

COMMONWEALTH OF KENTUCKY
BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

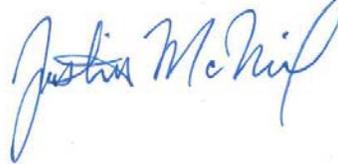

ELECTRONIC APPLICATION OF)
KENTUCKY-AMERICAN WATER) CASE NO. 2018-00358
COMPANY FOR AN ADJUSTMENT)
OF RATES)

**ATTORNEY GENERAL AND LEXINGTON-FAYETTE URBAN COUNTY
GOVERNMENT'S RESPONSES TO DATA REQUESTS FROM KENTUCKY-
AMERICAN WATER COMPANY**

Comes now the intervenor, the Attorney General of the Commonwealth of Kentucky, by and through his Office of Rate Intervention (“Attorney General”), and Lexington-Fayette Urban County Government (“LFUCG”), by and through counsel, submits the following responses to data requests from Kentucky-American Water Company (“KAW”) in the above-styled matter.

Respectfully submitted,

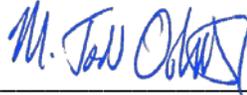

ANDY BESHEAR
ATTORNEY GENERAL

JUSTIN M. McNEIL
KENT A. CHANDLER
LAWRENCE W. COOK
REBECCA W. GOODMAN
ASSISTANT ATTORNEYS GENERAL

Attorneys for Lexington-Fayette Urban County Government

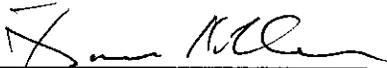

The Attorney General and LFUCG object to instruction paragraph number 1 of KAW's propounded data requests, insofar as the instruction contemplates or expects the parties to produce materials that are not within their current possession, nor directly related to this proceeding. The instruction states that "the production shall be organized and labeled to correspond with the data requests to which they are responsive, regardless of whether these documents and things are possessed directly by you or by your present or past agents, employees, companies, licensees, representatives, investigators, or attorneys." Present agents, or any of the other listed designations, of the parties who are not directly involved in this matter should not be expected to produce materials. Likewise, past agents, or any of the other listed designations, who are not directly involved in this matter should not be expected to produce materials. Any request made with such an expectation would be overly broad in scope and time, and compliance with it would be unduly burdensome and costly to the parties. Such an expectation would be calculated to annoy and harass the parties.

AFFIDAVIT

STATE OF GEORGIA)

COUNTY OF FULTON)

LANE KOLLEN, being duly sworn, deposes and states: that the attached is his sworn testimony and that the statements contained are true and correct to the best of his knowledge, information and belief.

RICHARD A. BAUDINO, being duly sworn, deposes and states: that the attached is his sworn testimony and that the statements contained are true and correct to the best of his knowledge, information and belief.

Richard A. Baudino

Sworn to and subscribed before me on this
12th day of April 2019.

Notary Public

Electronic Application of Kentucky-American Water Company For An Adjustment of Rates
Attorney General and LFUCG's Responses to KAW Data Requests
Case No. 2018-00358

WITNESS/RESPONDENT RESPONSIBLE:

Richard Baudino

Page 1 of 1

QUESTION No. 1

Please provide copies of all testimony prepared by Mr. Baudino for the last 5 years on the cost of capital.

RESPONSE:

Refer to the separately filed testimonies.

WITNESS/RESPONDENT RESPONSIBLE:

Richard Baudino / Counsel as to Objection

Page 1 of 1

QUESTION No. 2

Please provide a summary of Mr. Baudino's recommendations for each case where he has provided testimony on the cost of capital over the past five years. In this summary please include:

- a. Date filed
- b. Docket
- c. Company
- d. Mr. Baudino's recommended ROE
- e. Mr. Baudino's recommended capital structure
- f. Authorized ROE
- g. Authorized capital structure

RESPONSE:

Objection. This request is overly broad and unduly burdensome. The information sought by this request is in the public domain, the location of which has been equally available to Kentucky-American Water since the filing of intervenor testimony. Counsel for Kentucky-American Water can just as easily access the requested information as counsel for the Attorney General and LFUCG. Notwithstanding this objection, refer to Exhibit ___(RAB-1) for a listing of cases, docket and case numbers, date and month of filing of Mr. Baudino's testimony. Further, refer to the copies of testimony provided in response to Question 1 for Mr. Baudino's recommended ROE and capital structure, although Mr. Baudino may not have addressed capital structure in all cases. For the authorized ROE and capital structure in those cases, refer to the Commission web sites for the Commission Orders.

WITNESS/RESPONDENT RESPONSIBLE:

Richard Baudino / Lane Kollen / Counsel as to Objection

Page 1 of 1

QUESTION No. 3

Please provide all exhibits, workpapers and source documents in native format. All Excel files should be working spreadsheets with working formulas.

RESPONSE:

Objection. The question is overly broad and unduly burdensome, as it provides no specific reference or limit. The question is further objectionable in that it fails to provide any reference to the testimony filed with the Commission in this matter, insofar as it actually relates to said testimony. Without any reference, limit or relevant basis, the request is nonsensical as it is provided for the purpose of harassment. Without waiving these objections, and assuming the question is in reference to the direct testimonies of Messrs. Baudino and Kollen, refer to the attached spreadsheets, work papers, and source documents of Mr. Baudino. Mr. Kollen provided all exhibits, workpapers, and source documents along with his Direct Testimony. Note that Mr. Baudino did not include the Value Line reports he used due to copyright restrictions. Mr. Baudino also did not include the pages he cited from *New Regulatory Finance* due to copyright restrictions. This book is available from Public Utility Reports, Inc. Mr. Baudino did not include the pages cited from *A Random Walk Down Wall Street* due to copyright restrictions. This book is available for purchase on Amazon.com. For the material cited in footnotes 1, 3, and 4, the links in the footnotes may be used to access this material. For the Commission Order cited in footnote 22, refer to the Kentucky Public Service Commission's web site.

DUFF & PHELPS

2018 SBBI[®] Yearbook

Stocks, Bonds, Bills, and Inflation[®]

U.S. Capital Markets Performance by
Asset Class 1926–2017

Basic Series Summary Statistics

Exhibit 6.9 presents summary statistics of annual total return, and where applicable, income and capital appreciation, for each asset class. The summary statistics presented here are arithmetic mean, geometric mean, standard deviation, and serial correlation. Exhibit 6.10 presents summary statistics for the six inflation-adjusted total return series.

Exhibit 6.9: Total Returns, Income Returns, and Capital Appreciation Returns of the SBBI® Asset Classes; Summary Statistics of Annual Returns (%) 1926–2017

	<u>Geometric Mean (%)</u>	<u>Arithmetic Mean (%)</u>	<u>Standard Deviation (%)</u>	<u>Serial Correlation</u>
Large-Cap Stocks				
Total Return	10.2	12.1	19.8	0.02
Income	4.0	4.0	1.6	0.91
Capital Appreciation	6.0	7.8	19.1	0.01
Small-Cap Stocks (TR)	12.1	16.5	31.7	0.06
Long-term Corp Bonds (TR)	6.1	6.4	8.3	0.04
Long-term Gov't Bonds				
Total Return	5.5	6.0	9.9	-0.15
Income	5.0	5.0	2.6	0.96
Capital Appreciation	0.4	0.8	8.9	-0.26
Inter-term Gov't Bonds				
Total Return	5.1	5.2	5.6	0.15
Income	4.4	4.4	2.9	0.96
Capital Appreciation	0.6	0.7	4.4	-0.17
U.S. Treasury Bills (TR)	3.4	3.4	3.1	0.92
Inflation	2.9	3.0	4.0	0.64

Exhibit 6.9 shows that over 1926–2017 small-cap stocks were the riskiest asset class with a standard deviation of 31.7%, but provided the greatest rewards to long-term investors, with an arithmetic mean annual return of 16.5%. The geometric mean of the small-cap series is 12.1%. Large-cap stocks, long-term government bonds, long-term corporate bonds, and intermediate-term government bonds are progressively less risky, and have lower average returns. U.S. Treasury bills were nearly riskless and had the lowest return. In general, risk is rewarded by a higher return over the long term.

Forward-Looking Earnings Model

Ibbotson and Chen forecast the equity risk premium through a supply-side model using historical data. They used an earnings model as the basis for their supply-side estimate. The earnings model breaks the historical equity return into four pieces, with only three historically being supplied by companies: inflation, income return, and growth in real earnings per share. The growth in the P/E ratio, the fourth piece, is a reflection of investors' changing prediction of future earnings growth. The past supply of corporate growth is forecasted to continue; however, a change in investors' predictions is not. P/E rose dramatically from 1980 through 2001 because people believed that corporate earnings were going to grow faster in the future. This growth in P/E drove a small portion of the rise in equity returns over the same period.

Exhibit 10.14 illustrates the price-to-earnings ratio from 1926 to 2017. The P/E ratio, using one year average earnings, was 10.23 at the beginning of 1926 and ended the year 2017 at 24.33, an average increase of 0.95% per year. The highest P/E was 136.69 recorded in 1932, while the lowest was 7.08 recorded in 1948. Ibbotson Associates revised the calculation of the P/E ratio from a one-year to a three-year average earnings for use in equity forecasting.

Exhibit 10.14: Large-cap Stocks P/E Ratio
1926–2017

This is because reported earnings are affected not only by the long-term productivity, but also by one-time items that do not necessarily have the same consistent impact year after year. The three-year average is more reflective of the long-term trend than the year-by-year numbers. The P/E ratio calculated using the three-year average of earnings had an increase of 0.84% per year.

The historical P/E growth factor, using three-year earnings, of 0.84% per year is subtracted from the equity forecast because it is not believed that P/E will continue to increase in the future. The market serves as the cue. The current P/E ratio is the market's best guess for the future of corporate earnings and there is no reason to believe, at this time, that the market will change its mind. Using this top-down approach, the geometric supply-side equity risk premium is 4.08%, which equates to an arithmetic supply-side equity risk premium of 6.04%.

Another approach in calculating the premium would be to add up the components that constitute the supply of equity return, excluding the P/E component. Thus, the supply of equity return only includes inflation, the growth in real earnings per share, and income return. This forward-looking earnings model calculates the long-term supply of U.S. equity returns to be 9.27%:

$$SR = [(1 + CPI) \times (1 + g_{REPS}) + Inc + Rinv]$$

$$9.27\%* = [(1 + 2.89\%) \times (1 + 2.14\%) - 1] + 3.96\% + 0.21\%$$

* difference due to rounding

Where:

- SR* = The supply of the equity return
- CPI* = Consumer Price Index (inflation)
- g_{REPS}* = The growth in real earning per share
- Inc* = The income return
- Rinv* = The reinvestment return

The equity risk premium, based on the supply-side earnings model, is calculated to be 4.08% on a geometric basis:

$$SERP = \frac{(1 + SR)}{(1 + CPI) \times (1 + RRf)} - 1$$

$$4.08\%* = \frac{1 + 9.27\%}{(1 + 2.89\%) \times (1 + 2.01\%)} - 1$$

* difference due to rounding

Where:

- SERP* = The supply-side equity risk premium
- SR* = The supply of the equity return
- CPI* = Consumer Price Index (inflation)
- RRf* = The real risk-free rate

Converting the geometric average into an arithmetic average results in an equity risk premium of 6.04%.^{10.10}

$$R_A = R_G + \frac{\sigma^2}{2}$$
$$6.04\% = 4.08\% + \frac{19.80\%^2}{2}$$

Where:

- R_A = The arithmetic average
- R_G = The geometric average
- σ = The standard deviation of equity returns

Exhibit 10.15 presents the supply-side equity risk premium, on an arithmetic basis, beginning in 1926 and ending in each of the years from 2003 through 2017.^{10.11}

^{10.10} The 1926–2017 supply-side equity risk premia estimate (6.04%) is calculated by Duff & Phelps for the 2018 SBBⁱ Yearbook using (i) the same methodologies and (ii) the same data sources as were used in previous editions of this book, based upon the work by Roger G. Ibbotson and Peng Chen; see: Ibbotson, R.G., & Chen, P. 2003. "Long-Run Stock Returns: Participating in the Real Economy". *Financial Analysts Journal*, Vol. 59, No. 1, P. 88. An update of this work has been published that considers stock buybacks in addition to dividends; see: Philip U. Straehl and Roger G. Ibbotson, "The Long-Run Drivers of Stock Returns: Total Payouts and the Real Economy", *Financial Analysts Journal*, Third Quarter 2017, Volume 73 Number 3. The *Financial Analysts Journal* is a publication of CFA Institute. For more information, visit cfapubs.org.

^{10.11} In the 2016 SBBⁱ Yearbook, Exhibit 10.15 included supply-side ERP estimates for the most recent 25 years, estimated using refreshed data inputs over the entire 1926–2015 time horizon. Starting with the 2017 SBBⁱ Yearbook, this exhibit will only include the years for which supply-side ERP values were actually published in a hardcover book (instead of the most recent 25 years). As such, this exhibit will be made to match (i) the "as published" supply-side ERP values from the 2004–2013 SBBⁱ Valuation Yearbooks (see "Appendix C-1" in those books), (ii) the "as published" values from the 2014–2017 Valuation Handbook – U.S. Guide to Cost of Capital (see "Appendix 3" in those books), and (iii) the Cost of Capital Navigator beginning in 2018.

Exhibit 10.15: Supply-side Equity Risk Premia over Time, as Published in (i) the 2004–2013 SBBi® Valuation Yearbooks, (ii) the 2014–2017 Valuation Handbook – U.S. Guide to Cost of Capital, and (iii) the Cost of Capital Navigator beginning in 2018

Period Length (Years)	Period Dates	Source of Revised Values	Supply-Side Equity Risk Premia
92	1926–2017	Cost of Capital Navigator	6.04
91	1926–2016	2017 Valuation Handbook – U.S. Guide to Cost of Capital	5.97
90	1926–2015	2016 Valuation Handbook – U.S. Guide to Cost of Capital	6.03
89	1926–2014	2015 Valuation Handbook – U.S. Guide to Cost of Capital	6.21
88	1926–2013	2014 Valuation Handbook – U.S. Guide to Cost of Capital	6.18
87	1926–2012	2013 SBBi Valuation Yearbook	6.11
86	1926–2011	2012 SBBi Valuation Yearbook	6.14
85	1926–2010	2011 SBBi Valuation Yearbook	5.99
84	1926–2009	2010 SBBi Valuation Yearbook	5.18
83	1926–2008	2009 SBBi Valuation Yearbook	5.73
82	1926–2007	2008 SBBi Valuation Yearbook	6.23
81	1926–2006	2007 SBBi Valuation Yearbook	6.35
80	1926–2005	2006 SBBi Valuation Yearbook	6.28
79	1926–2004	2005 SBBi Valuation Yearbook	6.14
78	1926–2003	2004 SBBi Valuation Yearbook	5.93

Long-Term Market Predictions

The supply-side model estimates that stocks will continue to provide significant returns over the long run, averaging around 9.27% per year, assuming historical inflation rates. The equity risk premium, based on the top-down supply-side earnings model, is calculated to be 4.08% on a geometric basis and 6.04% on an arithmetic basis.

Ibbotson and Chen predict future increased earnings growth that will offset lower dividend yields. The fact that earnings will grow as dividend payouts shrink is in line with the Modigliani-Miller theorem, which here refers to the irrelevance over whether a firm pays a dividend or reinvests its returns.

The forecasts for the market are in line with both the historical supply measures of public corporations (i.e., earnings) and overall economic productivity (GDP per capita).

Explanation and Key to Bond Record Publication

(For Rating Key and Explanation of Moody's® Municipal Bond Ratings, see page 4)

Foreword: Mergent Bond Record covers fixed-income issues in detail, affording the user at a glance the essential facts relating to market position and statistical background.

Title of Bond: Name of corporation, together with coupon and date or dates of maturity are given. Listed issues are preceded by identifying symbol. In the case of domestic municipalities, ratings are applicable to all general obligation bonds of the unit named unless otherwise specified.

Interest Dates: Interest dates and date of the month of maturity given.

Underlined letter denotes the month of maturity.

J & J -----	January, July	A & O -----	April, October
F & A ---	February, August	M & N ----	May, November
M & S ---	March, September	J & D -----	June, December

Defaults: In cases of interest or principal default, the date together with appropriate symbol is usually shown in the interest column.

Call Price: The call price as of the date of this publication, is given in all cases possible, and will be adjusted to the correct call price when such change becomes effective. The footnotes in the call price column indicate, in the case of call protected issues, the date on which they can first be called by the issuer as a whole or in part.

Moody's® Rating: A discussion and explanation of Moody's® ratings follows.

Registered Bonds: Bonds issued only in fully registered form are indicated with the letter (r).

Quotations: Quotations shown are as follows:

Listed Issues: Quotations for listed issues represent actual sale prices as near as possible to the end of the month preceding date of publication. Where no recent transaction is reported, the latest bid or asked price is given.

Unlisted Corporate Issues: Quotations shown represent prices derived through a matrix evaluation. This evaluation indicates an issue's price relative to other issues in common business segments.

Quotations are obtained from sources which we believe reliable but they are not guaranteed. In the case of unlisted issues, quotations do not purport to a record of firm bids or offers nor do they necessarily represent actual transactions.

Flat: Issue is quoted or sold without accrued interest.

Yield to Maturity: The yield to maturity is shown on all bonds paying regular interest. Where sale price is not available, the yield is computed on the bid price for valuation purposes.

2018 Price Range: The high and low sale for all *listed* issues is given as near as possible to the end of the month. Unlisted issues appear as month end matrix evaluations. The high and low price ranges for unlisted issues are derived from matrix evaluations.

Amount Outstanding: Amount outstanding shown is after deducting bonds pledged or reacquired.

Sinking Fund Provision: Where the bond indenture contains a sinking fund provision, it has been indicated by the word "Yes" in this column. If no sinking fund is provided the word "No" is shown. In other cases where "Alt" meaning alternate is shown, the indenture has a provision for payments which under certain conditions may be used to retire bonds.

MOODY'S® BOND RATINGS

Purpose: The system of rating securities was originated by John Moody in 1909.

The purpose of Moody's® Ratings is to provide the investors with a simple system of gradation by which the relative investment qualities of bonds may be noted.

Rating Symbols: Gradations of investment quality are indicated by rating symbols, each symbol representing a group in which the quality characteristics are broadly the same. There are nine symbols as shown below, from that used to designate least investment risk (i.e., highest investment quality) to that denoting greatest investment risk (i.e., lowest investment quality):

Aaa Aa A Baa Ba B Caa Ca C

For explanation of municipal rating symbols, in particular the **A 1** and **Baa 1** groups see page 4

Absence of Rating: Where no rating has been assigned or where a rating has been suspended or withdrawn, it may be for reasons unrelated to the quality of the issue.

Should no rating be assigned, the reason may be one of the following:

1. An application for rating was not received or accepted.
2. The issue or issuer belongs to a group of securities or companies that are not rated as a matter of policy.
3. There is a lack of essential data pertaining to the issue or issuer
4. The issue was privately placed, in which case the rating is not published in Moody's® publications.

Suspension or withdrawal may occur if new and material circumstances arise, the effects of which preclude satisfactory analysis; if there is no longer available reasonable up-to-date data to permit a judgment to be formed; if a bond is called for redemption; or for other reasons.

Changes in Rating: The quality of most bonds is not fixed and steady over a period of time, but tends to undergo change. For this reason changes in ratings occur so as to reflect these variations in the intrinsic position of individual bonds.

A change in rating may thus occur at any time in the case of an individual issue. Such rating change should serve notice that Moody's® observes some alteration in the investment risks of the bond or that the previous rating did not fully reflect the quality of the bond as now seen. While because of their very nature, changes are to be expected more frequently among bonds of lower ratings than among bonds of higher ratings, nevertheless the user of bond ratings should keep close and constant check on all ratings—both high and low ratings—thereby to be able to note promptly any signs of change in investment status which may occur.

Limitations to Uses of Ratings: Bonds carrying the same rating are not claimed to be of absolutely equal quality. In a broad sense they are alike in position, but since there are a limited number of rating classes used in grading thousands of bonds, the symbols cannot reflect the fine shadings of risks which actually exist. Therefore, it should be evident to the user of ratings that two bonds identically rated are unlikely to be precisely the same in investment quality.

As ratings are designed exclusively for the purpose of grading bonds according to their investment qualities, they should not be used alone as a basis for investment operations. For example, they have no value in forecasting the direction of future trends of market price. Market price movements in bonds are influenced not only by the quality of individual issues but also by changes in money rates and general economic trends, as well as by the length of maturity, etc. During its life even the best quality bond may have wide price movements, while its high investment status remains unchanged.

The matter of market price has no bearing whatsoever on the determination of ratings which are not to be construed as recommendations with respect to "attractiveness." The attractiveness of a given bond may depend on its yield, its maturity date or other factors for which the investor may search, as well as on its investment quality, the only characteristic to which the rating refers.

Since ratings involve judgments about the future, on the one hand, and since they are used by investors as a means of protection, on the other, the effort is made when assigning ratings to look at "worst" potentialities in the "visible" future, rather than solely at the past record and the status of the present. Therefore, investors using the rating should not, expect to find in them a reflection of statistical factors alone, since they are an appraisal of long term risks, including the recognition of many non-statistical factors.

Though ratings may be used by the banking authorities to classify bonds in their bank examination procedure, Moody's® Ratings are not made with these bank regulations in view. Moody's® Investors Service's own judgment as to desirability or non-desirability of a bond for bank investment purposes is not indicated by Moody's® Ratings.

Moody's® Ratings represent the mature opinion of Moody's® Investors Service, Inc., as to the relative investment classification of bonds. As such, they should be used in conjunction with the description and statistics appearing in Moody's® Manuals. Reference should be made to these statements for information regarding the issuer. Moody's® Ratings are not commercial credit ratings. In no case is default or receivership to be imputed unless expressly so stated in the Manual

MOODY'S® SHORT-TERM DEBT RATINGS

Moody's® short-term debt ratings are opinions of the ability of issuers to repay punctually senior debt obligations. These obligations have an original maturity not exceeding one year, unless explicitly noted.

Moody's® employs the following three designations, all judged to be investment grade, to indicate the relative repayment ability of rated issuers:

Prime-1

Issuers rated **Prime-1** (or supporting institutions) have a superior ability for repayment of senior short-term debt obligations. Prime-1 repayment ability will often be evidenced by many of the following characteristics:

- Leading market positions in well-established industries.
- High rates of return on funds employed.
- Conservative capitalization structure with moderate reliance on debt and ample asset protection.
- Broad margins in earnings coverage of fixed financial charges and high internal cash generation.
- Well-established access to a range of financial markets and assured sources of alternate liquidity.

Prime-2

Issuers rated **Prime-2** (or supporting institutions) have a strong ability for repayment of senior short-term debt obligations. This will normally be evidenced by many of the characteristics cited above but to a lesser degree. Earnings trends and coverage ratios, while sound, may be more subject to variation. Capitalization characteristics, while still appropriate, may be more affected by external conditions. Ample alternate liquidity is maintained.

Prime-3

Issuers rated **Prime-3** (or supporting institutions) have an acceptable ability for repayment of senior short-term obligations. The effect of industry characteristics and market compositions may be more pronounced. Variability in earnings and profitability may result in changes in the level of debt protection measurements and may require relatively high financial leverage. Adequate alternate liquidity is maintained.

Not Prime

Issuers rated **Not Prime** do not fall within any of the Prime rating categories.

Moody's® makes no representation that rated bank or insurance company obligations are exempt from the registration under the U.S. Securities Act of 1933 or issued in conformity with any other applicable law or regulation. Nor does Moody's® represent that any specific bank or insurance company obligation is legally enforceable or a valid senior obligation of a rated issuer.

If an issuer represents to Moody's® that its short-term debt obligations are supported by the credit of another entity or entities, then the name or names of such supporting entity or entities are listed within the parentheses beneath the name of the issuer, or there is a footnote referring the reader to another page for the name or names of the supporting entity or entities. In assigning ratings to such issuers, Moody's® evaluates the financial strength of the affiliated corporations, commercial banks, insurance companies, foreign governments or other entities, but only as one factor in the total rating assessment. Moody's® makes no representation and gives no opinion on the legal validity or enforceability of any support arrangement.

Moody's® ratings are opinions, not recommendations to buy or sell, and their accuracy is not guaranteed. A rating should be weighed solely as one factor in an investment decision and you should make your own study and evaluation of any issuer whose securities or debt obligations you consider buying or selling.

MOODY'S® CORPORATE LONG-TERM RATINGS

Aaa

Bonds and preferred stock which are rated **Aaa** are judged to be of the best quality. They carry the smallest degree of investment risk and are generally referred to as "gilt edged." Interest payments are protected by a large or by an exceptionally stable margin and principal is secure. While the various protective elements are likely to change, such changes as can be visualized are most unlikely to impair the fundamentally strong position of such issues.

Aa

Bonds and preferred stock which are rated **Aa** are judged to be of high quality by all standards. Together with the **Aaa** group they comprise what are generally known as high grade bonds. They are rated lower than the best bonds because margins of protection may not be as large as in **Aaa** securities or fluctuation of protective elements may be of greater amplitude or there may be other elements present which make the long-term risk appear somewhat larger than the **Aaa** securities.

A

Bonds and preferred stock which are rated **A** possess many favorable investment attributes and are to be considered as upper-medium-grade obligations. Factors giving security to principal and interest are considered adequate, but elements may be present which suggest a susceptibility to impairment some time in the future.

Baa

Bonds and preferred stock which are rated **Baa** are considered as medium-grade obligations, (i.e., they are neither highly protected nor poorly secured). Interest payments and principal security appear adequate for the present but certain protective elements may be lacking or may be characteristically unreliable over any great length of time. Such bonds lack outstanding investment characteristics and in fact have speculative characteristics as well.

Ba

Bonds and preferred stock which are rated **Ba** are judged to have speculative elements; their future cannot be considered as well-assured. Often the protection of interest and principal payments may be very moderate, and thereby not well safeguarded during both good and bad times over the future. Uncertainty of position characterizes bonds in this class.

B

Bonds and preferred stock which are rated **B** generally lack characteristics of the desirable investment. Assurance of interest and principal payments or of maintenance of other terms of the contract over any long period of time may be small.

Caa

Bonds and preferred stock which are rated **Caa** are of poor standing. Such issues may be in default or there may be present elements of danger with respect to principal or interest.

Ca

Bonds and preferred stock which are rated **Ca** represent obligations which are speculative in a high degree. Such issues are often in default or have other marked shortcomings.

C

Bonds and preferred stock which are rated **C** are the lowest rated class of bonds, and issues so rated can be regarded as having extremely poor prospects of ever attaining any real investment standing.

Moody's® bond ratings, where specified, are applied to senior bank obligations and insurance company senior policyholder and claims obligations with an original maturity in excess of one year. Obligations relying upon support mechanisms such as letters-of-credit and bonds of indemnity are excluded unless explicitly rated.

Moody's® assigns ratings to individual long-term debt securities issued from medium-term note (MTN) programs, in addition to indicating ratings to MTN programs themselves. Notes issued under MTN programs with such indicated ratings are rated at issuance at the rating applicable to all pari passu notes issued under the same program, at the program's relevant indicated rating, provided such notes do not exhibit any of the following characteristics listed below. For notes with any of the following characteristics, the rating of the individual note may differ from the indicated rating of the program:

1. Notes containing features which link the cash flow and/or market value to the credit performance of any third party or parties.
2. Notes allowing for negative coupons, or negative principal.
3. Notes containing any provision which could obligate the investor to make any additional payments.

Market participants must determine whether any particular note is rated, and if so, at what rating level. Moody's® encourages market participants to contact Moody's® Ratings Desks directly if they have questions regarding ratings for specific notes issued under a medium-term note program.

MOODY'S® ISSUER RATINGS

Foreign Currency: Moody's® Foreign currency Issuer Ratings are opinions of the ability of entities to honor senior unsecured financial obligations and contracts denominated in foreign currency. These ratings are subject to Moody's® Foreign Currency Country Ceilings. Issuer Ratings are unlike our long term debt ratings in that they are assigned to issuers rather than specific debt issues. Specific debt issues of the issuer may be rated differently, and are considered unrated unless individually rated by Moody's®. Unless specified, obligations guaranteed by the issuer are considered unrated and are not covered by the issuer rating.

Domestic Currency: Moody's® domestic Currency Issuer Ratings are opinions of the ability of entities to honor senior unsecured financial obligations and contracts denominated in their domestic currency.

Derivative Product Companies: Issuer ratings that are assigned to derivative product companies are opinions of the financial capacity of an obligor to honor its senior obligations under financial contracts, given appropriate documentation and authorizations.

Rating Symbols: Moody's® rating symbols for Issuer ratings are identical to those used to show the credit quality of bonds. These rating gradations provide creditors a simple system to measure an entity's ability to meet its senior financial obligations.

Aaa

Issuers rated **Aaa** offer exceptional financial security. While the creditworthiness of these entities is likely to change, such changes as can be visualized are most unlikely to impair their fundamentally strong position.

Aa

Issuers rated **Aa** offer excellent financial security. Together with the **Aaa** group, they constitute what are generally known as high grade entities. They are rated lower than **Aaa** entities because long-term risks appear somewhat larger.

A

Issuers rated **A** offer good financial security. However, elements may be present which suggest a susceptibility to impairment sometime in the future.

Baa

Issuers rated **Baa** offer adequate financial security. However, certain protective elements may be lacking or may be unreliable over any great period of time.

Ba

Issuers rated **Ba** offer questionable financial security. Often the ability of these entities to meet obligations may be moderate and not well safeguarded in the future.

B

Issuers rated **B** offer poor financial security. Assurance of payment of obligations over any long period of time is small.

Caa

Issuers rated **Caa** offer very poor financial security. They may be in default on their obligations or there may be present elements of danger with respect to punctual payment of obligations.

Ca

Issuers rated **Ca** offer extremely poor financial security. Such entities are often in default on their obligations, or have other marked shortcomings.

C

Issuers rated **C** are the lowest rated class of entity, are usually in default on their obligations, and potential recovery values are low.

MOODY'S® MUNICIPAL BOND RATINGS**Aaa**

Bonds rated **Aaa** are judged to be of the best quality. They carry the smallest degree of investment risk and are generally referred to as "gilt edge." Interest payments are protected by a large or by an exceptionally stable margin and principal is secure. While the various protective elements are likely to change, such changes as can be visualized are most unlikely to impair the fundamentally strong position of such issues.

Aa

Bonds rated **Aa** are judged to be of high quality by all standards. Together with the **Aaa** group they comprise what are generally known as high grade bonds. They are rated lower than the best bonds because margins of protection may not be as large as in **Aaa** securities or fluctuation of protective elements may be of greater amplitude or there may be other elements present which make the long-term risks appear somewhat larger than in **Aaa** securities.

A

Bonds rated **A** possess many favorable investment attributes and are to be considered as upper medium grade obligations. Factors giving security to principal and interest are considered adequate, but elements may be present which suggest a susceptibility to impairment sometime in the future.

Baa

Bonds rated **Baa** are considered as medium grade obligations, i.e., they are neither highly protected nor poorly secured. Interest payments and principal security appear adequate for the present but certain protective elements may be lacking or may be characteristically unreliable over any great length of time. Such bonds lack outstanding investment characteristics and in fact have speculative characteristics as well.

Ba

Bonds rated **Ba** are judged to have speculative elements; their future cannot be considered as well assured. Often the protection of interest and principal payments may be very moderate and thereby not well safeguarded during both good and bad times over the future. Uncertainty of position characterizes bonds in this class.

B

Bonds rated **B** generally lack characteristics of the desirable investment. Assurance of interest and principal payments or of maintenance of other terms of the contract over any long period of time may be small.

Caa

Bonds rated **Caa** are of poor standing. Such issues may be in default or there may be present elements of danger with respect to principal or interest.

Ca

Bonds rated **Ca** represent obligations which are speculative in a high degree. Such issues are often in default or have other marked shortcomings.

C

Bonds rated **C** are the lowest rated class of bonds, and issues so rated can be regarded as having extremely poor prospects of ever attaining any real investment standing.

Con. (...)

Bonds for which the security depends upon the completion of some act or the fulfillment of some condition are rated conditionally. These are bonds secured by (a) earnings of projects under construction, (b) earnings of projects unseasoned in operation experience, (c) rentals which begin when facilities are completed, or (d) payments to which some other limiting condition attaches. Parenthetical rating denotes probable credit stature upon completion of construction or elimination of basis of condition.

(P) ...

When applied to forward delivery bonds, indicates that the rating is provisional pending delivery of the bonds. The rating may be revised prior to delivery if changes occur in the legal documents or the underlying credit quality of the bonds.

Note: Moody's® applies numerical modifiers 1, 2, and 3 in each generic rating classification from **Aa** to **B**. The modifier 1 indicates that the issue ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates that the issue ranks in the lower end of its generic category.

MOODY'S® SHORT-TERM LOAN RATINGS

There are three categories for short-term obligations that define an investment grade situation. These are designated Moody's® Investment Grade as MIG 1 (best quality) through MIG 3. Short-term obligations of speculative quality are designated SG.

In the case of variable rate demand obligations (VRDOs), a two-component rating is assigned. The first element represents an evaluation of the degree of risk associated with scheduled principal and interest payments, and the other represents an evaluation of the degree of risk associated with the demand feature. The short-term rating assigned to the demand feature of VRDOs is designated as VMIG. When either the long- or short-term aspect of a VRDO is not rated, that piece is designated NR, e.g., Aaa/NR or NR/VMIG 1.

MIG ratings terminate at the retirement of the obligation, while a **VMIG** rating expiration will be a function of each issue's specific structural or credit features.

MIG 1/VMIG 1

This designation denotes best quality. There is strong protection by established cash flows, superior liquidity support, or demonstrated broad-based access to the market for refinancing.

MIG 2/VMIG 2

This designation denotes high quality. Margins of protection are ample although no so large as in the preceding group.

MIG 3/VMIG 3

This designation denotes favorable quality. Liquidity and cash-flow protection may be narrow and market access for refinancing is likely to be less well established.

SG

This designation denotes speculative quality. Debt instruments in this category may lack margins of protection.

Underlying Ratings

An underlying rating is Moody's assessment of a particular debt issue's credit quality absent credit enhancement. There are three principal reasons why issuers would seek an underlying rating: 1) to achieve improved marketability at the time of the sale of credit-enhanced debt; 2) to improve secondary market liquidity for the debt; and 3) to establish and build market recognition, thereby improving future market access. Moody's will assign and publicly release an underlying rating requested by an issuer for debt that is entirely credit enhanced. This service is provided at no additional charge and is available both before and after the date of sale.

Prospective Ratings

As a service to the market and typically at the request of issuers, Moody's will assign a prospective rating when we believe it is highly likely that the rating will become final once all documents are received, or once other expected information is confirmed. A prospective rating is designated with a (P), followed by the debt rating of the issue or issuer.

Note: Moody's® applies numerical modifiers **1, 2, and 3** in each generic rating category from **Aa** to **Caa** in the corporate finance sectors, and from **Aa** to **B** in the public finance sectors. The modifier **1** indicates that the issuer is in the higher end of its letter rating category; the modifier **2** indicates a mid-range ranking; the modifier **3** indicates that the issuer is in the lower end of the letter ranking category.

Symbols

- Preceding name of issue denotes traded on New York Stock Exchange
- ◆ Preceding name of issue denotes traded on American Stock Exchange
- Preceding name of issue denotes traded on NASDAQ
- † Indicates date of interest default or, in the case of income bonds date of omission
- a Indicates ask price
- b Indicates bid price
- d deecit
- fb Indicates flat bid
- j Based on latest regular cash dividend declaration and other payments
- k Indicates month old bid price

- ¶ Approximate price at which common would have to sell to equal indicated market for the debentures
- r Denotes fully registered bonds
- § Non-refundable with lower interest cost or interest rate obligation prior to date indicated in last column of text The footnotes in the call price column indicate, in the case of call protected issues, the date on which they can first be called by the issuer as a whole or in part In **preferred stock**, this represents involuntary liquidation price
- * Company is not an issuer of commercial paper
- ‡ Conv price is for life unless footnoted with conv period

NOTE 1: Rating does not address the ability of the issuer to repurchase any mortgage loan that converts from an adjustable rate to a fixed rate; yield to investors may be other than anticipated

NOTE 2: Rating does not address the inherent risk that investors might fail to recoup their initial investment due to principal prepayments
