

KENTUCKY UTILITIES COMPANY

**February 15, 2019 Supplemental Response to First Request for Information of the
U. S. Department of Defense
Dated November 13, 2018**

Case No. 2018-00294

Question No. 3

Responding Witness: Daniel K. Arbough / Adrien M. McKenzie

Q-3. Please provide copies of all publications and credit reports referenced in or considered by witnesses Mr. McKenzie and Mr. Arbough. This is an ongoing request for all subsequent testimonies filed by these witnesses.

A-3. **Original Response:**

See Exhibit DKA-3 of Mr. Arbough's Direct Testimony (Moody's Rating Methodology, Regulated Electric and Gas Utilities, dated June 23, 2017).

See Exhibit DKA-4 of Mr. Arbough's Direct Testimony (S&P Corporate Methodology and Key Credit Factors for the Regulated Utilities Industry, dated November 19, 2013).

See Exhibit DKA-5 of Mr. Arbough's Direct Testimony (Moody's Outlook on Utility Industry, dated June 18, 2018).

With the exception of court and regulatory decision and publications of federal agencies, which are publicly available from the respective sources, copies of all publications and source documents cited in Mr. McKenzie's testimony are attached.

February 6, 2019 Supplemental Response:

Attached is a recent rating action report issued by Moody's Investors Service and is supplemental information being provided by Mr. Arbough.

February 15, 2019 Supplemental Response:

Attachment 1 and Attachment 2 are recent rating action reports issued by Standard & Poor's Financial Services and are supplemental information being provided by Mr. Arbough.

Outlook: Stable

The stable rating outlook on KU reflects S&P Global Ratings' outlook on its parent, PPL Corp. (PPL).

This stable outlook over the next 24 months is based on the company's excellent business risk profile, which we view to be at the upper end of the range, and significant financial risk profile, which is at the lower end of the range. Under our base-case scenario, we expect that adjusted funds from operations (FFO) to debt will range from 13%-14%, while adjusted debt to EBITDA will remain elevated at over 5x.

Downside scenario

We could lower the ratings over the next 24 months on PPL and its subsidiaries if core credit ratios weakened enough that adjusted FFO to debt fell below 13% on a consistent basis while still at the current level of business risk.

Upside scenario

Given our assessment of business risk and our base-case scenario for financial performance, we do not anticipate higher ratings on PPL and its subsidiaries during the outlook period. However, higher ratings would largely depend on PPL consistently achieving FFO to debt of more than 18% over the next 12-18 months, while maintaining the current level of business risk.

Our Base-Case Scenario

Assumptions	Key Metrics			
<ul style="list-style-type: none"> Gross margin growth in 2019 driven by modest volume growth and ongoing rate recovery for capital spending including on environmental-compliance equipment; High average capital spending of \$585 million per year for upgrading generation infrastructure to meet environmental standards and for improvements to transmission and distribution assets; and All debt maturities refinanced. 	2018E	2019E	2020E	
	Adjusted FFO to debt (%)	19-21	19-21	21-23
	Adjusted FFO cash interest coverage (X)	6.7-7.3	6.5-7.1	7.2-7.8
	Adjusted debt to EBITDA	3.6-4.0	3.6-4.0	3.2-3.6
E--Estimate. FFO--Funds from operations.				

Base-case projections

- After dividends and elevated capital spending, discretionary cash flow that is negative will be largely debt funded.
- Adjusted FFO to debt around 20%, but improving over time after incremental cost recovery; and

- Debt leverage, as indicated by debt to EBITDA, remains in the 3x-4x area.

Company Description

KU is a vertically integrated electric utility providing service to about 550,000 customers that are mostly in Kentucky.

Business Risk: Excellent

We assess KU's business risk profile based on the company's regulated integrated utility operations under Kentucky's generally constructive regulatory framework, which provides for the timely recovery of approved capital expenditures.

KU has moderate scale with 550,000 customers and limited geographic diversity since it operates almost entirely in Kentucky. The customer mix is mostly residential and commercial, which can insulate the company from fluctuations in electricity demand and also supports relatively stable operating cash flow.

The company has generation capacity of about 5,000 megawatts, including sizeable coal-fired capacity. However, KU has been upgrading its coal units to comply with environmental regulations. KU can recover the costs for these upgrades through an environmental cost recovery mechanism, which limits regulatory lag and supports the credit profile. Under Kentucky Public Service Commission regulation, the company benefits from other recovery mechanisms such as a pass-through fuel cost and a purchased power cost recovery rider. These mechanisms help stabilize the company's operating cash flow. Moreover, the company's low-cost, coal-fired generation and efficient operations contribute to competitive rates for customers.

Peer comparison

KU is in line with peers such as Kentucky Power, Appalachian Power, and Louisville Gas & Electric (LG&E) given the similar coal-fired generation profiles and environmental compliance spending obligations. KU has approximately 550,000 customers, which compares more favorably to Kentucky Power (which has 170,000) and LG&E (which has 400,000, but it is smaller than Appalachian Power, which has one million customers. Kentucky Power has greater industrial customer exposure with about one-half of energy sales coming from industrial customers. Whereas KU benefits from a higher level of residential and commercial customers, which contributes to steadier cash flows. All companies use regulatory mechanisms to recover environmental spending costs, pass through fuel costs, and for purchased power cost recovery. The mechanisms contribute to more robust operating cash flow and more predictable returns.

Discretionary cash flow/debt (%)	(0.4)	0.5	(1.4)	(5.3)
FFO--Funds from operations.				

Financial Risk: Significant

Under our base-case scenario, we project that KU's adjusted FFO to debt will be in the 19%-21% range, near the upper end the benchmark range. Bolstering the financial risk profile determination is the supplemental ratio of adjusted FFO cash interest coverage in the 6.5x-7.5x range. Over the next few years, we expect credit measures to benefit from the use of regulatory mechanisms to recover its invested capital cost. We expect continued capital spending averaging \$585 million per year, when combined with the utility's dividend, will result in discretionary cash flow that is negative. To offset the negative cash flow, we expect external funding such as debt issuances and cash injections within the PPL group. We do expect debt leverage to be relatively modest for a regulated utility as indicated by debt to EBITDA averaging about 3.5x over the next few years.

We assess KU's financial risk profile as significant using our medial table financial benchmarks, which are more moderate than the typical corporate issuer, accounting for the company's low-risk regulated electric utility operations, steady cash flow, and effective regulatory risk management.

FFO--Funds from operations.

Liquidity: Adequate

We assess KU's standalone liquidity as adequate because we believe its liquidity sources will likely cover uses by more than 1.1x over the next 12 months and meet cash outflows even if EBITDA declines 10%. We view KU as having sound bank relationships, the ability to absorb high-impact, low probability events without the need for refinancing, and a satisfactory standing in credit markets.

Principal Liquidity Sources	Principal Liquidity Uses
<ul style="list-style-type: none"> • Cash and liquid investments of about \$30 million • Revolving credit facility availability of \$400 million • Estimated cash FFO of \$615 million 	<ul style="list-style-type: none"> • Debt maturities of about \$95 million • Capital spending of about \$475 million • Dividends of \$230 million

Debt maturities

- 2019: \$96 million
- 2020: \$500 million
- 2021: \$0 million
- 2022: \$0 million

Covenant Analysis

Compliance expectations

As of Sept. 30, 2018, KU was in compliance with the financial covenants in its credit facilities and had sufficient cushion. Under our base-case scenario, we expect KU will remain in compliance with these covenants, especially given the stability of regulated utility operations. We expect that even if forecast EBITDA declined 10% the company would remain in compliance with the covenants.

Requirements

- Total debt-to-capitalization ratio of 70% or less.
- The covenant thresholds remain unchanged through the credit facility's expiration in January of 2023.

Environmental, Social, And Governance

Environmental factors are material in our rating analysis, while social and governance factors are not.

Most of the total generation capacity--about 5,000 megawatts--is coal-fired, representing an environmental risk factor. By 2050, PPL intends to reduce its carbon footprint by 70%. In Kentucky, the company is seeking a green energy tariff that would help grow renewable energy. The company expects to replace much of its coal-based generation with a combination of natural gas and renewables.

Social factors are neutral to our ESG assessment and are consistent with what we see across the industry for other publicly traded utilities. By pursuing greater renewable generation, the company is meeting customer demand for greener energy. Governance factors are also neutral to our ESG assessment and its governance practices are consistent with what we see across the industry for other publicly traded utilities.

Group Influence

Under our group rating methodology we consider KU a core subsidiary of parent PPL, reflecting our view that KU is unlikely to be sold, is integral to the group's overall strategy, possesses a strong long-term commitment from senior management, and is closely linked to the parent's name and reputation. As a result, the issuer credit rating on KU is 'A-', in line with the group credit profile of 'a-'.

Issue Ratings - Subordination Risk Analysis

The short-term rating on KU is 'A-2', based on the issuer credit rating.

Issue Ratings - Recovery Analysis

Key analytical factors

KU's first-mortgage bonds benefit from a first-priority lien on substantially all of the utility's real property, owned or subsequently acquired. Collateral coverage of over 1.5x supports a recovery rating of '1+' and an issue rating one notch above the issuer credit rating.

Summary:

Kentucky Utilities Co.

Credit Highlights

Overview

Key strengths	Key risks
Fully regulated vertically-integrated electric utility.	Limited geographic diversity and relatively small customer base.
Constructive and credit supportive regulatory framework.	Moderate operational and environmental risk relating to coal-fired generation.
Strengthening financial measures in 2019 benefiting from various cost recovery mechanisms.	Negative discretionary cash flow, in part reflecting greater capital spending.

Kentucky Utilities Co. (KU) operates under credit-supportive framework.

Kentucky has a constructive regulatory framework that provides for the timely recovery of approved capital expenditures, as well as pass-through fuel cost mechanisms and various operating expenses recoveries.

Debt leverage remains modest for regulated utilities overall.

Over the next few years, debt leverage, as indicated by debt to EBITDA, is expected to remain in the mid- to high-3x range, modest for regulated utilities, in part from timely cost recovery.

Capital spending has remained elevated as a result of environmental compliance.

The company has had higher capital spending to comply with the Environmental Protection Agency's (EPA's) Clean Air Act rules for coal combustion waste and byproducts created through coal-fired generation. KU is entitled to cost recovery through an environmental cost recovery mechanism.

Outlook: Stable

The stable rating outlook on KU reflects S&P Global Ratings' outlook on its parent, PPL Corp. (PPL).

This stable outlook over the next 24 months is based on the company's excellent business risk profile, which we view to be at the upper end of the range, and significant financial risk profile, which is at the lower end of the range. Under our base-case scenario, we expect that adjusted funds from operations (FFO) to debt will range from 13%-14%, while adjusted debt to EBITDA will remain elevated at over 5x.

Downside scenario

We could lower the ratings over the next 24 months on PPL and its subsidiaries if core credit ratios weakened enough that adjusted FFO to debt fell below 13% on a consistent basis while still at the current level of business risk.

Upside scenario

Given our assessment of business risk and our base-case scenario for financial performance, we do not anticipate higher ratings on PPL and its subsidiaries during the outlook period. However, higher ratings would largely depend on PPL consistently achieving FFO to debt of more than 18% over the next 12-18 months, while maintaining the current level of business risk.

Our Base-Case Scenario

Assumptions	Key Metrics			
<ul style="list-style-type: none"> Gross margin growth in 2019 driven by modest volume growth and ongoing rate recovery for capital spending including on environmental-compliance equipment; High average capital spending of \$585 million per year for upgrading generation infrastructure to meet environmental standards and for improvements to transmission and distribution assets; and All debt maturities refinanced. 	2018E	2019E	2020E	
	Adjusted FFO to debt (%)	19-21	19-21	21-23
	Adjusted FFO cash interest coverage (X)	6.7-7.3	6.5-7.1	7.2-7.8
	Adjusted debt to EBITDA	3.6-4.0	3.6-4.0	3.2-3.6
E--Estimate. FFO--Funds from operations.				

Base-case projections

- After dividends and elevated capital spending, discretionary cash flow that is negative will be largely debt funded.
- Adjusted FFO to debt around 20%, but improving over time after incremental cost recovery; and

- Debt leverage, as indicated by debt to EBITDA, remains in the 3x-4x area.

Company Description

KU is a vertically integrated electric utility providing service to about 550,000 customers that are mostly in Kentucky.

Business Risk: Excellent

We assess KU's business risk profile based on the company's regulated integrated utility operations under Kentucky's generally constructive regulatory framework, which provides for the timely recovery of approved capital expenditures.

KU has moderate scale with 550,000 customers and limited geographic diversity since it operates almost entirely in Kentucky. The customer mix is mostly residential and commercial, which can insulate the company from fluctuations in electricity demand and also supports relatively stable operating cash flow.

The company has generation capacity of about 5,000 megawatts, including sizeable coal-fired capacity. However, KU has been upgrading its coal units to comply with environmental regulations. KU can recover the costs for these upgrades through an environmental cost recovery mechanism, which limits regulatory lag and supports the credit profile. Under Kentucky Public Service Commission regulation, the company benefits from other recovery mechanisms such as a pass-through fuel cost and a purchased power cost recovery rider. These mechanisms help stabilize the company's operating cash flow. Moreover, the company's low-cost, coal-fired generation and efficient operations contribute to competitive rates for customers.

Peer comparison

KU is in line with peers such as Kentucky Power, Appalachian Power, and Louisville Gas & Electric (LG&E) given the similar coal-fired generation profiles and environmental compliance spending obligations. KU has approximately 550,000 customers, which compares more favorably to Kentucky Power (which has 170,000) and LG&E (which has 400,000, but it is smaller than Appalachian Power, which has one million customers. Kentucky Power has greater industrial customer exposure with about one-half of energy sales coming from industrial customers. Whereas KU benefits from a higher level of residential and commercial customers, which contributes to steadier cash flows. All companies use regulatory mechanisms to recover environmental spending costs, pass through fuel costs, and for purchased power cost recovery. The mechanisms contribute to more robust operating cash flow and more predictable returns.

Financial Risk: Significant

Under our base-case scenario, we project that KU's adjusted FFO to debt will be in the 19%-21% range, near the upper end the benchmark range. Bolstering the financial risk profile determination is the supplemental ratio of adjusted FFO cash interest coverage in the 6.5x-7.5x range. Over the next few years, we expect credit measures to benefit from the use of regulatory mechanisms to recover its invested capital cost. We expect continued capital spending averaging \$585 million per year, when combined with the utility's dividend, will result in discretionary cash flow that is negative.

To offset the negative cash flow, we expect external funding such as debt issuances and cash injections within the PPL group. We do expect debt leverage to be relatively modest for a regulated utility as indicated by debt to EBITDA averaging about 3.5x over the next few years.

We assess KU's financial risk profile as significant using our medial table financial benchmarks, which are more moderate than the typical corporate issuer, accounting for the company's low-risk regulated electric utility operations, steady cash flow, and effective regulatory risk management.

Liquidity: Adequate

We assess KU's standalone liquidity as adequate because we believe its liquidity sources will likely cover uses by more than 1.1x over the next 12 months and meet cash outflows even if EBITDA declines 10%. We view KU as having sound bank relationships, the ability to absorb high-impact, low probability events without the need for refinancing, and a satisfactory standing in credit markets.

Principal Liquidity Sources	Principal Liquidity Uses
<ul style="list-style-type: none"> Cash and liquid investments of about \$30 million Revolving credit facility availability of \$400 million Estimated cash FFO of \$615 million 	<ul style="list-style-type: none"> Debt maturities of about \$95 million Capital spending of about \$475 million Dividends of \$230 million

Debt maturities

- 2019: \$96 million
- 2020: \$500 million
- 2021: \$0 million
- 2022: \$0 million

Covenant Analysis

Compliance expectations

As of Sept. 30, 2018, KU was in compliance with the financial covenants in its credit facilities and had sufficient cushion. Under our base-case scenario, we expect KU will remain in compliance with these covenants, especially given the stability of regulated utility operations. We expect that even if forecast EBITDA declined 10% the company would remain in compliance with the covenants.

Requirements

- Total debt-to-capitalization ratio of 70% or less.
- The covenant thresholds remain unchanged through the credit facility's expiration in January of 2023.

Environmental, Social, And Governance

Environmental factors are material in our rating analysis, while social and governance factors are not.

Most of the total generation capacity--about 5,000 megawatts--is coal-fired, representing an environmental risk factor. By 2050, PPL intends to reduce its carbon footprint by 70%. In Kentucky, the company is seeking a green energy tariff that would help grow renewable energy. The company expects to replace much of its coal-based generation with a combination of natural gas and renewables.

Social factors are neutral to our ESG assessment and are consistent with what we see across the industry for other publicly traded utilities. By pursuing greater renewable generation, the company is meeting customer demand for greener energy. Governance factors are also neutral to our ESG assessment and its governance practices are consistent with what we see across the industry for other publicly traded utilities.

Group Influence

Under our group rating methodology we consider KU a core subsidiary of parent PPL, reflecting our view that KU is unlikely to be sold, is integral to the group's overall strategy, possesses a strong long-term commitment from senior management, and is closely linked to the parent's name and reputation. As a result, the issuer credit rating on KU is 'A-', in line with the group credit profile of 'a-'.

Issue Ratings - Subordination Risk Analysis

The short-term rating on KU is 'A-2', based on the issuer credit rating.

Issue Ratings - Recovery Analysis

Key analytical factors

KU's first-mortgage bonds benefit from a first-priority lien on substantially all of the utility's real property, owned or subsequently acquired. Collateral coverage of over 1.5x supports a recovery rating of '1+' and an issue rating one notch above the issuer credit rating.

Ratings Score Snapshot

Issuer Credit Rating

A-/Stable/A-2

Business risk: Excellent

- **Country risk:** Very low
