BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

**ELECTRONIC APPLICATION OF)
WEST DAVIESS COUNTY WATER) CASE NO. 2020-00137
DISTRICT FOR A DEVIATION FROM)
METER TESTING REQUIREMENTS)**

RESPONSE OF

WEST DAVIESS COUNTY WATER DISTRICT

TO

COMMISSION STAFF'S FIRST REQUEST FOR INFORMATION

DATED JULY 9, 2020

FILED: July 24, 2020

COMMONWEALTH OF KENTUCKY
BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

**ELECTRONIC APPLICATION OF)
WEST DAVIESS COUNTY WATER) CASE NO. 2020-00137
DISTRICT FOR A DEVIATION FROM)
METER TESTING REQUIREMENTS)**

**CERTIFICATION OF RESPONSE TO
COMMISSION STAFF'S FIRST REQUEST FOR INFORMATION**

This is to certify that I have supervised the preparation of West Daviess County Water District's Response to the Commission Staff's First Request for Information. The response submitted on behalf of West Daviess County Water District is true and accurate to the best of my knowledge, information, and belief formed after a reasonable inquiry.

William Higdon, Manager
West Daviess County Water District

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 1

Responding Witness: William Higdon

- Q-1. Identify the number of complaints West Daviess District has received in each of the last five calendar years and so far in the current year regarding meters over- or under-registering flow, and identify the number of those complaints in which West Daviess District has determined that the meters were over- or under-registering flow.
- A-1. West Daviess District occasionally receives a customer question regarding the validity of a bill amount and does everything possible to address the customer's concerns before the customer requests a meter test. West Daviess District received the following test requests for customer meters in the past five calendar years and so far in 2020:

| Year | Number of Complaints |
|------|----------------------|
| 2015 | 5 |
| 2016 | 0 |
| 2017 | 0 |
| 2018 | 1 |
| 2019 | 0 |
| 2020 | 1 |

Of the seven meters tested, one meter in 2015 registered slow. No meters over-registered flow.

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 2

Responding Witness: William Higdon

- Q-2. Refer to the application, Item 13(d). Provide an explanation, including a list of options, of what West Daviess District will do with the 15-year-old meters when removed from service.

- A-2. When West Daviess District's meters reach 15 years of age, West Daviess District will consider whether the meters are still testing accurately and possibly request the Commission to consider further extensions of the meters' service life. If West Daviess District is not able to reuse the 15-year-old meters, it will either trade in the meters if a trade-in program is available, sell the meters for scrap, or recycle the meters.

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 3

Responding Witness: William Higdon & Legal Counsel

Q-3. Refer to the application, Exhibit 1.

- a. Provide the AWWA New Meter Accuracy Standards to which West Daviess District's meters are warranted for five years from the date of shipment or the registration of 500,000 gallons, whichever comes first.
- b. Provide the AWWA Repaired Meter Accuracy Standards to which Daviess District's meters are warranted for fifteen years from the date of shipment or the registration of 1,500,000 gallons, whichever comes first.
- c. Provide any other information West Daviess District maintains supports its contention that its 5/8- x 3/4-inch Sensus SRII meters will remain accurate for 15 years.

A-3.

- a. See the Addendum to AWWA Manual M6, attached as **Exhibit 3-1**, which shows the accuracy standards for 5/8- x 3/4-inch displacement meters. The AWWA accuracy standards for 5/8- x 3/4-inch displacement meters are identical to the accuracy limits in 807 KAR 5:066, Section 16(a).
- b. See **Exhibit 3-1** and response to part a.
- c. West Daviess District believes the accuracy of its meters at 10 years of age, Sensus's 15-year warranty, and the Commission's past approval of sample meter testing plans that extend meter lives to 15 years all provide strong support that West Daviess District's 5/8- x 3/4-inch Sensus SRII meters will remain accurate for 15 years.

American Water Works Association

Addendum to

AWWA Manual M6, Water Meters—Selection, Installation, Testing, and Maintenance, Fifth Edition

(November 2018)

Purpose

The 2018 Addendum to AWWA Manual M6, Water Meters—Selection, Installation, Testing, and Maintenance, fifth edition, provides guidance to users on testing procedures and related topics for meters conforming to standard ANSI/AWWA C715-18 Cold-Water Meters—Electromagnetic and Ultrasonic Type, for Revenue Applications. This standard was approved by the AWWA Standards Committee on Water Meters on February 19, 2018, approved by the AWWA Board of Directors on June 9, 2018, and made effective on October 1, 2018.

The 2018 Addendum is considered a part of AWWA Manual M6 wherever the manual is referenced by AWWA water meter standards or other documents.

The current edition of AWWA Manual M6, the fifth edition, was published in 2012. The AWWA Water Meter Standards Committee believes that the 2018 Addendum to the manual fills an immediate need by water utilities for up-to-date meter testing procedures and that it was important for this information to be published in the interim, as work is continuing on the sixth edition of the manual.

Background

Historically, AWWA Manual M6 has served as a guide to best practices for water meters, as a companion document to the AWWA water meter standards. From a practical standpoint, the manual is often used as a reference tool by utilities in their meter shops for determining and executing the proper testing procedures for the various meter types and sizes.

As the family of AWWA water meter standards has expanded over the years to include new meter types, AWWA Manual M6 has also grown to include information on these new meters. The common practice has been that Manual M6 includes information on the meter types for which an AWWA standard exists. The fifth edition of the manual, for example, was expanded in 2012 to include information on singlejet-type (ANSI/AWWA C712) and fluidic oscillator-type (ANSI/AWWA C713) meters. The sixth edition will include more information on electromagnetic- and ultrasonic-type (ANSI/AWWA C715) meters, as well as meters for residential fire sprinkler systems in one- and two-family dwellings and manufactured homes (ANSI/AWWA C714).

Testing Procedures

Table 5-3 includes recommended data for testing cold-water meters by the volumetric method, using volumetric tanks, or by the gravimetric method, using weight scales. This data may also be used for testing cold-water meters against a master or reference meter that has a known calibration curve. Accuracy standards for new meters are contained in the latest editions of standards ANSI/AWWA C700, C701, C702, C703, C704, C708, C710, C712, C713, C714, and C715. The modified Table 5-3 issued in this addendum reflects the latest accuracy standards from these AWWA standards.

The following listing provides additional guidance on meter testing, beyond the modifications made in Table 5-3.

1. In testing meters to validate their accuracy (either prior to deployment or after some time in service), note that the testing procedures for electronic meters, may be different from those meters previously placed in service. The manufacturer's recommended testing procedures should be followed. Ignoring these recommendations can invalidate the accuracy results.
2. Electronic meters do not have moving parts and, therefore, are not subject to the same wear and tear as mechanical meters. Although AWWA standards for mechanical water meters provide recommended testing frequencies in the appendix of each standard, recommended testing frequencies are not provided in the appendix of ANSI/AWWA C715. Water quality and other local conditions may affect the performance of electronic meters over time. To assess these site-specific effects, the utility may choose to verify the accuracy of electronic meters at the recommended test frequencies provided in AWWA standards for mechanical meters, until the utility establishes its own criteria based on data collected on its operational experience and local conditions.
3. Some of the smaller electronic meters have minimum rate accuracy requirements at lower flow rates than any of the rates given in other AWWA meter standards (i.e., flow rates lower than 0.25 gpm). In other instances, the minimum rate flow rates of electronic meters may be lower than those of the mechanical meters previously deployed by the utility, for any given line size. Accuracy at these lower flow rates, therefore, might be more difficult to test and verify on the existing utility's meter test bench equipment. Gravimetric systems might provide more sensitivity than volumetric systems. In all cases, the testing equipment must be maintained properly, calibrated periodically, and certified to ensure it is working properly.
4. As discussed in item #3, a utility's testing equipment may not be capable of testing electronic meters reliably at the lower flow rates (particularly for flow rates even lower than the minimums given in ANSI/AWWA C715, if part of the manufacturer's warranted accuracy claims). If this is the case, an independent third-party service company with certified and calibrated equipment along with sound testing protocols may need to be engaged to verify accuracy. As provided in one of the footnotes for the modified Table 5-3 in this addendum, a utility may alternatively increase the minimum test rate flow to stay within the capability of their equipment, while holding the electronic meters to their tighter accuracy requirement at these somewhat higher flow rates. Utilities may also wish to use these somewhat higher flow rates when there are test time constraints.
5. Historically, Table 5-3 has included some caveats in test quantity recommendations, relative to the footnote that has called for "not less than 3 min running." This has been most notable for some of the maximum rate test quantities, which would result in test run times well below three minutes in length. This ambiguity recognizes limitations in the number and size of test tanks with which the utility may be equipped. The footnote further provides that, for reduced test quantities, "the resultant increase in total test

uncertainties and errors need to be recognized.” While mechanical water meters may have been able to accommodate those test quantities in Table 5-3 that result in test times of less than three minutes, this may not be the case for some electronic meters. A special test mode—temporarily increasing the sampling rate for the meter—may be available for some electronic meter designs, to mitigate the test uncertainties associated with test times shorter than three minutes.

6. Table 5-3 provides recommended test flow rates. These recommendations are based, in part, on the observation that all meters of the same type (all positive displacement meters, all turbine meters, and so on) will exhibit the same or similar characteristic accuracy curves. This may not be a valid observation for electronic meters, for which distinct calibration algorithms may be in use. As a result, alternate or additional flow test rates may be considered. These would be especially relevant for flow rates given in the manufacturer’s performance claims that significantly exceed the ranges established in AWWA water meter standards.
7. Electromagnetic- and ultrasonic-type electronic meters are inferential in nature, measuring water velocities and inferring volumetric flows based on these velocities. (Many mechanical flow meters are also inferential in nature.) Inferential meters can be susceptible to flow profile disturbances, and to “noisy” flow delivery systems (e.g., pressure pulsations). Care should be taken to ensure that utility test stands do not introduce disturbances or noise at levels that are not representative of those that occur in actual field installations.

For the sixth edition of this manual, expanded information on several aspects of meter testing will be provided; these will include test uncertainties related to testing equipment, test uncertainties related to procedures and practices, and evaluation of accuracy results for meters pulled from service in the field. If users of this manual have any comments, questions, or suggestions regarding this manual, they can contact the AWWA Standards group at standards@awwa.org.

For this 2018 Manual M6 addendum, Table 5-3 of Manual M6, fifth edition (2012) is replaced with the following Table 5-3:

Table 5-3 Test requirements for new, rebuilt, and repaired cold-water meters*

* A rebuilt meter is one that has had the measuring element replaced with a factory-made new unit. A repaired meter is one that has had the old measuring element cleaned and refurbished in a utility repair shop.

† These are suggested test flows and test quantities. Testing for high rates of flow can be achieved by testing the meter at 25% of the meters rating if the manufacturer's original test certificate indicates a linear curve between 25% and 100% of the rated flow range.

†† Quantity should be one or more full revolutions of the test hand / initial dial (see "Maximum Indication on Initial Dial" values specified in mechanical meter standards such as ANSI/AWWA C700, C701, and so on), or a quantity not less than the "Maximum Allowable Indication on Initial Display" values specified in ANSI/AWWA C715. Quantity should result in not less than 3 minutes running. When limited test capabilities force the use of smaller test quantities, the resultant increase in total test uncertainties and errors need to be recognized when establishing acceptance criteria tolerance.

§ The bypass meter should be tested in accordance with the appropriate test requirements for the type of meter used.

** As this rate varies according to manufacturer, it should be determined for each type of meter tested.

§§ Minimum test flow rates with corresponding accuracy limits in parentheses () are alternative values, to accommodate concerns over test times or concerns over test benches being able to conduct testing at the smaller flow rates (without parentheses) reliably. Note that the flow rate values in parentheses are the lowest rates for the normal test limits from ANSI/AWWA C715, and as such would have accuracy limits of 98.5%–101.5%. If these flow rates in parentheses are used in Minimum Rate testing, then the recommended test flow rates for the intermediate Rate should be twice those listed in the table. However, see the preceding footnote, detailing the preferred use of an intermediate rate determined for each specific make/model.

Metric Conversions: in. \times 25.4 = mm, gal \times 0.003785 = m³, gpm \times 0.2268 = m³/h, ft³ \times 0.02831 = m³.

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 4

Responding Witness: William Higdon

- Q-4. Explain how the manufacturer's warranty of AWWA Repaired Meter Accuracy Standards for 15 years or the registration of 1,500,000 gallons supports a finding that West Daviess District's 5/8- x 3/4-inch Sensus SRII meters will meet the accuracy requirements of 807 KAR 5:066 Section 15, for 15 years of service.
- A-4. First, the 15-year warranty for the Sensus SRII meters provides strong support that the manufacturer believes the meters remain accurate for 15 years. If the meters often did not remain accurate at 15 years, West Daviess District does not believe Sensus would offer this warranty as it would not be cost effective to do so.

Second, Sensus agrees to repair or replace the meters if they do not test within the AWWA Repaired Meter Accuracy Standards for 15 years or the registration of 1,500,000 gallons, whichever comes first.¹ As stated in response to Question 3, the AWWA Repaired Meter Accuracy Standards are identical to the accuracy standards in 807 KAR 5:066, Section 16(a). Thus, the 15-year warranty provides strong support that the Sensus SRII meters will test accurately pursuant to 807 KAR 5:066, Section 16(a) for 15 years.

¹ Based on West Daviess District's experience, a residential meter is unlikely to reach a registration of 1,500,000 gallons before reaching 15 years of age.

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 5

Responding Witness: William Higdon

- Q-5. Provide a breakdown by year of when all 5/8- x 3/4-inch Sensus SRII meters in West Daviess District's system were first placed in service, e.g., the number that was first placed in service in 2010, 2011, etc.

A-5. See below:

| Year | Number of Sensus SRII Meters ² |
|------|---|
| 2010 | 821 |
| 2011 | 914 |
| 2012 | 913 |
| 2013 | 195 |
| 2014 | 0 |
| 2015 | 0 |
| 2016 | 63 |
| 2017 | 334 |
| 2018 | 323 |
| 2019 | 47 |
| 2020 | 485 |

² These numbers differ from the approximate numbers provided in West Daviess District's Application at Appendix B-2 due to a software update from West Daviess District's software provider, United Systems. West Daviess District will update the cost savings to reflect the correct meter numbers.

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 6

Responding Witness: William Higdon

Q-6. Provide a list containing the make model and age of all of West Daviess District 5/8- x 3/4-inch meters that are not Sensus SRII meters.

A-6. Please see **Exhibit 6-1**.

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 7

Responding Witness: William Higdon

- Q-7. State what percentage of West Daviess District's total meters are 5/8- x 3/4-inch Sensus SRII meters.
- A-7. Approximately 70% of West Daviess District's total meters are 5/8- x 3/4-inch Sensus SRII meters.

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 8

Responding Witness: William Higdon & Legal Counsel

- Q-8. Identify who prepared West Daviess District's sample testing plan.
- A-8. Mary Ellen Wimberly of Stoll Keenon Ogden PLLC prepared West Daviess District's sample testing plan.

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 9

Responding Witness: William Higdon & Legal Counsel

- Q-9. State whether West Daviess District received any opinions from an engineer, statistician, or another person with relevant scientific or technical knowledge of sample testing practices regarding whether West Daviess District's sample testing plan will reliably reflect the accuracy of its 5/8- x 3/4-inch Sensus SR II meters as a whole. If so, provide the following information:
- a. The name of each person who rendered such an opinion;
 - b. The education, experience, and qualifications of each such person;
 - c. The opinion of each such person regarding whether West Daviess District's sample testing plan will reliably reflect the accuracy of its 5/8- x 3/4-inch Sensus SR II meters as a whole; and
 - d. The bases for each such person's opinion.
- A-9. As stated in the response to Question No. 6, Mary Ellen Wimberly of Stoll Keenon Ogden PLLC prepared the sample testing plan. Ms. Wimberly also prepared the sample testing plans reviewed and accepted by the Commission in Case No. 2016-00432 and Case No. 2019-00115. Given the Commission's previous review and acceptance of very similar statistical sample testing methodologies in Case No. 2016-00432 and Case No. 2019-00115, and the instructions for statistical testing available in the ANSI Standard, West Daviess District did not consult with an engineer, statistician, or other person with specialized statistical knowledge in preparing the Plan.

WEST DAVIESS COUNTY WATER DISTRICT

CASE NO. 2020-00137

Response to Commission Staff's First Request for Information

Question No. 10

Responding Witness: William Higdon & Legal Counsel

Q-10. Refer to the application, Exhibit 1, Section 3.0.

- a. Confirm that once a sample of meters installed in a given year is selected for testing that the same sample of meters will be tested in subsequent years until the meters in the sample have been in service for 15 years.
- b. Explain how West Daviess District proposes to identify meters that have been vandalized or tampered with.
- c. Explain how West Daviess District proposes to identify meters that have suffered a mechanical or other failure that is not equally likely to occur at the same or similar rate in the whole lot.
- d. State whether the ANSI Standard West Daviess District proposes to use in its sampling procedures anticipates sample testing the same lot multiple times over several years.
- e. If the ANSI Standard West Daviess District proposes to use in its sampling procedures does not anticipate sample testing the same lot multiple times over several years, explain how use of that standard in sample testing the same lot multiple times over several years will produce results that will reliably reflect the accuracy of West Daviess District's meters over time.
- f. State whether West Daviess District would incur any additional cost if it conducted a minimum flow test on every meter on which it conducted the maximum and intermediate flow rate tests and if so, quantify the additional cost.
- g. Explain whether the ANSI Standard anticipates increasing the level of scrutiny for subsequent lots if previous lots performed poorly, and if so, explain why West Daviess District's sample testing plan does not require similar increased scrutiny.

- h. Explain the basis for West Daviess District's contention that an AQL of 2.5 for maximum and intermediate flow rated is appropriate, other than the fact that it was used in another case.
- i. Explain the basis for West Daviess District's contention that an AQL of 2.5 for maximum and intermediate flow rates would provide reliable results.
- j. Explain the basis for West Daviess District's contention that an AQL of 10.0 for minimum flow rates is appropriate, other than the fact it was used in another case.
- k. Explain the basis for West Daviess District's contention that an AQL of 10.0 for minimum flow rates would provide reliable results.

A-10.

- a. Confirmed.
- b. West Daviess District recently installed an Advanced Metering Infrastructure System. The System analyzes usage data through a program known as "Sensus Analytics" and alerts West Daviess District if a meter has a negative flow rate, any meter failure, or other malfunction. After receiving such an alert, West Daviess District field staff will physically inspect the meter and determine whether the meter malfunction was due to vandalism or tampering.
- c. See response to part b. West Daviess District will use the same process to identify meters that have suffered mechanical or other failure.
- d. The ANSI Standard does not contemplate sample testing the same lot multiple times and is silent on this issue.
- e. West Daviess District believes that its approach of sample testing the same random sample over several years is consistent with the ANSI Standard. Regarding sample selection, the ANSI Standard states only that "[u]nits of the sample shall be selected at random without regard to their quality."³ When West Daviess District tests samples of meters each year, the samples remain units randomly selected without regard to their quality.

³ ANSI Standard at A7.2.

Furthermore, West Daviess District will not be drawing conclusions about the accuracy of a meter age group based on a single sample. Multiple groups of meters at each age of service will be tested. For instance, the sample of meters installed in 2010 was tested at 10 years of age in Year 1. A different sample group of meters installed in 2011 will be tested at 10 years of age in Year 2, and so on. Thus, West Daviess District and the Commission will have results from multiple random samples of meters through which to draw conclusions about the accuracy of the meters at certain ages.

- f. West Daviess District would incur additional cost if it conducted a minimum flow rate test on every meter on which it conducted the maximum and intermediate flow rate tests. If 35 meters are sample tested at maximum and intermediate flow rates, West Daviess District estimates that it would take approximately one additional hour to test all meters at a minimum flow rate and record the data. The hourly wage of the employee conducting the tests is approximately \$31/hour.⁴ Additional water will also be necessary to conduct minimum flow rate tests. The test requires 10 gallons of water and can test up to 10 meters at a time. Thus, testing all 35 meters at a minimum flow rate instead of only 7 would require 30 additional gallons of water.
- g. The ANSI Standard provides that “[w]hen normal inspection is in effect, tightened inspection shall be instituted when two out of five consecutive lots or batches have been rejected on original inspection.”⁵ West Daviess District’s Plan does not provide for this type of increased scrutiny because West Daviess District’s Plan instead requires that a group of meters that fails to be accepted under the ANSI Standard be removed.⁶ This is a stricter treatment than the increased scrutiny provided by the ANSI Standard.
- h. The Commission’s prior acceptance of an AQL value of 2.5 for the testing of maximum and intermediate flow rates in Case No. 2016-00432 and Case No. 2019-00115 was the main driver in West Daviess District’s selection of an AQL value of 2.5 for maximum and

⁴ \$31/hour includes an hourly wage of approximately \$17/hour and fringe benefits of approximately \$14/hour.

⁵ ANSI Standard, Item A10.3.1.

⁶ West Daviess District explained in its Plan that if a sample is not accepted under the ANSI Standard, West Daviess District will first try to identify a poorly performing sub-group, and if no such group can be identified, it will remove the entire control group of meters within 12 months of the group’s failure.

intermediate flow rates. Additionally, West Daviess District found it persuasive that the Commission has approved the use of an AQL value of 2.5 in many electric meter testing sample plans. West Daviess District believes that the regulation's accuracy limits also supports the use of an AQL value of 2.5. The accuracy limit in 807 KAR 5:066, Section 15 for meters at maximum and intermediate flow rates is 98.5% to 101.5%. Thus, the regulation allows a meter to deviate from the point of accuracy by 3% (1.5% above or below) and still comply with the regulation.

- i. A sample test using the ANSI Standard procedures will provide *reliable* results regardless of the AQL value used. The AQL value simply specifies the allowance of percent nonconforming. The Commission's past acceptance of an AQL value of 2.5 provides strong support that the Commission believes the AQL value reliably determines meter accuracy.
- j. The Commission's prior acceptance of an AQL value of 10.0 for the testing of minimum flow rates was the main driver in West Daviess District's selection of an AQL value of 10.0 for minimum flow rates. West Daviess District believes that the regulation's accuracy limit also supports the use of an AQL value of 10.0 for minimum flow rates. The accuracy limit in 807 KAR 5:066, Section 15 for repaired meters at a minimum flow rate is a minimum of 90%. Thus, the regulation allows a meter to deviate from the point of accuracy by 10% and still comply with the regulation.
- k. A sample test using the ANSI Standard procedures will provide *reliable* results regardless of the AQL value used. The AQL value simply specifies the allowance of percent nonconforming. To the extent that the Commission is concerned with accepting an AQL value that allows a higher percent nonconforming than the method for intermediate and maximum flow rates, there are many compelling reasons why less scrutiny should be applied to minimum flow rates.⁷

⁷ See Case No. 2016-00432, Hardin County Water District No. 2's Response to Commission Staff's Second Request for Information, Question No. 5, Page 4 of 5 (Ky. PSC filed June 5, 2017).

CERTIFICATE OF SERVICE

In accordance with 807 KAR 5:001 Section 8(7) and the Commission's March 16, 2020 Order in Case No. 2020-00085, I certify that West Daviess County Water District's electronic filing of this Response was transmitted to the Commission on July 24, 2020; that there are currently no parties that the Commission has excused from participation by electronic means in this proceeding; and that a physical copy of the filing will be submitted to the Commission once the State of Emergency has ceased.

Mary Ellen Wimberly
