| Provider(s)  | Gallons of Sewage Treated during 12 month period                 |
| LFUCG  | <b>61,164,822</b>  |
| <b>TOTAL</b>   | <b>61,164,822</b>  |
| <b>4. Total gallons of water sold for the 12 month period</b>  |  |
|  | <b>61,164,822</b>  |
| <b>5. Increased cost</b>   |  |
|  | <b>\$25,347.30</b>   |
| The increased cost is the difference between the gallons of treated sewage at the base (current rate) and at the new rate. The calculation and all supporting documents used to determine the change in treated sewage costs sufficient to determine the accuracy of the calculation is attached as <b>Exhibit B</b> |  |
| When water usage is the basis for the utility's sewage treatment charge, the treated sewage adjustment shall be calculated as a per 1,000 gallon factor.   |  |
| <b>6. Treated sewage adjustment factor per 1,000 gallons*</b>  | <b>\$0.42</b>  |
| *The treated sewage adjustment factor is obtained by dividing the increased cost of the sewage treatment by the total gallons of water sold. (Number 5 ÷ ( Number 4 ÷ 1,000))  |  |
| Note: The treated sewage adjustment factor is added to each thousand gallons sold. If the minimum usage is 2,000 gallons then the treated sewage adjustment factor would be added to the minimum bill twice.   |  |
| <b>Minimum bill: 2,000 gallons</b>   | <b>\$24.38 + \$0.84 = \$25.22</b>                                |
| When the utility has a flat monthly rate the treated sewage adjustment factor shall be calculated as a flat monthly amount to be added to the current rate.  |  |
| <b>7. Number of customers or Residential Equivalents</b>   | <b>----- (JSEWD does not have a residential equivalent rate)</b> |
| <b>8. Treated sewage adjustment (amount to be added)</b>   | <b>----- (JSEWD does not</b>                                     |
