position regarding the Companies' late payment charge credit proposal?³⁰

9 A. To understand why Ms. Mullinax's criticisms and recommendation are misplaced, it 10 is helpful to summarize what the Companies have proposed regarding the late 11 payment charge. As I testified previously, the Companies propose to waive a 12 residential customer's late payment charge if the customer requests it and has not 13 incurred a late payment charge in the previous eleven billing cycles. This would allow 14 residential customers who ordinarily pay on time but occasionally pay late not to be 15 charged while retaining a general incentive for customers to pay on time. As Mr. 16 Seelye described in his testimony, the Companies arrived at their revenue adjustments 17 to account for the proposed credit (i.e., assuming less miscellaneous revenue from 18 late payment charges, in turn requiring increased base-rate revenue) by calculating the 19 late-payment-charge revenue received in 2017 from customers who had only one late 20 payment charge after eleven months of not having a late payment charge.³¹

²⁹ Mullinax at 45-47

³⁰ Mullinax at 25-26.

³¹ Seelye Direct at 66-67.

Ms. Mullinax criticizes the Companies for how they calculated the revenue adjustments for this proposal, asserting that the Companies have assumed more late payment charge credits than will actually occur because the Companies do not plan to advertise the availability of the late payment credit.³² She proposes instead to assume *nobody* will avail themselves of the credit (i.e., to assume the Companies will charge and collect all billed late payment charges) and allow the Companies to create regulatory assets to address any credits they do provide.³³

8 Ms. Mullinax's proposal and reasoning are flawed for at least three reasons. 9 First, in addition to the publicity of having the waiver provision plainly stated in the 10 Companies' tariffs, the Companies will train their call center representatives to 11 inform qualifying customers who call about a late payment charge that a waiver is 12 available. Second, although the Companies do not at this time intend to broadly 13 advertise this annual waiver for late payment, it is unreasonable to assume that 14 information about the waiver will not become broadly known through mass media 15 and internet sources if the Commission approves it. Third and perhaps most 16 importantly, Ms. Mullinax's regulatory asset proposal is highly impractical. The 17 Companies' current customer care system could not track such waivers and report 18 them to the appropriate accounting systems for recording as a regulatory asset without 19 incurring significant programming costs. The costs of such implementation could 20 easily approach or exceed the value of the waiver. Therefore, in addition to being 21 substantively flawed, Ms. Mullinax's proposal would be practically unworkable.

³² Mullinax at 25-26.

³³ Mullinax at 25-26.

1

Gas Transmission Line Replacement Projects

2 Q. Ms. Mullinax argues the Commission should disallow any cost related to 3 separate gas transmission line replacement projects, which she calls the 4 "Uniform Diameter Transmission Line Replacement," until LG&E seeks and 5 obtains a certificate of public convenience and necessity.³⁴ Do you agree?

6 No. Ms. Mullinax attempts to construe a series of geographically distinct gas A. 7 transmission line replacements to be a single large capital project requiring a CPCN. 8 As Mr. Bellar explains in his rebuttal testimony, LG&E's plans to replace pipeline 9 segments on the Western Kentucky A and B lines, Magnolia road crossings, and 10 connection to Dixie Highway are still in the early stages. Those individual segment 11 replacements—if completed—are cumulatively expected to cost approximately \$91 12 million. Only about ten percent of that amount, \$9.6 million, is expected to be 13 incurred during the forecasted test period. As Mr. Bellar notes, LG&E will continue 14 to assess whether replacement of individual pipeline segments is required to achieve 15 safety enhancements and regulatory compliance. If segment replacements are 16 required, LG&E will assess those replacements on a case-by-case basis to determine 17 whether a CPCN is required. That assessment will include considering that the 18 proposed replacements are just that-replacements of existing facilities in the usual 19 course of business, not construction of new facilities.

Also, the Commission order Ms. Mullinax cites as supporting the need for a CPCN actually does not do so regarding the \$9.6 million of project cost included in the test year. She cites the Commission's June 22, 2017 order in LG&E's most recent

³⁴ Mullinax at 16-17.

base rate case as support for her assertion that a CPCN is required here.³⁵ In the order 1 2 she cites, the Commission does indeed state that a single 10-12 mile new gas pipeline built to improve reliability and serve new customers and with a projected capital cost 3 4 of \$27.6 million required a CPCN (which the Commission granted in the same order).³⁶ Notably, none of the different, geographically distinct pipeline replacement 5 projects LG&E plans to undertake in the test year comes close to being 10-12 miles in 6 7 length or to having a capital cost of \$27.6 million. Also, as I noted above, these are transmission line replacement projects in the usual course of business, not 8 9 construction of new facilities.

10 In addition, Ms. Mullinax overlooks a more analogous situation addressed in the Commission's final orders in the Companies' 2016 base-rate cases.³⁷ In those 11 orders, the Commission acknowledged that the Companies were engaging in a 12 Transmission System Improvement Plan ("Transmission Plan") that involved 13 replacing transmission assets to enhance reliability and engaging in several 14 maintenance programs and making capital investments in line sectionalization.³⁸ KU 15 stated it would spend approximately \$149 million between July 1, 2016, and June 30, 16 2018,³⁹ and LG&E stated it would spend approximately \$28 million over the same 17 period,⁴⁰ on the Transmission Plan as part of a total of \$511 million in transmission 18 19 capital investments that the Companies projected to spend over the five-year period 20 beginning 2017. The Commission did not suggest a CPCN would be required for that

³⁵ Mullinax at 17.

³⁶ Case No. 2016-00371, Order at 31 (June 22, 2017).

³⁷ Case No. 2016-00370, Order at 27-28 (June 22, 2017); Case No. 2016-00371, Order at 30-31 (June 22, 2017). ³⁸ Id.

³⁹ Case No. 2016-00370, Order at 27-28 (June 22, 2017).

⁴⁰ Case No. 2016-00371. Order at 30-31 (June 22, 2017).

significant *replacement* program, but rather required the Companies to file annual
 reports over the five-year Transmission Plan period.⁴¹ Therefore, it would be
 inconsistent with that Commission determination to require a CPCN for a much less
 extensive and less capital intensive set of gas line replacement projects.

5 Finally, it is noteworthy that Ms. Mullinax did not question the prudence of 6 this safety-driven set of investments, and no other party has done so. The 7 Commission should therefore disregard her proposed rate-base adjustment.

8

Rate PSA Provisions Regarding Audit and Inspector Costs

9Q.In your direct testimony, you discuss revisions to the current Rate PSA to permit10the direct assessment on attachment customers of the cost of attachment audits.

11 **Do you have any clarifications to that testimony?**

12 A. Yes. Audits are necessary to ensure that attachment customers are accurately billed 13 for the services that they receive and that attachment customers are observing the 14 application and permitting procedures contained in Rate PSA. Therefore, the 15 Companies believe it is reasonable that attachment customers cover the cost of these 16 audits. Mr. Seelye discusses necessary adjustments to miscellaneous revenues to 17 reflect payment of audit costs by attachment customers.

⁴¹ Case No. 2016-00370, Order at 28 (June 22, 2017); Case No. 2016-00371, Order at 31 (June 22, 2017).

1

KSBA Issues

2	Q.	Do you dispute KSBA witness Ronald L. Willhite's assertion that the Companies
3		received a "windfall" by ending the subsidized school rates when the Companies
4		filed their base-rate applications in these proceedings on September 28, 2018? ⁴²
5	A.	Yes. Contrary to Mr. Willhite's assertions, there is no "inadvertent oversight" or
6		ambiguity in the Commission's June 22, 2017 orders concerning this issue. The
7		Commission stated: "Therefore, the Commission will place a limit on the amount of
8		time the pilot tariffs will be in effect and finds that the pilot tariffs should be effective
9		for three years, or until [the Company] <i>files</i> its next rate case, whichever is earlier." ⁴³
10		The Commission is well aware of the difference between the filing of a rate case and
11		when rates are effective; indeed, the Commission demonstrated that understanding in
12		the quoted sentence by using both terms in contradistinction. What is certainly clear
13		from the Commission's order is that the explicitly subsidized rates for schools were
14		not favored, and that the Commission sought to have them end sooner rather than
15		later. Therefore, although Mr. Willhite's desire to characterize the Commission's
16		orders as being unclear on this point is understandable, it simply has no basis in the
17		plain text of the orders. ⁴⁴
10		

Also, if the KSBA believed the Commission's orders contained an "inadvertent oversight," the time to seek correction or rehearing was within 30 days of the orders' issuance, not a year and a half later. Notably, other parties did exactly

⁴² Willhite KU at 3-4; Willhite LG&E at 3-4.

⁴³ Case No. 2016-00370, Order at 20 (June 22, 2017)(emphasis added); Case No. 2016-00371, Order at 23 (June 22, 2017)(emphasis added).

⁴⁴ The Commission made clear in its October 30, 2018 Order in Case No. 2017-00441 that Rates SPS and STOD expired with the filing of the base rate case when it stated "those rate schedules were terminated on September 28, 2018, without the need for any approval by the Commission."

that.⁴⁵ But the KSBA chose not to exercise its rights in that regard, which rights have 1 2 long since been extinguished.

3 The Companies therefore were fully in compliance with the Commission's 4 June 22, 2017 orders and their own tariffs issued under the Commission's orders 5 when they terminated service under Rates SPS and STOD on September 28, 2018, the 6 date on which the Companies filed the applications that initiated these proceedings. 7 Yet again, if the KSBA believed the Companies had acted outside their tariffs, it 8 could have initiated customer complaints against the Companies on that ground. But 9 none of the Rate SPS or STOD schools chose to file such a complaint. Therefore, the 10 Commission should disregard Mr. Willhite's criticism of the Companies' strict 11 compliance with the clear wording of the Commission's orders and the Companies' 12 Commission-approved tariffs.

13 Mr. Willhite also criticizes the Companies for beginning service under Rates SPS **Q**. and STOD for participating schools on August 18, 2017.⁴⁶ How do you respond? 14 15 A. Mr. Willhite's claims in this regard are fully addressed by the Companies' responses to data requests KSBA 1-12(d)-(f) and KSBA 2-12. But I will address his claims 16

18 It is helpful to recall the timeline of events preceding the beginning of service 19 under Rates SPS and STOD on August 18, 2017. First, the Companies and the 20 intervenors to the Companies' 2016 base-rate cases-which included KSBA-had 21 reached a stipulation by April 19, 2017, to propose Rates SPS and STOD for 22 Commission approval. KSBA knew at that time that it would be responsible for

here, as well.

17

 $^{^{45}}$ See, e.g., Case Nos. 2016-00371 and 2016-00372, KIUC Motion for Rehearing (July 17, 2017). 46 Willhite KU at 3; Willhite LG&E at 3.

identifying candidate schools to the Companies. The Commission issued its orders 1 2 approving the pilot rates on June 22, 2017. But KSBA did not email its constituents until two weeks later (July 6),⁴⁷ and did not provide a list of candidate schools to 3 Companies until almost a month later: July 20, 2017.⁴⁸ 4 5 The Companies then had to analyze the proposed participants and consult with KSBA to confirm which schools could participate.⁴⁹ The Companies then had to 6 7 receive rate-change authorizations from the participating schools, which occurred from August 8 through 17.⁵⁰ For administrative ease the Companies chose to transfer 8 9 all of the participating schools to the new rates effective August 18, the day following the receipt of the last authorizations.⁵¹ The Companies therefore moved with all 10 reasonable speed regarding beginning service for schools under Pilot Rates SPS and 11 12 STOD. 13 Finally, contrary to Mr. Willhite's assertions, the Companies did not have 14 tariff authority to retroactively make adjustments to participating schools' bills "to reflect the rate change effective on bills on and after July 1, 2017."⁵² To do so would 15 have violated the Companies' Optional Rates provision at Sheet No. 97.1: "In no 16 17 event will Company make refunds covering the difference between the charges under 18 the rate in effect and those under any other rate applicable to the same class of 19 service." Therefore, for the Companies to have compensated or retroactively changed 20 the rates under which the affected schools took service-which is equivalent to a

⁵² Willhite KU at 3; Willhite LG&E at 3.

refund—would have violated their tariffs. And I must note again that if KSBA or the
 schools being served under Rates SPS and STOD believed the Companies were not
 acting in accordance with their tariffs, they could have filed complaints against the
 Companies with the Commission, but none did. These are proceedings about
 prospective rates, making their complaints about perceived past issues irrelevant.

6

Low-Income Advocates' Concerns

Q. Do you have any comments concerning the testimony filed by Marlon Cummings
for the Association of Community Ministries, Cathy Hinko of behalf of the
Metropolitan Housing Coalition, and Melissa Tibbs on behalf of the Community
Action Council for Lexington-Fayette, Bourbon, Harrison and Nicholas
Counties, Inc.?

12 A. Yes. First, the Companies do understand that low- and fixed-income customers face 13 financial difficulties that other customers do not. That is why, as I discussed at length 14 in my direct testimony, the Companies do their best to provide assistance, including 15 significant shareholder-funded assistance, to low- and fixed-income customers.⁵³ 16 Regarding shareholder contributions, the Companies have committed to provide at 17 least \$1.45 million annually through June 30, 2021, to support low-income programs, 18 all of which is in addition to shareholder funds contributed to the WinterCare and 19 WinterHelp programs. These contributions are in addition to funds contributed by 20 other customers to those programs. The Companies also provide the WeCare DSM-21 EE program, late-payment charge forgiveness for customers receiving authorized 22 agency assistance, and the FLEX Program to extend bill payment deadlines for

⁵³ Conroy Direct at 45-50.

customers with fixed incomes. The Companies also have HEA charges of \$0.30 for
 KU and \$0.25 for LG&E to help customers in need. In sum, the Companies take low income issues seriously and have done so for years.

4 But it is also important to recognize the legal constraints that exist concerning 5 For example, more than a decade ago the rates for low-income customers. Commission clearly stated that special low-income rates are not permissible, and it 6 has never deviated from that position.⁵⁴ Less than two months ago, the Commission 7 stated it could not consider affordability in determining the reasonableness of rates.⁵⁵ 8 9 Therefore, although the information the low-income advocates have provided 10 regarding the difficulties low- and fixed-income customers face is sobering, it cannot be used to create special rates for those customers. 11

Ms. Hinko seeks to contest the latter point.⁵⁶ But she notably overlooks the 12 13 requirement of KRS 278.170(1) not to discriminate with regard to rates or service for 14 "doing a like and contemporaneous service under the same or substantially the same 15 conditions." She likewise does not address the U.S. Supreme Court opinion the Commission cited in its recent order regarding using affordability as a criterion in 16 17 ratemaking.⁵⁷ Instead, Ms. Hinko cites authorities that do not stand for the 18 proposition that affordability for a certain segment of a single customer class may be 19 taken into account, which is what the Commission was pointing out in its January 3,

⁵⁴ In the Matter of Adjustment of the Rates of Kentucky-American Water Company, Case No. 2004-00103, Order at 82-84 (Feb. 28, 2005).

⁵⁵ Case No. 2018-00358, Order (Jan. 3, 2019).

⁵⁶ Hinko at 11-14.

⁵⁷ Case No. 2018-00358, Order at 3 (Jan. 3, 2019), *citing Gainesville Util. Dept. v. Fla. Power Corp.*, 402 U.S. 515, 528 (1971) ("But focus on the willingness or ability of the purchaser to pay for a service is the concern of the monopolist, not of a governmental agency charged both with assuring the industry a fair return and with assuring the public reliable and efficient service, at a reasonable price.").
2019 order.⁵⁸ It appears clear the Commission has better support for its argument
 than Ms. Hinko does for hers.

Regarding Ms. Hinko's assertions regarding disparate racial impacts,⁵⁹ the Companies, as they both desire to do and are required to do under KRS 278.170, provide service on a non-discriminatory basis. They do not maintain data on the race of their customers, and would not do so even if they could. The Companies are grateful to serve diverse communities with a diverse workforce, and find Ms. Hinko's regular accusations of racial bias to be offensive.

9 Oddly and incorrectly, Ms. Hinko asserts that LG&E has proposed to reduce 10 kWh and Ccf charges for residential customers, and therefore that LG&E has 11 proposed to undercut both energy efficiency and solar development by reducing 12 energy rates.⁶⁰ Ms. Hinko is simply mistaken on these points. LG&E has proposed 13 to increase its kWh and Ccf rates.

Finally, contrary to Ms. Tibbs's assertions,⁶¹ increasing the Companies' residential Basic Service Charge actually helps WeCare customers, who have aboveaverage energy consumption.⁶² Customers who receive WeCare are those most in need, and they tend to have above-average usage, which is why recovering fixed costs through fixed charges is particularly helpful to them. As I also noted in my direct testimony, one of the advantages of recovering fixed cost through fixed charges rather

⁶⁰ Hinko at 10-11.

⁵⁸ Case No. 2018-00358, Order at 3 (Jan. 3, 2019).

⁵⁹ Hinko at 4-10.

⁶¹ Tibbs at 13-15.

⁶² See, e.g., KU Response to CAC 1-15 and 1-16.

1		than volumetric charges is that it smooths the impact of usage spikes, particularly
2		those caused by extreme weather. ⁶³
3		The Companies' Errata Filings
4	Q.	Do you have any comments regarding Mr. Baron's testimony on revenue
5		requirement adjustments resulting from the Companies' January 11, 2019
6		errata filing?
7	A.	Yes. Concerning Mr. Baron's assertion regarding revenue requirement adjustments
8		resulting from the Companies' January 11, 2019 errata filing, the Companies agree
9		those adjustments are appropriate to consider to the extent they are not already
10		accounted for in other adjustments the Commission might ultimately require. It
11		would not be appropriate to double-count those adjustments by making them ab initio
12		and then inadvertently making them again via other adjustments that begin with the
13		Companies' filed revenue requirement.
14		The Companies made a second errata filing on February 15, 2019, resulting in
15		no changes to LG&E's revenue requirements and a small increase (\$1,261) to KU's
16		revenue requirement relative to the January 11, 2019 errata filing amount. It would
17		be appropriate to account for this filing, as well, to the extent it is not already
18		accounted for in other adjustments the Commission might ultimately require.
19	Q.	Does this conclude your testimony?
20	A.	Yes, it does.
21		

⁶³ Conroy at 15-16.

My Commission Expires: Judy Schooler Notary Public, ID No. 603967 <u>State at Large, Kentucky</u> Commission Expires 7/11/2022

Louisville Gas and Electric Company Tariff Changes Since September 28, 2018

LG&E Electric Tariff:

- Changed by Commission Approval:
 - o CSR (eff 12/01/18)
 - Verbiage change to the Automatic Buy-Through Price section
 - Stamped tariffs provided 11/30/18
 - Sheet Nos. 50.2 and 51.2
 - o DSM (eff 01/01/19)
 - Annual budget filing
 - Added DSM verbiage to the FLS tariff
 - Order dated 10/05/18, corrected order dated 10/25/18
 - Case No. 2017-00441
 - Sheet Nos. 30.1, 86, 86.1, 86.2, 86.3, 86.4, 86.5, 86.6, and 86.7
 - Line Extension Plan (eff 01/02/19)
 - Estimated average cost differential
 - Stamped tariffs provided 12/19/18
 - Sheet No. 106.4

• Proposed Tariffs Changed Through Responses to Data Requests:

- o Solar Share
 - Updated the tariff annotations
 - PSC 2-1(k)
 - Sheet Nos. 72.1, 72.2, and 72.3
- o Pole and Structure Attachment Charges (PSA)
 - Updated the tariff annotations
 - PSC 2-1(h)
 - Sheet Nos. 40-40.25
 - Update language regarding audits within 2 year period
 - PSC 3-1(g)
 - Sheet No. 40.18
- o General Service Rate
 - Updated language to the availability section
 - PSC 3-1(a)
 - Sheet No. 10
- o Lighting Service
 - Added language for Asterisk regarding LED offerings
 - PSC 3-1(b)
 - Sheet No. 35.2
- Terms and Conditions Deposits
 - Removed language regarding refunds/credits on anniversary dates of the deposit
 - PSC 3-1(d)
 - Sheet No. 102
- Terms and Conditions Line Extension
 - Addition of "Non-Residential" verbiage
 - PSC 4-20
 - Sheet No. 106.1, 106.2

Rebuttal Exhibit WSS-1 – Percentage of Energy Cost to Total Revenue Requirement
Rebuttal Exhibit WSS-2 – Final Pilot School Report
Rebuttal Exhibit WSS-3 – News Article Concerning the "2019 Polar Vortex"
Rebuttal Exhibit WSS-4 – Mathematical Equivalency of Net Cost Rate Base and Cash Working Capital for Depreciation Accruals
Rebuttal Exhibit WSS-5 – Response to Commission Data Request Regarding Lead-Lag Studies Submitted by Other Utilities in Kentucky
Rebuttal Exhibit WSS-6 – Revised Response to AG Data Request Regarding Fuel Stock, Materials and Supplies, and Other Items

1 I. INTRODUCTION AND SUMMARY

2 Q. Please state your name and business address.

A. My name is William Steven Seelye. My business address is 6001 Claymont Village
Drive, Suite 8, Crestwood, Kentucky 40014.

5

Q. Did you submit direct testimony in this proceeding?

A. Yes. I submitted testimony on behalf of Kentucky Utilities Company ("KU") and
Louisville Gas and Electric Company ("LG&E") (collectively "Companies") in
support of the Companies' cost of service studies, proposed revenue allocation,
proposed rates, and the lead-lag studies.

10 Q. What is the purpose of your rebuttal testimony?

11 The purpose of my testimony is to rebut the direct testimonies of the Attorney A. 12 General's ("AG's") witnesses Glenn A. Watkins concerning class cost of service, 13 revenue allocation, and rate design and Donna H. Mullinax concerning the lead-lag 14 studies; Kentucky Industrial Utility Customers, Inc.'s ("KIUC's") witness Stephen J. 15 Baron concerning class cost of service and revenue allocation; United States 16 Department of Defense and all other Federal Executive Agencies ("DOD's") witness 17 James T. Selecky concerning class cost of service, revenue allocation, and Substitute 18 Gas Sales Service -- Rate SGSS; Walmart Inc. ("Walmart's) witness Gregory W. 19 Tillman concerning class cost of service, revenue allocation and rate design; Kentucky 20 School Boards Association ("KSBA's") witness Ronald L. Willhite concerning the 21 expired special school rates; and Charter Communications Operating, LLC's 22 ("Charter Communication's") witness Joseph H. Crone III concerning the Companies'

- 1 proposed audit provision for pole attachments.
- 2 **Q.** Please summarize your testimony.

14

21

- 3 A. The following is a summary of my rebuttal testimony:
- 4 1. Walmart's witness Tillman and KSBA's witness Willhite do not oppose 5 the Companies' electric cost of service studies, which use the Loss-of-6 Load-Probability (LOLP) method for allocating production fixed costs. 7 KIUC's witness Baron and DOD's witness Selecky submit alternative cost 8 of service studies which use the 12-CP and 6-CP methods. KIUC's and 9 DOD's cost of service studies produce class rates of return that are similar 10 to those from the Companies' cost of service studies. Because LOLP is 11 used by the Companies to jointly plan their generation systems, the 12 Companies' cost of service studies more accurately reflect the actual cost 13 of providing service to customers.
- 152.AG's witness Watkins did not submit a cost of service study. He criticizes16the Companies' studies, claiming that they place too much emphasis on17capacity. Because the amount of generation capacity installed by KU and18LG&E does not depend on energy utilization, Mr. Watkins' criticisms of19the Companies' cost of service studies are without merit and should be20disregarded.
- 22 3. KIUC's witness Baron, DOD witness Selecky, and Walmart Witness 23 Tillman agree with grouping the electric rate classes into four tiers as 24 proposed by the Companies. However, Mr. Baron recommends assigning 25 a larger portion of the proposed electric revenue increases to customers 26 served under the Tier II rate classes (GS, PS, AES, LS, RLS, and SC) and 27 recommends lower increases for Tier III rate classes (TODS, TODP, RTS, 28 and FLS). Because the Tier II rate classes have higher rates of return 29 than the Tier III rate classes, Mr. Baron's recommendation would assign 30 too large of an increase to Tier II rate classes. Mr. Selecky proposes to 31 allocate larger portions of the rate increases to the residential rate classes. 32 AG's witness Watkins proposes to increase all rate class tiers by the same 33 percentage regardless of their class rates of return. I recommend that the 34 Commission approve the Companies' proposed allocation of the revenue 35 increase because it strikes the appropriate balance between cost of service

1 2

14

21

26

37

principles, economic development, and gradualism.

- 3 4. AG's witness Watkins opposes increases to the residential Basic Service Charges. He proposes to leave the Basic Service Charges at their current 4 levels. He does not address the Basic Service Charges for the non-5 6 residential rate classes. In recommending leaving the residential Basic 7 Service Charges at their current levels, Mr. Watkins performs an analysis 8 that omits fixed distribution costs classified as customer-related costs 9 using the zero-intercept methodology, which has been approved by the 10 Commission in numerous rate cases. It is my recommendation that the 11 Companies' proposed Basic Service Charges should be approved, 12 regardless of the revenue requirements authorized by the Commission in 13 these proceedings.
- 155.AG's witness Watkins opposes the Companies' proposal to implement a16daily Basic Service Charge. A daily Basic Service Charge is more17accurate, is easier for customers to understand when bills are prorated for18customer change-outs and creates greater optionality for possible future19implementation of prepaid metering and other programs. Mr. Watkins20failed to offer valid reasons for opposing a daily charge.
- 226.AG's witness Watkins opposes separating energy charges into fixed and23variable cost components for informational purposes. He offers no valid24reason for keeping this information from customers and other25stakeholders.
- 27 7. In its Orders in the Companies' last rate cases, the Commission ruled that 28 the pilot rates for schools would be eliminated when the Companies' filed 29 rate cases. The pilot school rates were terminated on September 28, 2018, 30 when the Companies filed their rate case applications in the current 31 proceedings. KSBA witness Willhite recommends that these pilot rates 32 be reinstated. However, he does not provide a cost of service study that 33 supports the reasonableness of the pilot rates which were eliminated 34 pursuant to the Commission's Order. A study performed under my 35 supervision demonstrates that there is no cost justification for reinstating 36 the pilot school rates.

1 2 3		8. DOD witness Selecky opposes the 100% demand ratchet proposed by LG&E for Substitute Gas Sales Service (SGSS). However, Mr. Selecky does not oppose the Base Demand ratchet for KU and LG&E's large
4 5		customer electric rates, which recover essentially similar fixed costs. Only one customer takes service under SCSS Mr. Selecky claims that a 70%
6		demand ratchet is appropriate because of system load diversity.
7		However, an analysis of demands for the SGSS customer indicates that
8		the customer's maximum demand occurs at the same time as LG&E's
9		system peak. Therefore, there is no demand diversity under SGSS.
10		
11		9. AG witness Mullinax recommends reductions to the Companies'
12		proposed Cash Working Capital included in Rate Base. Ms. Mullinax's
13		proposed modifications are inappropriate and conceptually flawed.
14		
15		10. Charter Communications' witness Crone opposes the proposed tariff
16		provisions requiring pole attachment customers to reimburse the
17		Companies for the cost of auditing pole attachments. Because audits are
18		necessary to ensure that parties are not attaching to poles without
19		authorization from the Companies, it is reasonable that attachment
20		customers reimburse the Companies for the cost of these audits.
21		nowever, it has come to our attention that the rees for such audits were not included in other miscellaneous revenues in Schedule M 2.3 for KII
22		and Schedule M-23-F for IC&F Therefore the Companies are
23 24		nonosing to adjust other miscellaneous revenue to include these audit
25		fees.
26		
27	II.	COST OF SERVICE STUDIES
28		A. ELECTRIC COST OF SERVICE STUDIES
29	Q.	Were KU and LG&E's electric cost of service studies addressed by the
30		intervenor witnesses in this proceeding?
31	A.	Yes. The Companies' electric cost of service studies were addressed in direct

32 testimony submitted by KIUC's witness Baron, DOD's witness Selecky, AG's witness

1 Watkins, KSBA witness Willhite, and Walmart witness Tillman.

2 Q. Please summarize the intervenor witnesses' position on the electric cost of service 3 studies?

4 A. To the extent that there is disagreement with KU and LG&E's cost of service studies 5 on the part of the intervenor witnesses, the area of disagreement concerns the allocation of production fixed costs. The Loss of Load Probability (LOLP) 6 7 methodology was used to allocate fixed production costs in the Companies' electric 8 cost of service studies. As explained in my direct testimony, LOLP is a key metric 9 used by the Companies to plan their production resources. LOLP represents the 10 probability that a utility system's total demand will exceed its generation capacity 11 during a given hour. LOLP takes into consideration the magnitude of the load, 12 installed generation capacity by season and forced outage rates. For the cost of service 13 studies, LOLP was calculated for each hour of the test year based on the hourly loads 14 for the test year and the characteristics of the Companies' generating facilities, 15 including capacity and forced outage rates. Hourly loads for each rate class were then 16 weighted by the LOLP for each hour to determine LOLP weighted hourly load for 17 each rate class. The weighted loads for each rate class were then summed for the test 18 year to determine the production fixed cost allocators.

19 Q. What are the positions of the intervenor witnesses regarding the LOLP 20 methodology?

A. KSBA's and Walmart's witnesses do not oppose the LOLP methodology. KSBA's
witness Willhite states that "LOLP is an appropriate method for allocating production

1	costs in the Cost of Service Study." (See Testimony of Ronald L. Willhite, Case No.
2	2018-00294, at p. 8, line 9, and Testimony of Ronald L. Willhite, Case No. 2018-00295,
3	at p. 8, line 10.) Similarly, Walmart's witness Tillman states that "Walmart does not
4	oppose the Company's proposed cost of service study." (See Direct Testimony of
5	Gregory W. Tillman, Case No. 2018-00294, at p. 19, lines 18-19, and Direct Testimony
6	of Gregory W. Tillman, Case No. 2018-00295, at p. 18, lines 8-9.) This is consistent
7	with the testimony that Mr. Tillman submitted in KU and LG&E's previous rate cases,
8	where he stated more explicitly that "Walmart does not oppose the use of the LOLP
9	methodology or the Company's proposed COSS." (See Direct Testimony of Gregory
10	W. Tillman, Case No. 2016-00370, at p. 18, lines 9-10, and Direct Testimony of
11	Gregory W. Tillman, Case No. 2016-00371, at p. 17, lines 9-10.)
12	KIUC's witness Baron opposes the LOLP method but acknowledges that the
13	LOLP methodology produces "relatively similar results" to his proposed
14	methodology. (Direct Testimony and Exhibits of Stephen J. Baron, Case Nos. 2018-
15	00294 and 2018-00295, at p. 15, lines 6-7.) Mr. Baron recommends the 12 coincident
16	peak method ("12 CP"), which allocates production fixed costs on the basis of the
17	sum, or average, of each class's contribution to the 12 monthly system peak demands.
18	(<i>Id.</i> , at p. 13 <i>et seq.</i>)
19	DOD's witness Selecky recommends using a 6 CP method for allocating fixed
20	production and transmission costs. This is in contrast to the testimony that he
21	submitted in LG&E's 2016 rate case, in which he stated:
22	LOLP can serve as a method for allocating fixed generation and

- 6 -

1 transmission costs to customer rate classes. In other words, 2 allocating fixed production and transmission costs on the basis of 3 the LOLP links the cost of service methodology to the 4 measurements used by LG&E and KU to plan the system. (Direct 5 Testimony of James T. Selecky, Case No. 2016-00371, p. 11, Case No. 2016-00371, lines 4-8.) 6 7 8 Mr. Selecky went on to state that he "would recommend that the Commission abandon 9 the BIP method for the reasons stated above and utilize the LOLP method for purposes 10 of determining the allocation of fixed costs." (Id., at p. 12, lines 12-14.) Like the 12 11 CP method, Mr. Selecky's 6 CP approach produces results that are similar to the 12 Companies' LOLP methodology. 13 While not offering a cost of service study of his own, or recommending a 14 particular allocation methodology, AG's witness Watkins criticizes the LOLP method because it is not widely used, because he claims that it does not comport with the 15 16 LOLP method described in the NARUC Electric Utility Cost Allocation Manual, and 17 because he claims that the LOLP factors generated by the Companies' planning 18 models produce "anomalous results". As I will explain, Mr. Watkins' criticisms are 19 without merit. His criticisms are merely red herrings intended to persuade the 20 Commission to adopt an across-the-board rate increase for all rate classes. 21 Do any of the intervenor witnesses offer alternative cost of service studies? 0. 22 A. Yes. KIUC witness Baron and DOD witness Selecky offer alternative cost of service 23 studies. Mr. Baron proposes the 12 CP method, and Mr. Selecky proposes a 6 CP 24 method. Mr. Baron's 12 CP method allocates production fixed costs on the basis of class coincident peak demands for twelve months. (Op. cit., at p. 13.) Mr. Selecky's 25

1		6 CP method allocates production and transmission fixed costs on the basis of class
2		coincident peak demands during the four summer months of June through September
3		and the two winter months of January and February. (Op. cit., at p. 16.) As mentioned
4		earlier, the witnesses for KSBA and Walmart express agreement with the Companies'
5		cost of service methodology and therefore did not offer alternative studies, and while
6		the AG's witness did not agree with the Companies' cost of service studies, he did not
7		offer an alternative study.
8	Q.	How do KIUC's and the DOD's cost of service studies compare to the Companies'
9		cost of service studies?
10	A.	Their studies produce results that are generally in line with KU and LG&E's studies.
11		The following table (Table 1) compares the class rates of return from KU's LOLP
12		study to KIUC's 12 CP and DOD's 6 CP studies:

TABLE 1

Kentucky Utilities Company Class Rates of Return

KU's Cost of Service Study Compared to KIUC's and DOD's Studies

	KU's COS LOLP	KIUC's COS 12 CP	DOD's COS 6 CP
Tier I – Residential	3.03%	2.96%	2.41%
Tier II – GS, PS, AES, LS, RLS, OSL	11.14%	11.44%	12.35%
Tier III – TODS, TODP, RTS, FLS	5.17%	5.12%	5.74%
Tier IV – LE, TE	17.84%	14.77%	17.71%

14

15 Table 2 shows the same comparison but of for LG&E:

TABLE 2			
Louisville Gas and Electric Company Class Rates of Return			
LG&E's Compared to F	Cost of Service S KIUC's and DOD	tudy Vs Studies	
	LG&E's COS	KIUC's COS	DOD's COS
	LOLP	12 CP	6 CP
Tier I – Residential	2.69%	3.37%	2.77%
Tier II – GS, PS, SC, LS, RLS, OSL	12.29%	11.38%	12.10%
Tier III – TODS, TODP, RTS, FLS	10.06%	8.72%	10.03%
Tier IV – LE, TE	17.60%	12.73%	12.26%

1

2

3

4 Comparing the results from the three cost of service studies indicates that the LOLP 5 method, 12 CP method, and 6 CP method produce similar results. For the major rate classes in Tiers I, II, and III, Mr. Selecky's cost of service studies produce results that 6 7 are closer to the Companies' studies than Mr. Baron's studies. This is not surprising 8 because Mr. Baron's 12 CP includes loads for Spring and Fall shoulder months that 9 have little or no bearing on production fixed costs. The largest differences in class 10 rates of return are for Tier IV; however, these rate classes account for very small 11 percentage of the Companies' total revenue.

12 **Q.**

Do you have any comments concerning the three cost allocation methodologies?

A. Yes. I don't have strong objections to the use of either the 12 CP method or the 6 CP
method. They are standard methodologies that allocate fixed production costs on the
basis of class contributions to system demands. Because the Companies must have

13	Q.	Are there other advantages of the LOLP method over the 12 or 6 CP methods?
12		systems.
11		the 6 CP method more accurately allocates fixed production costs for KU and LG&E's
10		methodology. However, between the 6 CP methodology and the 12 CP methodology,
9		demands in resource planning. ¹ For this reason, the LOLP is the superior
8		requirements. The Companies do not use the sum of their 12 or 6 monthly system
7		processes and is a key measure for determining the Companies' reserve margin
6		particular hour. LOLP has been used for years in the Companies' resource planning
5		of the probability of the utility not having the resources to meet its demand in a
4		used by the Companies to jointly plan their generation resources. LOLP is a measure
3		cost of providing service. As I explained in my direct testimony, LOLP is a key metric
2		is not unreasonable. However, the LOLP method more accurately reflects the actual
1		sufficient capacity to meet maximum system demand, using a CP allocation method

A. Yes. The LOLP method is more robust and therefore provides more reliable results.
Both the 12 CP and 6 CP methodologies allocate fixed production costs on the basis
of a small set of hours during the year. The 12 CP method allocates all fixed
production costs on the basis of load for only 12 hours during the year, the system
peak hour for each month during the year. The 6 CP method is even more problematic

¹ In resource planning, the Companies also perform reserve margin analyses to ensure that they have adequate capacity at the time of the combined system peak. This might suggest the use of a single CP (1 CP) approach but not a 12 CP or 6 CP approach; however, the use of a 1 CP approach would limit the allocation of fixed production costs to a single hour during the year, further impairing the "robustness" of the determination of cost of service for each rate class. Furthermore, relying on a 1 CP, 6 CP, or 12 CP increases the likelihood of free ridership for classes such as lighting being allocated zero production costs.

in this regard because it allocates fixed production costs on the basis of only 6 hours
during the year. The LOLP method, on the other hand, allocates fixed production
costs on the basis of loads and LOLPs (i.e., load-weighed LOLPs) for over a thousand
hours during the year. Because it is not as dependent on the values of a small set of
12 or 6 data points, the LOLP method is more robust and therefore more reliable.

Furthermore, relative to CP methods, the LOLP method captures seasonal 6 7 variability in generation capacity ratings. For example, the Companies' traditional 8 generating resources have higher capacity ratings during the winter months than 9 during the summer months. During the summer months, the higher ambient 10 temperatures will reduce the capacity ratings of their steam and combustion turbine 11 generating resources. However, the Companies' solar generating facilities will have 12 lower or even zero capacity during winter peak hours. The Companies' run-of-the-13 river hydroelectric units will also experience seasonal variability. Unlike the 12- or 14 6-month CP methods, the allocation factors calculated in the Companies' LOLP 15 models take this seasonal variation in capacity into consideration.

Q. How do you respond to the intervenor witnesses' criticism that the LOLP method is not commonly used in the utility industry?

A. A methodology should not be rejected simply because it is not widely used in the
industry. To my knowledge, the Modified Base-Intermediate-Peak ("Modified BIP")
methodology that the Companies used in past rate cases was not used by any other
utilities. The Modified BIP methodology bears essentially no similarity to the
Standard BIP that is described in NARUC's *Electric Utility Cost of Service Manual*,

1 yet the Modified BIP methodology was used by LG&E, and eventually by KU, for a 2 number of years. The Modified BIP methodology was developed by LG&E during 3 the early 1980s because the Standard BIP methodology produced unreasonable results 4 for its generation resources at that time, which in the early 1980s consisted almost 5 entirely of base-load coal fired units. The Standard BIP methodology would have resulted in higher costs during the off-peak period than during peak periods. But over 6 7 time, as LG&E and KU's generation mix changed, as the combined LG&E and KU 8 systems began to exhibit dual summer and winter peaks, and as the cost of natural gas 9 decreased relative to coal, neither the Modified BIP methodology nor the Standard 10 BIP produced reasonable results. Therefore, in the Companies' last rate case 11 proceedings, the Companies began to transition to the LOLP methodology, which 12 allocates costs on the basis of a key metric used in the Companies' resource planning 13 process. While I agree that the 12 CP method proposed by Mr. Baron is a widely used 14 cost of service methodology for allocating fixed production costs, the LOLP method 15 adheres more closely to the Companies' resource planning process. As I mentioned 16 earlier, the Companies do not use the sum of their 12 system peaks for generation 17 resource planning; they rely heavily on LOLP.

18 19

0.

Please respond to those.

AG's witness Watkins offers a number of other criticisms of the LOLP method.

A. It is important to keep in mind that Mr. Watkins' criticisms are offered from the perspective that production fixed costs should be allocated based on how generation resources are *used* rather than based on the amount of *capacity that is installed*. Mr.

1 Watkins has testified in a number of KU and LG&E rate cases, and his position 2 regarding the allocation of fixed production costs is that they should be allocated on 3 the basis of the *use* of the resources rather than on the *capacity* required to serve each 4 rate class. The cost-of-service method he typically recommends is principally based 5 on the amount of *energy* that is produced from the Companies' generation resources rather than on the *capacity* installed to serve each rate class. Mr. Watkins' comments 6 7 therefore stand in stark relief to positions put forward by KIUC witness Baron and 8 DOD witness Selecky. Mr. Baron and Mr. Selecky propose to allocate fixed 9 production costs based on peak demands. The thread that runs through Mr. Watkins' 10 criticisms is that the Companies' cost allocation method does not consider generation 11 during each hour of the year. Mr. Watkins states that "Mr. Seelye's generation 12 allocation factors only consider loads during the highest peak periods even though it 13 has been established that the vast majority of the Companies' investment in generation 14 facilities is ascribed to base-load units that were planned, designed and are utilized to 15 serve customers' loads throughout the year." (Direct Testimony of Glenn A. Watkins, 16 Case Nos. 2018-00294 and 2018-00295, at p. 16, lines 7-10.) Mr. Watkins' claim 17 that the "vast majority" of the Companies' investment in generation facilities consists 18 of base load units is erroneous. Mr. Watkins' claim may have been true during the 19 early 1990s and before, but it is no longer true today. Since the early 1990s the 20 Companies have installed a significant amount of generation capacity consisting 21 primarily of large-frame natural gas combustion turbine units and combined-cycle 22 combustion turbine units. In fact, Mr. Watkins' claim is contradicted in his own 1 testimony. The load duration curve shown on page 10 of his testimony indicates that 2 approximately half of the Companies' combined load is served from generating units 3 he designates as "base-load units". Furthermore, in the electric industry as it exists 4 today, particularly with the relatively low cost of natural gas and the emergence of 5 new generation and storage technologies, the distinction that Mr. Watkins wants to make between base, intermediate and peak units no longer has the meaning that it did 6 7 in the late 1970s and early 1980s, when the distinction between these categories of 8 units was framed for purposes of cost of serve studies.

9 But despite Mr. Watkins' erroneous claim about the amount of "base-load 10 capacity" installed by KU and LG&E, he is correct that the LOLP method primarily -11 and *appropriately*, I would add – considers loads during the peak hours of the year. 12 Generation resources are sized to meet peak demands; they are not sized to meet the 13 annual utilization of the facilities, as Mr. Watkins argues. Increased peak demand 14 will result in the need for additional generation resources, whereas greater utilization 15 of the Companies' generation resources will not result in additional resources. In fact, 16 greater utilization of the generation resources during off-peak periods will typically 17 result in lower unit costs. Therefore, with respect to cost of service, generation 18 resources should be allocated on the basis of peak demands, not on the basis of 19 utilization, as Mr. Watkins suggests.

Q. Can you provide an example of how the base-intermediate-peak designation that Watkins continues to use no longer has the same relevance that it did decades ago?

1 A. Yes. During the late 1970s through the early 2000s, there was a clear distinction 2 between base load units such as coal-fire steam generating units and intermediate units 3 such as gas-fired combined cycle generating units. During that time frame, coal-fired 4 units had higher capacity cost but significantly lower running cost (energy cost) than 5 gas-fired combined cycle units. Today, largely because of the relatively lower cost of natural gas, the running cost of a gas-fired combined cycle generating unit is 6 7 typically about the same as the running cost of a coal-fired steam generating unit. In 8 the case of older, less efficient steam units, the running cost of a combined cycle 9 generating unit will often be lower than the running cost of a steam unit. This is one 10 of several reasons that coal-fired steam generating units are no longer being installed 11 in the United States. Thus, Mr. Watkins' distinction between base and intermediate 12 generating units is an artifact from decades ago.

13

Q. Are there other flaws in Mr. Watkins' criticisms of the LOLP method?

14 A. Yes, Mr. Watkins makes a number of inaccurate and misleading claims. He states 15 that under the Companies' LOLP methodology, "the class contributions during hour 16 1 would receive 80% weight with the development of the allocation factor [0.4%]17 (0.4% + 0.1%)] with class contributions in hour 2 receiving 20% weighting." (Id., at 18 p. 15, lines 25-28.) Mr. Watkins' claim is erroneous and misleading. The reality is 19 that the hour with the highest LOLP is only weighted 7.121%, not 80% as claimed by 20 Mr. Watkins. The second highest LOLP hour is only weighted 5.917%, and not 20% 21 as Mr. Watkins claims. He seems to be suggesting that production fixed costs are 22 allocated on the basis of loads for only two hours during the year. In reality, with the

1		LOLP method, the Companies' fixed costs are allocated on the basis of class demands
2		during 2,745 hours during the year, based on varying degrees of weighting. The hours
3		during the year with the highest loads do indeed receive the highest LOLP weighting,
4		but it is a distortion to suggest that loads for only two hours during the year account
5		for 100% of the allocation. Indeed, one of the benefits of the LOLP method over the
6		12 CP proposed by KIUC witness Baron and the 6 CP method proposed by DOD
7		witness Selecky is that the LOLP method does not allocate cost on the basis of just 12
8		or 6 hours during the year. The LOLP method allocates costs on the basis of class
9		loads for thousands of hours during the year, at various weighting levels.
10	Q.	Mr. Watkins criticizes the LOLP method because it relies heavily on peak period
11		demands to allocate generation capacity costs. Is this a valid criticism?
12	A.	No. While Mr. Watkins criticizes the Companies' cost of service studies for their
13		over-reliance on peak demand for the allocation of generation capacity costs, he makes
14		just the opposite point elsewhere in his testimony. In his discussion of the residential
15		customer charge, Mr. Watkins states:
16 17 18 19 20 21 22		As a matter of cost causation, the Companies must plan and install relatively more capacity for heating/air conditioning customers than for small volume customers. This additional capacity comes at a cost such that cost to serve a high load factor (low annual volume) customer is significantly less than that for a low load factor (high annual volume) customer. (<i>Id.</i> , at p, 31, lines 14-18.)
23		Yet, regarding production capacity costs, Mr. Watkins claims that "cost causation for
24		generation costs relates to the energy/capacity tradeoff between various generation
25		resources." (Id., at p. 9.) With respect to generation capacity costs, Mr. Watkins is

- 16 -

1 confusing cost causation with the use or optimization of capacity. What *causes* 2 capacity to be built is the shortage of capacity due to high LOLP factors or low reserve 3 margins. The energy/capacity tradeoff between various generation resources does not 4 *cause* the generation capacity to be added and is therefore not related to *cost causation*. 5 During the past 60 years or more, the Companies have installed new generating capacity to meet their peak demand requirements, most often due to growth in their 6 7 peak demands. Therefore, what necessitates the amount of capacity installed by the 8 Companies is the peak demand on their system. This is precisely the reason that the 9 KIUC and DOD witnesses are proposing to allocate generation capacity costs on basis 10 of coincident peak demands. By confusing the use of capacity with cost causation, 11 Mr. Watkins would assign the high capacity cost steam units to all hours of the year 12 and the low capacity cost single-cycle peaking units to the peak hours. Of course, on 13 a unit cost basis, this would result in higher generation capacity cost during off-peak 14 periods than during on-peak periods, which is a nonsensical result. This is precisely 15 the problem that LG&E encountered with the Base-Intermediate-Peak methodology 16 during the late 1970s and early 1980s.

17 Q. Mr. Watkins claims that the LOLP method is not consistent with the way that 18 the Companies' generation resources are planned. Is he correct?

A. Absolutely not. Mr. Watkins states that the Companies' cost of service studies "do
not comport with the manner in which the Companies generation resources were
planned and built and therefore, do not reflect cost causation." (Id., at p. 2, lines 14This claim is incorrect. The Companies have used LOLP as a key planning

- metric for many years. The Companies selected the LOLP methodology *because* of
 its use in resource planning.
- Q. Mr. Watkins claims that because the total capacity of supply resources i.e.,
 generating units, CSR loads, and purchases is greater than system demands, it
 is impossible that the Companies would not be able to meet their load obligations
 and therefore the LOLP should be zero. Is he correct?

7 A. No. Mr. Watkins' assertion indicates a lack of understanding of probabilistic 8 modeling. While numerous other factors come into play -- such as planned outages, 9 level of the load, CSR demand, and seasonal capacity of the Companies' generation 10 resources -- LOLP is also driven by the joint probability of forced outages of the 11 Companies' generation resources. As long as generation resources' outage rates are 12 not equal to zero, there is a probability (LOLP), however small, that the Companies 13 cannot meet their load obligations. With his Schedule GAW-4, Mr. Watkins also 14 purports to show that for several peak load hours supply (generation resources, CSR, 15 and purchases) is not fully utilized but there is positive expected unserved energy and 16 LOLP. However, Mr. Watkins is confusing the Companies' hourly dispatch model 17 results with the results of the LOLP model. The results of the two models are 18 incommensurable and should not be directly compared because they are developed for 19 different purposes. The dispatch model randomly simulates a *deterministic* outage 20 scenario for the development of an hourly forecast of system operations, while the 21 LOLP model applies a *stochastic* approach using numerical convolution techniques to 22 calculate the joint forced outage probabilities for the Companies' generating units to

1		evaluate the system's expected reliability. Therefore, for a given hour, the supply
2		results from the dispatch model represent just a deterministic (non-stochastic) outage
3		scenario while the results from the LOLP model represent the availability of resources
4		reflecting probabilistic (stochastic) outage scenarios for the Companies' generation
5		resources. Because a deterministic model does not result in unserved demand does
6		not mean that there is zero loss of load probability. In plain English, Mr. Watkins is
7		comparing apples to oranges.
8	Q.	Mr. Watkins suggests on pages 13-14 of his testimony that the LOLP analysis did
9		not consider curtailable loads. Is he correct?
10	A.	No. Curtailable loads under the Companies' Curtailable Service Riders (CSR) were
11		modeled as resources in the development of the LOLP factors. Mr. Watkins failed to
12		submit a data request inquiring how CSR loads were modeled and assumes that they
13		were not included, which is incorrect.
14	Q.	Mr. Watkins criticizes the LOLP method because he cannot verify, replicate, or
15		validate the Companies' model. Is this a valid criticism?

In a first the first hour user of the and fisch of the first hour hour is a logical to calculate the fisch of hour
 longstanding and proven system planning software used in the electric utility industry.
 KU and LG&E have purchased a license from ABB to use the software. PROSYM
 is a standard model that has been used by over 130 companies worldwide to evaluate
 production energy and reliability costs. PROSYM is a recognized model in the
 industry; the results of PROSYM have been accepted by regulatory commissions all
 over the United States in the evaluation of utilities' integrated resource planning

1		efforts. Furthermore, KU and LG&E have used PROSYM in their resource planning
2		efforts for decades. While LG&E and KU would not be permitted to provide the
3		source code used by ABB in PROSYM, nor do the Companies have the source code,
4		ABB's technical sheets on PROSYM's LOLP algorithms were provided in response
5		to AG 1-139, which was subject to a non-disclosure agreement that the AG's witness
6		signed. Furthermore, the Companies validated the reasonableness of PROSYM's
7		LOLP model results using an Equivalent Load Duration Curve ("ELDC") model
8		developed by the Companies.
9	Q.	Did the AG request an on-site visit to verify the reasonableness of the LOLP
10		calculations?
11	А.	No. The AG could have requested an on-site visit to verify the reasonableness of the
12		LOLP calculations but did not do so.
13	Q.	Did the AG's witness offer any criticisms of the methodologies that the
14		Companies used to allocate other costs in the electric cost of service studies, such
15		as transmission, distribution, billing and administrative and general costs?
16	А.	No.
17	Q.	Did the AG's witness Watkins submit an alternative cost of service study?
18	А.	No.
19	Q.	What is your recommendation regarding the electric cost of service studies in this
20		proceeding?
21	А.	It is my recommendation that the Commission should accept the Companies' cost of
22		service studies for use as a guide in allocating the revenue increase and in designing

1		rates. While I don't have strong objections to the cost of service studies offered by
2		the KIUC and DOD witnesses, the Companies' cost of service studies are superior and
3		should be approved by the Commission. The AG's criticisms of the Companies
4		studies are without merit and should be ignored.
5		B. GAS COST OF SERVICE STUDIES
6	Q.	Did any of the intervenor witnesses offer comments on or criticisms of LG&E's
7		gas cost of service study?
8	A.	No.
9		
10	III.	ALLOCATION OF THE REVENUE INCREASES TO THE RATE CLASSES
11		A. APPORTIONMENT OF THE ELECTRIC INCREASES
12	Q.	Did any of the intervenor witnesses address the Companies' proposed
13		apportionment of the revenue increase to the rate classes?
14	A.	Yes. The allocation of the electric revenue increase is addressed by AG witness
15		Watkins, KIUC witness Baron, DOD witness Selecky, and Walmart witness Tillman.
16	Q.	In order to frame the discussion, please briefly summarize the Companies'
17		proposed allocation of the revenue increase.
18	A.	The Companies proposed a tier-based approach to allocate the overall revenue
19		increase to the rate classes. Using this approach, individual rate schedules are grouped
20		into the following four tiers that generally reflect cost of service and customer
21		characteristics.
\mathbf{r}		• Tier Lincludes the residential rate classes (RS_VED_RTOD-Energy_ and RTOD-

Demand.

1

- 2 Tier II includes the small to medium commercial and industrial ("C&I") rate 3 classes (GS, PS, AES-KU, LS, RLS, OSL, and LG&E's special contract). Tier III includes the large customer rate classes (TODS, TODP, RTS, FLS). 4 5 Tier IV includes two special lighting rates with high rates of return (LE and TE). 6 For the Tier I rate classes, the Companies are recommending an increase of one 7 percentage point above the overall increase for each company. For the Tier III rate 8 classes, the proposed increase would be one percentage point below the overall 9 increase for each company. The Companies are not proposing increases for the Tier 10 IV rate classes; however, these are small rate classes in terms of both revenues and 11 numbers of customers served. Tier II would be assigned a residual increase to 12 produce the overall revenue increase proposed by the Companies. For KU the proposed increase for the Tier II rate classes was 0.50 percentage points below the 13 14 overall increase, and for LG&E the proposed increase for the Tier II rate classes was 0.44 percentage points below the overall increase. In developing this framework for 15 16 apportioning the increases to the rate classes, along with the other considerations that 17 were addressed in my direct testimony, the Companies were seeking to balance the 18 elimination of inter-class subsidies with the ratemaking principles of rate continuity 19 and gradualism. I continue to have confidence that the Companies are striking the 20 proper balance.
- 21 **Q.**
- What do the intervenor witnesses recommend?

A. Walmart's witness Tillman agrees with the Companies' proposed allocation of the
revenue increase. He states that "[a]t the proposed revenue requirement, Walmart does
not oppose the Company's revenue allocation." (Op. cit., at p. 23, lines 9-10.)
However, he recommends that if the Commission reduces the Companies' proposed
revenue increases then one quarter of the reductions should be applied proportionately
to reduce the Company's proposed increases for rate classes with a current rate of
return greater than 100 percent. (Id., at p. 23.)

8 DOD's witness Selecky proposes a more vigorous approach in eliminating 9 inter-class rate subsidies than proposed by the Companies. Mr. Selecky proposes 10 larger increases to the residential rate classes. KIUC's witness Baron proposes to shift 11 a significant portion of the increase from the large customer rates to the small-and 12 medium C&I rates.

AG's witness Watkins proposes the same percentage increase for all rate classes. Mr. Watkins' proposal to apply the same percentage increase to the residential rates as all other classes would not eliminate the subsidies currently being provided by the other rate classes. In terms of the percentage increase to the residential rate classes, the Companies' proposal falls between the AG's position on the one end -- which does not address class subsidies -- and DOD's position on the other end – which takes a more vigorous stance in eliminating class subsidies.

20

Q. What is your reaction to DOD's position?

A. DOD puts forward a more forceful proposal for the elimination of inter-class subsidies
than the Companies' proposal. Therefore, the difference between the Companies'

- 23 -

positions and DOD's recommendation is a matter of the degree to which subsidies are 1 2 addressed in this proceeding. Mr. Selecky proposes larger increases to residential 3 rates to address the subsidies that those rate classes are receiving. Specifically, for 4 KU, Mr. Selecky recommends that "the Residential increase should be increased by 2 5 percentage points over the system average and the additional revenues generated by this increase should be used to reduce the Tier 2 and 3 proposed increases 6 7 [proportionately]." (Op. cit., at p. 12, lines 18-22.) Thus, Mr. Selecky is proposing 8 to increase KU's residential rates by an additional 1 percentage point above what is 9 proposed by KU. For LG&E, Mr. Selecky recommends that "the Residential increase 10 should be 3 percentage points over the system average" or 2 percentage points above 11 what LG&E is proposing. While the DOD's recommendations do more to eliminate inter-class subsidies, particularly as it relates to the elimination of subsidies currently 12 13 received by the residential rate classes, the Companies' proposal addresses the 14 elimination of subsidies in a more gradual manner.

15 Q. Please address KIUC's witness Baron's recommendation?

A. Mr. Baron proposes to adopt the Companies' tiered approach, but he would apply the percentage-point differences proposed by KU and LG&E so that they include the revenue increase due to the pro forma elimination of the Tax Cuts and Jobs Act ("TCJA") surcredits. Mr. Baron's proposal has the effect of significantly lowering the base rate revenue increase to the large customer rates grouped in Tier III and significantly increasing the small and medium C&I rates included in Tier II. The impacts of Mr. Baron's proposal on Tier I and Tier IV are not materially different from what was proposed by the Companies. The obvious problem here is that even according to Mr. Baron's own 12 CP cost of service study, the Tier II rate schedules indicate higher rates of return than the Tier III rate schedules. The following table compares the rates of returns for Tier II to the rates of return for Tier III from Mr. Baron's own cost of service study:

1

2

3

4

5

6

7

Tier	Rate Schedules	KU	LG&E
II	GS, PS, AES, LS, RLS, OSL, SC	11.44%	11.38%
III	TODS, TODP, RTS, FLS	5.12%	8.72%

8 Mr. Baron's proposal is to shift revenue from Tier III, which has lower rates of return, 9 to Tier II, which has higher rates of return. Once again, the difference between the Companies' position and the KIUC's position is a matter of degree. In my direct 10 11 testimony, I discussed the importance of applying a lower percentage increase for 12 large customers, particularly large manufacturers, which have greater options for 13 where they locate their operations. I also addressed the importance of continuing to 14 maintain competitive rates for large manufacturing customers. While small and 15 medium C&I customers tend to be anchored to a geographic region because of their 16 customer base, large manufacturers typically have greater options about where they 17 locate or expand their facilities, and energy costs are frequently a major factor in their 18 decision-making processes. The Companies' approach does more to address the rate 19 subsidies provided by small and medium C&I customers than KIUC's approach. 20 KIUC's approach, on the other hand, is more aggressive in lowering the increases to large customers. Ultimately, it is necessary to balance a set of multiple objectives. In
 my judgment, the Companies' proposal strikes a better balance than KIUC's proposal
 between the elimination of inter-class subsidies and encouraging economic
 development in Kentucky.

5 Q. Please address the AG's proposal to increase all rates by the same percentage?

6 In his direct testimony, Mr. Watkins states that the "OAG [Office of Attorney General] A. 7 has advised me that in the absence of a reasonable and appropriate class cost allocation 8 study, the Commission's long-standing practice is to distribute any overall revenue 9 increase to individual classes on an equal percentage basis." (Op. cit., at p. 21, lines 10 1-3.) Needless to say, this is a profoundly unsatisfactory position. The AG had the 11 opportunity to submit its own cost of service study but failed to do so. Both KIUC 12 and DOD made the effort to submit cost of service studies of their own. If nothing 13 more, KIUC and DOD were able to test the reasonableness of the Companies' studies. 14 While the Companies' LOLP methodology is superior to the 12 and 6 CP methods 15 proposed by Mr. Baron and Mr. Selecky, the methods they used are standard in the 16 industry and produced results that were similar to the Companies' cost of service 17 Furthermore, their studies generally support the Companies' proposed studies. 18 apportionment of the revenue increase. In an effort that was much like throwing mud 19 against the wall to see if anything sticks, Mr. Watkins offered a handful of flawed and 20 easily rebutted criticisms of the Companies' cost of service studies. Mr. Watkins is 21 also critical of the 6-CP method proposed by DOD and the 12-CP method proposed 22 by KIUC. (See AG's response to Question 16 and 17 of the Commission Staff's data request in Case No. 2018-00294 submitted February 14, 2017.) Ultimately, the Companies' cost of service methodology is sound, and their proposed apportionment of the revenue increases is sound. The AG's proposal to ignore inter-class subsidies and apply the same percentage increase to each rate class should be rejected.

5 Q. Please compare the Companies' proposed increases to those of the intervenors.

6 A. The following table (TABLE 3) shows the percentage base rate revenue increases by

7 rate class grouping (tier) using the apportionment proposed by the KU to those

8 proposed by KIUC, DOD, and the AG:

TABLE 3						
KENTUCKY UTILITIES COMPANY PROPOSED APPORTIONMENT OF THE INCREASE BY PARTY						
Tier	Description	KU	KIUC	DOD	AG	
Ι	Residential	8.11%	8.07%	9.10%	7.11%	
II	Small & Medium C&I	6.61%	7.72%	5.96%	7.11%	
III	Large C&I	6.11%	5.15%	5.51%	7.11%	
IV	Special Lighting	0.00%	-0.14%	0.00%	7.11%	
Overall Increase		7 11%	7 11%	7 11%	7 11%	

9

10 The following table (TABLE 4) shows the percentage base rate revenue increases by

- 11 rate class grouping (tier) using the apportionment proposed by the LG&E to those
- 12 proposed by KIUC, DOD, and the AG:

TABLE 4						
LOUISVILLE GAS AND ELECTRIC COMPANY PROPOSED APPORTIONMENT OF THE INCREASE BY PARTY						
Tier	Description	KU	KIUC	DOD	AG	
Ι	Residential	4.09%	4.01%	6.09%	3.09%	
------------------	--------------------	-------	-------	-------	-------	
II	Small & Medium C&I	2.65%	3.41%	1.17%	3.09%	
III	Large C&I	2.09%	1.32%	0.92%	3.09%	
IV	Special Lighting	0.00%	0.00%	0.00%	3.09%	
Overall Increase		3.09%	3.09%	3.08%	3.09%	

1

2

3

4

The purpose of these tables is to show the impact of the various proposals for apportioning the increases to the rate classes. I am not suggesting that the intervenors agree with the Companies' overall revenue increases.

5 Q. What is your recommendation regarding the apportionment of the revenue
6 increases to the rate classes.

7 A. It remains my recommendation that the Commission approve the revenue increase 8 allocations proposed by the Companies. The Companies' proposal strikes the 9 appropriate balance between the following objectives: (1) eliminating inter-class rate 10 subsidies, (2) giving due consideration to the level of charges for large-use customers 11 who have greater options with respect to the geographic regions where they locate 12 their operations; and (3) giving due consideration to the ratemaking principles of rate 13 continuity and gradualism.

14 **B. APPORTIONMENT OF THE GAS INCREASES**

15 Q. Did any of the intervenor witnesses offer comments on or criticisms regarding
 16 LG&E's proposed apportionment of the gas rate increases?

- 17 A. No.
- 18

1

IV. RESIDENTIAL RATE DESIGN

Q. Please provide a quick overview of the Companies' proposed changes to the Basic Service Charges for residential service.

4 A. The Companies are proposing two changes. First, the Companies are proposing to 5 structure the Basic Service Charge as a daily rather than a monthly charge. This change will apply to all electric rate schedules that have Basic Service Charges and 6 7 will apply to all gas rate schedule that are billed on a CCF basis. Second, KU and 8 LG&E are proposing to increase the Basic Service Charge for electric service from 9 \$12.25 per month to a charge *equivalent* to \$16.13 per month (\$0.53 per day). The 10 Companies' cost of service studies would support a Basic Service Charge of \$23.89 11 per month for KU and a Basic Service Charge of \$20.34 for LG&E. LG&E is 12 proposing to increase the Basic Service Charge for gas service from \$16.35 per month 13 to a monthly equivalent of \$19.78 (\$0.65 per day).

14 Q. Are the Companies also proposing to break out the energy charge into fixed and 15 variable cost components?

A. Yes, KU and LG&E are proposing that the energy charge be broken down into a
Variable Energy Charge component and an Infrastructure Energy Charge. This
change is for informational and educational purposes only and will not affect
customers' bills. The Companies want customers, stakeholders and employees to be
aware that two types of costs are included in the energy charge for Rate RS and other
rates that have a two-part rate structure consisting of a Basic Service Charge and an
Energy Charge.

Q. Did the AG's witness Watkins address the Companies' proposed Basic Service Charges for residential service?

A. Yes. Mr. Watkins recommends that the electric Basic Service Charge remain at its
current level of \$12.25 per month and that LG&E's gas Basic Service Charge remain
at the current level of \$16.35 per month. He also opposes the adoption of a daily
charge and the Companies' proposal to break out the energy charge in to variable and
fixed cost components for informational purposes.

8 Q. Did Mr. Watkins provide valid cost justification that supports leaving the current
9 Basic Service Charges at their current levels?

10 A. No. He provides calculations that omit significant amounts of customer-related costs 11 and arrives at a monthly customer charge of \$6.55 for KU, \$4.20 for LG&E-Electric, 12 and \$12.14 for LG&E-Gas. (See Mr. Watkins' Schedule GAW-5 and Schedule 13 GAW-6.) He provides no explanation for why he is proposing a \$12.25 Basic Service 14 Charge for electric service, when his cost analysis only supports \$6.55 for KU and 15 \$4.20 for LG&E. Either he has little faith in his own analyses, or he feels that 16 proposing such low customer charges would diminish the credibility of his analysis.

17 Q. Did the Company use a standard cost of service methodology to calculate 18 customer costs?

A. Yes. In the cost of service studies filed by KU and LG&E distribution costs were
classified as demand- and customer-related using the zero-intercept methodology.
With the zero-intercept analysis, a statistical analysis is performed to determine the
fixed-cost components of overhead conductor, underground conductor, and

- 30 -

19 20		2000, at pages 75-76.
19		
		For example, see the Commission's Order in Case No. 2000-080 dated September 27,
18		Commission has rejected this minimalist and non-conforming approach in past orders.
17		which the Commission has traditionally considered to be customer related. The
16		components for overhead conductor, underground conductor and line transformers
15		analyses that he included in his Schedules GAW-5 and GAW-6 excluded cost
14		his customer cost analysis that excluded numerous customer-related costs. The
13	A.	No. Mr. Watkins ignored the results of the zero-intercept analysis when he performed
12		when he performed his analysis of customer costs?
11	Q.	Did Mr. Watkins rely on the results of the Companies' zero-intercept analysis
10		00371, the Companies' last general rate case filings.
9		1980s, including the cost of service studies filed in Case Nos. 2016-00370 and 2016-
8		been used in every cost of service study filed by both KU and LG&E since the early
7		methodology, to be reasonable. Furthermore, the zero-intercept methodology has
6		Light Heat and Power in Case No. 2001-00092, which also utilized the zero-intercept
5		reasonable. The Commission also found the cost of service study submitted by Union
4		methodology submitted in Case No. 90-158 and in Case No. 2000-080 to be
3		Commission found LG&E's cost of service studies utilizing the zero-intercept
2		customers. This methodology has been used for decades for both KU and LG&E. The
		transformers that do not vary with demand, but would still vary with the humber of

22 application of a customer charge (i.e., a Basic Service Charge)?

- 1 A. Yes. In the well-known treatise *Electricity Pricing* by Lawrence J. Vogt published in
- 2 2009, the author states:

14

3 The Customer Charge is intended to recover a number of fixed costs 4 that are not directly dependent on either the monthly volumes of 5 energy use or the capacity required by the customer, although the 6 customer-related costs of larger customer may indeed be greater per 7 delivery point than for smaller customers. Specifically, customer-8 related costs include the investment and expenses in metering 9 equipment and service lines along with a minimal portion of 10 secondary distribution lines, line transformers, and the primary 11 feeder system of poles, conduit, and conductors. (Lawrence J. Vogt, 12 Electricity Pricing: Engineering Principles and Methodologies, 13 CRC Press, 2009, at p. 273.)

15 Mr. Vogt goes on to state that the "zero intercept methodology provides a rational 16 basis for separating the cost of a device between its customer and demand 17 components." (*Id.*, at p. 500.)

18 In support of his position, Mr. Watkins cites Bonbright's Principles of Public 19 Utility Rates where the author discusses the "minimum system methodology", which 20 was a commonly-used methodology in the 1950s, when Mr. Bonbright was writing 21 his book. (Direct Testimony of Glenn A. Watkins, at p. 36.) An obvious problem 22 with Mr. Watkins' reliance on Bonbright's comments about the minimum system 23 approach is that KU and LG&E do not use the minimum system methodology in their 24 cost of service studies. The Companies use the *zero-intercept methodology*, which is 25 a statistical methodology that bears no resemblance to the *minimum system methodology* discussed by Bonbright. In the 1950s, when Mr. Bonbright was writing 26 27 his book, utilities did not have the computer capability to run the weighted regression

1 analyses needed to apply the *zero-intercept methodology*. The zero-intercept 2 methodology didn't come into common practice until the 1970s when digital computers began to be used to perform cost of service studies.² It is impossible to 3 4 speculate on what Mr. Bonbright, who retired in 1960, would have had to say about 5 the *zero-intercept methodology*, which wasn't used until many years later.³ 6 Mr. Watkins claims that the Companies' proposed Basic Service Charges are Q. 7 contrary to "efficient pricing". Is he correct? 8 A. No. Mr. Watkins has a confused notion of marginal cost pricing. Mr. Watkins states: 9 Perhaps the best known micro-economic principle is that in 10 competitive markets (i.e., market in which no monopoly power or excessive profits exist) prices are equal to marginal cost. Marginal 11 cost is equal to the incremental change in cost result from an 12 13 incremental change in output. A full discussion of the calculus 14 involved in determining marginal costs is not appropriate here. 15 However, it is readily apparent that because marginal costs 16 measure the changes in costs with output, short-run "fixed" costs 17 are irrelevant in efficient pricing. (Id., at p. 24) (Emphasis added.) 18 19 The underscored sentence in this passage, in particular, discloses a serious 20 misunderstanding of marginal costs and efficient pricing. A fundamental 21 misconception that Mr. Watkins seems to have is that *fixed costs* are short-run 22 marginal costs. Fixed costs, which principally consist of plant-related costs, are

² For example, the cost of service study that LG&E conducted in 1976 was prepared using handwritten columnar accounting sheets without the use of a digital computer. The "zero-intercept methodology" was first used by LG&E in a study performed in 1979 using a mainframe computer.

³ The minimum system method continued to be widely used in marginal cost analysis. In a survey conducted by NERA in the early 1990s it was reported that the minimum system method was the most widely used method for calculating marginal customer costs. See Hathie Parmesano and William Bridgman, *The Role and Nature of Marginal and Avoided Costs in Ratemaking*, NERA, January 1992.

1 considered "long-run marginal costs." The majority of KU and LG&E's cost of 2 service consists of fixed costs and are therefore considered *long-run marginal costs*. 3 The only short-run marginal costs are fuel and variable operation and maintenance 4 expenses. As shown in Rebuttal Exhibit WSS-1, only 35.38% of KU and LG&E's 5 revenue requirements are variable costs, and the remaining 36.14% are fixed costs. 6 Mr. Watkins wants to focus on the "economic efficiencies" of the Companies' variable 7 expenses, which only make up only about 36% of the Companies' cost of service. Mr. 8 Watkins claims that a "full discussion of the calculus involved in determining 9 marginal costs is not appropriate here." (Id.) Perhaps Mr. Watkins should have given 10 more careful consideration to the calculus involved in marginal cost analysis, because, 11 if he had, he might not have ignored over 64% of the Companies' costs in his 12 discussion of marginal cost pricing.

13

Q. In what way did Mr. Watkins oversimplify marginal costs?

14A.Based on economic theory, electric utility costs are a function of four independent15variables – the quantity of energy consumed (q_e), the demand for power at the time of16the utility's system peak (q_{cp}), customers' individual maximum demands (q_{ncp}), and17the number of customers served (q_c). The relationship of COST as a function of the18four variables q_e , q_{cp} , q_{ncp} , and q_c can be represented by:

19

20 $COST = COST (q_e, q_{cp}, q_{ncp}, q_c)$

8

9

$$MC = \frac{dCOST}{dq_{cp}}$$

10

which means that marginal cost (MC) is equal to a change in COST due to a change in 11 $q_{cp.}$ But COST is not a function of one variable, it is a function of four variables. 12 13 Therefore, there are four types of marginal costs -- a marginal cost associated with a 14 change in each of the four independent variables. In mathematics, a change in a 15 function due to a change in one of several independent variables is called a *partial derivative*, which for a function f and a variable x is represented mathematically as $\frac{\partial f}{\partial x}$. 16 Therefore, we have four marginal costs, with each representing a change in COST due 17 18 to a change in each of the four variables. Thus, we have (1) marginal cost (MC_e) , 19 which is a change in COST due to a change in energy, (2) marginal cost (MC_{cp}), which is a change in COST due to a change in coincident peak demand, (3) marginal cost 20

1	(MC_{ncp}) , which is a change in COST due to a change in non-coincident peak demand,
2	and (4) marginal cost (MC_c) which is a change in cost due to a change in the number
3	of customers served. ⁴ Each of these marginal costs can be defined in terms of partial
4	derivatives as follows:
5	
6	Marginal Energy Cost
7	(1) $MC_e = \frac{\partial COST}{\partial q_e}$
8	Marginal Coincident Peak Demand Cost
9	(2) $MC_{cp} = \frac{\partial COST}{\partial q_{cp}}$
10	Marginal Non-Coincident Peak Demand Cost
11	(2) $MC_{ncp} = \frac{\partial COST}{\partial q_{ncp}}$
12	Marginal Customer Cost
13	(4) $MC_c = \frac{\partial COST}{\partial q_c}$

¹⁴ Q. Which of these four types of marginal costs does Mr. Watkins concentrate on?

⁴ The industry literature on calculating marginal costs will often identify marginal demand and energy costs for the generation function, marginal transmission demand costs, marginal distribution demand costs, and marginal distribution customer costs. For example, see "Marginal Cost Analysis in Evolving Power Markets: The Foundation of Innovative Pricing, Energy Efficiency Programs, and Net Metering," *Emerging Current Topics in Energy Markets and Regulation*, 2010, at p. 2:

A marginal cost analysis will assess the incremental cost of an additional kilowatt of demand or a kilowatt of energy, or to serve an additional customer at a particular time and place.

1 A. Mr. Watkins focuses on Marginal Energy Costs but ignores Marginal Coincident Peak 2 Demand Costs, Marginal Non-Coincident Peak Demand Costs and Marginal 3 Customer Costs. In terms of economically efficient pricing structures, the Marginal 4 Energy Costs cannot be emphasized to the exclusion of these other three important 5 marginal costs. The first type of marginal cost, Marginal Energy Cost, is a short-run cost that corresponds to variable energy costs, namely, fuel and variable O&M 6 7 expenses. A change in energy usage by a customer results directly in a change in fuel 8 expenses and variable O&M expenses incurred by the Company. As I demonstrated 9 earlier, fuel and variable O&M expenses only represent about 36% of the Companies' 10 total cost of service. But the Companies' costs also change due to changes in the 11 other three variables. In the long run, the Companies will require additional 12 generation capacity due to increases in peak system demands, and the Company will 13 require additional distribution capacity due to increases in non-coincident peak 14 demands. Therefore, MC_{cp} and MC_{ncp} are considered long-run marginal costs. But 15 when new customers are added, the Companies also incur additional distribution costs, 16 metering costs, and customer service costs. Whenever the Companies add new 17 customers – regardless of their size – poles must be installed or underground trenches 18 need to be dug, overhead or underground cable must be installed, transformers must 19 be installed, services installed, meters installed, additional meters read, and additional 20 bills rendered. Mr. Watkins ignores these costs.

21

Q. Is recovering fixed costs through the energy charge economically efficient?

1 A. No. Mr. Watkins' proposal to load up the Companies' energy charges with fixed costs 2 is highly inefficient. His proposal would send a pricing signal to customers that a 3 change in energy usage will automatically result in a change in KU and LG&E's fixed 4 costs, which will not happen. After a utility invests in distribution infrastructure, a 5 change in customers' kWh usage does not affect the fixed costs associated with the infrastructure. If fixed distribution costs are recovered through the energy charge 6 7 then when a customer reduces its energy usage there is no reduction in the Companies' 8 fixed distribution cost. All that is accomplished is that the fixed cost incurred to serve 9 the customer is inappropriately shifted to other customers. Therefore, Mr. Watkins' 10 proposal is not only economically inefficient but it is also inherently unfair. In his 11 zeal to promote energy conservation, Mr. Watkins has tossed economic efficiency and 12 inter-class equity out the window.

13 Q. Are there examples in competitive industries where fixed costs are recovered 14 through fixed monthly or daily charges?

15 A. There are a number of examples. Cable television service providers and cell phone 16 companies such as Sprint, AT&T, and T-Mobile price their service as monthly fixed 17 charges that typically do not vary by the amount of time that their customers watch 18 cable television or use their cell phones for domestic calls. Another example is car 19 rental companies such Hertz and Avis, which typically rent automobiles based on daily 20 rates without a limit on the number of miles driven. The reason that these competitive 21 industries have moved to fixed daily or monthly pricing structures is that most of their 22 costs consist of fixed costs, much like an electric or gas utility. It is now somewhat unusual for companies operating in these competitive industries to recover their fixed
 costs based a pricing structure other than a monthly or daily fixed charge.

3 Q. In terms of *efficient pricing*, what type of rate structure do these four types of 4 marginal cost suggest?

5 A. The analysis of both marginal and embedded costs suggest that the most efficient 6 pricing structure would be a four-part rate consisting of: (i) a Basic Service Charge 7 (i.e., a customer charge), (ii) an Energy Charge, (iii) a system peak Demand Charge, 8 and (iii) a non-coincident peak Demand Charge. This is precisely the type of rate 9 design that the Companies utilize for their large customer rates – TODS, TODP, RTS, 10 and FLS. These rates have relatively large customer charges and two types of demand 11 charges – a Base Demand Charge that is applied to the customers' maximum demands 12 whenever they occur and Peak Demand Charge that is applied to the customers' 13 demand during the Companies' peak hours. It is noteworthy that Mr. Watkins does 14 not object to the four-part rate design used in the Companies' large customer rates. 15 But more significantly, Mr. Watkins does not object to the Basic Service Charges for 16 the large customer rates, which are significantly higher than the proposed Basic 17 Service Charges for the residential rates.

18 Q. In opposing the adoption of a daily Basic Service Charges, does Mr. Watkins
 19 identify any problems with using a daily customer charge?

A. No. He fails to identify specific problems with the use of a daily Basic Service Charge.
He simply states that a monthly charge is "accepted industry practice which virtually
all public utility ratepayers are used to." The Company is proposing a daily charge

- 39 -

1	because it more accurately reflects service for the actual number of days in a billing
2	cycle, because it is easier for customers to understand than a pro-rated charge for a
3	partial month of service, and because it will create future optionality for new
4	programs, such as prepaid metering. Mr. Watkins failed to counter any of these
5	justifications for the Companies' proposal. Indisputably, because a daily Basic
6	Service Charge reflects the actual number of days in a billing month, a daily charge
7	will more accurately reflect the actual cost of service. Furthermore, as I explained in
8	the response to Question No. 12 of Sierra Club's Supplemental Data Requests:
9 10 11	[I]t is easier for someone with basic skills in mathematics to understand the following billing of a Basic Service for a service period of 13 days during a month:
12 13 14	13 days x \$0.53 per day = \$6.89
14 15 16 17	than for a customer to understand a pro-rated billing for a month with billing-cycle consisting of 30 days:
18	$\frac{13 \ days}{30 \ days} \ x \ \$16.13 \ per \ month = \ 0.4333 \ x \ \$16.13 \ per \ month = \ \6.90
19 20 21 22 23 24 25 26 27 28 29	Another problem with customers understanding a prorated Basic Service Charge is that the number of days in a monthly billing cycle will in some cases differ from the number of days in a calendar month, thus creating the potential for additional confusion on the part of customers. For example, in the pro-rated example shown above, the number of days in the monthly billing cycle is 30 days but the number of days during the calendar month could be 31 days, creating additional reasons for customers not being able to understand the mathematics involved in the pro-ration.
30	Thus, as this response shows, a daily charge will be easier for customers to understand
31	than a monthly charge. Furthermore, Mr. Watkins does not deny that a daily charge

would facilitate pre-paid metering or other services should the Companies choose to
offer them. He simply argues that the Companies should not try to be proactive by
taking steps to create greater optionality but should just cross that bridge when we
come to it, while disregarding other benefits of daily charges.

5

Q.

What is your recommendation regarding the Basic Service Charges?

A. It is my recommendation that the Commission approve the Basic Service Charges
proposed by the Companies. Even if the Commission approves lower revenue
requirements than are proposed by the Companies, it is still my recommendation that
the Commission approve the levels of the Basic Service Charges proposed by KU and
LG&E. The proposed Basic Service Charges are significantly below the actual cost
of service and should be approved as filed.

Q. Does Mr. Watkins offer legitimate reasons for opposing separating out the energy charge into fixed and variable cost components for informational purposes?

14 A. No. Mr. Watkins claims that customers "could care less [sic] about the cost structure 15 for ratemaking purposes within the energy charges." Obviously, Mr. Watkins has no 16 way of knowing whether KU and LG&E's customers care about this issue or not. But 17 based on my own experience, I frequently get questions from utility customers both 18 informally and at public meetings about what costs are included in a utility's charges. 19 Furthermore, when I was an employee of LG&E, I was frequently asked very specific 20 questions from residential customers about what costs are recovered through the 21 energy charge and customer charge. But regardless of my personal experiences, I fail 22 to understand why the AG's witness is opposed to providing additional cost

1	information to customers. LG&E's gas rates have been separated into fixed and
2	variable cost components for decades. In fact, it was the Commission that directed
3	the Company to break out its charges per Mcf of throughput into a Gas Supply Cost
4	Component and a Distribution Charge, and to show this breakdown in each rate
5	schedule. When LG&E first implemented its Gas Supply Clause in Case No. 9133,
6	the Company proposed that the MCF charge would continue to include both fixed and
7	variable costs, but in its Order in Case No. 9133 the Commission directed the
8	Company to break out the Gas Supply Cost Component and the Distribution Charge
9	in its next rate case:
10 11 12 13 14 15 16 17 18	LG&E proposed to retain the total rate per 100 cubic feet authorized in its last rate case, which includes 35.720 cent as gas costs, rather than putting all gas costs in the GSCA determined in the quarterly filing. To avoid customer confusion at the present time, the Commission will allow such practice. <u>However, with LG&E's next rate case all gas costs will be included in the GSCA and all other costs will be set out as the distribution cost.</u> (Order in Case No. 9133, dated January 7, 1985, at p. 2. Emphasis added.)
20	matters
20	However, the Companies are not proposing this change just to inform and
22	educate customers. The change is also intended to inform and educate the
23	Companies' employees and other stakeholders, including intervenors in the
24	Companies' rate cases, various government agencies and organizations providing
25	assistance to customers. It is important for employees and stakeholders to understand
26	that the energy charge recovers both fixed and variable costs.

1 Q. Another reason that Mr. Watkins gives for proposing this change is that in his 2 experience working in the industry he claims that has never seen a utility break 3 out its fixed and variable costs. How do you respond to this observation? 4 A. Well, Mr. Watkins must not have looked at LG&E's gas rates too closely, because its 5 gas rates have been separated into fixed and variable cost components for about three decades. Also, my consulting firm has worked with electric utilities across the United 6 7 States that have unbundled their rates into fixed and variable cost components for 8 informational purposes, some operating in states with retail competition and others 9 not. For example, the energy charge for most utilities in Michigan are unbundled into 10 a large number of cost components, including fixed and variable generation costs, 11 fixed transmission costs, and fixed distribution costs. But whether Mr. Watkins is or 12 is not aware of a utility that unbundles its rates for informational purposes is not a 13 valid reason to keep information from customers. I am actually surprised that the 14 AG's witness would recommend that customers should be prevented from receiving 15 information about the cost components that make up the Companies' energy charges. 16 Mr. Watkins' position strikes me as a bit paternalistic. What he seems to be suggesting 17 is that customers cannot be trusted with information concerning the cost components 18 that make up the Companies' rates. Personally, I reject the proposition that cost 19 information should be shielded from customers.

20

21

Q.

into fixed and variable components for informational purposes?

- A. It is my recommendation that the Commission approve the Companies' proposal to
 - 43 -

What is your recommendation for separating out the Companies' energy charges

1		break out the energy charges into a Variable Energy Charge component and an
2		Infrastructure Energy Charge.
3		
4	V.	LARGE CUSTOMER RATES – TODS, TODP, RTS, RTS
5	Q.	The Companies are proposing to modify the demand charge for TODS so that it
6		is applied as a KVA charge. Did any of the intervenor witness oppose this
7		change?
8	A.	No.
9	Q.	As part of your direct testimony, you sponsored a study concerning the impact of
10		100% base demand ratchets for Rate TODS. Did any of the intervenor witnesses
11		comment on the study?
12	A.	No. The study was included as Exhibit WSS-3 of my direct testimony.
13		
14	VI.	KSBA'S SPECIAL SCHOOL RATE PROPOSAL
15	Q.	Were pilot rates for schools implemented in the Companies' rate cases as a result
16		of the settlement agreement?
17	A.	In the Stipulation and Recommendation ("Stipulation") in the Companies' previous
18		rate cases, the parties agreed to implement two optional pilot rates for schools – School
19		Power Service (Rate SPS) and School Time-of-Day Service (Rate STOD).
20	Q.	Did the Commission approve the pilot rates?
21	A.	Yes, but with the following requirements: (1) the Stipulation was to be modified to
22		include non-public schools not covered by KRS 160.325; (2) the pilot rates would be

1 available to new participants until the total projected revenue reduction reaches 2 \$750,000 annually for each utility, compared to the projected annual revenues for the 3 participating schools under the rates which the schools would otherwise be served; (3) 4 a limit was placed on the amount of time the pilot rates would be in effect of three 5 years, or until the Utilities file their next rate case; and (4) beginning six months from the date of the Commission's rate case order, the Utilities were required to file a report 6 7 with the Commission to provide details concerning monthly load information, 8 individually and in the aggregate, and preliminary findings regarding the schools' load 9 characteristics. Regarding the time limit for the pilot rate, the Commission stated that 10 it "will place a limit on the amount of time the pilot tariff will be in effect and finds 11 that the pilot tariffs should be effective for three years, or until KU [or LG&E] files 12 its next rate cases, whichever is earlier." (Orders in Case Nos. 2016-00370 and 2016-13 00371, dated June 22, 2017, at p. 20.) Effective with the filing of the application in 14 the current rate cases, the Companies terminated Rates SPS and STOD on September 15 28, 2018, and moved all schools that were taking service under those rates to the 16 appropriate rate schedules – Rates PS, TODS, or TODP.

17 Q. Did the Companies file reports with the Commission that set out details 18 concerning the effectiveness of the pilot school rates?

A. Yes. The Companies filed three reports with the Commission assessing whether the
pilot school rates were effective. The first report was filed with the Commission on
December 21, 2017; the second report was filed with the Commission on June 22,
2018; and the third report was filed with the Commission on December 21, 2018. The

1		third report was based on an analysis of load data for a full 12-month period. The
2		final report is included as Rebuttal Exhibit WSS-2.
3	Q.	What was the conclusion of the final report on the pilot school rates that was filed
4		on December 21, 2018?
5	A.	It concluded as follows:
6		
7 8 9 10 11 12 13 14 15		There is no evidence that creating a separate rate for schools would result in an improvement in fairness or equity of the rates for the schools or of the rates for the remaining non-school customers. Furthermore, given their similar load characteristics as non-school customers, the results of this analysis suggest that the schools have not likely modified their loads in response to taking service under the Pilot Rates. (<i>School Pilot Tariffs Report No. 3</i> , December 21, 2018, at p. 6.)
16		The report compared the load characteristics for the schools served under the pilot
17		rates to customers served under the standard rate schedules. This comparison
18		demonstrated that the load characteristics for the schools were not materially different
19		from the load characteristics of non-school customers, certainly not sufficiently
20		different to warrant the creation of a separate rate schedule for the schools that were
21		served under the pilot rates. The report states as follows:
22 23 24 25 26		The class statistics for LG&E and KU indicate that the load characteristics that would create significant cost differences in those rate classes are simply not present between schools and non-school customers in the PS and TOD rates. (<i>Id.</i> , at p. 7.)
27	Q.	Were the pilot school rates that were implemented in the last rate cases based on
28		cost of service?

A. No. They were the result of a stipulation agreement that were developed as part of
 settlement discussions.

Q. Did KSBA submit a cost of service study in the current rate case proceedings that
 would support implementing special school rates?

A. No. KSBA did not submit a cost of service study in these proceedings showing schools
broken out into separate rate classes. KSBA's witness Willhite recommends
reinstating the pilot rates for schools but doesn't calculate unit costs that support those
rates. The data presented in the reports evaluating the effectiveness of the pilot school
rates show that the load characteristics of the schools do not support the deeply
discounted rates that were implemented as part of the Stipulation.

Q. Are there particular statistics reported in *School Pilot Tariffs Report No. 3* that concern you about offering a special rate for schools?

13 A. Yes. The coincident-peak and non-coincident load factors for the schools are lower 14 than the non-school customers. Load factor is the ratio of average demand to maximum demand. The *coincident-peak load factor* ("CP load factor") is therefore 15 16 the ratio of the rate class's average demand to the class demand at the time of the 17 Companies' peak. The non-coincident-peak load factor ("NCP load factor") is the 18 ratio of the sum of the customers' maximum demand to average demand. The low CP 19 load factor for schools indicates that schools are more likely to have a high demand at 20 the time of the Companies' system peak relative to their average demands than non-21 school customers. This means that the Companies must install more generation 22 capacity for schools than for non-school customers, relative to their average demand.

1 The low NCP load factor for schools indicates that schools are more likely to have 2 high maximum individual demands than non-schools relative to their average 3 demands. This means that the Companies must install more distribution capacity for 4 schools than for non-school customers, relative to their average demand. The 5 following tables show comparisons between the CP and NCP load factors for schools 6 versus non-schools based on load research data for a full year (November 2017 7 through October 2018):

- 8
- 9

TABLE 5	,
---------	---

Kentucky Utilities Company

	Customers Taking Service Under the Pilot Rates for Schools	Sample of Customers Taking Service Under Standard Rates
Average Coincidence Factor	0.674012	0.707894
Average CP Load Factor	0.680610	0.744180
Average NCP Load Factor	0.458739	0.526757

10 11

TABLE 6

Louisville Gas and Electric Company

	Customers Taking Service Under the Pilot Rates for Schools	Sample of Customers Taking Service Under Standard Rates
Average Coincidence Factor	0.681444	0.733917
Average CP Load Factor	0.609078	0.663990
Average NCP Load Factor	0.415053	0.487314

12 13 As can be seen from these tables, for both KU and LG&E, the CP and the NCP load
 factors are lower for schools than non-schools.

3 Q. KSBA's witness Willhite claims that the coincidence factor is the most significant. 4 Is he correct?

5 A. No. The higher coincident factors for the non-schools are purely the consequences 6 of the higher CP load factors for the non-school customers. Mathematically, as CP 7 load factors approach 100%, coincident factors also approach 100%. Therefore, 8 higher load factor customers also exhibit higher coincidence factors. Mr. Willhite's 9 claim that coincidence factor is the more important statistic is incorrect. (Id., 10 Testimony of Ronald L. Willhite, Case Nos. 2018-00294 and 2018-00295, at p. 4.) 11 Coincidence factors do not come into play in the Companies' cost of service studies. CP and NCP load factors, on the other hand, are major drivers in the Companies' cost 12 13 of service studies. CP and NCP load factors are the primary statistics for explaining 14 differences in cost of service between customer classes. Both of these key statistics 15 suggest that, if anything, the rates for schools should be higher than for non-schools.

Q. Do you believe that it is appropriate to offer a special rate for schools, regardless of whether the CP and NCP load factors are higher or lower?

A. No. The electric utility industry has been moving away from offering special rates
 tailored to special customer groups. Beginning around the time of the Public Utilities
 Regulatory Policies Act (PURPA), electric utilities began collapsing the plethora of
 special rates into more streamlined sets of cost-based rates that tend to reflect the size
 of customer kW demands rather than end-uses. A major problem with special rates

- 49 -

1 that differentiate between types of end-use customers is where to stop with tailored 2 rates for specific type end-use customers. It would be possible to have school rates, 3 church rates, water heater rates, space heating rates, public authority rates, mining 4 rates, chemical manufacturing rates, cement manufacturing rates, steel mill rates, 5 aluminum smelter rates, hotel and resort rates, grain drying rates, water pumping rates, 6 gas pipeline compressor rates, radio tower rates, elevator rates, and so on *ad infinitum*. 7 Most likely, any of these customers would argue that their unique circumstances and 8 load characteristics warrant a special rate. However, working with utilities across the 9 country, I have seen distinct rates for most all of these special groups being eliminated 10 in favor of cost-based rates suitable for most any type of end-use customer. In fact, 11 KU and LG&E have eliminated a number of these special rates over the years. A 12 sound rate design will generally operate effectively with any type of customer. For a 13 number of years, it has been the Companies' objective to develop rates designs that 14 accurately reflect costs for a wide range of customers within each rate class. The 15 Companies' Power Service rates and TOD rates are both designed to reflect cost of 16 service. The Companies' large customer rates (TODS, TODP, RTS, and FLS) are 17 particularly well designed to reflect differences in cost of service among customers 18 within each rate class. TODS, TODP, RTS, and FLS are multi-part rates consisting 19 of a Basic Service Charge, Energy Charge, Base Demand Charge, Intermediate 20 Demand Charge, and Peak Demand Charge. This multi-part rate design is extremely 21 effective in terms of reflecting cost of service and can be viewed as the "gold standard" 22 for rate design. However, an impediment to implementing multi-part rates on a wider scale is the traditionally higher cost of the metering equipment that is required to
measure the time-differentiated demands necessary to bill multi-part rates. But, as
advanced metering solutions are adopted in the industry, we can expect to see a
broader adoption of multi-part demand rates. Already, electric utilities across the
country which have invested in automatic metering infrastructure are adopting multipart rates for general service and residential customers.

7

8 VII. SUBSTITUTE GAS SALES SERVICE ("SGSS")

9 Q. Please provide a description of LG&E's Substitute Gas Sales Service (SGSS).

10 A. Rate SGSS provides substitute gas sales service for any customer who desires to 11 receive firm sales service from LG&E in addition to gas received from other sources 12 with which the customer is physically connected. This rate applies to customers who 13 normally purchase gas supply directly from a pipeline, from another local distribution 14 company, or from a local producer but desire to rely on LG&E as an alternative or 15 substitute supplier of natural gas. In its role as a substitute supplier, LG&E maintains 16 sufficient storage and distribution delivery capacity on its system to provide firm 17 service to a customer under Rate SGSS, just as it would any other commercial or 18 industrial sales customer. Rate SGSS is structured as a three-part rate consisting of (i) 19 a Basic Service Charge, which is a fixed customer charge to be billed monthly; (ii) a 20 Distribution Charge, which will be applied to monthly volumetric deliveries; and (iii) 21 a Demand Charge, which will be applied to the customer's Monthly Billing Demand. 22 The demand charge helps ensure that other customers are not subsidizing those

	customers who take substitution or backup service from LG&E. For Rate SGSS,
	LG&E is proposing to include a 100% demand ratchet, which is the same ratchet
	provision that is used to determine the billing demand for the Base Demand Charge in
	KU and LG&E's large customer electric rate schedules - TODS, TODP, RTS, and
	FLS. SGSS currently includes a 70% ratchet provision, which was the result of a
	settlement in LG&E's last rate case.
Q.	Do any of the intervenor witnesses address Rate SGSS?
A.	Yes. DOD witness Selecky addressed Rate SGSS in his direct testimony.
	Specifically, Mr. Selecky proposes to change the ratchet provision of Rate SGSS, as
	follows:
	The Commission should not eliminate the 70% demand ratchet provision. A 100% ratchet is punitive and does not reflect the usage diversity for gas customers that utilize the system. The cost components that are used to develop the monthly demand charge include transmission demand costs. Typically, the transmission system is designed to meet the system peak and not the non-coincident peaks or the total of all customers' maximum demands. A 70% ratchet factor reflects the diversity in individual customer demands at the time of the system peak. (<i>Op. cit.</i> , at p. 22, lines 3-9.)
Q.	Is Mr. Selecky's proposal consistent with the demand ratchet provision of TODS,
	TODP, RTS, and FLS?
A.	No. Rates TODS, TODP, RTS, and FLS include three demand charge components –
	Peak Demand Charge, Intermediate Demand Charge, and Base Demand Charge. The
	Peak and Intermediate Demand Charges are designed to recover fixed production
	costs, and the Base Demand Charge is designed to recover transmission and
	Q. A. Q.

1 distribution delivery costs. The Demand Charge for Rate SGSS is essentially equivalent to the Base Demand Charge for electric.⁵ Under LG&E's current electric 2 3 tariff, the Base Demand Charge recovers transmission and distribution costs and 4 currently incorporates a 100% ratchet, which is the same ratchet provision that LG&E 5 is proposing for the SGSS demand charge. Mr. Selecky does not challenge the current 100% Base Demand ratchet provision for TODP. Mr. Selecky states that the 6 7 "Companies' proposed method of cost recovery for TODP from the Base, 8 Intermediate and Peak demand charges should be adopted by the Commission." (Op. 9 *cit.*, at p. 19, lines 13-14.) To be consistent with TODP, whose Base Demand ratchet 10 provision Mr. Selecky does not challenge, the ratchet provision of Rate SGSS should 11 be 100%.

12 Q. Why is it appropriate to utilize a 100% ratchet for gas delivery service?

A. As with the electric system, LG&E's gas delivery system is sized to meet the maximum volumes of gas used by customers at any time. On LG&E's gas system, mains, regulators, and other equipment are sized to meet the maximum demands that individual customers place on the system. Therefore, it is appropriate to apply a demand charge to the maximum demand established by the customer. It is particularly important to have a 100% demand ratchet for Rate SGSS, because gas suppled under that rate is intermittent. This kind of customer only falls back on LG&E when the

⁵ For gas service, the analogue for the production fixed costs recovered through the Peak and Intermediate Demand Charges are the purchased gas demand costs recovered through the Company's Gas Supply Component (GSC).

1

customer fails to secure adequate gas supply.

Q. Mr. Selecky claims that the demand ratchet provision of Rate SGSS does not reflect any type of usage diversity. Does demand diversity matter for the portions of the distribution system providing service to individual customers?

5 A. No. The distribution system is sized to deliver gas to individual customers. For the 6 DOD customer represented by Mr. Selecky, LG&E installed two 8-inch parallel 7 pipelines directly from one of its storage facilities to provide service to the DOD 8 customer. Each of these parallel pipelines spans 3 to 4 miles. The Company installed 9 two large gas regulator stations at its storage facilities that serve the DOD customer. 10 The regulator stations include overpressure protection equipment, two gas regulator 11 runs, piping, valves and electronic monitoring equipment. The Company has also 12 installed two large metering stations, consisting of two six-inch orifice meters, one 13 four-inch orifice meter, one rotary meter, regulation equipment, and electronic 14 monitoring and control equipment. These facilities have been refurbished within the 15 last ten years. The DOD customer is one of only two natural gas customers served by 16 LG&E whose natural gas service is provided from costly orifice metering stations. 17 These facilities are sized solely to meet the DOD customer's historical maximum 18 demands and no other customer. In fact, the facilities were designed to serve a 19 historical demand that is several times larger than the customer's recent peak demand. 20 Therefore, with respect to the distribution facilities installed to serve the DOD, usage 21 diversity is irrelevant, because there can be no diversity with respect to facilities that 22 have been installed to serve a single customer.

1	Furthermore, there is little or no diversity between the DOD customer's usage
2	and LG&E's system peak demand. Like most customers on LG&E's gas system, the
3	DOD customer's usage requirements are driven by cold temperatures (high heating
4	degree days). For example, during the last three winter peak seasons (Dec 2016 – Feb
5	2017, Dec 2017 – Feb 2018, Dec 2018 – Jan 2019), LG&E's maximum demand day
6	occurred on January 30, 2019. This was during the so-called "polar vortex" that
7	gripped the Midwest United States, when it was widely reported in the news media
8	that temperatures in Chicago and Minnesota were falling below minus 30° F. (See
9	Rebuttal Exhibit WSS-3.) LG&E's maximum daily demand on January 30, 2019,
10	was about 490,000 Mcf. The DOD customer's maximum demand day during January
11	2019 also occurred on January 30, 2019. This indicates that on the peak day that
12	occurred during the last three winter seasons, there was zero diversity between
13	LG&E's system demand and the DOD customer's usage. Both LG&E and the DOD
14	customer experienced a peak on January 30, 2019, when the average of the 24-hourly
15	temperature observations on that gas day was about 7° F, which was not only the
16	coldest temperature during January 2019 but also the coldest gas day during the last
17	three winter heating seasons.

18 Q. What is your recommendation regarding LG&E's proposed ratchet provisions 19 for Rate SGSS?

A. It is my recommendation that the Commission approve the 100% ratchet provisions
for Rate SGSS. The provision is reasonable for gas sales service to customers whose
purchases from LG&E are intermittent and who normally purchase natural gas from

another provider but want to rely on LG&E as an alternative or substitute supplier of
 gas.

3

4 VIII. LEAD-LAG STUDIES

5 Q. Did the Companies submit lead-lag studies in the current rate case proceedings?

A. Yes. In the settlement agreement filed in their last rate cases, LG&E and KU
"committed to file a lead-lag study in their next base-rate cases." (*Stipulation and Recommendation*, Case Nos. 2016-00370 and 2016-00370, Section 5.4, at p. 17.)
Lead-lag studies for KU and LG&E were included as part of the Companies'
Application in the current proceedings.

11 **Q.** What is a lead-lag study used for?

A. A lead-lag study is a statistical study that estimates the Cash Working Capital required by a utility for its operations. Cash Working Capital is the amount cash *invested* by the utility to fund its operations.⁶ A lead-lag study is an analysis that measures the difference between the revenue lags and expense leads, where *revenue lags* represent the number of days between a company supplying service to customers and receiving cash payment for the service and where *expense leads* represent the number of days between the company incurring the expense and paying for those cash expenses.

⁶ It should be noted by AG's witness Mullinax uses a slightly different definition of Cash Working Capital. She states that Cash Working Capital "represents the cash a utility needs to have on hand to fund its day-to-day operations." (*Direct Testimony of Donna H. Mullinax*, at p. 19, lines 10-11) As a point of fact, a utility will not have the *cash on hand*. Cash Working Capital is not a cash balance that sits on the Companies' balance sheet, but an amount of cash *invested* by the utility that reflects the difference between revenue lag and expense leads. Capital working capital thus represents the cash invested by the utility to fund these differences.

Q. Are AG's witness Mullinax and you in agreement with what a lead-lag study is supposed to measure?

A. Yes. Ms. Mullinax states that a "lead-lag study is an in-depth analysis that measures
the difference between a company's revenue lag (the lapsed days between a company
supplying service and being paid for service) and the expense lead (the lapsed days
between the company incurring costs and having to pay for those costs.)." I could
quibble over the word "cost"⁷ in her definition, but essentially, I agree with her
definition.

Please explain the terms "revenue lags" and "expense lags" and how they relate

9

10

Q.

to Cash Working Capital.

11 As I mentioned earlier, revenue lags represent the number of days between a company A. 12 supplying service to customers and receiving cash payment for the service. Therefore, 13 if there are 45 days from the middle of a service month and the day when customers 14 pay their bills then there is a revenue lag of 45 days. This delay in receiving payment 15 of the service provided by the utility creates a cash need associated with the revenues 16 of 45 days. Therefore, if the utility's annual revenue is \$100 million, the revenue lag 17 creates a cash need of \$12.3 million ([$$100,000,000 \div 365 \text{ days}$] x 45 days = 18 Thus, the Cash Working Capital corresponding to the revenue lag is \$12,328,767). 19 \$12.3 million. But the cash requirements created by the revenue lag can be offset or

⁷ The word "cost" is too broad, in my opinion because a lead-lag study only measures the expenses lags for cash *expenses* and not *non-cash accruals* such as depreciation and amortization expenses. As will be discussed later in my testimony, expense lags for depreciation are fully captured by including net utility plant in rate base.

reduced by the time delay between incurring and paying expenses, i.e., by the expense 1 2 leads. Again, expense leads represent the number of days between the company 3 incurring the expense and paying for those cash expenses. If a utility incurs an 4 expense during a month – for example, it buys diesel fuel for service vehicles -- but 5 pays the expense at the end of the following month then, assuming 30 days in the month, there is a expense lead of 45 days for the transaction represented by the 6 7 difference in the number of days from the middle of the month when the fuel was 8 purchased and the end of the following month (15 days + 30 days = 45 days). 9 Therefore, expense leads result in a reduction in requirements for Cash Working 10 Capital and a reduction in rate base.

11 However, if the payment for an expense *precedes* the service period for the 12 expense, then the transaction results in negative lead days (or, equivalently, lag days), 13 resulting in an *increase* in Cash Working Capital and thus an *increase* in rate base. 14 Depreciation expense is an example of an expense item for which the payment of the 15 expense *precedes* the service period for the expense. When a utility makes a plant 16 investment it is effectively making an upfront payment of the depreciation expenses 17 for service from the plant over the life of the property. In the case of utility property, 18 net plant costs are included in rate base instead of capturing the prepaid expenses in 19 Cash Working Capital with a lead-lag study based on *negative* lead days. Including 20 net plant (i.e., gross plant less net depreciation) in rate base is mathematically 21 equivalent to calculating Cash Working Capital associated with the payment leads on 22 depreciation expenses determined ratably over the life of the property. *Therefore*, *including net plant in rate base is identical to calculating the negative expense leads (i.e., lags) for depreciation expenses.* (See Rebuttal Exhibit WSS-4 for a mathematical
 proof of this.)

4 5 **Q**.

Ms. Mullinax claims that the Companies' lead-lag studies double count depreciation expenses and other non-cash expenses. Is she correct?

6 A. Absolutely not. Because the payment of assets precedes the use of those assets and 7 the recording of depreciation expense, the lag between payment for those assets and 8 the recording of depreciation expense (i.e. the negative lead days) is recognized by 9 including net plant in service in rate base. Therefore, by including net plant in rate 10 base, the negative leads associated with depreciation expenses have been fully 11 captured. Because net plant is included in rate base, thereby capturing the fact that payment of capital assets precedes the use of the plant and the recording of 12 13 depreciation expenses, it is necessary to assume zero lead days for depreciation 14 expenses in the lead-lag study, otherwise there would indeed be double counting. 15 Thus, on the expense side, the negative leads associated with depreciation expenses 16 have been captured just like any other expense. But with respect to the revenue side 17 of the lead-lag study, what costs are recovered through revenues have nothing 18 whatsoever to do with the calculation of revenue lags. Revenue lags are simply the 19 timing difference between when service is provided to customers and when payments 20 are received from customers. These lags apply to all revenues. In a lead-lag study, 21 expenses are expenses and revenues are revenues. Ms. Mullinax is confusing the two. 22 Ms. Mullinax is proposing to remove large chunks of revenue lags merely because she seems not to recognize that including net plant in service and other non-cash expenses
in rate base have fully captured the lags (i.e., negative leads) related to the payment of
these expenses. Removing the revenue requirements for depreciation and other noncash expenses from revenue lags would deny KU and LG&E the ability to recover its
costs using a return-on-rate-base approach for determining revenue requirement.

6 Q. Is Ms. Mullinax's proposal to remove depreciation expenses and other non-cash 7 expenses from revenues consistent with her own definition of lead-lag analysis? 8 A. No. At the beginning of her discussion of Cash Working Capital she defines a lead-9 lag study as "an analysis that measures the difference between a company's revenue 10 lag (the lapsed days between a company supplying service and being paid for service) 11 and the expense lead (the lapsed days between the company incurring costs and having 12 to pay of those costs)." (Id., at pp. 19-20.) While she describes the lag portion of the 13 analysis as the *revenue lag* she proposes to remove large portions of revenues from 14 According to her own definition, revenue lag reflects the timing the analysis. 15 difference (number of days) between when service is provided and when revenues are 16 recovered from customers. Therefore, according to her own definition of a lead-lag 17 study, the revenue collected from customers is not just a portion of revenue, but the 18 entire revenue, including revenue collected from the rate mechanisms and any other 19 costs included in the amount of revenue paid by customers. For purposes of 20 calculating Cash Working Capital, revenue lags should correspond to total revenue 21 because the cash that a utility must invest to cover the time delay in receiving its 22 revenue requirements relates to the *total revenue* not portions thereof.

1	Q.	Is the Companies' treatment of depreciation and other non-cash expenses in the
2		lead-lag studies consistent with the methodology that was approved by Virginia
3		State Corporation Commission (VA SCC) for Old Dominion Power Company
4		(KU-ODP)?
5	А.	Yes. The cash working capital methodology that the Companies are proposing in the
6		cases before the Kentucky Commission is the same methodology that was approved
7		by the VA SCC for KU-ODP, which is the name under which KU operates in
8		Virginia. ⁸
9	Q.	Is the Companies' treatment of depreciation and other non-cash expenses in the
10		lead-lag studies consistent with lead-lag studies that have been approved by the
11		Commission for other utilities.
12	А.	Yes. In the lead-lag study that was submitted by Kentucky-American Water Company
13		in Case No. 2012-00520, zero lead days were applied to depreciation expenses and
14		other non-cash accrual items, but no adjustment was made to reduce revenue lags for
15		these expenses. See response to Question 20 of the Commission Staff's Second
16		Request of Information, dated November 13, 2018, which is attached as Rebuttal
17		Exhibit WSS-5.
18	Q.	Does Ms. Mullinax recommend any changes to the expense leads in the
19		Companies' lead-lag studies?

20 A. Ms. Mullinax is recommending two adjustments to the Companies' proposed Cash

⁸ Kentucky Utilities Company d/b/a Old Dominion Power Company For an Adjustment of Electric Base Rates, Case No. PUR-2017-00106, Testimony of Justin M. Morgan (VSCC Feb. 28, 2018).

Working Capital amounts. She makes an adjustment to the lag days for Other O&M
 Expenses that assumes that lead days for all entries in the Companies' sample of Other
 O&M transactions that do not indicate a service period would arbitrarily be 30 days.

4

Q.

Do you agree with this adjustment?

5 A. No. Ms. Mullinax arbitrarily assumes lead days of 30 for any transaction in the 6 Companies' Other O&M transactions for which the transaction detail did not specify 7 Ms. Mullinax did not perform any type of empirical analysis to a service period. 8 support her 30-day assumption. In calculating the lead days for Other O&M expenses, 9 KU and LG&E used the invoice date for any transaction that did not indicate a specific 10 service data for the expense. This is a standard approach in performing lead-lag 11 studies. It is inappropriate to simply assume an arbitrary value that was not developed 12 based on empirical data.

13 Q. Ms. Mullinax proposes to remove prepayments from rate base. Is this 14 adjustment appropriate?

15 A. No. Ms. Mullinax claims that prepayments are double counted in the lead-lag study. 16 This is incorrect. The Companies did not include prepaid expenses in the lead-lag 17 Ms. Mullinax does not point to specific instances in which the Companies study. 18 calculated expense leads for prepaid expenses included in Prepayments included in 19 the Companies' rate base. She relied on two responses to data requests submitted by 20 the Companies – KU's and LG&E's responses to the Question No. 59 of the AG's 21 initial data request. After reviewing these responses, which are attached as Exhibits 22 HHM-58 and DHM-59 to Ms. Mullinax, the Company unintentionally indicated that

1		expenses included for Rate Base Prepayments included were also included in the lead-
2		lag study. (On February 21, the Companies filed corrected responses to Question No.
3		59 of the AG's first data request. These revised responses are attached as Rebuttal
4		Exhibit WSS-6.) In response to the AG's data requests, the Companies should have
5		stated that fuel expenses, gas supply expenses, and charges to materials and supplies
6		were included in the lead-lag study but not the expense items included in Rate Base
7		Prepayments.
8	Q.	Does Ms. Mullinax identify transactions included in the lead-lag study that were
9		also included in Rate Base Prepayments?
10	A.	No.
11		
12	IX.	REVENUES FROM POLE ATTACHMENT AUDITS
13	Q.	The Companies propose that parties that attach to KU and LG&E's poles
14		pursuant to Rate PSA be required to reimburse the Companies for the cost of
15		any audit of pole attachments. Is this a reasonable requirement?
16	А.	Yes. As discussed in Mr. Conroy's rebuttal testimony, audits are necessary to ensure
17		that attachment customers are accurately billed for the services that they receive and
18		that attachment customers are observing the application and permitting procedures
19		contained in Rate PSA. These audit costs would not be incurred in the absence of
20		Rate PSA customers attaching to the Companies' poles. Therefore, it is reasonable
21		that attachment customers cover the cost of these audits, thereby ensuring that other
22		customers are not burdened with these costs. However, it has come to our attention
1		that the fees associated with planned audits were not included in miscellaneous
----	----	--
2		revenues in KU's Schedule M-2.3 and LG&E's Schedule M-2.3-E. Forecasted costs
3		in the amount of \$96,565 were included in KU's test-year revenue requirements, and
4		forecasted costs in the amount of \$66,167 were included in LG&E's test-year revenue
5		requirements for the pole attachment audits. However, there were no off-setting
6		revenues included in other miscellaneous revenues to reflect the reimbursement of
7		these costs from attachment customers. Accordingly, the increase in other
8		miscellaneous electric revenues shown on page 2 of Schedule M-2.3 for KU (i.e. the
9		column labeled "increase") should be adjusted upwards by an additional \$96,565 and
10		the increase in other miscellaneous electric revenues shown on page 2 Schedule M-
11		2.3-E for LG&E should be adjusted upwards by an additional \$66,167.
12	Q.	What effect do these adjustments to miscellaneous revenues have on the rates to
13		the Companies' other customers?
14	A.	These adjustments have the effect of lowering the revenue requirements applicable to
15		the Companies' electric customers from what was originally proposed in these
16		proceedings. Making these upward adjustments to the increase in other miscellaneous
17		revenues ensures that there is no double recovery of revenues related to the pole
18		attachment audits.
19	Q.	Does this conclude your testimony?

20 A. Yes, it does.

VERIFICATION

COMMONWEALTH OF KENTUCKY)) **COUNTY OF JEFFERSON**)

The undersigned, William Steven Seelye, being duly sworn, deposes and states that he is a Principal of The Prime Group, LLC, and that he has personal knowledge of the matters set forth in the foregoing testimony and exhibits, and the answers contained therein are true and correct to the best of his information, knowledge and belief.

School Pilot Tariffs Report No. 3 Report on the Load Characteristics for the Optional Pilot Rates for Schools

Kentucky Utilities Company Louisville Gas and Electric Company

December 21, 2018

Load Characteristics of the Optional Pilot Rates for Schools

Background

The parties in Kentucky Utilities Company's ("KU's") and Louisville Gas and Electric Company's ("LG&E's") (collectively "Utilities" or "each Utility" when referenced individually) last rate case, filed in Case Nos. 2016-00370 and 2016-00371, submitted a Stipulation and Recommendation ("Stipulation Agreement") agreeing to the implementation of Optional Pilot Rates for Schools. In the Stipulation Agreement, these discounted Optional Pilot Rates were available to participants until the total projected revenue impact (reduction in revenues) for each Utility reaches \$750,000.

The Stipulation Agreement provided for the creation of two Optional Pilot Rates for Schools for KU and LG&E: (1) School Power Service ("Rate SPS") and (2) School Time-of-Day Service ("Rate STOD"). Rate SPS is a multi-part rate consisting of a Basic Service Charge, Energy Charge and seasonally differentiated Demand Charge. Rate SPS was modelled after the Power Service ("Rate PS"), except Rate SPS offers discounted charges to schools taking service under the rate. Schools taking service under Rate SPS would be transferred from Rate PS. Rate STOD is a multi-part rate consisting of a Basic Service Charge, Energy Charge and time-differentiated Demand Charge. Rate STOD was modeled after Time of Day Secondary ("Rate TODS") and Time of Day Primary ("Rate TODP"), except Rate STOD offers discounted charges to schools in comparison to the Rates TODS and TODP. Schools taking service under STOD would be transferred from Rate TODS or TODP.

After a hearing concerning the Stipulation Agreement, in its Orders in Case Nos. 2016-00370 and 2016-00371, dated June 22, 2017, the Commission approved the Optional Pilot Rates for Schools, with the following requirements: (1) the Stipulation was to be modified to include non-public schools not covered by KRS 160.325; (2) the pilot rates would be available to new participants until the total projected revenue reduction reaches \$750,000 annually for each utility, compared to the projected annual revenues for the participating schools under the rates which the schools would otherwise be served; (3) a limit was placed on the amount of time the pilot rates would be in effect of three years, or until the Utilities file their next rate case;¹ and (4) beginning six months from the date of the Commission's rate case order, the Utilities were required to file a report with the Commission which set out details

¹ The Commission's Orders in Case Nos. 2016-00370 and 2016-00371 also provided as follows:

In the event that new base rates are not in effect by July 1, 2020, schools participating in the pilot tariffs should be returned to the tariffs under which they were formerly served. In addition, the Commission finds that KU should create a regulatory liability to record the difference between what the schools served under the pilot tariffs would have been billed under the pilot tariffs subsequent to July 1, 2020, and the amounts they are billed under the tariffs to which they are returned. The regulatory liability will be addressed in [the Utility's] next base rate proceeding.

Id. at p. 20.

concerning monthly load information, individually and in the aggregate, and indicating preliminary findings as conclusion regarding the schools' load characteristics are reached.

This report represents the third report filed with the Commission regarding the load characteristics for the schools taking service under the Optional Pilot Rates. The first report was submitted to Commission on December 21, 2017. However, because each school's transition to the School Pilot Rates took place in September and October 2017, no meaningful load data was available at that time. The second report looked at load data for each of the schools under the Pilot Rate from December 2017 through March 2018.

Description of Load Data

As summarized below, there are currently 233 public and private schools taking service under the Optional Pilot Rates for Schools:

Pilot School Rate Count								
Utility	Rate	Public	Private	Total				
KU	School Power Service	69	8	77				
	School Time of Day Service	76	0	76				
	KU Total	145	8	153				
LG&E	School Power Service	68	8	76				
	School Time of Day Service	4	0	4				
	LG&E Total	72	8	80				
System	System Total	217	16	233				

The Utilities have collected hourly load data for these customers. When this report was being prepared, complete hourly load data for all customers were available for the twelvemonth period of November 2017 through October 2018.

Appendix A of this report shows the average monthly energy usage, average monthly coincident peak (CP) demand, average monthly non-coincident (NCP) demand, coincident factor, CP load factor, and NCP load factor for each school taking service under KU's Optional Pilot Rates for Schools. Appendix B shows the same information for each school taking service under LG&E's Optional Pilot Rates for Schools. Each row of these reports corresponds to data for a single school taking service under the Optional Pilot Rates for Schools. The names of the individual school have been omitted from these reports.

The CP demands are important because they represent each school's demand during the hour of KU and LG&E's combined monthly system peak. Because KU and LG&E must install or purchase sufficient generation capacity to meet their combined system peak demands, CP demands are important determinants of the Utilities' cost of providing service, particularly production demand-related costs. NCP demands represent the maximum monthly demand of each customer. NCP demands are important because KU and LG&E must install delivery capacity (transmission and distribution capacity) to serve each customer's maximum demand. Both CP and NCP demands are utilized to allocate costs in KU and LG&E's

class cost of service studies. *Coincidence factor* represents the ratio of the customer's CP demand to its NCP demand and, therefore, provides a measure of whether a maximum demand occurs at the time of KU and LG&E's combined system peak. In other words, coincidence factor provides information about the portion of a customer's total demand that occurs at the time of the utility's peak load. *Load factor* represents the ratio of a customer's average kWh energy usage to its demand. In Appendix A and B, both CP and NCP load factors are shown. *CP load factor* represents the ratio of the customer's average demand to the customer's NCP demand. Coincidence factors and load factors provide an indication of how cost of service might differ from one customer to another. For example, with everything else being equal, it would cost more to serve a customer with a high coincidence factor. Likewise, it costs more *ceteris paribus* to serve a customer with a low load factor than one with a high load factor.

Load Factor and Coincident Factor Analysis

The following table compares the average coincidence factors, CP load factors, and NCP load factors for the customers served under the Optional Rates for Schools to a random sample of customers taking service under KU's standard rate schedules (Rate PS, Rate TODS, and Rate TODP).

Kentucky Utilities Company							
	Customers Taking Service Under the Pilot Rates for Schools	Sample of Customers Taking Service Under Standard Rates					
Average Coincidence Factor	0.674012	0.707894					
Average CP Load Factor	0.680610	0.744180					
Average NCP Load Factor	0.458739	0.526757					

As can be seen from the above table, the average coincidence factor for the customers taking service under the Pilot Rates for Schools is slight lower than the coincidence factor for the random sample of non-school customers taking service under KU's standard rate schedule. The average CP and NCP load factors for the customers taking service under the Pilot Rates for Schools are also slightly lower than KU's non-school customers.

Louisville Gas and Electric Company						
	Customers Taking Service Under	Sample of Customers Taking				
	the Pilot Rates for Schools	Service Under Standard Rates				
Average Coincidence Factor	0.681444	0.733917				
Average CP Load Factor	0.609078	0.663990				
Average NCP Load Factor	0.415053	0.487314				

As can be seen from the above table, the average coincidence factor for the customers taking service under the Pilot Rates for Schools is slightly lower than the coincidence factor for the random sample of non-school customers taking service under LG&E's standard rate schedule. The average CP and NCP load factors for the customers taking service under the Pilot Rates for Schools are also somewhat lower than LG&E's non-school customers.

Based on this data, there is not a significant difference between the coincidence factors and NCP load factors of customers taking service under the Pilot Rates for Schools and non-school customers taking service under Rates PS, TODS, and TODP. The Coincidence factors, NCP and CP load factors for the schools are lower than for the non-school customers. These results suggest that the schools have not likely modified their load patterns in response to taking service under the Pilot Rates.

LOLP Analysis

In addition to the results discussed in the previous section, the Utilities also evaluated the Loss of Load Probability ("LOLP") for customers taking service under the Pilot Rates for School's compared to that of the non-school customer group. The LOLP methodology mirrors the allocation method which was used in the Utilities' latest Cost of Service Study for allocation of Production-related demand costs. LOLP is a key measure used by KU and LG&E for planning generation resources. LOLP represents the probability that a utility system's total demand will exceed its generation capacity during a given hour. For each customer group, the LOLP was calculated as the hourly load-weighted LOLP for the customer group. LOLP, therefore, takes into consideration the magnitude of the load, installed generation capacity, forced outage rates, maintenance schedules, and ramp-up rates of generating units. LOLP can be calculated for any period – an hour, a day, a week, etc. Specifically, it is used to evaluate the level of reserve margins the Utilities target. Thus, LOLP can be a useful measure of determining whether a class of customers is likely contributing to KU and LG&E's need for additional generating capacity.

LOLP was calculated for each hour of the twelve-month period from November 2017 through October 2018 based on the hourly loads for that period and the characteristics of the Utilities' generating facilities, including capacity, forced outage rates, and maintenance schedules. Hourly loads for the customers taking service under the Pilot Rates for Schools and the non-school customer group were then weighted by the LOLP for each hour to determine LOLP weighted hourly load for each group of customers for both LG&E and KU.

The LOLP is not a directly comparable number from one class to another. To create a measure of LOLP that can be compared across classes of service we calculated two LOLP statistics; 1) LOLP per CP kW, and 2) LOLP per customer. These statistics will allow us to compare effect of LOLP between classes. We calculated the LOLP per CP kW for customers taking service under both Rate SPS and Rate STOD and compared them to the same calculations for non-school customers taking service under the PS and TOD rate schedules for each hour of the evaluation period. We also calculated the total LOLP per customer for each of the rate categories.

	Kentucky Utilities LOLP per CP kW Summary				
	Power Service	TOD Service			
Schools	0.003482	0.003575			
Non - Schools	0.003630	0.003646			

As can be seen from the table above, both the school and non-school sets of customers have similar LOLP per Coincident peak demand on KU's system. The data suggests that from the perspective of production cost allocation, there would be little difference in the production cost allocated to each group and no reason to separate the schools into a different rate category.

	Louisville Gas & Electric LOLP per CP kW Summary				
	Power Service	TOD Service			
Schools	0.004007	0.004019			
Non - Schools	0.003885	0.004371			

The LOLP per CP kW for LG&E's customers also show very similar results, indicating that it would be of little value to create separate rate categories for schools.

	Kentucky Utilities	Louisville Gas & Electric
	Total LOLP per Customer	Total LOLP per Customer
Schools	7.51	7.20
Non - Schools	7.64	7.06

Finally, as can be seen from the table above, the LOLPs per customer for customers taking service under the Pilot Rate for Schools are not materially different from those that take service under the Standard rate schedules. This would lend additional support for there being no meaningful difference between those customers taking service under the Pilot Rate for Schools and customers under the Standard rate schedule for both PS and TOD.

Conclusion

The purpose of creating separate rate classes for groups of customers is to construct a class of customers that have similar load characteristics, and therefore, similar costs of providing service. The characteristics that drive the cost of providing service in a cost of service study are load factor, coincidence factor, and loss of load probability. When rate classes do not contain customers with similar load characteristics, the rate structure does not accurately reflect the cost of providing service to those customers who are dissimilar to the other members of the class. Therefore, it is important that utility rate classes contain reasonably similar customers, so the rates are fair and reasonable for all customers in the class. Conversely, if similar customers are charged different rates so that one group is advantaged over another, those rates are discriminatory because they are not based on the cost of providing service.

Examining the comparative load factors, coincidence factors, LOLP per CP kW, and LOLP per customer leads to the conclusion that the schools have very similar load characteristics, and therefore, very similar cost of service, as the other customers in the PS and TOD rate schedules. There is no evidence that creating a separate rate for schools would result in an improvement in fairness or equity of the rates for the schools or of the rates for the remaining non-school customers. Furthermore, given their similar load characteristics as non-school customers, the results of this analysis suggest that the schools have not likely modified their loads in response to taking service under the Pilot Rates.

In contrast to the similarities between the schools and other members of the PS and TOD rates, the same statistics show significant differences when comparing different classes to each other. The table below shows the LOLP per customer, LOLP per CP kW, NCP Load Factor, and 12 CP Load Factor for each class on LG&E's system. It is important to note the significant variability in many of these statistics from class to class compared with the variability in the same statistics between schools and non-schools in the PS and TOD classes. Significant variation in some, or all, of these statistics indicate the necessity for a separate rate schedule. The same variability is not present when comparing the schools to other customers served under Rates PS and TOD.

Louisville Gas and Electric Company								
		LOLP Per	LOLP Per	NCP	12 CP			
Rate Class		Customer	CP kW	Load Factor	Load Factor			
Residential Rate RS		0.228	0.008046	14.5%	53.3%			
General Service Rate GS		0.445	0.007336	25.1%	63.0%			
Power Service Primary		19.766	0.006800	32.0%	79.7%			
Power Service Secondary		7.792	0.006446	37.0%	68.1%			
TOD Primary		168.684	0.007026	40.3%	90.8%			
TOD Secondary		33.915	0.006649	39.5%	73.5%			
Retail Transmission Service		712.112	0.006005	47.9%	93.9%			
Special Contract		252.352	0.005826	32.8%	90.1%			
Street Lighting Rate (RLS & LS)		0.001	0.001462	42.4%	281.8%			
Lighting Energy Rate LE		0.017	0.001415	40.2%	272.7%			
Traffic Energy Rate TLE		0.028	0.005724	85.5%	95.3%			
Outdoor School Lighting		0.113	0.005412	2.7%	157.9%			

As can be seen from the above table, there are significant differences in the LOLP and load-factor statistics from one class to another. These differences do not exists between the customers served under School Power Service and Power Service, and between School Time-of-Day Service and Time-of-Day Service.

Kentucky Utilities								
	LOLP Per	LOLP Per	NCP	12 CP

Outdoor Sports Lighting Rate OSL	0.340	0.003357	4.7%	84.6%				

Below are the same statistics for the rate classes on KU's system:

Again, this table indicates significant differences in the LOLP and load-factor statistics from one class to another. These same differences do not exist between the customers served under School Power Service and Power Service, and between School Time-of-Day Service and Time-of-Day Service.

The class statistics for LG&E and KU indicate that the load characteristics that would create significant cost differences in those rate classes are simply not present between schools and non-school customers in the PS and TOD rates. The data suggests that the PS and TOD rate classes are the appropriate classes under which the schools should be served.

Polar Vortex Triggers Coldest Arctic Outbreak in at Least Two Decades in Parts of the Midwest

By weather.com meteorologists - January 31 2019 07:00 PM EDT - weather.com

01:11

Deadly Cold Kills at Least 11 People, Shuts Down Cities

The deadly polar vortex-triggered arctic temperatures are over, but the temperatures left shutdown cities, power outages, flight cancelations and several deaths in their wake.

At a Glance

- Extreme cold in the Midwest broke numerous daily records and a few all-time records.
- · For some in the upper Midwest, it was the coldest outbreak since the 1990s.
- · A preliminary all-time state record low may have been set in Illinois.
- · While not as cold, some bitterly cold air also filtered into the Northeast.

The arctic cold outbreak of January 2019 will go down as the coldest in parts of the upper Midwest since the 1990s, shattering numerous daily records and even topping a few all-time cold records, while creating wind chills as cold as the 60s below zero.

(NEWS: Impacts From the Cold Outbreak)

Mount Carroll, Illinois, may have set a new all-time record low for the state of Illinois Thursday morning, Jan. 31, with a temperature of minus 38 degrees.

An ad hoc state climate extremes committee will examine the data and determine whether it will officially be accepted as a new state record, which would beat the <u>current all-time Illinois</u> cold record of minus 36 degrees set Jan. 5, 1999, in Congerville. A second location, Morrison, preliminarily tied the all-time record of minus 36 degrees.

At least four locations tied or set all-time record lows:

- Minus 43 degrees northwest of Mather, Wisconsin, on Wednesday, Jan. 30, tied the all-time low at that location in records dating to 1903.
- Minus 33 degrees Thursday morning, Jan. 31, in Moline, Illinois, shattered the alltime record low of minus 28 degrees from Feb. 3, 1996.
- Minus 31 degrees in Rockford, Illinois, Thursday morning, Jan. 31, topped its previous record of minus 27 degrees from Jan. 10, 1982.
- Minus 30 degrees in Cedar Rapids, Iowa, Thursday morning, Jan. 31, beat the previous all-time record of minus 29 degrees.

At least 340 daily cold records were broken or tied in the Midwest alone from Jan. 30 through Jan. 31, according to the Midwest Regional Climate Center.

Among the daily record lows set on Jan. 31 were Grand Forks, North Dakota (minus 32 degrees), Detroit (minus 14 degrees), La Crosse, Wisconsin (minus 33 degrees), Pittsburgh (minus 5 degrees) and several other locations.

The coldest temperature early Jan. 31 was minus 56 degrees in Cotton, Minnesota. That was just a few degrees short of the state's all-time record low of minus 60 degrees set in Tower on Feb. 2, 1996. NWS-Duluth meteorologist Joe Moore told The Wall Street Journal that <u>only</u> some morning fog limited how far the temperature plunged at the observation site in Cotton.

One instigator for this outbreak of cold air was a displacement of a lobe of the polar vortex to a position over the Great Lakes, according to a <u>wunderground.com blog entry</u> from Jeff Masters and Bob Henson.

Other Late-January Cold Plunge Notables

Here are some other notables about this cold outbreak:

 Minus 23 degrees Wednesday, Jan. 30, at Chicago's O'Hare Airport was its coldest temperature in 34 years, when its all-time record low of minus 27 degrees was set.
Chicago O'Hare was below zero for 52 straight hours, the fourth longest streak on record, there, according to the National Weather Service.

 Minus-60s wind chills were recorded in parts of Minnesota, North Dakota and northeastern Iowa Tuesday night, Jan. 29, into Wednesday, Jan. 30. Minus 66 degrees was the coldest wind chill observed in this arctic outbreak in Ponsford, Minnesota, Tuesday evening, Jan. 29.

 Minus-50s wind chills were observed Wednesday morning, Jan. 30, as far south as central Illinois and northwestern Indiana, including much of Chicagoland and the Milwaukee metro area.

 Numerous daily record lows for Jan. 30 were set from the Midwest into parts of the Northeast.

 Minus 49 degrees was reported west of Rugby, North Dakota, Wednesday morning, Jan. 30. Lake Metigoshe State Park plunged to minus 46 degrees.

 Minus 20 degrees in Des Moines, Iowa, Wednesday, Jan. 30, was its first temperature in the minus 20s since Feb. 4, 1996.

 Minus 26 degrees Monday morning, Jan. 28, at the National Weather Service office outside of Marquette, Michigan, smashed a daily record low set in 2014.

 A minus-82-degree wind chill was observed Monday, Jan. 28, in northern Manitoba and southern Nunavut, Canada, according to the National Weather Service.

 Minus 46 degrees Sunday morning, Jan. 27, in International Falls, Minnesota, set a daily record low. This also tied as the fifth-coldest temperature on record there for any day of the year.

 Minus 23 degrees in Madison, Wisconsin, Saturday, Jan. 26, was the coldest morning there since Feb. 3, 1996. Madison was even colder Wednesday, Jan. 27, and Thursday, Jan. 28, when the low fell to minus 26 degrees.

Mathematical Equivalency Between Net Cost Rate Base and Lead-Lag Results

The following shows the mathematical equivalency between (i) the net book value of an asset included in rate base and (ii) an equivalent cash-working capital related to capital expenditures related to the asset using lead-lags. This proof assumes that the average service life (ASL) of the property is equal to the depreciable life of the asset. The proof also assumes a net salvage value of zero. A proof could also be constructed using a survivor curve (i.e., probability dispersion function such as an Iowa Curve) for the property, but the results would be the same; however, advanced calculus or numerical integration techniques would be required to integrate the survivor curve over the remaining life of the asset. The following example demonstrates the equivalency net book value amount and the equivalent cash working capital amount for an asset using simple algebra rather than calculus.

Let:

NBV	represents the net book value included in rate base
ос	represents the up-front capital expenditure (of Original Cost) of some utility property;
SL	represents the average service life (ASL) and depreciable life of the property
СҮ	represents the current year
ECWC	represents the equivalent cash working cash working capital amount using lead-lag

Net Book Value Included in Rate Base

For a current year (CY), the net book value (NBV) for utility property is determined as follows:

$$NBV = OC - CY \times \left(\frac{OC}{SL}\right)$$
$$= OC \left(1 - \frac{CY}{SL}\right)$$

Equivalent cash working capital

ECWC related to the capital expenditures for the utility property is calculated using expense lags (i.e. negative expense leads) as follows. In developing the following formula, it is assumed that a calendar

year consists of 365 days (i.e., leap years are ignored). ECWC is determined as follows by multiplying (1) the up-front expenditures incurred for the asset (i.e., the OC of the asset) per day over the service life of the asset by (2) the lag days for depreciation for the remaining service life of the asset:

$$ECWC = \frac{OC}{365 \, x \, SL} (SL \, x \, 365 - 365 \, x \, CY)$$

By cancelling out the number of days during the year (i.e. 365) and rearranging terms (i.e., bringing SL inside the parenthesis) we have:

$$ECWC = \frac{OC}{SL}(SL - CY)$$
$$= OC\left(1 - \frac{CY}{SL}\right)$$

Conclusion

As shown above, the equivalent cash working capital amount (ECWC) calculated for the capital expenditures of an asset equals the net book value of the asset. Therefore, by including net utility plant in rate base, the cash working capital for depreciation has been fully accounted. Because net utility plant accounts for the expense lags via depreciation expense, it is appropriate to assume zero days for the expense lags in the lead-lag study. But assuming zero expense lags in the lead-lag study does not mean that expense lags for depreciation expense are not accounted. Expense lags for depreciation expenses are simply captured another way – viz., by including net plant in rate base. Therefore, because depreciation and pension expense lags are captured just like any other expense, it is appropriate to include revenue lags for these accruals.

KENTUCKY UTILITIES COMPANY

Response to Commission Staff's Second Request for Information Dated November 13, 2018

Case No. 2018-00294

Question No. 20

Responding Witness: William Steven Seelye

- Q-20. Refer to the Seelye Testimony, pages 102-103. Here, Mr. Seelye explains that the cash working capital methodology proposed by KU, in this case, is the same Lead/Lag methodology approved by the Virginia State Corporation Commission.
 - a. Provide a comparative analysis between the Lead/Lag methodology proposed by KU in this proceeding to the methodology proposed by Atmos in Case No. 2015-00343.¹ Include in this analysis detailed explanations for any differences between the two methodologies.
 - b. Provide a comparative analysis between the Lead/Lag methodology proposed by KU in this proceeding to the methodology proposed by Kentucky-American Water and accepted by the Commission in Case No. 2012-00520.² Include in this analysis detailed explanations for any differences between the two methodologies.
- A-20.
- a. Based on a review of the testimony and workpapers filed by Atmos in Case No. 2015-00343, it does not appear that a lead-lag study was submitted in that proceeding. Attachment 1 of Atmos's Filing Requirement (FR_16(8)(b), Attachment 1) indicates that the 1/8th O&M Method for Cash Working Capital was utilized. The Companies reviewed workpapers and responses to data requests submitted by Atmos in Case No. 2015-00343 and could not find where Atmos had submitted a lead-lag study.

In his testimony filed in Case No. 2015-00343, Atmos's witness Gregory K. Waller states: "The components of rate base are: net plant in service, construction work in progress, cash working capital calculated using the 1/8 O&M expense method, plus an allowance for other working capital items consisting of materials and supplies, gas stored underground, and prepayments,

¹ Case No. 2015-00343, Application of Atmos Energy Corporation for an Adjustment of Rates and Tariff Modifications (Ky. PSC Aug. 4, 2016).

² Case No. 2012-00520, Application of Kentucky-American Water Company for an Adjustment of Rates Supported by a Fully Forecasted Test Year (Ky. PSC Oct. 25, 2013).

Seelye

less customer advances for construction and deferred income taxes." (Testimony of Gregory K. Waller, at p. 7.)

b. The Companies reviewed the testimony, exhibits and responses to data requests filed by Kentucky-American Water Company ("KY-Amer") in Case No. 2012-00520 supporting its lead-lag study. Based on the information that was filed by KY-Amer, the Companies could only perform a high-level review of KY-Amer's lead-lag study. However, the methodology for calculating expense lead days, as supported by Exhibit 37, Schedule B-5.2 of KY-Amer's Filing Requirement, and as described in the Direct Testimony submitted by Linda C. Bridwell, generally appears to be the same as used by the Company. Specifically, Schedule B-5.2 breaks out the expense categories similarly to KU and LG&E. Also, similar to LG&E and KU, KY-Amer assumed zero lead days for accrual items such as depreciation expenses, amortization expenses, and deferred income taxes. The methodology for calculating revenue lag days also appears to be similar. Differences the Companies observed are potential leadlag day differences for pension and OPEB, uncollectibles, and net income. The Companies included working capital for pension and OPEB as a balance sheet item in rate base (see Schedule B-5.2 filed with the Companies' Application). The Companies included uncollectibles expense in the determination of leadlag results but did not include net income in the determination of lead-lag results. Also, the Companies included pass-through items, (i.e., school tax, sales tax, and franchise fees) in their lead-lag studies; however, KY-Amer did not appear to include these pass-through items in its lead-lag study.

Rebuttal Exhibit WSS-6

KENTUCKY UTILITIES COMPANY

February 21, 2019 Supplemental Response to Attorney General's Initial Data Requests for Information Dated November 13, 2018

Case No. 2018-00294

Question No. 59

Responding Witness: William Steven Seelye

- Q-59. Schedule B-5.1 reports the inclusion of Fuel Stock, Gas Stored Underground, Materials and Supplies, and Prepayments under Other Working Capital Allowances on Schedule B-1. Have the test period operating expenses associated with these items been removed from cash working capital determined under the lead-lag method on Schedule B-5.2?
 - a. If the response is in the affirmative, explain why there are lagged expenses related to Fuel, Non-Fuel Commodities, Purchased Power, and Purchased Gas in cash working capital, as computed under the lead-lag method.
 - b. If the response is in the negative,
 - i. Explain why not removing the related expense from cash working capital under the lead-lag method does not lead to double counting in rate base?
 - ii. Provide the related expense reflected in each lagged item on Schedule B-5.2 for the forecast test year.

A-59. Original Response:

No.

- a. Not applicable.
- b.
 - i. Removing these expense items from the analysis of expense leads would increase cash working capital. For example, for coal expenditures the expense lead was determined as the difference between the time the coal is recorded in inventory and when the payment for the coal clears the Company's bank account. This difference results in positive expense lead days, which reduces cash working capital. Schedule B-5.1 includes inventory and prepayment amounts for which the Company incurs carrying costs until expensed in connection with providing service to customers. Therefore, there is no double counting in rate base because the cash working capital determined from the expense lead calculation in the lead/lag study and the
prepayment or inventory items included in rate base measure two different and offsetting timing differences.

ii. Fuel and gas expenses are separately identified on Schedule B-5.2. Information is not readily available to determine the expense amounts attributable to Prepayments and Materials and Supplies.

February 21, 2019 Supplemental Response:

No, except for prepayments. Rate base prepayments were not included in the determination of expense lead days in the lead-lag study.

- a. Not applicable.
- b.
 - i. Removing these expense items from the analysis of expense leads would increase cash working capital. For example, for coal expenditures the expense lead was determined as the difference between the time the coal is recorded in inventory and when the payment for the coal clears the Company's bank account. This difference results in positive expense lead days, which reduces cash working capital. Schedule B-5.1 includes inventory and prepayment amounts for which the Company incurs carrying costs until expensed in connection with providing service to customers. Therefore, there is no double counting in rate base because the cash working capital determined from the expense lead calculation in the lead/lag study and the prepayment or inventory items included in rate base measure two different and off-setting timing differences.
 - ii. Fuel and gas expenses are separately identified on Schedule B-5.2. Information is not readily available to determine the expense amounts attributable to Prepayments and Materials and Supplies.
