

1 A. Are you asking if commercial operations takes
2 both companies' best interests in mind?

3 Q. I suppose it's kind of a vague way of my
4 having phrased it. Yeah. For any reason, whether
5 it's different regulatory approvals or otherwise,
6 does commercial operations basically just make a
7 decision as to the plant, irrespective -- you know,
8 without having a distinction in mind between
9 Kentucky Power and Wheeling?

10 A. Yes. They're generally viewing the
11 generating assets -- in terms of market offers,
12 they're generally doing it as a single generating
13 unit. They're not taking individual ownership into
14 account.

15 Q. Okay. Thank you.

16 A. So they're trying to maximize -- sorry.

17 Q. Oh, no, no, no. That -- I didn't mean to cut
18 you off.

19 A. I was -- okay. They're trying to maximize
20 the value of the unit. They're not paying attention
21 to the ownership share.

22 Q. Understood. Thanks.

23 Okay. So putting aside the day-to-day
24 commitment decisions, are you aware of any seasonal
25 or perhaps annual, you know, kind of longer

1 incremental conversations at AEP, or KPC for that
2 matter, where folks make a point of looking back at
3 whether self-scheduling resulted in losses, variable
4 operating losses for significant stretches of time
5 that may have been avoidable if the Company had
6 chosen not to self-schedule Mitchell?

7 A. I'm not aware of any specific studies, but
8 keep in mind -- I mean, you yourself listed earlier
9 all the different factors that go into any decision
10 to self-schedule: The determination of whether or
11 not you have adequate fuel supply, or if you can
12 safely operate the unit, or any operational
13 considerations such as a test or for a -- you know,
14 a two-unit power plant like Mitchell whether you
15 need to keep a unit on during cold weather for heat.
16 Things like that.

17 Q. Sure. And I appreciate that. And my
18 question, which I think you answered, but just to be
19 clear, you know, sometimes, you know, looking back,
20 you may get a perspective that wasn't anticipated
21 with the day-to-day analyses. You might see that,
22 weeks over weeks or even months, self-scheduling
23 resulted in losses, and losses that might have been
24 avoidable had a plant not been self-scheduled.

25 And I'm not asking you to admit to or concede

1 that that has happened right here. I'm just
2 wondering if you're aware of conversations,
3 presentations, or certainly any documentary, whether
4 there's a memo or, you know, internal studies that
5 address this as a bigger pattern, if it's come up.

6 A. I'm not aware of anything formal, but I know
7 that they're reviewing the results of the market and
8 trying to understand how that fits in with fuel
9 supply, fuel obligations, all those other factors to
10 make sure that whatever we're doing makes economic
11 and operational sense for the units.

12 Q. Thank you.

13 I suppose a component of that, and I'll just
14 ask to be clear. You know, you may be aware of
15 increasing discussion, some might say debate,
16 studies about coal units self-scheduling -- or
17 sometimes called self-committing, depending on the
18 RTO -- in the trade press at different commissions.

19 Are you aware of any -- any documents or any
20 dialogue at AEP or KPC reacting to that discussion
21 in the industry?

22 A. I'm not aware of any documentation. I'm
23 aware of some of the things that you've mentioned.
24 I know that the issues of dispatch have been brought
25 up in front of other commissions. I believe RTOs

1 have each addressed that to an extent.

2 Q. That's helpful. Thanks.

3 In that same discovery response, couple
4 subparts down in 2-3D and D-IV, Roman IV, you said
5 that the workbooks that are generated on a daily
6 basis looking ahead six days, they provide a
7 snapshot in time that is used as a starting point
8 for the unit bids that are ultimately submitted to
9 PJM.

10 When you say "unit bids" -- I just want to
11 make sure I understand -- does that encompass the
12 decision whether to self-schedule the units?

13 A. These daily files initially come up with a --
14 say, a recommendation discussion point. These files
15 are generated at the beginning of the daily
16 commitment process. So you've got an analysts
17 looking at unit availability -- current unit
18 availability at that point in time, as well as the
19 current LMP forecast and attempting to come up with
20 some talking points to deal with -- to bring up to
21 the rest of the team.

22 But, yes, it's a snapshot in time. It's done
23 very early in the process, and there's additional
24 monitoring and analysis and communication with the
25 generating plants that goes on up until the point

1 where the units are offered into the market.

2 Q. I see. And so that starting point is then
3 subject to starting point that incorporates the LMP
4 projections and unit costs. That's a starting
5 point, and then other factors, such as fuel contract
6 constraints and the like, are folded in, and then
7 the ultimate decision is made?

8 A. Yes.

9 Q. Okay.

10 A. At a high level, that's the process.

11 Q. At a high level.

12 Do you have a sense of if or how often fuel
13 contract obligations were a dispositive reason that
14 Mitchell was self-scheduled in the test year or --
15 or other recent history?

16 A. Not -- nothing exact, no. I know that they
17 always take into account the level of fuel that's
18 available at the plant and the scheduled fuel
19 deliveries.

20 Q. Do you happen to know if self-scheduling has
21 ever been cited as a means of helping the units
22 achieve a particular target capacity factor?

23 A. I'm not aware of any of those sorts of
24 discussions.

25 Q. Uh-huh. Do you have an opinion on whether

1 that would be appropriate, to use self-scheduling to
2 ensure that the plants hit a capacity factor?

3 A. I don't really have an opinion on that, no.

4 Q. All right. With respect to the test year in
5 this case, are you aware of any substantial
6 stretches of time, say weeks-long periods, week over
7 week, that Mitchell was self-scheduled and was
8 incurring a consistent operating loss on a variable
9 basis?

10 A. I'm not aware, but I didn't do the analysis
11 to support any sort of decision in that regard.

12 Q. Okay. Did you happen to review the
13 controversial data that Kentucky Power produced to
14 Sierra Club in its supplemental discovery response
15 on October 9th? There's a bunch of Excel files.

16 A. I'm aware of the files. I am not -- I don't
17 know how detailed your question is. I don't know
18 that I could answer anything specific on a specific
19 date or time.

20 Q. All right. Fair enough. I'm almost done. I
21 might be done. Just give me one moment, please. I
22 have two more questions.

23 Do you happen to know -- well, I'll ask you,
24 and I don't want you to say the answer if you do
25 know, at least yet, but are you aware, roughly,

1 the -- take -- from -- from the amount of time that
2 Mitchell actually does dispatch -- not when its
3 units are off, but whether it's actually dispatching
4 in the market -- are you aware of, roughly, the
5 proportion of time that was a result of
6 self-scheduling versus a market or economic
7 commitment mode?

8 A. I -- I want to refer you to the confidential
9 attachment we provided to Staff Question 5-6.

10 Q. 5-6. Okay. I believe Mr. Vaughan sponsored
11 that.

12 Okay. Do you have -- are you aware of whether
13 that -- the tendency to or, I guess, the proportion
14 by which self-scheduling selected, is that on a
15 seasonal basis or, you know, higher incidence based
16 on season or seasons? Or is it kind of independent
17 of seasonal market demand?

18 A. Seasonal market demand is one of the factors
19 that plays into this, also as well as expectations
20 of outages for other units in PJM and whatever
21 outage schedules and maintenance outages are
22 necessary for the Mitchell units themselves.

23 Q. Do you know if there have been discussions or
24 have you been a part of any discussions at AEP or
25 KPC about transitioning Mitchell to seasonal

1 operations?

2 A. I'm not aware of any such discussions.

3 Q. Okay. The last thing I'll ask is do you have
4 an understanding of whether -- whether the unit
5 commitment decision-making with respect to Mitchell
6 has ever been explicitly offered for approval or
7 specifically challenged or otherwise specifically
8 passed on by this commission -- by this commission,
9 whether that decision of self-scheduling versus
10 market commitment has -- its prudence has been
11 passed on?

12 A. I'm not aware that the Commission has ever
13 addressed it specifically, but the fuel usage at
14 Mitchell is, obviously, up for review as part of the
15 Company's fuel filings.

16 Q. Okay. And so would you -- and I'm not asking
17 for a legal conclusion but just your understanding
18 as somebody who supports this decision-making as a
19 technical matter. Is it your understanding that the
20 prudence of these decisions, you know, in tandem
21 with the gains or losses that the Company realizes
22 is at issue in the fuel reconciliation dockets?

23 A. It's my understanding that, yeah, the
24 off-system sales margin and the fuel expense are
25 things that are reviewed as part of the fuel

1 dockets.

2 Does that answer your question?

3 Q. It does. It does. And would you agree that
4 it's also at issue in the general rate case?

5 A. I think only to the extent that you have any
6 off-system sales margins included in base rates.
7 But even still, anything that you have in base
8 rates, if it's trued up in a rider, would really be
9 addressed in that particular rider, in this case the
10 FAC.

11 MR. MILLER: Well, Mr. Stegall, thank you
12 very much for walking through this with me. I
13 appreciate your precision and your help.

14 That's all I have, Mr. Chairman. Thank you
15 very much.

16 CHAIRMAN SCHMITT: Thank you.

17 Mr. Frye, any questions?

18 MR. FRYE: No questions at this time,
19 Mr. Chairman.

20 CHAIRMAN SCHMITT: Vice Chairman Chandler,
21 questions?

22 VICE CHAIRMAN CHANDLER: Yeah. Thank you.
23 Just a few, Chairman. I appreciate it.

By Vice Chairman Chandler:

Q. Is it Mr. Stegall or Mr. Stegall?

A. Mr. Stegall.

Q. Stegall. Good afternoon.

In terms of the interaction between the Company's dispatch decisions and the off-system sales calls, is it better to ask questions of you or Mr. Vaughan?

A. I think it depends on the question. I mean, I can -- I can talk about how -- the process at a high level, but the dispatch is just offering the units in. The determine of off-system sales is something that occurs once we have market results and understand our internal load.

Q. Yeah. And I think that's an important distinction, isn't it, is that there's the ultimate decisions, and then the off-system sales is just the result of those decisions, correct?

A. Correct.

Q. Okay. And you agree that off-system sales, pursuant to a commission-approved tariff, is shared between customers and Kentucky Power, correct?

A. Correct.

Q. And do you know on what percentage basis that

1 is shared?

2 A. Off the top of my head, I don't recall. I
3 know that there is a sharing mechanism, though.

4 Q. Okay. And is it your understanding that the
5 Company's customers pay -- pay for the units? For
6 instance, the Mitchell and the Big Sandy I unit?

7 A. I -- I think the Company's customers pay
8 their financial obligation towards these generating
9 assets.

10 Q. Okay. And the fuel -- and, you know, other
11 variable O&M expenses -- or the other variable
12 expenses are recovered through a number of different
13 places, right? Base rates plus the different riders
14 that are applicable to those units, right?

15 A. Correct.

16 Q. Like the FAC that you were talking about?

17 A. Yes.

18 Q. Okay. Is it your experience that the Company
19 makes the appropriate dispatch decisions because
20 they have a sharing mechanism in the off-system
21 sales clause?

22 Let me withdraw that question. Let me ask the
23 question this way.

24 Do you think that a no-sharing of the
25 off-system sales clause between customers and the

1 Company, no sharing with the Company, would change
2 the Company's dispatch procedures or choices?

3 A. No, because I think commercial operations
4 does the best -- tries to make the best decision for
5 customers regardless.

6 Q. Okay. And I was just interested in maybe
7 following up on one of Mr. Miller's questions, and I
8 guess I can appreciate the perspective on it. In
9 regards to the Company's -- and if you can't speak
10 to this, please don't. Just push it off to Mr.
11 Kerns or somebody else. Feel free to.

12 But are you aware of the Company going back
13 and doing after-the-fact reviews of whether -- and
14 I'm really summarizing -- whether -- whether the
15 Company's actions on dispatch decisions have been
16 fruitful, or if there needs to be a change going
17 forward?

18 A. The evaluation is done whether it's on an
19 annual basis or even on a short-term basis. I've
20 seen -- I've heard discussions about evaluating on a
21 short-term basis. I'm not aware of a formal review
22 on something on a month-by-month or year-by-year,
23 but that doesn't mean that it's not done.

24 And the Company's own results and off-system
25 sales margins would dictate, at a high level,

1 whether or not we're successful overall.

2 Q. Well, it would to a degree, but those are --
3 the off-system sales margins -- well, let me ask
4 this.

5 Insofar as sales, right, the revenue received
6 is less than the cost, is it your understanding that
7 the Company shares in those losses?

8 A. Are you talking about at the end of the day,
9 when we file a FAC with an off-system sales margin,
10 are there individual hours where we came in
11 negative?

12 Q. No, no. I'm asking the off-system sales
13 clause or the off-system sales margin is shared, a
14 percentage of it, with the Company, correct?

15 A. Correct.

16 Q. The profit is shared with the Company.

17 Insofar as there are losses, is the sharing
18 with the Company zero dollars or that percentage of
19 the losses?

20 A. I -- I don't have enough knowledge of the
21 mechanism to tell you for sure. I know across the
22 system, I've seen different -- across AEP, I've seen
23 different views, but generally the view is that the
24 Company -- if it's a loss overall, the Company will
25 absorb the loss. If it's a gain overall, then it's

1 shared, or the customer gets all of it depending on
2 the jurisdiction.

3 Q. Well, let me make that sure I'm clear. You
4 say the Company would absorb the loss? But doesn't
5 the Company recover the costs through the FAC?

6 A. Well, any -- any costs for off-system sales,
7 so any fuel that's burned to generate off-system
8 sales in the FAC is recorded as a credit, subject to
9 check.

10 So we have a cost allocation process at the
11 end -- at the end of the month, and once we know all
12 of our transactions and what serves internal load
13 versus what serves off-system load. And there's a
14 cost recovery mechanism that assigns a -- an
15 offsetting revenue to sort of the contra expense to
16 the fuel for any fuel burned to serve off-system
17 customers.

18 Q. Okay. So let me ask this question: Insofar
19 as sales are made or generation is produced to make
20 sales in excess of native load need, right, is that
21 a function of a particular action the Company took,
22 or is that a function of being dispatched in the
23 market for an amount in excess of native load
24 demand?

25 A. I would say it's both. It's making your

1 generation available to the point where it can be
2 dispatched by the market, and then it's market
3 demand requesting that you produce more energy that
4 can be sold. And this energy that you're producing
5 happens to exceed what your internal load is.

6 Q. So the off-system sales margin is, only for
7 that answer, incentivizing making the units
8 available for PJM's economic dispatch?

9 A. The way that's characterized seems a bit
10 oversimplified.

11 I think making sure that a unit is available
12 and operating is -- that's the piece that you're
13 incenting. Obviously, the market does the dispatch
14 from, at the very least, your economic minimum up to
15 your economic maximum, but the units aren't -- it
16 takes a lot of work and supervision and maintenance
17 to make sure that the units are available to the
18 market.

19 Q. Would you agree that Kentucky Power has an
20 obligation to provide electricity and reasonable
21 service to its customers?

22 A. Yes.

23 Q. And wouldn't you agree that -- are you aware
24 of the capacity performance rules in PJM?

25 A. Broadly, yes.

1 Q. But you understand that -- that generators
2 have an obligation to produce when called upon and
3 be available when needed?

4 A. Yes.

5 Q. Okay.

6 VICE CHAIRMAN CHANDLER: I appreciate it.
7 Thank you very much. Have a good evening.

8 CHAIRMAN SCHMITT: Dr. Mathews, questions?

9 COMMISSIONER MATHEWS: I don't have any.

10 CHAIRMAN SCHMITT: Ms. Glass, any redirect?

11 MS. GLASS: Just one quick one, Your Honor.

12 REDIRECT EXAMINATION

13 By Ms. Glass:

14 Q. Mr. Stegall, would Company Witness Vaughan be
15 the best witness to discuss the operation of the
16 Company's system sales clause?

17 A. Yes.

18 MS. GLASS: Thank you. That's all I have.

19 CHAIRMAN SCHMITT: Thank you. You may step
20 down. Thank you, Mr. Stegall.

21 I guess the next witness is, what, Ms. Cost?

22 MS. GLASS: Yes, Your Honor.

23 Your Honor, may I ask?

24 CHAIRMAN SCHMITT: Thank you.

25 MS. GLASS: I'm sorry. I think she needs to

1 be sworn first.

2 CHAIRMAN SCHMITT: No.

3 Ms. Cost, would you please raise your right
4 hand?

5 Do you solemnly swear or affirm under the
6 penalty of perjury that the testimony you're about
7 to give will be the truth, the whole truth, and
8 nothing but the truth?

9 THE WITNESS: Yes, I do.

10 CHAIRMAN SCHMITT: Ms. Glass, now you may
11 ask.

12 * * * * *
13 JACLYN COST, called by the Kentucky Power
14 Company, having been first duly sworn, testified as
15 follows:

16 MS. GLASS: Thank you.

17 DIRECT EXAMINATION

18 By Ms. Glass:

19 Q. Can you please state your name, business
20 address, and employer for the record.

21 A. Yes. Jaclyn Cost. American Electric Power
22 Service Corporation, and 1 Riverside Plaza,
23 Columbus, Ohio 43215.

24 Q. And what's your position with AEPSC?

25 A. Regulatory consultant senior.

1 Q. Did you cause to be filed into the record of
2 this case direct testimony and answers to data
3 requests?

4 A. Yes.

5 Q. And do you have any changes to your direct
6 testimony or answers to data requests?

7 A. No, I do not.

8 Q. If I were to ask you those same questions
9 today, would your answers be the same?

10 A. Yes, they would.

11 MS. GLASS: Your Honor, the witness is
12 available for cross-examination.

13 CHAIRMAN SCHMITT: Ms. Vinsel, questions?

14 MS. VINSEL: Thank you, Chairman. Staff does
15 not have any questions for Ms. Cost.

16 CHAIRMAN SCHMITT: Mr. West, questions?

17 MR. WEST: No questions from AG. Thank you.

18 CHAIRMAN SCHMITT: Mr. Kurtz, questions?

19 MR. KURTZ: No questions, Your Honor.

20 CHAIRMAN SCHMITT: Ms. Grundmann, questions?

21 MS. GRUNDMANN: No questions, Your Honor.

22 CHAIRMAN SCHMITT: Mr. Spenard.

23 MR. SPENARD: No questions, Mr. Chairman.

24 CHAIRMAN SCHMITT: Mr. Fitzgerald?

25 MR. FITZGERALD: No questions, Mr. Chairman.

1 CHAIRMAN SCHMITT: Mr. Miller?

2 MR. MILLER: None from us. Thank you, Your
3 Honor.

4 CHAIRMAN SCHMITT: Mr. Frye?

5 MR. FRYE: Nothing from us as well, Your
6 Honor.

7 CHAIRMAN SCHMITT: Vice Chairman Chandler?

8 VICE CHAIRMAN CHANDLER: I have no questions.
9 Thank you, Mr. Chairman.

10 CHAIRMAN SCHMITT: Dr. Mathews?

11 COMMISSIONER MATHEWS: I'm going to make it
12 unanimous. I have no questions.

13 CHAIRMAN SCHMITT: Obviously, there can't be
14 redirect since there's been no cross-examination,
15 Ms. Glass.

16 Thank you, Ms. Cost. You may step down.

17 THE WITNESS: Thank you.

18 CHAIRMAN SCHMITT: I was hoping we'd get one
19 more witness. If we could get Mr. -- is it Messner?
20 And then take a break and begin with Mr. McKenzie.

21 MS. GLASS: Your Honor, we'll just need to
22 sanitize both of our areas quickly.

23 CHAIRMAN SCHMITT: Okay. Mr. Garcia, are you
24 ready?

25 MR. GARCIA: We are, Your Honor.

1 CHAIRMAN SCHMITT: Okay. Mr. Messner, would
2 you please raise your right hand?

3 Do you solemnly swear or affirm under penalty
4 of perjury that the testimony you're about to give
5 will be the truth, the whole truth, and nothing but
6 the truth?

7 THE WITNESS: I do.

8 CHAIRMAN SCHMITT: Thank you.

9 Mr. Garcia, you may ask.

10 * * * *

11 FRANZ MESSNER, called by the Kentucky Power
12 Company, having been first duly sworn, testified as
13 follows:

14 MR. GARCIA: Thank you, Your Honor. If I can
15 check that I am being heard. Yes?

16 MS. VINSEL: Yes. Checking to make sure he's
17 being heard.

18 CHAIRMAN SCHMITT: Oh, yes, yes. You can be
19 heard. Loud and clear.

20 MR. GARCIA: Thank you.

21 DIRECT EXAMINATION

22 By Mr. Garcia:

23 Q. Mr. Messner, please talk into the microphone.
24 And if -- at some point we may receive instruction
25 that you may need to speak more clearly, being that

1 we're in a virtual environment. Is that okay?

2 A. Okay.

3 Q. Thank you. Would you please state your name,
4 business address, and for whom you work, and in what
5 capacity for the record, please?

6 A. Franz Messner. Managing director of
7 corporate finance, American Electric Power Service
8 Corporation. 1 Riverside Plaza, Columbus, Ohio
9 43215.

10 Q. Okay. And, Mr. Messner, did you cause in
11 this case direct testimony, rebuttal testimony, and
12 discovery responses to be filed on behalf of
13 Kentucky Power?

14 A. Yes, I did.

15 Q. Were those prepared by you or under your
16 supervision?

17 A. Yes, they were.

18 Q. Do you have any corrections to those data
19 requests or rebuttal testimony or direct testimony?

20 A. No, I do not.

21 Q. If I were to ask you the same questions
22 today, would you substantially provide the same
23 answers?

24 A. Yes, I would.

25 MR. GARCIA: Your Honor, I would tender the

1 witness at this point.

2 CHAIRMAN SCHMITT: Okay. Thank you.

3 Ms. Vinsel, questions?

4 MS. VINSEL: Yes, Chairman, we do have some
5 questions.

6 CROSS-EXAMINATION

7 By Ms. Vinsel:

8 Q. Good afternoon, Mr. Messner. How are you
9 today?

10 A. Good afternoon. I'm well. Thank you.

11 Q. Good. Good.

12 Let's jump in with unprotected excess ADIT.
13 Some of the questions that I asked Mr. Mattison he
14 deferred to you and, I believe, to Mr. Vaughan.

15 As you know, Kentucky Power is proposing to
16 accelerate the return of approximately 65 million in
17 unprotected excess ADIT. And that -- that is about
18 half of the existing balance as of April -- let me
19 be clear -- as of April 2020. Is that correct?

20 A. To my understanding, I think that's correct,
21 subject to check.

22 Q. Subject to check.

23 Mr. Messner, did you participate at all in
24 the -- I think it was a 2018 case involving the tax
25 cut and JOBS Act reduction in corporate income tax?

1 A. No, I did not.

2 Q. Let me -- we've discussed several times that
3 in that case Kentucky Power had offered testimony
4 that it needed 18 years -- or minimum of 18 years to
5 return the unprotected excess ADIT because a shorter
6 period would adversely impact credit metrics.

7 I recognize you weren't part of that. I'm
8 telling you that, hopefully, that you will agree
9 that you have heard that somewhere.

10 A. Yes, I have.

11 Q. I'll also note that that period was
12 substantially longer than the Commission authorized
13 for any other utility.

14 So given that background, I think it's natural
15 to have some concerns about returning roughly half
16 of the balance over a one-year period. So can you
17 tell me, are there impacts on the credit -- on
18 Kentucky Power's credit metrics from returning the
19 unprotected excess ADIT, the 65 million, in a
20 one-year period?

21 And I recognize that was a long question. I
22 can shorten it if you like.

23 A. No, I think I understand. Anything that
24 delays or otherwise negatively impacts cash flows
25 has a negative impact on credit ratings.

1 Q. So then let me jump to another question, and
2 I'll circle back to that one. Is there a level of
3 increased amortization of the excess ADIT that, if
4 reached, will downgrade Kentucky Power's credit
5 metrics?

6 A. I don't know that one could come up with a
7 definitive calculation. It is a case that Kentucky
8 Power's cash flows are what I would characterize as
9 out-of-bounds low for their current credit rating.
10 So they're already distressed.

11 Q. And I believe that there's testimony -- I'm
12 sorry, I can't recall who filed this testimony --
13 that Kentucky Power is planning to finance the
14 accelerated return of the ADIT.

15 Can you speak to that?

16 A. Yes. I'm not sure finance as in a proactive,
17 okay, we need to go issue \$65 million of -- you
18 know, to offset this. It's my understanding that
19 what the proposal is is to delay the rate increase
20 for a year and offset that with an associated
21 decrease of ADF -- deferred income taxes in the
22 equal amount.

23 The impact that that will have is Kentucky
24 Power will need to -- will either have negatively
25 impacted cash flows, and depending on where their

1 money pool balance, their short-term borrowing
2 position is, may need to issue additional debt to
3 term out some of the short-term debt.

4 Q. I may -- it may be Mr. West that had that
5 testimony or Mr. Vaughan. I will follow up with
6 them on that.

7 Let me ask, is there an ROE value that can
8 offset any potential downgrade from the -- from any
9 acceleration of the ADIT?

10 Let me ask this another way. Let me ask it a
11 little more artfully. It's okay. You can laugh.

12 Now I'm trying to think of how I really want
13 to say this. At what point, what -- what -- is
14 there an ROE or a particular point where the excess
15 ADIT, the increased amortization, would not result
16 -- would balance out any credit metric adverse
17 credit impact?

18 A. Let me think about that question for a
19 second.

20 Q. Sure. Sure. What I'm really asking is is
21 there an ROE value that can offset a downgrade?

22 A. ROE is the result of the Company's
23 operations. And, obviously, in this process we agree
24 with an authorized ROE. And it is the case that
25 Kentucky Power has not been earning their authorized

1 ROE. In fact, I think it's close to half. And,
2 obviously, that has negative financial impacts.

3 There is no -- there's not necessarily a
4 tipping point in terms of if your ROE is this number
5 that results in an automatic downgrade. The credit
6 rating agencies consider all aspects, both
7 financial, quantitative measures, as well as
8 qualitative measures.

9 So I think the answer to the question is
10 there's not a specific ROE that leads to a
11 downgrade. Does that make sense?

12 Q. No, no. It does. It does. Thank you.

13 There also was testimony that, although the
14 accelerated return of the excess ADIT -- although it
15 would be a negative impact, there would not
16 necessarily be an adverse impact from credit rating
17 agencies because this was being returned over only
18 one year. So, basically, a very limited time
19 period, and that would mute any potential adverse
20 impact.

21 Do I have that correct, or would you like to
22 add to that?

23 A. Yes, you do, generally. I equate it to kind
24 of ripping the Band-Aid off. While it will have a
25 negative impact on cash flows, obviously, credit

1 rating agencies, generally -- I'm not sure
2 "accommodate" is the right word, but they take into
3 consideration things that are short duration or
4 one-time events, as being proposed in this rate
5 case. Things that generally lead to being put on
6 negative outlook and/or a downgrade are those things
7 that last for longer than maybe a single one-time
8 event.

9 And a perfect example of that would be the
10 Rockport deferrals that were part of the last rate
11 proceedings. I believe the order was in January of
12 2018, and in March of that same year Moody's moved
13 to put Kentucky Power on negative outlook. And,
14 basically, that means over the next 6 to 18 months
15 they're going to evaluate the Company's financial
16 performance and revisit sooner than perhaps they
17 otherwise would, and then actually Kentucky Power
18 was subsequently downgraded to Baa3, I believe, in
19 April of 2019.

20 Q. I think this was one of the questions
21 Mr. Mattison deferred to you. If -- if the same
22 amount, that approximately 65 million of excess ADIT
23 were -- it was accelerated over a two-year period
24 instead of a one-year period -- so, if you will,
25 split in half, same amount over two years -- would

1 there be an adverse impact from that as opposed to
2 returning the same amount in one year?

3 A. There will be an adverse impact either way,
4 but, as I hopefully explained a moment ago, I think
5 that the impact would be potentially more severe
6 when the duration is extended other than the
7 singular one-time event.

8 Q. And other than your professional experience
9 -- and believe me, I'm not downgrading that at all,
10 but other than that, of course, your professional
11 experience, is there any other support that you have
12 for your testimony in regard to the adverse impact
13 from returning the excess ADIT over one year or even
14 two years if that were the case?

15 A. In the credit -- Moody's credit opinions -- I
16 don't recall the exact language, and I could find it
17 for you, but one of the things that they talk about
18 is a period -- you know, whether it be the ADIT or
19 some of the Rockport deferrals from the last case,
20 they talk about the reason for the downgrade -- I'm
21 paraphrasing here -- was due to anticipated longer
22 duration period of insufficient cash flows.

23 Q. Okay. And that makes sense because, again,
24 as you said, accelerating the ADIT, that has an
25 impact on Kentucky Power's cash flow.

1 A. It does, yes.

2 Q. And you don't have to show me the document.
3 I think we might have it. There are some
4 confidential exhibits that may have that, so we may
5 see that later.

6 A. That's correct, yes.

7 Q. Let me move to short-term debt. And I
8 believe, as you know, that during the test year the
9 short-term debt increased from 380 -- excuse me --
10 38 million, 38.65 million to over 122 million.

11 Do you want to check that and make sure that
12 that's correct?

13 A. I think that's generally correct.

14 Q. I'm doing some rounding with the numbers.

15 A. Yeah. I don't -- I didn't see 122, but I do
16 note in February it was 120 or rounded to 121.

17 Q. Then I misspoke. I meant to say 120.

18 Can you tell me why the short-term debt
19 balance increased about not quite 82 million during
20 the test year?

21 A. Well, for a variety of reasons. The primary
22 one is the reason that we're here. Kentucky Power
23 has not been earning their authorized ROE. In
24 addition, they've been deferring some of their
25 earnings. So while they may have earnings, a fair

1 amount of it is noncash earnings. So the short-term
2 debt is being used to finance the operations of the
3 Company.

4 Q. So, basically, using that -- as you said,
5 using the short-term debt to operate the Company in
6 the place of expected revenues. Would that be
7 correct?

8 A. Right. Insufficient cash revenues require
9 use of the short-term borrowing program for working
10 capital purposes.

11 Q. Also in your testimony you discuss the fact
12 that Kentucky Power had considered issuing private
13 placement debt. I believe -- was that at the end of
14 2019 or fall 2019?

15 A. Yes. We started, in the third quarter of
16 2019, the process to evaluate issuing a private
17 placement for those who are around. For the last
18 rate case we had a similar situation. We issued a
19 private placement in June of 2017, I believe.

20 But due to the fact that there was uncertainty
21 around Kentucky's economic outlook, it would have
22 made issuing in the private placement market, and
23 those investors are typically insurance companies
24 and the like, it would have been a little bit of a
25 difficult sell in telling Kentucky Power's story.

1 So we kind of stood down and reassessed in
2 December and then again in January. And, obviously,
3 the rate case activity was going on. So what we did
4 instead was, in lieu of the private placement, we
5 issued a two-year term loan that closed, I believe,
6 March 6 in the amount of 125 million to bring down
7 Kentucky Power's short-term debt balance as it
8 approached their authorized limit of 180 million.

9 Q. When you talked about uncertainty in
10 Kentucky's economic activity, can you expand upon
11 that?

12 A. Yes. As a point of comparison, when we did
13 the private placement in 2017, we had investors come
14 in, and we had investor presentation for them. At
15 the time there was a lot of activity related to
16 Braidy Industries. I'm not sure if EnerBlu was in
17 the mix yet or not.

18 There was potential for the -- there was
19 discussions between then-President Satterwhite and
20 members of Congress about, you know, the potential
21 for bringing investment, bringing manufacturing into
22 the Kentucky Power service territory. So that story
23 was positive.

24 Segue to 2019, the conditions are markedly
25 different. So we decided to stand down instead.

1 Issued a two-year term loan to span the period of
2 the rate case and perhaps allow for some further
3 economic development in Kentucky.

4 Q. That's what I -- my next question, you just
5 partially answered, and that's what is it that led
6 Kentucky Power to make this decision to get that
7 two-year term loan to lower the short-term debt
8 about a month before the rate case?

9 A. So, originally, we had intended on doing the
10 private placement in the fourth quarter last year.
11 I believe the balances -- we had forecast that the
12 balances would be about where they are in, you know,
13 October-November time frame. So we had looked at
14 originally doing this in the November-December time
15 frame.

16 And because of the, you know, the decision to
17 delay and the balance at the time, we switched
18 course and went to the term loan. We ended up
19 issuing the 125 million in March.

20 Q. Was it a question of timing? It was just a
21 question of timing for -- for what, I guess I should
22 say.

23 A. So we had originally intended to term out,
24 you know, roughly 100 million or so in the fourth
25 quarter of last year to put longer-duration debt on

1 Kentucky Power that more closely matched the asset
2 lives, but because the conditions didn't warrant
3 that, or we -- banks will tell us that there's a
4 deal to be done, but that means it might be at a
5 price that's unattractive.

6 So rather than issuing into that market in the
7 private placement world, we decided to do a two-year
8 term loan with two banks and knowing that, you know,
9 the rates were going to be cheaper, and it would
10 basically allow us to span the period of the rate
11 case and perhaps allow for more economic
12 development.

13 Does that answer your question?

14 Q. No, no, thank you.

15 Is there any general principle that prompts
16 Kentucky Power to roll short-term debt into
17 long-term debt?

18 A. Yeah. Generally, with Kentucky Power and our
19 other operating companies, we use short-term debt as
20 a means of support operations and working capital.
21 And then, when the debt amount either gets close to
22 their authorized limit or to -- not necessarily in
23 Kentucky Power's case but for some of the other SEC
24 registrant companies, when they get to something
25 that's called index eligible size, which is

1 generally 300 million or more, we will term it out
2 at that point, again using -- the typical durations
3 are 10 and 30 years. But -- and, again, that's to
4 match the longer-lived assets.

5 Q. Thank you.

6 I'm going to try very hard to ask this next
7 batch of questions without having to refer to a
8 document, but basically I want to talk to you about
9 senior unsecured notes.

10 In the application, one of the schedules has
11 long-term debt, and that includes ten senior
12 unsecured notes, all with maturity dates between
13 June 2021 and September 2047. I can give you the
14 exact citation if you want it. It's in the
15 application Section 5, Exhibit 2. It's Work
16 Paper S3.

17 And if I went too fast, I can repeat it.

18 A. I have that right in front of me.

19 Q. Okay. So when a debt instrument matures,
20 does

21 Kentucky Power typically refinance that debt
22 instrument?

23 A. Generally that's the case, yes.

24 Q. And if the refinancing was at a higher
25 interest rate, would there still be refinancing?

1 A. If the market conditions indicated that --
2 yes. I mean, we do the issuances to maintain capital
3 structure, you know, investment grade capital
4 structure that is viewed favorably by the credit
5 rating agencies.

6 If it's the case that the market rates,
7 prevailing rates are higher, that would -- that
8 would be something that we would do.

9 Q. Okay. One of the senior unsecured notes
10 matures on June 18, 2021, and it has an interest
11 rate of 7.250 percent.

12 Do you anticipate that Kentucky Power will
13 refinance with June 2021 bonds if an interest rate
14 savings could be incurred with bonds?

15 A. Could you restate the last phrase of that
16 sentence -- question?

17 Q. Sure. Do you anticipate that Kentucky Power
18 will refinance that note with bonds if an interest
19 rate savings could be incurred?

20 A. I don't know that it's contingent on interest
21 rate savings, but, obviously, it's maturing, so we
22 would need to do something to account for that
23 maturity.

24 It may be the case -- I know that might have
25 been a little vague. It may be the case, and I'm

1 speculating slightly here, but, we may look to do an
2 issuance depending on whether the Kentucky
3 short-term debt balance that would not only take out
4 -- you know, take down the short-term debt balance
5 but also facilitate the -- you know, offsetting the
6 maturity.

7 Q. Thank you. And I apologize. I needed to --
8 we're doing a text as a back channel with my
9 coworkers who cannot be here with me today. So I
10 needed to double-check something with a team member.

11 A. I understand.

12 Q. Normally, I would just turn and be able to
13 ask them.

14 While I'll wait to see if I get a response,
15 just in general, would you agree that interest rates
16 have fallen since 2017 with one exception of a
17 slight uptick in, I think, September of 2018?

18 A. Yes, I would say that's accurate.

19 MS. VINSEL: Okay. Staff has no further
20 questions.

21 CHAIRMAN SCHMITT: Mr. West, any
22 cross-examination for this witness?

23 MR. WEST: Yes. We have just a few
24 questions.

25

By Mr. West:

Q. Hello, Mr. Messner.

A. Hello.

Q. Just a few questions about the short-term debt issue that Nancy just explored with you a bit, but during the test year the average monthly balance of short-term debt outstanding was 80.621 million, correct?

A. Yes.

Q. But for ratemaking purposes, the Company proposes a capital structure with no short-term debt. Is that also correct?

A. Yes.

Q. So if the Company sets short-term debt at zero dollars assessed year, is that accurately portraying the month-to-month operations of the Company?

A. Well, a couple of things there. One, you know, some of the discussions that we just had about we had actually initially intended to issue the private placement earlier, which obviously would have impacted the average balance, but the capital structure that we proposed in this rate case is consistent with last rate case.

1 It's based on a 3/31/20 test year, and I
2 believe the requirements mandate that we use the
3 per-books balance on that date. And, as a practical
4 matter, the delay in the private placement and
5 subsequent term loan that we issued actually
6 resulted in a rate -- the term loan on 3/31 actually
7 has a lower rate than the short-term debt rate
8 that's included in the cost of capital.

9 MR. WEST: Okay. Thank you. That's the only
10 questions I had.

11 CHAIRMAN SCHMITT: Mr. Kurtz,
12 cross-examination?

13 MR. KURTZ: Thank you.

14 CROSS-EXAMINATION

15 By Mr. Kurtz:

16 Q. Sorry. Good afternoon, Mr. Messner.

17 The unprotected excess ADIT, that's money that
18 Kentucky Power owes to consumers; is that correct?

19 A. Yes.

20 Q. And you're holding on to it and essentially
21 paying consumers the weighted average cost of
22 capital on the unamortized balance?

23 A. Could you restate that question, please?

24 Q. Isn't the weighted average cost of capital
25 carrying charge added to the balance that you owe

1 customers?

2 A. I am not familiar with that and would defer
3 -- I don't know if it's Company Witness Whitney or
4 West.

5 Q. Well, if it's money that the Company owes
6 consumers, and you're not providing any interest
7 carrying charge on it, then the longer it takes to
8 give it back, the worse off consumers would be,
9 correct?

10 A. Again, I'll defer to Company Witness -- now
11 that you're asking the question that way, it may be
12 Company Witness West or Company Witness Vaughan.

13 Q. Okay. This is an issue that AEP deals with
14 in all of its jurisdictions, the unprotected excess
15 ADIT; is that correct?

16 A. To the best of my knowledge, yes.

17 Q. For the protected, the tax rules require that
18 the money be refunded over what's called ARAM,
19 correct?

20 A. I'm not familiar with that. And, again, I
21 would defer.

22 Q. For the unprotected, it's up to, essentially,
23 the discretion of the various commissions.

24 Do you know -- for example, the amortization
25 period in Kentucky, the settlement the Commission

1 awarded was 18 years. Do you know the corresponding
2 terms for Virginia, West Virginia, Indiana, et
3 cetera?

4 A. No, I do not.

5 Q. What about for the transmission, the OATT?
6 For transmission same thing -- you have this money
7 that the transmission owner owes consumers, and you
8 give it back. Is there a uniform term that FERC has
9 mandated?

10 A. I'm not familiar with that.

11 Q. Okay. Kentucky Power is asking for a
12 13 percent base rate increase in this case, 70
13 million; is that right?

14 A. I'm not familiar with the percentage, but if

15 --

16 Q. But it is 70 million?

17 MR. GARCIA: Objection, Your Honor. The
18 witness has indicated that he doesn't know.

19 CHAIRMAN SCHMITT: I think that's correct. I
20 think he has indicated he's not familiar with that.

21 MR. KURTZ: Okay. I thought he said he
22 didn't know the percentage.

23 THE WITNESS: No, I do not.

24 Q. Okay. You don't know the dollar amount
25 either?

1 A. I'm sorry. Could you repeat that question?

2 Q. You don't know the dollar amount of the
3 requested base rate increase?

4 A. Not offhand. I believe it is in the 65 to
5 70 million range, but --

6 Q. Yeah. Do you prepare -- are you on the
7 earnings calls with the investment analysts that
8 occur quarterly?

9 A. I listen to them as I'm able.

10 Q. We saw you testify that Kentucky Power has a
11 low earned rate of return currently, and it
12 consistently drags down the AEP average return.
13 Isn't that correct?

14 A. Yes, they are -- Kentucky Power is
15 underearning.

16 Q. And historically has underearned?

17 A. Yes, I believe that's the case.

18 Q. And we saw earlier that the solution to that
19 product underearning is to grow rate base to
20 increase rates to increase earnings.

21 Were you here for that?

22 A. I heard some of that discussion, but I think
23 earning -- earning a -- I guess the authorized
24 return is the reason that we have this rate
25 proceeding. Kentucky is not earning anywhere near

1 that, so as part of that story or process is a
2 regulatory process, and I'm coming before the
3 Commission and establishing reasonable rates.

4 Q. Agreed. A big driver of the rate increase is
5 poor sales or loss of sales, correct?

6 A. I don't know specifically the main driver.
7 All I know is that Kentucky Power's earning nowhere
8 near their authorized ROE.

9 Q. If base rates go up by 13 percent additional,
10 that's going to cause sales to go down even further
11 because there is some elasticity of demand. People
12 will use less of a product when you charge more.

13 Doesn't that just exacerbate the problem?

14 MR. GARCIA: Objection, Your Honor. That's
15 outside of the scope of the testimony of this
16 witness.

17 CHAIRMAN SCHMITT: I'm sorry. I didn't
18 understand the objection.

19 MR. GARCIA: Outside of the scope of the
20 testimony of this witness.

21 CHAIRMAN SCHMITT: Yeah, I understand. We
22 have wide-open cross-examination in Kentucky under
23 our rules. And it is, I think, relevant to the
24 entire proceeding.

25 MR. GARCIA: Thank you, Your Honor.

1 Q. Doesn't that just make the problem worse?

2 A. Would you please restate the question?

3 There's a couple different things going on there.

4 Q. Kentucky Power has bad earnings, historically
5 has had bad earnings, historically drags down the
6 AEP average. It's entitled to a reasonable rate of
7 return, but when you grow rate base, grow earnings,
8 and you raise rates, you're going to drive down
9 sales even further and just make the problem
10 compound.

11 Don't you -- do you see that?

12 A. Not necessarily. I can't speak to consumers'
13 usage. What I can speak to and what I'm supporting
14 here is the cost of capital and the capital
15 structure and this process by which Kentucky will be
16 able to earn a fair and reasonable return.

17 Q. Have you ever heard the concept of, in
18 finance that, there's a natural owner of an asset?

19 A. Could you ask that question differently,
20 please? I'm not sure I understand what you're
21 getting at.

22 Q. Do you believe that AEP is the natural owner
23 of the eastern Kentucky service territory? Is it
24 best suited to serve its own interests and the
25 interests of consumers, or might there be a better,

1 more natural owner of that (indiscernible)?

2 A. I don't have an opinion on that.

3 MR. KURTZ: No more questions, Your Honor.

4 Thank you.

5 CHAIRMAN SCHMITT: Ms. Grundmann, questions?

6 MS. GRUNDMANN: No, Your Honor.

7 CHAIRMAN SCHMITT: Mr. Spenard?

8 MR. SPENARD: Yes, Mr. Chairman. We have a
9 few questions.

10 CROSS-EXAMINATION

11 By Mr. Spenard:

12 Q. As a preliminary matter, to the witness, can
13 you hear me?

14 A. Yes.

15 Q. Okay. And, if you have any difficulty
16 hearing me or understanding a question, just let me
17 know. Okay?

18 A. I will. I will.

19 Q. Thank you.

20 Let's -- let's go back to your testimony from
21 the stand today. If I understand correctly, one of
22 the things that you're testifying about are the
23 cash -- you're talking about cash flow, and you're
24 talking about the earnings from the revenues that
25 are being sought and the cash flow implications.

1 Is that a fair characterization?

2 A. It's accurate that there is a relationship
3 typically with revenues and cash flows, but,
4 obviously, in the case of deferrals, you know, the
5 cash would not be there.

6 Does that make sense?

7 Q. All right. So, when we're talking about the
8 accumulated deferred income tax and the balance
9 that's currently carried on the books, the
10 accumulated deferred income tax balance is
11 generated, or it comes into existence, based upon a
12 timing difference between the tax liability to the
13 Internal Revenue Service and then the tax liability
14 that's -- that's for calculating rates.

15 Is it based on a timing difference?

16 A. I believe that's generally true. I would
17 defer perhaps to Company Witness Whitney on some of
18 the more technical aspects.

19 Q. Sure. And I appreciate that. And if there's
20 something that another witness needs to discuss,
21 then that's perfectly fine, or if you think it's
22 fair to give a comprehensive answer, that's fine as
23 well. I just want to try to get a very general
24 understanding.

25 What is your testimony today with regard to

1 the cash flow -- the cash flow -- the consequences
2 to the cash flow associated with Kentucky Power
3 returning the excess -- a portion of the excess
4 deferred income taxes to the ratepayers over the
5 next year?

6 A. My testimony is that delaying the
7 implementation of rates and thus the receipt of cash
8 will negatively impact Kentucky Power's cash flows
9 versus a scenario where rates go into effect
10 January 1st of 2021.

11 It's my understanding from listening to
12 Company Witness Mattison and perhaps others that,
13 you know, this delay and offset to ADIT is being
14 done as a way to, you know, to help customers and
15 perhaps get, you know, beyond the period, you know,
16 with this pandemic crisis.

17 Q. Okay. So when you're saying in terms of when
18 rates go into effect, that -- to your knowledge, if
19 you know, and if you don't, then we'll ask another
20 witness. For the rates that are the subject to this
21 application, what is the proposed -- as we sit here
22 today, what is the proposed effective rate for the
23 increase in rates subject to this application?

24 A. Would you define what you mean by "the rate"?

25 Q. Well, as part of the application -- if you

1 know, as part of the application, did Kentucky Power
2 Company supply new tariffs, proposed tariffs
3 containing new rates?

4 MR. GARCIA: Your Honor, if I may, I think
5 the objection would be to the use of the term
6 "rates," which, in the context of regulated service,
7 has a different meaning than in the context of
8 finance in which Mr. Messner is testifying. That
9 may be the confusion.

10 MR. SPENARD: Mr. Chairman, if I may, that's
11 -- if my question is confusing, then I'll add a
12 little more specificity to the question perhaps.
13 Again, if it's a better witness --

14 CHAIRMAN SCHMITT: Please do. If the witness
15 doesn't understand, the witness needs to say "I
16 don't understand." Either "I don't understand the
17 question" or "I'm not the person who can
18 appropriately answer the question."

19 But go ahead. Rephrase your question, if you
20 would, Mr. Spenard.

21 MR. SPENARD: Yes, Mr. Chairman.

22 Q. Kentucky Power generates revenues by
23 reference to the rates that it has on file, and
24 they're approved by the Kentucky Public Service
25 Commission; is that correct?

1 A. Yes.

2 Q. And the current application, among other
3 things, is seeking an increase in the rates for
4 service that Kentucky Power will be authorized to
5 charge its customers; is that correct?

6 A. Yes. Thank you for the clarification.

7 Q. Okay. You're quite welcome.

8 With regard to the effective date of the
9 increase in rates to generate additional revenue,
10 what is the effective date for the rate increase?

11 A. I'm not aware of that, what that exact date
12 is. It's my understanding is that the proposal is to
13 delay by a year and offset an ADIT balance. The
14 specific date, I would have to defer to probably
15 Company Witness West or Company Witness Mattison.

16 MR. SPENARD: Okay. Well, thank you. And at
17 this stage what we'll do is we will -- we'll address
18 the issue with Company Witness West, but I certainly
19 appreciate your answers. Thank you.

20 CHAIRMAN SCHMITT: Anything further,
21 Mr. Spenard, of this witness?

22 MR. SPENARD: No, no further questions for
23 this witness, Mr. Chairman.

24 CHAIRMAN SCHMITT: Mr. Fitzgerald?

25 MR. FITZGERALD: Mr. Chairman, we have no

1 questions.

2 CHAIRMAN SCHMITT: Mr. Miller?

3 Mr. Miller may have dropped off.

4 Mr. Frye?

5 MR. FRYE: I am here, Mr. Chairman, and no
6 questions.

7 CHAIRMAN SCHMITT: Okay. Mr. Miller, are
8 you -- have you come back? If not, if --

9 MR. CHILDERS: Your Honor, this is Joe
10 Childers.

11 CHAIRMAN SCHMITT: If you have questions --
12 well, I'll ask Mr. Miller in a minute. Is he there?

13 VICE CHAIRMAN CHANDLER: No. I think,
14 Chairman, that -- I just want to say Joe, but
15 Mr. Childers noted that Sierra Club did not have any
16 questions. I think there he is now.

17 MR. CHILDERS: That's correct. No questions.

18 CHAIRMAN SCHMITT: I'm sorry. I didn't know
19 you'd come in place of Mr. Miller.

20 Are you -- do you have questions of this
21 witness?

22 MR. CHILDERS: No questions, Your Honor.

23 CHAIRMAN SCHMITT: Thank you.

24 Vice Chairman Chandler, questions?

25 VICE CHAIRMAN CHANDLER: Thank you, Chairman.

1 Sorry about that, Mr. Childers.

2 EXAMINATION

3 By Vice Chairman Chandler:

4 Q. Good afternoon. Can you hear me okay?

5 A. Yes, I can.

6 Q. Great. So, as a preliminary question, have
7 you seen the witness list in this case for the
8 witnesses on behalf of the Company?

9 A. I have -- I believe I have, yes.

10 Q. Okay. And insofar as you've seen that
11 witness and, at least in a general matter, know who
12 is on that witness list, are you the person in this
13 case that most often would be discussing AEP and
14 Kentucky Power matters with banks?

15 A. Yes.

16 Q. Okay.

17 VICE CHAIRMAN CHANDLER: Chairman, can I ask
18 if we can go into a short confidential session?

19 CHAIRMAN SCHMITT: Yes. Let's -- Candace,
20 can we go -- can you get us into confidential
21 session?

22 MS. SACRE: We're in confidential, Chairman.

23 CHAIRMAN SCHMITT: Okay. We're now in
24 confidential session.

25 (Confidential testimony of Mr. Messner heard

1 from 3:30 p.m. through 3:50 p.m.)

2 MS. SACRE: Okay. We're back in normal
3 session, Chairman.

4 CHAIRMAN SCHMITT: We're back now in public
5 session.

6 Q. All right. Mr. Messner, can you still hear
7 me?

8 A. Yes.

9 Q. Okay. Great. Would you agree that risk and
10 return are positively correlated? Would you like me
11 to ask it differently?

12 A. Yeah. If the question is is higher risk
13 correlated to higher return?

14 Q. Well, let me ask it this way. As one
15 increases, do investors, as a general matter, expect
16 the other to?

17 A. I believe I agree with you. They would --
18 their intent, I assume, would be to be compensated
19 commensurate with the risk.

20 Q. Right. And that's the basis for -- for
21 instance, Mr. McKenzie is going to talk to us either
22 later today or tomorrow on it, correct?

23 A. That's my understanding.

24 Q. On page 6 of your rebuttal testimony, line 21
25 and 22, you refer specifically to the ratios that

1 the Company uses for cash flow.

2 A. I'm there.

3 Q. So I'm aware of FFO to debt as a general -- I
4 couldn't explain it to you besides the bare bones of
5 it.

6 What other ratios may you be referring to
7 there other than FFO to debt, if you are referring
8 at all to FFO-to-debt ratios?

9 A. So the Moody's ratings methodology has
10 40 percent of their methodology based on financial
11 metrics, and those include cash from operations plus
12 interest divided by interest; cash from operations
13 divided by debt, which is the most important of the
14 financial ratios; cash from operations plus
15 dividends divided by debt; and then debt to
16 capitalization, which is not necessarily directly,
17 obviously, a cash flow-related item.

18 And then the remaining 60 percent, 25 percent
19 of that is regulatory framework. That includes
20 legislative and judicial underpinnings of the
21 regulatory framework of 12.5 percent, and then
22 consistency and predictability of regulation is
23 another 12.5 percent. So those two together make up
24 the 25 percent regulatory framework measure.

25 The next 25 percent is ability to recover

1 costs and earn returns. And that would include, in
2 equal portions, timeliness of recovery of operating
3 and capital costs, and sufficiency of rates and
4 returns.

5 And then the remaining 10 percent is
6 diversification split equally between market
7 position and generation and fuel diversity.

8 Q. Okay. Great.

9 A. I've submitted, I believe, certain of the
10 Moody's credit opinions, and they have scores in
11 those opinions that -- for each of those measures.

12 Q. Great. And so, as I understand it, you
13 discussed a couple of these measures, but as I take
14 it away, you only discussed the ones I can think of
15 that were negative or that were going the wrong way.
16 Is that incorrect?

17 For instance -- let me ask it this way -- are
18 you aware that the company in this case is proposing
19 to recover 100 percent rather than the current
20 80 percent of LSE OATT expenses through the tariff
21 PPA?

22 A. In listening to testimony this week, I've
23 heard that discussion, but I was not specifically
24 involved in that, no.

25 Q. No, no, I agree. But I didn't see your

1 testimony on it at all. But what I'm asking is,
2 outside of the 40 percent financial, you would agree
3 that that at least is a positive for some of those
4 other categories that Moody's, for instance, takes
5 into account, correct?

6 A. I'm going to paraphrase your question. If
7 the proposal in this case, they were allowed to earn
8 recovery on hundred percent -- I apologize. I don't
9 know a lot about that issue -- specific issue. So
10 perhaps you can either rephrase the question, or
11 maybe somebody else would be better able to answer
12 it.

13 Q. Well, we're talking about the timely recovery
14 of costs, right?

15 A. Right.

16 Q. And it's a tracker that recovers costs. So
17 we know that it deals with the timely recovery of
18 costs. So we know that. And that's what one of
19 those statements you read was about, correct?

20 A. Correct.

21 Q. And instead of recovering 80 percent of the
22 cost through a tracker, they recover 100 percent of
23 the cost through a tracker.

24 So in terms of timely, great. But, second,
25 wouldn't you also agree that that's also the ability

1 to recover expenses, one, and that would help in the
2 ability to earn an ROE, right?

3 A. I would agree that having this automatic
4 recovery is viewed favorably as opposed to being
5 required to go in for a base rate case in order to
6 recover those costs.

7 Q. Right. And even in addition to that, it
8 helps in the whole idea of a constructive regulatory
9 -- or a constructive regulatory atmosphere
10 environment, correct?

11 A. To the extent that it's viewed as favorably
12 impacting Kentucky Power's financials, yes.

13 Q. Okay. So -- but I guess what I'm asking for
14 is would you agree, then, that insofar as what
15 credit ratings agencies look at with risk, that the
16 testimony was only focusing on the downside risks
17 presented in the Company's application, or the
18 status quo without the rate case, rather than any of
19 the positives that it's proposing or that had
20 occurred?

21 A. I only -- in the testimony that -- my
22 rebuttal testimony that you've referenced, I'm only
23 focusing on the impact that decreased cash flows
24 would have on Kentucky Power's credit rating.

25 Q. Right.

1 A. Not discussing other risk-associated items.

2 Q. Right. But what I'm asking is you're the
3 only person for Kentucky Power that discussed any of
4 these credit-related issues, right?

5 Let me ask the question differently. Are you
6 aware of any other Kentucky Power witness that spoke
7 to any of those other considerations that Moody --
8 that Moody's has in making their credit ranking
9 decisions?

10 A. I've not read all the testimony. I don't
11 know. I do know that I reviewed testimony from a
12 2018 case, Company Witness Horeled, and I believe he
13 did, in fact, talk about credit ratings. I'm not
14 sure if anyone has in this case.

15 Q. Okay. One of the financial metrics you
16 mentioned was something something something divided
17 by debt. Was that free cash flow from operations?

18 A. Yes.

19 Q. Okay.

20 A. That's one thing that Moody's, I guess, has
21 the largest weighting from a financial perspective.

22 Q. Okay. How is Kentucky Power's FFO to debt?

23 A. As I mentioned earlier, I would characterize
24 it out-of-bounds low for their current credit
25 rating. I wish I had their most recent credit

1 opinion, but if I remember correctly, I believe it
2 decreased from the mid-teens down to -- I want to
3 say 10 percent, subject to check, at year-end 2019.
4 And I believe that the range that Moody's looks for
5 for Baa entities are -- is 13 percent to 22 percent.

6 Q. Do we have in this record what the -- what
7 the anticipated FFO-to-debt ratio is in 2021?

8 A. Not to my knowledge no.

9 Q. And if we requested that, would the Company
10 be able to provide it? If we asked -- if we asked,
11 based on the application, what is the Company's
12 anticipated FFO-to-debt ratio in the year 2021, the
13 calendar year, would the Company be able to estimate
14 that?

15 A. The calculation can be done, but I'm not sure
16 how reasonable the estimate would be, only because
17 there's so many other factors that would go into
18 cash from operations. You know, load assumption,
19 more or less all the assumptions that are part of
20 this case.

21 Q. Right. But what you said was that -- you
22 talk about decreased cash flows having an impact on
23 Kentucky Power's credit rating, but other than
24 talking about it in general, how can the Commission
25 take that into account if we can't look at it in the

1 particulars?

2 A. I think you can look at Kentucky Power's --
3 the latest Moody's opinion. And, subject to check,
4 I believe it was April of this year, and they
5 mention a couple of different items related to
6 deterioration in the cash flows.

7 And there is a schedule in there that shows --
8 I'm not sure how far back it goes, but you can see
9 that particular metric. And, again, I wish I had it
10 in front of me, but I believe it's now -- at year
11 2019, I think it was --

12 MR. GARCIA: Your Honor, if it would be
13 helpful, I actually have a copy handy I can provide
14 to the witness.

15 VICE CHAIRMAN CHANDLER: If you're going to
16 provide it to the witness, could you identify where
17 in the record it is?

18 MR. GARCIA: Sure, Your Honor. And this is
19 attachment to AG1-39. And that includes the various
20 credit report updates, and each one of them has a
21 particular date. So I'll let the witness identify
22 once they have them.

23 VICE CHAIRMAN CHANDLER: Thank you.

24 MR. GARCIA: May I approach the witness, Your
25 Honor?

1 VICE CHAIRMAN CHANDLER: Don't forget to turn
2 your microphone back on, Mr. Messner.

3 MR. KURTZ: Vice Chairman, could I interject
4 something, please?

5 VICE CHAIRMAN CHANDLER: Up to the Chairman.

6 CHAIRMAN SCHMITT: I'm sorry? What was the
7 question?

8 MR. KURTZ: Chairman Schmitt, could I
9 interject at this point?

10 CHAIRMAN SCHMITT: Yes.

11 MR. KURTZ: On AG KIUC Hearing Exhibit 1,
12 page 74, it will demonstrate the FFO-to-debt ratio
13 of all the AEP operating companies, and it will
14 confirm that, just like earnings, Kentucky Power is
15 dragging down the AEP average quite considerably.
16 And perhaps that can be put on the screen. I think
17 it would
18 be --

19 CHAIRMAN SCHMITT: I was going to suggest
20 maybe that would be better than the direction we're
21 going now.

22 MR. KURTZ: So that's Hearing Exhibit 1,
23 page 74. Nancy?

24 MS. VINSEL: I was going to say, I'm not
25 sure. I'm not sure exactly -- there it is. There it

1 is.

2 MR. GARCIA: Thank you, Your Honor.
3 Specifically, the April 2020 credit opinion for
4 Kentucky Power from Moody's is in AG 179, Attachment
5 6.

6 VICE CHAIRMAN CHANDLER: Okay. Thank you.

7 Q. So, Mr. Messner, are you looking at the same
8 thing there we are, page 74 of KIUC Hearing
9 Exhibit 1 -- AG KIUC Hearing Exhibit 1?

10 A. Yes.

11 Q. Okay. So is this -- so you're saying that in
12 2019 that 8.7 percent is the FFO to debt for
13 Kentucky Power?

14 A. So there are a number of different views
15 that -- of this particular measure. AEP has a view
16 that adjusts for certain -- makes certain
17 adjustments.

18 Moody's has a view, and they have a standard
19 methodology that they put out, the things that they
20 adjust for, and S&P also has their own methodology.
21 And then there's, of course, GAAP, if you just use
22 the GAAP numbers, but the numbers that I see here
23 are close to what the Moody's view suggests.

24 Q. Excuse me. Okay. So we've got an
25 FFO-to-debt ratio here in 2019, and I just want to

1 make sure
2 that -- your rebuttal testimony talks about the
3 deterioration of cash flows and the impact those
4 reduction to cash flows has on metrics and those
5 metrics have on credit ratings, right?

6 But what I'm asking, has the Company provided
7 the Commission, in consideration of its request
8 here, or of any other matter in any other, you know,
9 2019-2020 case, the impact of its proposals?

10 A. Not to my knowledge, no.

11 Q. So we know that any cash outlay, whether it
12 be \$1 or \$100 million, has an impact on cash flow,
13 right?

14 A. Yes.

15 Q. And it's -- it's a matter of degree, would
16 you agree, as to what impact it ultimately has, any
17 given proposal?

18 A. I think that's a reasonable statement.

19 Q. Okay. So, like, an amortization of
20 \$100 million of excess ADIT over 100 years has an
21 impact on cash flow, but it's a greater impact if
22 it's amortized over 50 years. Is that fair?

23 A. A shorter amortization period has a larger
24 negative impact from a credit perspective.

25 Q. Has a greater impact. And that's intuitive,

1 but what I'm asking is 18 years in 2018 35, as I
2 understand from the Company's proposal, was still a
3 concern, 10 years is a concern. But any shorter
4 time is going to have a greater impact on the
5 Company's cash flow. That was your testimony
6 earlier, correct?

7 A. It will have a larger negative impact on the
8 Company's financial position.

9 Q. And you're saying, for \$113 million balance,
10 that the Company can pay \$65 million amortization in
11 one year because it's only one year?

12 A. I'm not necessarily saying they can take it.
13 I believe my testimony was that a more singular,
14 one-time event may be viewed by Moody's more
15 favorably than if the duration is extended.

16 And, again, there I'll reference back to the
17 last case -- and they mentioned it in their credit
18 opinions -- the cash deferrals are pressuring their
19 credit metrics.

20 Q. Okay. So that's perfectly fair, but you
21 understand the Company is proposing the \$65 million
22 accelerated amortization to offset their rate
23 proposal, right?

24 A. Yes.

25 Q. So I'm asking can the Company financially

1 take that proposal? Can it weather that proposal
2 that they're making?

3 A. When you say "weather," do you mean from a
4 credit rating perspective, I assume?

5 Q. From a financial health and/or a credit
6 rating perspective.

7 A. It's -- it's a financial burden for sure.

8 Q. Okay. So -- so to Ms. Vinsel's question
9 earlier about a one-year amortization at
10 approximately \$65 million, okay? Work with me here
11 on a hypothetical because I really want to
12 understand the way Moody's and S&P look at this,
13 okay, and you're our insight into that.

14 If Mr. Mattison gets up at the end of the
15 hearing and says, "We are going to half our revenue
16 requirement ask." Right? So let's just say it's
17 66 million, that we're proposing that it only be a
18 \$33 million-a-year increase.

19 Do you follow me up to now? In the
20 hypothetical, do you understand up to that point?

21 A. If I understand you correctly, you're
22 suggesting in lieu of 65 million, you halve it to
23 33 million.

24 Q. Yeah. Okay. We're on the same page then.
25 And in lieu of a one-year, approximately,

1 \$66 million amortization of excess ADIT, Mr.
2 Mattison says no, no, we're going to do two years at
3 33 million.

4 Right? Does that make sense? So it's the
5 same amount. What I'm asking for, it's still a
6 limited duration of two years instead of one year,
7 right?

8 What is your understanding of how that will be --
9 would be viewed?

10 A. Again, I apologize if I wasn't clear earlier.
11 The rating agencies, in my view, would be more
12 understanding of a single, one-time event as opposed
13 to something that puts continued pressure on
14 particularly a metric that is already below
15 investment grade.

16 Q. So a one-time event only counts as one year,
17 is what you're saying, instead of a one-time event
18 that just so happens to occur over two years?

19 A. It's the duration, I think, that would be
20 viewed unfavorably. I mean, as a practical matter,
21 Kentucky Power's metrics are quite poor now. I
22 think the rating agencies would recognize that this
23 is being done to offset some of the increase -- you
24 know, the impact on the customers.

25 It may not change their overall opinion, and

1 they may -- you know, may put the Company on a
2 negative outlook or take further rating action.
3 But, again, in my opinion, the one-time event with
4 the one-year duration would have less of an impact
5 than two or more years.

6 Q. Well, what I want to finally get to is you
7 say less of an impact. What we were talking about
8 earlier about the impact, for instance, cash flow,
9 we agreed that it was a degree, right? It was a
10 matter of degree. Over 100 years, 50 years, 25
11 years, they all have a negative impact to cash flow.
12 It's to the degree at which.

13 So what I would ask now is what degree to
14 which will that be viewed negatively as a one-year
15 event -- a limited duration one-year event at the
16 same magnitude as a limited duration two-year event?

17 A. I can't assign a specific degree, but, as I
18 mentioned earlier, after the last rate case Moody's
19 put Kentucky Power on negative outlook. And, again,
20 their protocol is to revisit that company in the
21 next 6 to 18 months, which they did, and the cash
22 flows were still low over that time.

23 So the longer the cash flows are not in range,
24 again, in my mind, the higher the probability that
25 they might take action as opposed to an instance

1 where we do a one-time in a single year.

2 Q. Okay. And what's the outlook for both S&P
3 and Moody's as it relates to Kentucky Power?

4 A. Kentucky Power, the outlook is stable.

5 Q. For both, correct?

6 A. Yes.

7 VICE CHAIRMAN CHANDLER: I appreciate it,
8 Mr. Messner. Thanks for bearing with us through the
9 transition there. Thank you.

10 CHAIRMAN SCHMITT: Dr. Mathews, any
11 questions?

12 COMMISSIONER MATHEWS: I have a question
13 related to something else.

14 You probably are the right person since you
15 deal with the ratings agencies and the lenders.

16 EXAMINATION

17 By Commissioner Mathews:

18 Q. Is there an impact of Kentucky Power being so
19 heavily fossil fuel? Does that have an impact on
20 the ratings?

21 A. I believe -- you're a little bit muffled, but
22 I believe --

23 Q. Oh, I'm sorry.

24 A. -- the question was is the fact that Kentucky
25 Power has fossil fuels in their generation mix, does

1 that impact their credit ratings or how they are
2 viewed by investors?

3 I can tell you that --

4 Q. Say both.

5 A. -- the investors definitely take that into
6 consideration, and there are certain investors who
7 will no longer lend to companies that have any kind
8 of carbon footprint.

9 From a credit rating perspective, I would need
10 to go back and look at the opinion. I know it's
11 mentioned -- I believe it's mentioned in the credit
12 opinion, but without actually reading it --

13 Q. That's fine.

14 A. -- which I'm happy to do, I'm not sure. I
15 think the singular reliance does have -- well, I
16 can't speak to that yet without -- I would need to
17 look and read the opinion.

18 Q. Okay. And that's in our documents. I'll
19 just read that myself.

20 COMMISSIONER MATHEWS: That's all I have.

21 CHAIRMAN SCHMITT: Okay. Thank you.

22 Mr. Garcia, any redirect?

23 MR. GARCIA: Yes, Your Honor, just a few.

By Mr. Garcia:

Q. Mr. Messner, you were asked some questions regarding the credit metrics of Kentucky Power and the relationship with the authorized ROE?

A. Yes.

Q. And, if you would explain to me, sir, a little bit the relationship between the credit metrics, the authorized ROE and the actual ROE that the Company earns from the point of view of credit metrics and credit rating agencies.

A. So I guess the response to that would be the actual earned ROE are the most important. As we know, Kentucky Power has an authorized ROE that's significantly higher than what their actual earned ROE is. So, in that regard, earned ROE is most important by far.

Q. Do I understand correctly that having an authorized ROE is important, but earning it -- or the actual earned ROE is what affects most significantly the cash flows and the credit metrics?

A. Yes, that's correct.

Q. And, in turn, that would have the greater impact on the credit rating agency's evaluation of the Company?

1 A. Yes. Actual ROE -- actual earnings has the
2 most impact.

3 Q. Okay. And you were asked about the ability
4 of the Company to recover its transmission costs.
5 Do you recall that line of questions?

6 A. Yes, I do.

7 Q. Okay. And on a very general level, it's your
8 understanding that the credit rating agencies would
9 view negatively if the ability of the Company to
10 recover those transmission costs in a tracker was
11 eliminated?

12 A. Yes. The ability to recover via tracker is
13 viewed more favorably than if the Company would have
14 to wait for a base rate proceeding. The current
15 recovery is viewed favorably, yes.

16 Q. Okay. And in your testimony, if I recall
17 correctly -- and if not, if you could state it right
18 now -- one of the things that the rating companies
19 right now in their evaluation most recently in April
20 of 2020, one of the things that they consider a
21 favorable factor supporting Kentucky Power is its
22 regulatory environment. Is that correct?

23 A. That is correct, yes.

24 Q. And having the tracker for recovering
25 transmission costs would be part of that supportive

1 environment, correct?

2 A. Yes, it would.

3 Q. Let me ask you something. And you were also
4 asked some questions about the return of ADIT?

5 A. Yes.

6 Q. And do I understand correctly that the -- in
7 terms of credit metrics, starting on 2022 the
8 return -- when I say pace, it was authorized in the
9 2018 case -- by the Commission in 2018. It's going
10 to be the same as it was authorized in 2018. Is
11 that correct?

12 A. That's my understanding after the one-time
13 event proposed, that it will be consistent with what
14 was agreed to in the 2018 proceeding.

15 Q. And does that relate to what you were
16 indicating --

17 MS. VINSEL: We can't hear.

18 CHAIRMAN SCHMITT: Sorry. Sorry. Stop. I
19 don't think --

20 MR. GARCIA: Thank you, Your Honor.

21 CHAIRMAN SCHMITT: Well, wait, Mr. Garcia. I
22 think people are having difficulty hearing your
23 questions and possibility the witness's answers, but
24 I think it's his questions.

25 MS. VINSEL: No. Actually, his --

1 Mr. Messner's last response, we could not hear.

2 CHAIRMAN SCHMITT: All right. The issue was
3 Mr. Messner's last response to your question, which
4 could not be heard. So I don't know if we can read
5 the question, or if you can remember -- if
6 Mr. Messner can remember the question and try to
7 reanswer.

8 THE WITNESS: Yeah, it's probably safest to
9 reask the question. I believe the answer -- I know
10 the answer, but --

11 MR. GARCIA: I can ask the question again,
12 Your Honor, and I'll try to speak slower.

13 CHAIRMAN SCHMITT: All right. Thank you.

14 MR. GARCIA: Thank you, Your Honor.

15 Q. So, Mr. Messner, you were asked about the
16 return of the ADIT?

17 A. Yes.

18 Q. And is my understanding correct that starting
19 on 2022, the pace at which the Company is going to
20 be returning to customers if the ADIT would be the
21 same as it was authorized in 2018 by the Commission?

22 A. Yes, that's my understanding.

23 Q. Okay. And is there a relationship between
24 that quality and your indication that it does make a
25 difference from the point of view of the credit

1 metrics and the way that they are evaluated by
2 credit rating agencies of whether the duration of
3 the accelerated return that is proposed by the
4 Company in these circumstances that we have today,
5 is there a relationship between those two, that
6 starting in 2022 it essentially goes back to what
7 was approved in 2018?

8 A. So if I understand your question, I would --
9 I would assume there would be no difference -- or no
10 difference in opinion of the credit rating agency
11 that they have now if the rate of return goes back
12 to being the same as it was, you know, as part of
13 the '18 proceeding.

14 Q. But if the duration of the accelerated
15 process was longer, you would expect that it's more
16 likely that there would be a reaction?

17 A. Yes, that would be viewed negatively, more
18 negatively than the one-time event.

19 Q. Let me switch topics, if I may. You were
20 asked about the maturity of some debt by Kentucky
21 Power?

22 A. Yes.

23 Q. Okay. And, if you can explain to me,
24 Mr. Messner, is it normal for the Company to
25 refinance debt earlier than its expected maturity?

1 A. That's not -- that's not typical, no.

2 Q. And why is that?

3 A. Well, debt, and particularly the debt that
4 was discussed in the rate case proceeding today, is
5 a make-whole requirement. So refinancing it early
6 would require effectively a make-whole is a payment
7 to investors of the interest that will be foregone,
8 and that payment is on top of the principal that
9 will be repaid.

10 So from the investors' perspective, they're,
11 quote, made whole in that they're getting the
12 interest that they would have otherwise earned, you
13 know, between now and the maturity, as well as the
14 return of the principal amount.

15 Q. Now, going back to the way that the Company
16 actually did it in this case this year, the new term
17 loan that the Company was able to secure to
18 refinance its debt, the interest rate was actually
19 lower than the short-term debt that it repaid; is
20 that correct?

21 A. Yes.

22 Q. And that is a benefit to customers?

23 A. Yes. The impact is that it would -- resulted
24 in a lower cost of capital than had we left the
25 short-term debt balance outstanding.

1 Q. Now, to be fair, is that circumstance usual,
2 or was that a situation that was rather unusual?

3 A. It was a rather unusual situation in that the
4 short-term debt rate was based on the 12-months
5 ending March 31st of 2020, the cost of short-term
6 debt over that period.

7 And it just so happened that, when we did
8 ultimately issue the term loan, closed March 6, I
9 believe -- I don't have the exact timing, but I
10 believe the fed took -- made two rate cuts, the
11 second one taking the fed funds rate down to zero to
12 .25 percent.

13 The term loan is a floating rate note, and so
14 the impact on that was that the term loan is
15 actually -- a two-year term loan is actually a
16 cheaper cost rate than the short-term debt would
17 have had in the cost of capital.

18 Q. Okay. And in the cost of capital that's
19 calculated, you did reflect the benefit to
20 customers, correct?

21 A. Yes. The lower-cost term loan is in the cost
22 of capital in lieu of the short-term debt that was
23 taken out.

24 Q. Okay. You were also asked about the relative
25 low interest rates that are right now in the

1 financial environment.

2 Do you recall that line of questioning?

3 A. Yes.

4 Q. I think that you mentioned that there have
5 been an uptick in 2018, but then interest rates
6 since then have gone lower. Is that correct?

7 A. Yes. I'm not sure the exact timing, but that
8 sounds about right. The answer would be the
9 interest rates environment today are lower than they
10 were in 2017.

11 Q. And the reason for that, a significant
12 disturbance in the financial markets related to
13 COVID-19 and the corresponding reaction from the
14 Federal Reserve to reduce interest rates to respond
15 to these unprecedented conditions?

16 A. Yes.

17 MR. GARCIA: If I can have a moment, Your
18 Honor?

19 CHAIRMAN SCHMITT: Yes. Sure.

20 MR. GARCIA: Those are all the questions that
21 I have on redirect, Your Honor.

22 CHAIRMAN SCHMITT: Thank you.

23 Mr. Messner, you may step down.

24 THE WITNESS: Thank you.

25 CHAIRMAN SCHMITT: I guess our next witness

1 is Mr. McKenzie.

2 MR. GARCIA: Yes, Your Honor. And Mr.
3 McKenzie will be joining remotely, and I see him on
4 screen right now. If we can check his sound when we
5 bring him in. Thank you.

6 CHAIRMAN SCHMITT: Is this a witness that
7 you're responsible for, Mr. Garcia? You'll be doing
8 whatever redirect there may be?

9 MR. GARCIA: Yes, Your Honor. I have the
10 privilege of asking questions of Mr. McKenzie.

11 CHAIRMAN SCHMITT: Okay. Thank you.

12 All right, Mr. McKenzie. Will you please
13 raise your right hand?

14 Do you solemnly swear or affirm under penalty
15 of perjury that the testimony you're about to give
16 will be the truth, the whole truth, and nothing but
17 the truth?

18 THE WITNESS: Yes, I do.

19 * * * *

20 ADRIEN MCKENZIE, called by the Kentucky Power
21 Company, having been first duly sworn, testified as
22 follows:

23 CHAIRMAN SCHMITT: Mr. Garcia, you may ask.

24 MR. GARCIA: Thank you, Your Honor.

25 * * *

DIRECT EXAMINATION

1
2 By Mr. Garcia:

3 Q. Mr. McKenzie, would you please state your
4 name and business address for the record?

5 A. My name is Adrien McKenzie, and my business
6 address is 3907 Red River Street, Austin, Texas
7 78751.

8 Q. And, Mr. McKenzie, by whom are you employed
9 and in what capacity? What's your title?

10 A. I'm employed by the firm FINCAP, Inc., and
11 I'm a principal in that firm and its president.

12 Q. Mr. McKenzie, in this case did you submit
13 testimony, direct testimony, rebuttal testimony, and
14 discovery responses on behalf of Kentucky Power?

15 A. Yes, I did.

16 Q. Okay. And you are -- we're going to have a
17 couple corrections to the rebuttal testimony, and I
18 will go through those now.

19 CHAIRMAN SCHMITT: Okay.

20 Q. Mr. McKenzie, do you have any corrections to
21 your testimony? And I suppose that you're going to
22 direct me to page 32?

23 A. Well, actually, the first correction I have
24 to my rebuttal testimony is on page R12, line 2, and
25 the word "not" should actually read "now." So the

1 sentence should read, "I certainly agree with
2 Mr. McKenzie that uncertainty and associated risk is
3 greater now than it was prior to March 2020."

4 Q. Thank you. When I said 32, I meant 12. You
5 have it in front of you. Thank you.

6 Mr. McKenzie, do you have another correction
7 to your testimony on page 37?

8 A. Yes, I do. At R37, the table labeled R-2 had
9 some typographical errors, and in particular there
10 were some numbers that were inadvertently left off
11 that table, and I believe you've provided an errata
12 to that effect.

13 Q. Yes.

14 MR. GARCIA: Your Honor, at this point, if I
15 could impose on Staff, the corrections are reflected
16 in the Company Hearing Exhibit 9.

17 MS. VINSEL: Zack, can you please display
18 Kentucky Power -- excuse me -- Company Hearing 9?
19 I'm sorry, Company Exhibit 9.

20 MR. GARCIA: Thank you.

21 Q. And, Mr. McKenzie, you have your own copy of
22 this with you, correct?

23 A. Yes.

24 Q. Okay. If you would please describe what was
25 the typographical error on page 37 and how this

1 revised Table R-2 corrects it?

2 A. Certainly. If you compare the table on
3 Hearing Exhibit 9 with the original Table R-2 in my
4 filed testimony, you can see that the only
5 difference is that on three lines of the original
6 table under "Projected Bond Units," you'll see that
7 the numbers were left off that table and were not
8 incorporated into the averaging.

9 So here in Exhibit 9 corrects that table by
10 including the results of my analyses using projected
11 bond yields for the CAPM, the empirical CAPM, and
12 the risk premium approach.

13 Q. Just to clarify, Mr. McKenzie, it's not that
14 the corrected values were different from your
15 calculations, but instead that the original version
16 of page R27 did not correctly reflect the
17 calculations that you had made?

18 A. Yes, that's correct. If you turn to page R40
19 of my rebuttal testimony, lines 13 through 18
20 discuss the results of applying the CAPM using the
21 projected bond yields.

22 If you look at page R41, lines 1 through 3,
23 that reflects the results of the projected bond
24 yields under the ECAPM approach, and the risk
25 premium approach results using projected bond yields

1 are shown on page R41, lines 11 through 18.

2 So the correction merely reflects those
3 numbers that were already discussed in my testimony.

4 Q. Thank you, Mr. McKenzie.

5 With that correction, the direct rebuttal
6 testimony -- I'm sorry -- the direct testimony, the
7 rebuttal testimony, and the discovery responses that
8 you submitted, those were prepared by you under your
9 supervision?

10 A. Yes, sir.

11 Q. And with the correction you just made, if I
12 were to ask you the same questions today, would you
13 provide substantially the same answers?

14 A. Yes, I would.

15 MR. GARCIA: Your Honor, I would submit for
16 the record what has been identified previously as
17 Company Hearing Exhibit 9 -- it's an errata to the
18 testimony of Mr. McKenzie -- for admission to the
19 record.

20 And with that, he's tendered for
21 cross-examination.

22 CHAIRMAN SCHMITT: Let it be added to the
23 record.

24 (Company Hearing Exhibit 9 admitted.)

25 MR. GARCIA: Thank you, Your Honor.

1 CHAIRMAN SCHMITT: Ms. Vinsel, any
2 cross-examination?

3 MS. VINSEL: Yes, Chairman.

4 CROSS-EXAMINATION

5 By Ms. Vinsel:

6 Q. Good afternoon, Mr. McKenzie.

7 A. Good afternoon.

8 Q. If you have any problems hearing me, please
9 let me know.

10 A. Okay. I can't see you, but I can hear you
11 very well.

12 Q. I -- yes, I can see that. There. There I
13 am.

14 Can you see me now?

15 A. I certainly can.

16 Q. Okay. Mr. McKenzie, are you aware of any
17 rating agencies or any industry observer that has
18 singled out this commission for awarding abnormally
19 low or punitive ROEs?

20 A. No. That would definitely not be the case.
21 I think, generally, the Kentucky Commission is
22 viewed as being a supportive regulatory agency.

23 I will note that in the Moody's reports they
24 have voiced some concerns regarding apparent links
25 between economic conditions and service territories

1 and a downward movement on ROEs, but I don't think
2 that rises to the level that you were discussing.

3 Q. Thank you. I had some -- some general
4 principles I would like to cover with you initially.

5 Would you agree that, in terms of investing,
6 there's a rule of thumb that the higher the risk,
7 the better the return?

8 A. Yes, that's correct. There's an expectation,
9 certainly on the part of investors, that
10 compensation should reflect risk. So, if they're
11 going to bear more risk, they need a higher expected
12 return to do that.

13 Q. Can you tell me what's generally considered
14 the least risky investment?

15 A. Well, generally, that would be a security
16 issued by the U.S. government. So, for example,
17 30-year Treasury bonds are typically viewed as close
18 to risk-free as you can get, and those serve as the
19 risk-free rate in applying the CAPM, for example.

20 Q. And what you mentioned, that the government
21 securities, the Treasury bills, Treasury bonds, are
22 generally considered to be less risky because the
23 risk of the government going bankrupt is rather low?

24 A. That's correct. I mean, they have taxing
25 ability, they have the ability through their --

1 through issuing debt and through monetary policies
2 to basically meet their obligations.

3 Q. Would you agree that risk and return
4 typically follow an upward slope linear
5 relationship, again, in that the greater the risk,
6 the greater the expected return?

7 A. Well, I agree that there is a relationship.
8 It's not necessarily linear.

9 Q. Okay.

10 A. I think if you have an extreme change in
11 risk, you can have a very marked change in the
12 return. So, for example, going from an
13 investment-grade bond rating of Baa3 down to a BB+
14 rating would imply a very significant upward move in
15 the ROE that wouldn't necessarily apply for staying
16 within the investment-grade scale.

17 Q. Okay. Thank you.

18 Would you agree that utility bonds are a more
19 risky investment than a Treasury bond?

20 A. Yes, generally, that's true.

21 Q. And would you agree that, in general,
22 corporate stocks are typically considered to be at
23 the higher end of the risk and return relationship?

24 A. I'm sorry. You said corporate stocks? Do
25 you mean common stocks? Equities?

1 Q. Yes, common stocks. Yes.

2 A. Yes, they would be considered to be riskier
3 than debt instruments.

4 Q. And, finally, would you agree that, in
5 general, utility investment falls somewhere between
6 Treasury bonds and common stocks on that -- that
7 relationship between risk and return?

8 A. Well, if we're speaking of utility common
9 stocks, that is a common stock. The risks of a
10 utility common stock would exceed the risks of a
11 utility bond, and those would, in turn, exceed the
12 risks of a Treasury bond.

13 If you're speaking about the relationship
14 between returns from different classes of common
15 stocks, we would need to look at the industry, but
16 the risk of the utility industry generally is
17 considered to be lower than that of the market as a
18 whole.

19 Q. Thank you. I think your answer -- I wish I
20 had put it that artfully. Yes, the market as a
21 whole is what we were looking at.

22 MS. VINSEL: Zack, can I have you bring up
23 Mr. McKenzie's rebuttal testimony?

24 Q. While he's bringing that up, I would like to
25 go -- I have some questions in regard to

1 Exhibit AMM-21.

2 And, Mr. McKenzie, I know you're turning to
3 the page. Please let me know when you're there.

4 A. I'm there. Thank you.

5 Q. Thank you. Is it correct that the companies
6 that are listed --

7 MS. VINSEL: And, Zack, could you resize it
8 just a little bit -- I'm sorry -- to make it bigger.
9 I need it to be clearer. Thank you.

10 Q. It's correct that these companies are public
11 companies who do not operate in a regulated
12 environment. Is that correct?

13 A. That's correct. Their prices are not
14 regulated. Obviously, they have to comply with
15 various regulations depending upon the industry
16 they're in, but they are not -- they wouldn't be
17 considered regulated utilities.

18 Q. That distinction is taken. Thank you.

19 MS. VINSEL: Zack, can I have you scroll down
20 to the bottom? Okay. That's it.

21 Q. I'm looking at the average. I'm sorry. I
22 didn't capture which column is which, but each of
23 these three columns -- one is for Value Line, one is
24 for IBES, and the other is for Zacks.

25 Mr. McKenzie, as I understand, you eliminated

1 the highs and lows as you were working on the
2 average and the midpoint; is that correct?

3 A. Yes.

4 Q. If the eliminated highs and lows are removed,
5 would you agree the average earnings growth for
6 Value Line would be 9.92, for IBES, 8.84, and for
7 Zacks, 8.86?

8 A. Actually, I'm sorry. I didn't understand the
9 question.

10 Q. I think the question -- I think the question
11 actually is not removed. If they're included.

12 So if we were to include to not remove the
13 highs and lows --

14 A. Well, that would surprise me. I mean, I'm
15 looking at page 3 of Exhibit AMM-21, and just
16 looking down the column under Value Line there's
17 more numbers at the high end that were excluded than
18 at the low end, I believe, or at least they're
19 equal.

20 So it looks like there's actually more high
21 numbers excluded than low numbers. There's only
22 two -- three low numbers excluded, five high numbers
23 excluded. So I'm --

24 Q. Okay.

25 A. I'm not sure that it would have much of an

1 impact on the average. I haven't done the math. So
2 I can't tell you, but that would surprise me.

3 Q. Okay. Thank you. I appreciate that.

4 MS. VINSEL: Zack, you can take down the
5 document. Thank you.

6 Q. This is one I'm just going to have you refer
7 to your testimony. We don't need to bring this up,
8 I don't think.

9 In your rebuttal testimony you note that the
10 average allowed ROE by state commissions -- let me
11 back up.

12 You have a table with the average allowed ROE
13 by state commissions for the past four years.

14 A. Yes.

15 Q. And through -- okay. And according to that
16 table -- I'm sorry, I'm going to look at it just to
17 make sure -- the average allowed is 9.69 percent,
18 correct?

19 A. That's correct.

20 MS. GRUNDMANN: This is Carrie Grundmann.
21 Would you just point out the table so I can quickly
22 find it in the testimony?

23 MS. VINSEL: Sure. Zack. Let me have you
24 bring up Mr. McKenzie's rebuttal testimony.

25 MS. GRUNDMANN: I'm happy to just have you

1 refer to it as well. I have it in front of me in
2 hard copy.

3 MS. VINSEL: I think this is something that's
4 probably better. If I'm going to ask these
5 questions, we need to have them in front of us.

6 Zack, will you scroll -- you're going to need
7 to go back. We're going to look for it's on
8 rebuttal page 5. I don't have the PDF handy.
9 Probably about 37 pages. Almost there. Two more
10 pages. There you go. If you'll resize it so it's a
11 little bigger.

12 Q. So this is the table I'm referring to, and
13 the average return -- the average ROE by state
14 commissions is 9.69 percent.

15 Let me ask, the average return for your proxy
16 group is 9.79, correct?

17 A. That's correct. I will point out there is a
18 distinction between those numbers, and I think the
19 Commission should be aware of what that distinction
20 is.

21 The Table R-1 is a reporting of allowed ROEs
22 by RRA. And the 9.79, which is shown lower down on
23 my testimony, that is the -- that is the allowed ROE
24 that Value Line reports as being in effect for the
25 utilities in the proxy group.

1 So Value Line typically informs investors as
2 to what ROE is currently authorized for that
3 company.

4 And it might report a weighted average if the
5 Company operates over multiple jurisdictions.

6 So there is a distinction between the two sets
7 of data in that respect.

8 Q. Okay. And does that distinction impact the
9 fact that between 2017 and this -- I believe it's
10 September of 2020 -- that there's a downward trend
11 in the ROEs?

12 A. Yeah. I mean, first off, I'm not -- a
13 downward trend, you could say that. I think we're
14 not through 2020 yet. We don't know what will be
15 coming down the pike. Those numbers move around.
16 Obviously, the 9.68, it went up to 9.73 in 2019, but
17 the primary difference is -- and I think you're
18 correct here, it's timing. So the 9.79 number is
19 the actual ROE that the utilities in the proxy group
20 are currently authorized to earn.

21 Now, those authorized ROEs may have been set
22 some time ago, but, nevertheless, that's the
23 opportunity cost. That's the earned return that the
24 companies in the proxy group have been authorized,
25 but there is timing differences there.

1 Q. In your rebuttal factor you explain that you
2 used an adjustment factor to convert year-end
3 returns to average returns to address that
4 difference between the flow of earnings and a book
5 value or point estimate.

6 Can you explain how you determined these
7 adjustment factors? Or expand upon them?

8 A. Yeah. Basically, the adjustment factor --
9 and this refers to the expected earnings approach,
10 which is shown on Exhibit 20 of my rebuttal
11 testimony, and it's also reported in my direct
12 testimony at AMM-9.

13 But, basically, the adjustment is required
14 because Value Line reports year-end returns on
15 equity. So, in other words, we're taking the amount
16 of equity at the end of the year and dividing that
17 by the earnings over the year.

18 So that's really a mismatch because the
19 earnings are a product of the investment over the
20 entire year. So that's the purpose of averaging a
21 beginning-of-year equity and an end-of-year equity
22 in order to compute that.

23 Just as if -- if you had a bank account with a
24 thousand dollars in it at the beginning of the year
25 and \$10,000 in it at the end of the year, you

1 wouldn't compute your interest return by dividing
2 the interest earned over the year by the 10,000 at
3 the end of the year; you'd use an average balance.

4 So that's essentially what this adjustment
5 factor does. The adjustment factor, it's not
6 indicated in the footnotes; it's actually a formula
7 that's reported in regulatory finance, which is a
8 treatise on utility finance. It's the same factor
9 that FERC uses for the same purpose. It's been used
10 there since, I believe, 2000 to recognize that same
11 distinction.

12 Q. The market has recently seen an increase in
13 utility beta values; is that correct?

14 A. Yes, a very significant increase.

15 Q. And do you know if the betas for most
16 investments made an upward or downward adjustment?

17 A. I don't know the answer to that. You know,
18 the market equals one, so, presumably, if some went
19 up, some went down. But I haven't done an
20 industry-by-industry study to look at what changes
21 were for other industry groups with respect to
22 betas.

23 Q. And for the utility sector?

24 A. Well, the utility sector, they've decidedly
25 increased. I mean, the average beta for the proxy

1 group in the last case was about .66, and it's now
2 about .87. So that's about a 32 percent rise.

3 Q. Do you believe this is a permanent
4 adjustment, or is it a reaction to the economic
5 situation resulting from the pandemic?

6 A. Well, it's certainly a reaction to -- a
7 response to the pandemic, and its investors'
8 adjustments to the prices that they're willing to
9 pay for common stocks in the market that leads to
10 this observed change in beta.

11 Now, we can't see forward. I mean, the beta
12 that should be used in the CAPM is actually kind of
13 the -- the true beta is a projected value. And
14 there is no way to estimate that except by looking
15 at historical information, which is the accepted
16 approach. It's how Value Line measures beta. It's
17 how Bloomberg measures beta. And the question is
18 how do those pricing relationships change over time?

19 In this case, you know, none of us have the
20 ability to see into the future to see what
21 relationship utility stock prices will have to the
22 broader market going forward, but, in my view, there
23 is no basis to ignore the actual behavior that took
24 place earlier this year which indicates a sharp
25 change in beta values and an upward revision in the

1 risk perceptions of investors.

2 I think anytime we get into subjectively
3 trying to decide what part of the five-year history
4 we're going to accept and what part we're going to
5 throw out, we get on really shaky ground, because it
6 just opens the door to subjective arguments about
7 what prices might be reasonable or indicative of
8 future relationships and what might not be.

9 I think beta has been an accepted risk measure
10 at the Commission. I know we've had discussions
11 here about beta when they were going down. So I
12 think that the appropriate course is to take betas
13 at their face value.

14 MS. VINSEL: Thank you. That answered all of
15 Staff's questions. We have nothing further.

16 CHAIRMAN SCHMITT: Mr. West or Mr. Cook or
17 Attorney General?

18 Any questions, Mr. West?

19 MR. WEST: Yes, Your Honor.

20 CROSS-EXAMINATION

21 By Mr. West:

22 Q. Mr. McKenzie, how are you?

23 A. I'm well. Thank you, sir.

24 Q. I want to start out with some questions about
25 your analysis of the utility proxy group. When you

1 initially calculated your DCF in this case, you
2 excluded six low-end estimates, correct?

3 A. That's correct, sir.

4 Q. Okay. And did you also exclude any high-end
5 DCF results?

6 A. No, I did not.

7 Q. In fact, did you keep one in your analysis
8 that was actually 13.6 percent?

9 A. Yes. That's correct. I discussed that in my
10 testimony. In my most recent analysis, the number
11 is still 13.6. It's for Sempra under the Value Line
12 growth estimates.

13 Q. When was the last time a 13.6 return on
14 equity was approved by a commission in a rate case?

15 A. I don't know. I haven't done that research.
16 If you look at my risk premium analysis -- let's
17 see.

18 So if you look at page 3 of AMM-19, you'll see
19 that there were some numbers, you know, up in that
20 territory back in the early '80s.

21 I think the other thing to recognize too is
22 that, while I've excluded some numbers at the low
23 end of my DCF range, I've also retained quite a few
24 numbers that I don't think would be considered to be
25 reasonable that there's no regulatory commission

1 that has approved either.

2 So, for example, on page 3 of AMM-15, you can
3 see a 6.4 percent ROE included in the BR plus SV
4 growth calculation. So I haven't excluded that
5 number, but I'm not aware of any regulatory
6 commission approving an ROE of 6.4 percent either.

7 Q. Thank you.

8 And you mentioned that possibly back in the
9 '80s some ROEs were set at that level. Weren't
10 interest rates much different than they are now at
11 that time?

12 A. Yes. They were considerably higher.

13 Q. And based on your initial calculations
14 applying your DCF, you came up with a range of mean
15 and median returns between 8.6 and 10.2., and then
16 in your updated analysis that range went from 8.2 to
17 10.3; is that correct?

18 A. Yes.

19 Q. I want to move on for a moment and talk about
20 your analysis related to the competitive proxy
21 group.

22 Is it fair to say that utilities reap certain
23 economic benefits that make them attractive to
24 potential investors that your typical unregulated
25 competitive firm working in an open market would not

1 have access to?

2 A. Well, I certainly think it's true that
3 there's trade-offs. I addressed this in my
4 testimony, that it's not the case that Coca-Cola,
5 for example, faces the same business conditions as
6 Kentucky Power.

7 That's certainly clear.

8 So there's pluses and minuses. I mean,
9 Coca-Cola can leave markets if -- if demand is
10 declining, they can decline to serve customers, they
11 can reduce their product offerings, they can change
12 their pricing.

13 But, again, at the end of the day, as my
14 testimony discusses, it really comes back to risk.
15 And I think if you look at the risk measures, you'll
16 see clearly that the risks of that group are
17 comparable or, in some cases, less risky than the
18 utility group. And I think that's what matters at
19 the end of the day.

20 Q. Well, don't utilities have a big advantage in
21 that they have a fixed pool of customers that are
22 obligated to purchase from them in some respect?

23 A. Yes, that's true that utilities, by and
24 large, don't face competition. So they're the only
25 game in town. And if you want electricity delivered

1 to your home, then you need to purchase service from
2 that one company.

3 But, again, that specific fact doesn't
4 necessarily indicate that the utility is higher or
5 lower risk than any particular firm in the
6 competitive sector.

7 As I indicated earlier in responding to Staff,
8 it's certainly clear that, if you look at the market
9 as a whole, utilities are viewed as less risky. But
10 in the case of the nonutility group that I've
11 identified in my testimony, I don't believe that's
12 true, and I presented evidence to demonstrate that.

13 Q. Let's talk about some of that.

14 MR. WEST: Could Staff bring up AMM-21 in the
15 rebuttal testimony of Mr. McKenzie?

16 MS. VINSEL: Zack, I don't know if you caught
17 that. This is Mr. McKenzie's rebuttal testimony,
18 which is a document you had just brought up. And
19 it's Exhibit AMM-1.

20 Is that correct, Mr. West?

21 MR. WEST: AMM-21. And that's at page 170 of
22 the PDF that was filed.

23 Is there any way we can enlarge that just a
24 little?

25 Q. So, Mr. McKenzie, can you see the exhibit on

1 the screen?

2 A. Yes.

3 Q. Okay. So this is -- this is the cost of
4 equity estimates for the competitive proxy groups,
5 is it not?

6 A. Yes.

7 Q. And this -- we were already talking about
8 this, so I thought I'd skip ahead to it, but can you
9 just explain why Kentucky Power should earn a
10 comparable return to, say, Lockheed Martin, Coke,
11 Pepsi, Walmart, Apple, some of the companies listed
12 on this exhibit?

13 A. Yeah. Sure.

14 I mean, this goes back to the very fundamental
15 standards that underlie a return, which we discussed
16 from a financial standpoint earlier in the day. We
17 all agreed that as risk goes up, return goes up, and
18 for comparably risky investments, the returns should
19 be comparable.

20 So if -- you know, when a common equity
21 investor is trying to decide where to put their
22 money, they are not restricted to considering only
23 utility stocks. They can invest their money in
24 Lockheed Martin and Coca-Cola.

25 And if you look, for example, at Coca-Cola,

1 you're looking at a company with an A-plus bond
2 rating, an A1 rating from Moody's, the highest
3 safety rank that Value Line issues.

4 So there's -- it's a very strong firm with
5 dependable earnings. It's paid regular dividends
6 for many years. It's an established product. So
7 it's not just the case that because Coca-Cola is
8 selling soft drinks that it's inherently riskier
9 than Kentucky Power.

10 I think if you look at the legal standards
11 underlying a fair rate of return -- and I'm not a
12 lawyer -- but interpreting those, again, the Supreme
13 Court in Hope and Bluefield is saying that the
14 return has to be commensurate with opportunities of
15 comparable risk.

16 It didn't say "other utilities" or "other
17 utilities with the same credit ratings." It said
18 "other investment opportunities." And Mr. Baudino
19 recognizes this in his testimony as well.

20 Q. But to go back to your discussion with
21 Ms. Vinsel, in general you would say that investing
22 in a utility presents less risk than in other
23 industries, in competitive industries?

24 A. Well, if we're looking at it on an
25 industry-by-industry basis, you know, again, what I

1 told her was I haven't done a comparison of various
2 industry groups to decide which industries might be
3 higher risk than utilities and which might be lower.

4 I think, as a general proposition, we're all
5 agreed that utilities are less risky than the market
6 as a whole, but when it comes to individual
7 companies, that's a different proposition.

8 Again, you know, if you look at Johnson &
9 Johnson, that's an established company that has a
10 AAA rating. It has a rating that's the same as the
11 U.S. government. So it's not a high-risk common
12 stock; it's a very conservative common stock.

13 And, from that standpoint, I think this
14 nonutility analysis is an important benchmark. And
15 that's all it is. I haven't used that as the basis
16 of my recommendation, but I do believe it deserves
17 consideration.

18 Q. Okay. One final question -- or maybe two --
19 on competitive proxy -- the competitive proxy group,
20 and then I'll move on, but on page 14 of your
21 initial testimony, you said that the average and
22 midpoint DCF estimates for the low-risk group of
23 firms in the competitive sector of the economy
24 ranged from 9.5 to 10.8 before consideration of
25 flotation costs.

1 Just to be clear -- and I'm sure we all know
2 this -- but the 9.5 represents average and not the
3 low end that you analyzed, correct?

4 A. That's correct.

5 Q. Okay. So it would be fair to say that some
6 investors in the competitive proxy group are
7 accepting returns below the 9.5 percent, correct?

8 A. Yes. The DCF results in that respect are
9 analogous to those for the utility proxy group. We
10 have a range of results, some high, some low. And
11 the effort in trying to identify this unobservable
12 quantity is to distill that range down to a more
13 discrete quantity.

14 Q. Okay. I want to move on and ask a couple
15 questions about the impact that COVID had on your
16 analysis or it's had on the industry.

17 On page 36 of your initial testimony you said
18 that it would be unreasonable to disregard current
19 capital market conditions in establishing a fair
20 rate of return -- or return on equity. I'm sorry.

21 You say that (Reading) The challenges posed by
22 the COVID-19 crisis have the potential to
23 significantly impact the financial pressure of the
24 investor-owned utilities, increasing the overall
25 level of investor risk, and will have to be

1 addressed by state regulators.

2 Am I quoting you correctly on that?

3 A. Yes.

4 Q. Okay. When you initially calculated your
5 DCF, it was -- apparently you retrieved the data in
6 May of 2020. Does that seem about right?

7 A. Yes. That's correct.

8 Q. Okay. Wouldn't it be fair to say that, given
9 the timing of COVID-19 and the response to it, the
10 DCF calculations that you arrived at may have
11 already accounted for the volatility and uncertainty
12 associated with COVID, given that we're talking six
13 months -- or six weeks or a few months after COVID
14 emerged?

15 A. Well, I think the -- I think the stock prices
16 at May 1st certainly reflected some aspects of the
17 COVID pandemic and the market's reaction. I think
18 you could argue about whether analysts had enough
19 time at that point to incorporate their expectations
20 about what that might mean going forward into their
21 growth rates.

22 But, you know, and I think part of the issue
23 back then when I did my -- when I originally filed
24 my direct testimony, is just the high degree of
25 uncertainty and not knowing where the markets were

1 going to head from that point.

2 So I think there was a greater degree of
3 uncertainty about market direction when I did my
4 analysis that are included in my direct testimony.

5 Q. That's fair. And on some level isn't
6 uncertainty equated with risk or a greater degree of
7 risk?

8 A. Yes. That's true.

9 MR. WEST: If we could pause for just a
10 moment, I think we have someone, a caller, who has
11 their phone on, Caller 15.

12 MS. VINSEL: If we could ask everyone on
13 phones to make sure that their phones are on mute.

14 MR. WEST: Okay. Thank you. I believe
15 they've taken care of it.

16 Q. So I'm going to move on to another general
17 question. I believe Ms. Vinsel may have touched on
18 this with you, but I wanted to make sure I
19 understand your answer, and maybe my question is a
20 little bit different, but it's regarding beta
21 values.

22 And you-all discussed the fact that, in the
23 utility industry, betas have increased recently.
24 And I believe you said that that would, by
25 implication, mean that betas in other industries

1 have decreased, but my question is whether it's
2 possible that those betas could return to their
3 pre-COVID levels fairly quickly. Do you have any
4 insight on that?

5 A. Well, I don't have any insight for you into
6 what will actually transpire. If I did, I'd love to
7 share it with you, and we could both go live on that
8 island somewhere, but, you know, the -- it's
9 certainly possible.

10 I mean, betas change over time. There's no
11 question about that. They respond in kind with
12 changes in stock prices. So they will presumably
13 change one way or another over time, but we don't
14 know how.

15 There's nothing to say that the market
16 couldn't go through another period of disruption
17 just as it did back in March going forward. I mean,
18 in response to some development that we don't know,
19 whether to do with COVID or some other financial,
20 political, or other crisis.

21 So the point is not that betas will be forever
22 constant, but the point is is that the information
23 that we have now is the best we have now, and that,
24 in my view, ignoring it or tinkering with it or
25 suggesting that somehow because it moved in one

1 particular direction or another it's now no longer
2 valid, I think that's dangerous.

3 Q. Well, if betas in the utility group increase
4 or decrease, one or the other, in the future, in
5 your opinion is it more likely that they decrease or
6 increase from their current levels?

7 A. Yeah, I can't put a probability on that. It
8 all depends again on how utility stock prices move
9 going forward relative to the market. So I can
10 certainly grant that if they return to their old
11 pattern of behavior, by and large over time utility
12 betas could moderate, but as I just indicated, it's
13 possible they could increase. I mean, we don't
14 know.

15 And that's why I think the best course is to
16 use the accepted published benchmark which has been
17 used in rate cases for many, many years, and that's
18 the Value Line betas.

19 Q. Okay. Thank you.

20 Moving on to -- I just have a couple questions
21 about a previous Commission case that you may or may
22 not be aware of. Have you had an opportunity to
23 review the Commission's final review in the Duke
24 Energy Kentucky case in 2020-271 that was issued
25 earlier this year?

1 A. Yes.

2 Q. Okay. You're aware that the Commission
3 awarded a 9.25 return to Duke in that case?

4 A. Yes, I'm aware of it. And I'm also aware of
5 a number of distinctions which I think warrants them
6 not doing that in this proceeding.

7 Q. Well, that's fine. I appreciate that. I
8 believe you spelled that out in your testimony --
9 rebuttal testimony that you gave. That was included
10 in your testimony, correct?

11 A. No, I didn't address the Duke order directly
12 in my testimony. I mean, my testimony presents the
13 reasoning behind why -- supporting my
14 recommendations, but I think with respect to Duke,
15 there's clear differences, both --

16 Q. Well, maybe I'm mistaken, but I assumed
17 maybe -- maybe I'm thinking of someone else, but did
18 you not address it in your rebuttal testimony? I
19 might have the wrong -- I apologize.

20 A. I'm not sure. If you have a specific
21 reference, I'm happy to look for it.

22 Q. No. I'm sorry. I was just noting that we
23 had that to refer to if we needed to, but my real
24 question was are you aware about -- whether Duke
25 Kentucky has been downrated by S&P or Moody's

1 because of that Commission order?

2 A. No. In fact, they have not been, but, again,
3 there's differences between Duke and Kentucky Power,
4 and I think the Commission should be mindful of
5 those when it establishes an ROE in this case.

6 Q. Noted. Thank you.

7 Are you also aware of the portion of that
8 order where the Commission said that in regards to
9 flotation costs the Commission has historically
10 rejected and continues to reject the notion of
11 flotation costs to be included in ROE estimates?

12 A. Yes.

13 Q. Okay. But you recommended inclusion of the
14 flotation costs, did you not?

15 A. Yes, I do.

16 Q. Okay. Moving on. Just a couple questions
17 regarding your conclusions, and then I'll wrap up.

18 But excluding flotation costs, your
19 recommended range was 9.3 to 10.4 for the ROE,
20 correct?

21 A. Yes.

22 Q. Your CAPM and your ECAPM results don't fall
23 within that range, do they? In fact, they're quite
24 higher, aren't they?

25 A. Yeah, as is the expected earnings. So all of

1 those numbers fall outside the range. The only --
2 and so does the DCF. So what we're really trying to
3 do is take some disparate results and distill them
4 down to a reasonable range that reflects the cost of
5 equity. And that's what I've tried to do.

6 Q. Did you say "a reasonable range"?

7 A. Yes. I believe that 9.3 to 10.4 is a
8 reasonable range, excluding flotation costs.

9 Q. So if your results from your CAPM analysis
10 and your ECAPM analysis all exceeded the upper bound
11 of the range that you're saying is reasonable, would
12 that make them unreasonable?

13 A. No, I don't believe so. I mean, again, the
14 CAPM, ECAPM, and expected earnings approaches all
15 produce numbers that are above the top of my range,
16 but the range is constructed based on those values
17 and considering the range of outcomes, including the
18 risk premium and DCF numbers.

19 So it's not a question of suggesting that
20 because the CAPM numbers fall outside the range I've
21 distilled from those results that they're somehow
22 rendered unreasonable.

23 Q. Okay. Just a couple more questions about the
24 CAPM and the ECAPM, and I want to go back to if you
25 recall the table that you looked at with Ms. Vinsel

1 in her cross-examination previously where you showed
2 the average allowed ROEs in 2020. I believe it was
3 Table R-1 on R5 of your rebuttal testimony.

4 We don't have to pull it up or look back at
5 it. I mean, I think you recall that the average was
6 in the 9.69 -- it was 9.69, wasn't it?

7 A. That's correct.

8 Q. Okay. And, again, your ECAPM and your CAPM
9 analysis is much higher than the average allowed
10 ROEs so far in 2020, isn't it?

11 A. Yeah. And I think that, in large part,
12 reflects what we discussed earlier in terms of this
13 dramatic upward move in betas, which is probably not
14 reflected in most of the record evidence in cases
15 that were decided earlier this year.

16 Q. Okay. Give me just one second.

17 On -- in your rebuttal testimony, don't you
18 state that allowed ROEs should be used to evaluate
19 whether recommended ROE is sufficient to meet
20 regulatory standards?

21 A. Yeah, it's one benchmark. It has
22 limitations.

23 I don't think the Commission should look blindly to
24 determinations based on RRA and make a finding with
25 respect to Kentucky Power using that.

1 I think they need to take a broader approach
2 and consider the record evidence in this proceeding,
3 but it certainly is one benchmark.

4 Q. Understood. Thank you.

5 MR. WEST: I believe that's all the questions
6 I have.

7 CHAIRMAN SCHMITT: Mr. Kurtz,
8 cross-examination?

9 MR. KURTZ: Very briefly.

10 CROSS-EXAMINATION

11 By Mr. Kurtz:

12 Q. Good evening, Mr. McKenzie. Your recommended
13 return on equity is 10.3 percent, correct?

14 A. Yes.

15 Q. That's an after-tax return on equity?

16 A. Yes.

17 Q. Okay. For ratemaking purposes, the utility
18 has to recover a pretax return to yield your
19 recommended after-tax return of 10.3 percent,
20 correct?

21 A. That's correct. They recover an income tax
22 allowance.

23 Q. What is the pretax rate of return on equity
24 that would result from your recommendation?

25 A. I don't know the answer to that.

1 Q. If the gross revenue conversion factor was
2 1.34482, what would it be?

3 A. What did you say that was?

4 Q. 1.34482.

5 A. I think it's over 14 percent, if my math is
6 right.

7 Q. So a 14 percent pretax return on equity being
8 requested in this case is what consumers would
9 actually pay, if your recommendation is adopted?

10 A. That's correct.

11 Q. How did your recommendation take into account
12 that the Company's proposed 13 percent base rate
13 increase would hurt -- potentially hurt the economy
14 of eastern Kentucky, which is already one of the
15 weakest economies in the United States?

16 A. Well, I address this briefly in my rebuttal.
17 You know, it isn't my purview to advise the
18 Commission on social issues or those types of
19 factors. My -- the purpose of my testimony is to
20 present an independent appraisal of what the cost of
21 equity is demanded by investors in the market.

22 So that cost is not driven by the specific
23 situation faced by ratepayers within the service
24 territory. It's -- just like the cost of any other
25 input, it's determined in a market.

1 So when Kentucky Power buys coal, they pay a
2 price for that coal. And the price of the coal
3 isn't based on how things are going in the service
4 territory; it's what the market price is.

5 Q. So does that mean you did not take into
6 account the fact -- the effect that your
7 recommendation would have on the businesses and
8 people of eastern Kentucky?

9 A. That's correct.

10 MR. KURTZ: No further questions.

11 CHAIRMAN SCHMITT: Ms. Grundmann,
12 cross-examination?

13 MS. GRUNDMANN: I do, briefly.

14 And I apologize, Your Honor. My cocounsel is
15 here with me, and he may or may not be as
16 cooperative as I might otherwise hope he would be
17 for purposes of this cross-exam. So I'll be brief.

18 Ms. Vinsel, do you think we could pull up AG
19 KIUC Hearing Exhibit 1 and go to page 28 of that
20 document?

21 CROSS-EXAMINATION

22 By Ms. Grundmann:

23 Q. Mr. McKenzie, while we're turning to that
24 exhibit, have you been observing the last couple of
25 days of this hearing?

1 A. Not all of it. I've seen some.

2 Q. So this presentation has made its way into
3 the record a couple of times, and I just wanted to
4 ask you your opinion on some information in one of
5 these slides.

6 Have you seen this exhibit brought up thus far
7 in the hearing?

8 A. Yes.

9 Q. Okay. So you're at least vaguely familiar
10 with it. So I am looking at page 28 of the
11 document. And I want to link it to some of your
12 testimony. Do you see there in the dark blue line
13 the information that says "2021 Forecasted Regulated
14 ROE is 9.0 percent"?

15 A. Yes, I see that.

16 Q. Do you agree with me that that is AEP's
17 estimate as to what its average likely ROE is
18 expected to be for its regulated business lines,
19 including Kentucky Power?

20 A. Yeah. I'm assuming that's their forecast of
21 an actual earned ROE, which is consistent with
22 what's reported in the table or in the little
23 balloons above.

24 Q. Well, I think that the balloons above, would
25 you agree with me, are actual numbers and -- so the

1 light blue are actual numbers, and the navy blue is
2 a forecasted estimate.

3 A. That's right.

4 Q. Okay.

5 A. I would agree with that.

6 Q. And then if you look a little closer under
7 the blue balls, you'll see that under AEP Ohio,
8 APCO, Kentucky Power, SWEPCO, that all of those have
9 pending base rate cases, and I think that you were
10 involved in the APCO case in Virginia. So you're
11 familiar with those?

12 A. Yes.

13 Q. So it looks as though the Company is
14 forward-looking as to what it might expect its ROE
15 to be in 2021, partially accounting for the results
16 of some of these base rate cases. Doesn't that seem
17 fair?

18 A. Yeah, I would expect that they would need to
19 make some assumption about what allowed ROEs would
20 be in order to construct an estimate of earned ROE
21 for 2021.

22 Q. Okay. And so does the notion that the
23 Company would want to earn a 9.0 ROE, is that
24 something that the Commission should take into
25 account in setting the return on equity for purposes

1 of this proceeding?

2 A. Well, I'm going to push back on your
3 question.

4 I mean, you said the Company would want to earn an
5 ROE of 9. I mean, there's a lot of factors that go
6 into actual earned returns and -- in terms of, you
7 know, as we see in this service territory, for
8 example, the pattern of sales, the pattern of costs,
9 the pattern of investment and how much those are
10 being recovered through rates or not being recovered
11 through rates, as is the case in this particular
12 instance.

13 So I don't think the 9 percent represents a
14 goal of the Company or, alternatively, a weighted
15 average of the allowed ROEs that they necessarily
16 expect for their jurisdictions.

17 I think it might be an outcome of some
18 forecast model but considers a wide variety of
19 factors which I'm not privy to. I don't know how it
20 was arrived at.

21 Q. Understood. And you didn't take part in
22 putting together this presentation that was given a
23 couple of weeks ago to EEI, were you?

24 A. No, I did not.

25 Q. So I guess you don't have an opinion as to

1 the Company's conclusions about its strong financial
2 position based upon a 2021 forecasted regulated ROE
3 of 9.0 percent for its regulated entities, do you?

4 A. No. Again, I can't really speak to what
5 exactly that number represents or how it was arrived
6 at.

7 Q. Understood.

8 Mr. McKenzie, can I have you take a look at
9 your rebuttal testimony? I actually wanted to ask a
10 couple of questions about Exhibit -- I believe it's
11 AMM-13.

12 A. I'm there.

13 Q. The question that I have about this document
14 that I'm trying to understand is you have identified
15 the document as state-allowed ROEs. Is that fair?

16 A. Yes.

17 Q. And so when you say that, for example, Duke
18 Energy Corporation has an allowed ROE of 10.10,
19 you've taken this document from Value Line; is that
20 right?

21 A. That's correct. This is what Value Line is
22 reporting to investors in their individual reports
23 for the various companies listed.

24 Q. So I guess I'm just trying to understand
25 because I couldn't understand the math so as to tell

1 whether this document is useful or not because, for
2 example, Duke Energy was awarded a 9.5 percent ROE
3 in South Carolina recently and a 9.25 percent ROE in
4 Kentucky.

5 I'm just trying to understand what that --
6 where that 10.1 came from and how it's calculated
7 because it seems, just looking at Duke, it seemed a
8 little high to me, and I'm trying to understand
9 whether it includes all of the Company's regulated
10 operations or just state-based vertically-integrated
11 utilities.

12 A. Well, there's -- there's -- basically what
13 Value Line reports generally is -- how they break
14 that up is between electric and gas utility
15 operations.

16 So they don't -- in certain instances they
17 break it up between jurisdictions and report
18 different numbers from different jurisdictions, in
19 which case I just developed a weighted average based
20 on that, but that's about the extent of the detail.

21 So as the quarterly publications of Value Line
22 are released, they typically update those numbers to
23 reflect what proceedings might have taken place in
24 the interim.

25 Q. I guess I'm just trying to understand. Does

1 this allowed ROE potentially include transmission or
2 FERC-approved rates, or is it solely
3 state-authorized ROEs? Because you phrased it as a
4 state-allowed ROE, and I'm -- just looking at Duke,
5 I saw that number at 10.1 and was, like, that seems
6 really high because I think that they've been
7 awarded a 9.9 in North Carolina, a 9.5 in South
8 Carolina, a 9.25 in Kentucky, and all of those are
9 lower than 10.1., so I'm trying to understand how
10 there's an allowed ROE of 10.1 under the
11 circumstances.

12 A. Right. Yeah, I mean, generally, as again --

13 Q. So I guess I'm asking do you know what the
14 inputs were that Value Line used to arrive at the
15 10.1?

16 A. Right. And I think the answer to that
17 question is clear, no, I don't. And the reason I
18 still think that the numbers are valid is because
19 that's what Value Line reports to investors.

20 So from an investors' standpoint, it does form
21 the basis of an expectation with respect to allowed
22 ROEs, but they do not report any of the details or
23 underlying calculations supporting those figures.

24 Q. And so then I guess it's fair to say that
25 when we look at this average 9.79, that's for the

1 totality of the operations of these companies.

2 A. Electric operations.

3 Q. Does it include any nonregulated affiliates?

4 A. No, it does not. They're allowed returns, so
5 they are -- purportedly by Value Line, they are
6 based on the actual allowed returns that are
7 currently in effect for the regulated operations of
8 these companies, and specifically the electric
9 operations because some of them, obviously, have gas
10 operations too, and those are reported separately.

11 Q. And did you -- I just don't know the answer
12 off the top of my head, but was the underlying data
13 forming the basis for AMM-13, were those produced in
14 some of your work papers?

15 A. Yes, they are in my work papers. I don't
16 know that my --

17 Q. Sorry. Go ahead.

18 A. Pardon me. I don't know that there's been a
19 request for my rebuttal work papers, so I'm not sure
20 that those have been produced, but the Value Line
21 sheets underlying the original direct testimony are
22 included in my work papers.

23 MS. GRUNDMANN: Your Honor, would it be
24 possible to make a posthearing data request for
25 these Value Line investment surveys dated July 24,

1 August 14, and September 11, 2020?

2 CHAIRMAN SCHMITT: It certainly will, and at
3 the close of the testimony we'll discuss time
4 periods. It would have to be in writing in, like,
5 an interrogatory. No, you'll have an opportunity to
6 do that.

7 MS. GRUNDMANN: Thank you, Your Honor.

8 Q. Mr. McKenzie, I think that in response to
9 some questions from the Attorney General you were
10 asked a question of whether you were aware whether a
11 commission has ever issued a 13 percent ROE to the
12 extent it was included in some of the results that
13 you didn't exclude in the DCF.

14 Do you remember that line of questions?

15 A. Yes.

16 Q. And do you -- so when you're forming your
17 estimates as to what an appropriate return on equity
18 would be, do you look -- does it matter to you that,
19 if awarded, your requested ROE would be essentially
20 the highest ROE awarded in the last 18 months across
21 the country to any utility?

22 A. Well, my recommendation certainly isn't
23 predicated on the findings of regulatory agencies in
24 prior proceedings. It's predicated on the analyses
25 that I've presented in my testimony, so there isn't

1 a direct connection between regulatory findings in
2 other cases and my recommendation, no.

3 Q. Okay. Okay.

4 A. The only clarification I would add is that my
5 risk premium approach is predicated entirely on the
6 findings of regulatory agencies, but it's over a
7 long period of time, back to 1974, and then it's
8 also adjusted for changes in interest rates over
9 that study period. But, again, it does -- it is
10 based on regulatory findings directly.

11 Q. Understood.

12 Mr. McKenzie, could I ask you to turn to
13 page R2 of your rebuttal testimony focusing on
14 Figure R-1?

15 A. Okay. I'm there.

16 Q. And I just want to make sure that I'm
17 understanding this correctly, but you have created a
18 figure in response to some testimony from AG KIUC
19 Witness Baudino about where his ROE recommendation
20 falls as related to certain benchmarks.

21 Is that a fair description as to what you're
22 trying to show in Figure R-1?

23 A. Yes.

24 Q. And so then, as I look at Figure R-1, you had
25 four benchmarks -- allowed ROE, expected earnings,

1 electric authorized 2019, and electric authorized
2 2020. Is that fair?

3 A. Yes.

4 Q. And the large bars, the large thick bars -- I
5 apologize, my copy here is in black and white --
6 that is the range of results that your analysis
7 reveals for each of those four benchmarks?

8 A. That's correct.

9 Q. And then the dark line that runs horizontally
10 across that, that's Mr. Baudino's -- those are his
11 conclusions and his ROE results at 9.0, correct?

12 A. Yes, that's correct.

13 Q. And so they fall within the range for each of
14 these four metrics, do they not?

15 A. Yes. They fall within the range, although
16 considerably below the indicated average.

17 Q. Understood.

18 MS. GRUNDMANN: I don't have any further
19 questions at this time. Thank you, Mr. McKenzie.

20 THE WITNESS: Thank you.

21 CHAIRMAN SCHMITT: Mr. Spenard, questions?

22 MR. SPENARD: Yes, Mr. Chairman, just a few.

23 CROSS-EXAMINATION

24 By Mr. Spenard:

25 Q. Good evening. Can you hear me, Mr. McKenzie?

1 A. Yes, sir, I can. Thank you.

2 Q. Thank you.

3 MR. SPENARD: Could Staff please share on the
4 screen a cross-examination exhibit? It's the
5 application Section 3, Volume II, McKenzie direct
6 testimony, page 7. Is that -- is that document
7 available?

8 MS. VINSEL: Yes, Mr. Spenard, it should be
9 available.

10 MR. SPENARD: Thank you.

11 MS. VINSEL: I'm going to give them a little
12 help.

13 Zack, we're talking about document Number 9.

14 Q. This will be page number 221 of 333.

15 Good. Thank you.

16 A. Thank you.

17 Q. There is a question that begins on line 9,
18 Question Number 13. "What part does regulation play
19 in ensuring that Kentucky Power has access to
20 capital under reasonable terms and on a sustainable
21 basis?"

22 Do you see that question?

23 A. Yes, sir.

24 Q. Okay. And beginning on line 12, the answer,
25 the first sentence, "Regulatory signals are a major

1 driver of investors' risk assessment for utilities."

2 Do you see that?

3 A. Yes.

4 Q. With regard to the phrase "regulatory
5 signals," what does the phrase "regulatory signals"
6 comprise?

7 A. Well, in my view, it would really come down
8 to the actions as well as pronouncements from
9 regulatory agencies with respect to rate cases, rate
10 proceedings, and other proceedings involving the
11 utility.

12 Q. And I apologize. I'm trying to -- I
13 appreciate that answer to get on the same page. For
14 example, is it your testimony that the Commission
15 order that will be produced from this application
16 falls within the set of regulatory signals?

17 A. Sure. I think that's true. I think that the
18 Commission's order in any proceeding will be
19 examined by investors and evaluated with respect to
20 how whatever actions the Commission took in that
21 particular proceeding would impact that utility, as
22 well as perhaps other utilities that operate in the
23 state.

24 Q. Okay. And with regard to the -- again, the
25 first sentence on line 12, "Regulatory signals are a

1 major driver of investors' risk assessment for
2 utilities," in terms of the phrase "risk
3 assessment," what does that phrase comprise?

4 A. Well, it really comprises -- I guess there's
5 a couple of things. First is the security of the
6 capital that's invested in the utility. So
7 certainly debt investors are concerned with the
8 ability to -- of the utility to meet the obligations
9 under the debt instrument itself and repay the
10 principal.

11 With respect to common shareholders, they're
12 interested in whether there's a reasonable
13 opportunity that they're going to earn a return
14 that's comparable to what they could earn on another
15 investment.

16 So I think those are the two major issues with
17 respect to what drives the risk, is the uncertainty
18 surrounding those -- those events.

19 Q. And that -- and, again, this is your
20 testimony. I'm just trying to make sure I'm on the
21 same page.

22 In terms of the -- when you say "risk assessment,"
23 that phrase, that ties into the investors' view as
24 to the uncertainty associated with a return? Or did
25 I miss -- did I miss that?

1 A. No, that's part of it. And, again, I mean,
2 regulatory signals are one driver. They're not the
3 sole driver, but they're certainly a consideration.
4 So there's timeliness of recovery, regulatory lag.
5 All of those considerations would be part of what
6 investors would be interested in when they look to
7 see what the regulatory climate is in any particular
8 jurisdiction.

9 Q. So perhaps this can be wrapped up with one
10 more question.

11 With regard to the regulatory signals, for
12 regulatory signals for Kentucky Power Company, are
13 they more or less unique to Kentucky Power Company,
14 or does -- or is the regulatory signals associated
15 with Kentucky Power Company -- do they share those
16 with the rest of the AEP family?

17 A. Well, I think when we're trying to, at least
18 from my standpoint, look at an ROE for Kentucky
19 Power Company, we're focused primarily on what's
20 happening in Kentucky, not what's happening in Ohio
21 or other jurisdictions. I think that's what we're
22 trying to do here, is to establish a fair ROE for
23 the Kentucky jurisdictional electric operations of
24 Kentucky Power.

25 So when I talk generally about regulatory

1 drivers here, it's a general statement. If we're
2 talking about this particular case, it really comes
3 down to the actions of this commission.

4 MR. SPENARD: Okay. Thank you. That's all
5 the questions that I have.

6 CHAIRMAN SCHMITT: Mr. Fitzgerald?

7 MR. FITZGERALD: Mr. Chairman, I do have a
8 few questions.

9 CROSS-EXAMINATION

10 By Mr. Fitzgerald:

11 Q. Give me just a second. There we go.

12 Mr. McKenzie, can you hear me okay?

13 A. Yes, sir. Thank you.

14 Q. Wonderful. When Mr. Kurtz asked you whether
15 your analysis considered the dire economic
16 conditions that have faced most of the 20 counties
17 comprising the KPC service area, you responded that
18 you didn't consider, quote, "social matters." Your
19 response sounded dismissive of those conditions, and
20 I wanted to follow up a little bit to give you a
21 chance to clarify that.

22 Is it your testimony that the conditions of
23 the ratepayers, the economic conditions, should not
24 be considered by the Commission when it's reviewing
25 the proposed rate increases and what ROE to approve?

1 A. Well, I think, you know, clearly we're in
2 agreement that the Commission's job is to balance
3 the interests of consumers and investors. So I
4 don't dispute that.

5 I think there are various regulatory standards
6 that have been established that provide the
7 Commission with guidance as to how to accomplish
8 that, and there are regulatory and judicial
9 standards governing what a fair rate of return is.

10 And I'm certainly not being dismissive of
11 economic hardships faced by customers in Kentucky
12 Power service territory. My only clarification was
13 really to note that, as an ROE expert, my job is to
14 present an independent assessment of what the
15 capital markets tell me, and that assessment doesn't
16 really involve assessing economic hardship on the
17 part of consumers and adjusting the ROE in any way
18 to account for that.

19 I think there's also some dangerous
20 implications that can result from those types of
21 adjustments as well.

22 Q. Okay. That was what I was trying to clarify.
23 You weren't suggesting that those considerations are
24 not appropriate for the Commission; it's just that
25 they weren't part of your particular analysis?

1 A. They're not part of my analysis, and they
2 also -- again, I mean, purely from the standpoint of
3 a regulatory analyst looking at the cost of equity
4 and looking at the financial integrity and health
5 and viability of the utility, I would suggest that
6 deviating markedly from the market cost of equity
7 presents a lot of challenges and pitfalls for --
8 ultimately, for consumers as well because if the
9 utility is unable to earn a fair ROE, that has
10 implications for reliability ultimately and the
11 quality of service ultimately.

12 And I think, obviously, there's fairness
13 issues to investors as well in terms of what a
14 return should be granted for them putting up their
15 capital.

16 So it's not -- it's not a swag where we get to
17 say, well, things are tough in the service
18 territory, and the cost of equity is sort of an
19 amorphous number. We know it's not a fixed number
20 that we can look at in the market, so we're just
21 going to chop an increment off because there's
22 hardship in the service territory. I don't think
23 that's good policy.

24 Q. Okay. Would you agree that whether rates are
25 fair, just, and reasonable, which, as you noted, is

1 the standard that the Commission uses and one that
2 has been adjudicated in the courts in Kentucky,
3 necessarily includes consideration of whether those
4 rates are reasonable in light of the economic
5 conditions of the 28 counties that comprise the KPC
6 service area?

7 A. I think that's a legal question I'm not
8 qualified to weigh in on.

9 Q. Okay. You mentioned in response to questions
10 a minute ago that you looked to Kentucky to see what
11 was an appropriate range for the ROE. Is it -- were
12 you aware -- because it sounded like you were
13 looking at a report that suggested a higher ROE than
14 Duke has actually been getting.

15 Were you aware that the most recently
16 litigated case involving Duke Power Kentucky was a
17 9.25 ROE?

18 A. Yes, I'm aware of that. And that's the order
19 that I was referring to in the earlier
20 cross-examination, and my only point on that was
21 that there are distinctions in the sense that Duke
22 is a higher-rated company, and the Commission
23 specifically cited Duke's ability to mitigate
24 regulatory lag when they gave that order.

25 And if we look at President Mattison's

1 testimony with respect to earned ROEs for Kentucky
2 Power, it presents a very different picture. This
3 utility has not been able to mitigate regulatory
4 lag. It's earning returns which are dramatically
5 below what it's authorized.

6 Q. Right. Last question. Do you think that
7 it's inappropriate in the balancing that you
8 acknowledge has to occur between the interests of a
9 utility that's been underearning and a region that
10 has been underemployed and is having a fairly dire
11 economic time meeting its bills, do you think it's
12 appropriate that the Commission consider something
13 on the lower end of the ROE range rather than the
14 golden plate or the gold standard?

15 A. Well, I mean, again, you're putting me in a
16 hard position because that's not really --

17 Q. Well, I tell you what --

18 A. The purpose of my testimony is to really give
19 the Commission the data it needs with respect to
20 what the market demands.

21 Q. Okay. Well, let me ask you that question,
22 then. If it's a hard question for you, I just -- I
23 wanted to distinguish your role is to produce one
24 set of numbers, and the Commission's is to balance
25 the interests of all the parties in order to

1 determine what's fair, just, and reasonable.

2 You wouldn't disagree with that, would you?

3 A. No, I wouldn't disagree with that.

4 MR. FITZGERALD: Okay. I appreciate your
5 time and didn't mean to put you in a hard spot.

6 CHAIRMAN SCHMITT: Mr. Miller or Mr.
7 Childers, cross-examination?

8 MR. MILLER: Hi, Mr. Chairman. I'm back.
9 Sierra Club has no questions. Thanks a lot.

10 CHAIRMAN SCHMITT: Mr. Frye?

11 MR. FRYE: No questions at this time,
12 Mr. Chairman.

13 CHAIRMAN SCHMITT: Vice Chairman Chandler?

14 EXAMINATION

15 By Vice Chairman Chandler:

16 Q. Good evening, Mr. McKenzie.

17 A. How do you do.

18 Q. Wore out. It's been a long day. Thank you
19 for asking.

20 Let me just clarify. What role do the Hope
21 and Bluefield cases that you cite on page 5 of your
22 testimony play in your determination of an adequate
23 or proposed return on equity?

24 A. Well, I think it's important to go back to
25 realize that one thing the Hope and Bluefield cases

1 don't do is they don't tell the Commission how to
2 come to an answer, so they specifically leave that
3 up to the regulators. They do not specify a
4 particular methodology that should be employed.
5 It's the end result that matters.

6 So with respect to the end result, my view is
7 that there's a variety of methods that are accepted
8 in terms of analyzing the market cost of equity. I
9 think this Commission noted in its order in the Duke
10 case that it was appropriate to present multiple
11 methodologies. That's what I've done.

12 But I think, again, coming back to this end
13 result standard, it's not a good end result if a
14 commission authorizes an ROE of, let's say,
15 9.7 percent, and the utility is earning something
16 less than 6 or consistently earning less than 9.7.
17 That's a problem that needs to be addressed, and I
18 think that goes to the heart of the Hope and
19 Bluefield standards.

20 Q. Let me ask, on that front, have you provided
21 the Commission, as it relates to the return on
22 equity, the final product, the end result?

23 A. Well, in my view, the purpose of my testimony
24 is to present the market cost of equity. I'm
25 recommending 10.3. The company is asking 10. And

1 I'm supporting 10 as a reasonable end result.

2 Q. Right. But I just want to make sure I'm
3 clear that, as it relates to a return, you believe
4 that your proposal is -- is enough of an end result
5 that the Commission can accept it without making any
6 other adjustments necessary to reflect the legal
7 standards required.

8 A. That's correct.

9 Q. Okay. So you --

10 VICE CHAIRMAN CHANDLER: Can we get --
11 Mr. Ripy, can we get the document -- and I believe
12 it would be page 219, if it was 221 earlier -- but
13 the document that -- Ms. Vinsel, was it Number 9,
14 Mr. McKenzie's direct testimony?

15 MS. VINSEL: Yes, that's correct, Vice Chair.

16 VICE CHAIRMAN CHANDLER: So it will be Number
17 9 at 219, Mr. Ripy. You mind to share that?

18 Q. And I believe this will be page 5 of your
19 direct testimony, Mr. McKenzie, if it's easier to --
20 if you've got a version in front of you you'd prefer
21 to look.

22 A. Thank you.

23 Q. I'll ask you to look at the screen in a
24 minute, but I'd rather save your eyes until then.

25 So page 5, you cite both Hope and Bluefield.

1 When we get there, just please confirm that.

2 A. That's correct.

3 Q. Okay. And so your first one there is at
4 Bluefield, the Footnote 1, you started with a public
5 utility. There's something missing in the middle,
6 and then it ends with "public duties" at the end.

7 Do you see that?

8 A. Yes.

9 Q. Okay. And have you read the Bluefield case,
10 Bluefield Water Works & Improvement Company v.
11 Public Service Commission?

12 A. Yes.

13 Q. Okay. And so are you aware that there's --
14 well, are you aware that there's important text
15 prior to "a public utility is entitled"?

16 A. Yes, certainly.

17 Q. Okay. And what -- do you know what is
18 missing in between there where the ellipsis is
19 between "risks and uncertainties" and then "that
20 return should be"?

21 A. No, not offhand.

22 Q. Okay. So would you be surprised to know that
23 it says, "But it has no constitutional right to
24 profits, such as a realized or anticipated and
25 highly profitable enterprises or speculative

1 ventures"?

2 A. No. I've read that language before. That's
3 -- that sounds familiar.

4 Q. Okay. And so would you agree that that
5 language sounds like firms that are unregulated? Is
6 that a fair assessment, that are not rate-regulated?

7 A. No, I wouldn't agree with you on that.

8 Q. So you would agree that those highly
9 speculative ventures would likely be rate-regulated.

10 A. No. What I'm saying is that I don't agree
11 that just because a firm is unregulated it's a
12 highly speculative venture.

13 Q. I apologize. That wasn't the question that I
14 asked. I believe -- I meant to ask it the other
15 way, which was, although it may be one, it's not
16 necessarily the other, but you would agree that if
17 it's highly speculative it is not a rate-regulated
18 entity, correct?

19 A. I see what you're saying. Yes, I would agree
20 with that. Well, actually, let me take that back.

21 Q. Go ahead.

22 A. There can be instances where rate-regulated
23 firms can be considered highly speculative. So the
24 most recent example would be PG&E. They just got
25 through getting out of bankruptcy, and they were

1 highly speculative for quite some time, and the
2 stockholders lost all their money.

3 Q. I appreciate it. Were they highly
4 profitable?

5 A. No. That was the problem. They couldn't
6 recover their costs and meet their liabilities with
7 respect to inverse condemnation associated with
8 wildfires.

9 Q. Right. Right. And with your quote there
10 about Hope, it starts off, I believe, "The investor
11 or company point of view"; is that correct?

12 A. Yes.

13 Q. Okay. Would you be surprised to know that
14 the portion just above that -- or just before that
15 in the order says that "the ratemaking process under
16 the Act," which is, I believe, the Natural Gas Act.
17 Is that your understanding as well?

18 A. Yes.

19 Q. Okay. "The ratemaking process under the Act,
20 i.e., the fixing of just and reasonable rates,
21 involves a balancing of investor and the consumer
22 interests." And then would you agree that the quote
23 you cited there goes on to discuss the investor
24 interests?

25 A. Yes.

1 Q. Okay. And so is it your testimony that the
2 balancing act only occurs after an ROE is
3 determined, or would you agree that customers should
4 be considered in the determination of an ROE?

5 A. Well, I think -- I'm not trying to cop out
6 here, but I think it does call a little bit for a
7 legal opinion in terms of analyzing the exact
8 language of Hope and Bluefield in terms of what that
9 means.

10 But, to me, again, it comes back to that end
11 result and is the end result fair, and the end
12 result is, I think clearly, based on the language
13 included in my testimony and also the language that
14 you've supplied today, it does anticipate a
15 balancing. I don't disagree with that whatsoever.

16 I just wanted to clarify that my only point is
17 that I don't think it's an imbalance for the Company
18 to be offered an opportunity to earn in the market
19 cost of equity, whatever the Commission decides that
20 actually is.

21 Q. Well, and that's why I wanted to ask about
22 going back to the end result portion we talked about
23 earlier. So is it your understanding -- or let me
24 ask this: Is it your testimony that, as it relates
25 to return, what you've proposed is the end result in

1 that matter, and are you proposing for the
2 Commission to make no adjustments in balancing the
3 consumer interests in making the determination of
4 the return on equity?

5 A. Yeah, I think how the Commission balances
6 interests, when it comes to the return on equity, is
7 to consider the record evidence in this proceeding
8 and make a determination as to what the actual
9 market cost of equity is. It's not --

10 Q. Excuse me. Go ahead.

11 A. Well, I just wanted to clarify that, and
12 again, I think I mentioned this earlier, it's not a
13 question of deciding that, well, as a Commission we
14 think the market cost of equity is 9.7, but we're
15 going to cut it down to 9 because the economy is
16 suffering. I think that's bad policy.

17 Q. Yeah, and what I wanted to be clear about --
18 what I'm asking here is there's -- one of the things
19 that was addressed in rebuttal testimony was one of
20 the parties proposed an adjustment, the Company said
21 we've already made that adjustment, right? And the
22 concern was that it's unfair for the same adjustment
23 to be made twice.

24 What I'm effectively asking you is have you
25 balanced, in your determination of your ROE

1 recommendation, the interests of investors and
2 consumers insofar as it's included in your end
3 product, or are you providing only the perspective
4 of the investor and leaving the balancing of the
5 consumer to the Commission?

6 A. I think when it comes to Hope and Bluefield
7 and the requirements for a return, I think they're
8 not -- there's not a distinction. I think the
9 Commission's job is to establish what it believes to
10 be the market cost of equity and allow the utility
11 an opportunity to recover that.

12 So just -- again, getting back to any other
13 input that goes into providing service, if the cost
14 of wire is X, the Commission doesn't multiply that
15 by 90 percent and put that in the cost of service
16 based on a balancing of consumer interests and
17 investor interest. The cost is the cost.

18 And I think the same is true for the cost of
19 equity, that, clearly, based on the language we've
20 discussed, Kentucky Power is not entitled to earn an
21 ROE that exceeds its costs or that is equivalent to
22 a speculative enterprise or a highly profitable
23 enterprise. I think that's what we're kind of
24 talking about when we try to balance these issues.

25 Q. Yeah. And I can appreciate that -- that --

1 that -- you know, understanding our role, I think I
2 somewhat do, but what I'm wanting to make sure of,
3 in consideration of your evidence, is have you
4 considered that, or should we assume that that
5 hasn't -- that consumer interest has not necessarily
6 been considered in the amounts that you've provided
7 us? That's what I want to be sure of in this
8 matter.

9 A. Well, again, my evidence presents my
10 independent estimate of the market cost of equity,
11 and I think that establishing the ROE based on the
12 market cost of equity does represent the appropriate
13 balancing. I think that's what the Commission is
14 supposed to be doing.

15 Q. Okay. And I do have just one more question.
16 And I apologize.

17 One of the items that I believe is mentioned
18 in your -- the Bluefield quote maybe is -- can you
19 still see that?

20 A. I have my testimony here in front of me.

21 Q. I believe it's on line 7 --

22 A. Uh-huh.

23 Q. -- where it talks about the part of the
24 country, same general part of the country.

25 A. Right.

1 Q. And so in terms of the economy, for instance,
2 in the 20 eastern Kentucky counties that Kentucky
3 Power serves, the broader eastern Kentucky area, the
4 Appalachian area, Kentucky as a state, did any part
5 of your analysis specifically look at that, or was
6 your analysis more -- more generalized than looking
7 at specifically the area in which Kentucky Power
8 operates to determine if -- I think the quote says
9 that, you know, the rates, the return "being made at
10 the same time and in the same general part of the
11 country on investments in other business
12 undertakings which are attended by corresponding
13 risks and uncertainties."

14 A. Yeah, I mean, it's difficult to translate
15 that language into monitoring capital markets,
16 because, obviously, Kentucky Power and AEP are
17 competing on a global basis for capital, and it's
18 generally accepted that a utility -- an investor in
19 AEP, or let's take Kentucky Power, has the
20 opportunity to invest in any number of other
21 equivalent common stocks in the utility space.

22 So it's really pretty impractical to think
23 that we're going to go to eastern Kentucky and find
24 some kind of a comparable group on which to evaluate
25 a fair ROE. I think, in olden times, when the

1 Supreme Court was looking at this, there was the
2 notion that we would look to nonregulated firms and
3 see --

4 Q. Mr. McKenzie, I don't mean to interrupt you.
5 I will ask the question again and give you an
6 opportunity, but I'm afraid we may have had an issue
7 with our connection to the system, and it may have
8 stopped recording. So I just want to make sure
9 that's not the case.

10 MS. VINSEL: Yes, it's --

11 CHAIRMAN SCHMITT: What happened?

12 MS. VINSEL: -- that failure that we
13 experienced yesterday where they can't see and hear.
14 It's that failure.

15 VICE CHAIRMAN CHANDLER: We can hear you now,
16 Ms. Vinsel.

17 CHAIRMAN SCHMITT: As far as we know, it's
18 still working. I don't know.

19 MS. VINSEL: It's working again, Chairman.

20 VICE CHAIRMAN CHANDLER: Ms. Vinsel, you can
21 hear us?

22 MS. VINSEL: Yes, we can hear you, Vice
23 Chair.

24 VICE CHAIRMAN CHANDLER: Okay. Can we just
25 confirm that it's still recording and that it

1 recorded throughout that period?

2 CHAIRMAN SCHMITT: It did.

3 Q. All right. I apologize, Mr. McKenzie.

4 A. Yeah, I think I was just wrapping up my
5 answer, but I was just suggesting that it's really
6 impractical to think that we could go to the
7 Company's service territory and look for
8 investment -- businesses of comparable risk and
9 develop a market return based on that kind of a
10 notion, because capital markets are much broader.

11 And I think back when the Supreme Court was
12 looking at this, there was an idea that they would
13 look to nonregulated businesses as the basis of the
14 earned returns that were used in evaluating the fair
15 ROE, but I think that's not really how that type of
16 analysis should be done.

17 Q. Okay. But I just want to make sure that I'm
18 clear. You did not, as part of your analysis, look
19 at the returns or earnings of companies that do
20 operate in Kentucky Power to determine whether the
21 ROE proposed for Kentucky Power was appropriate in
22 light of those circumstances?

23 A. In light of businesses that are operating
24 within the service territory of the utility?

25 Q. Right, the same general part of the country

1 that Kentucky Power operates at. I just want to
2 confirm that that was not the case.

3 A. I did not do that.

4 VICE CHAIRMAN CHANDLER: All right. I very
5 much appreciate it, Mr. McKenzie, sticking with us
6 for three days. Thank you very much.

7 CHAIRMAN SCHMITT: Dr. Mathews, questions?

8 COMMISSIONER MATHEWS: I have one. Well, I
9 have a question about timing. I know you said
10 earlier, Mr. Chairman, that you would like to break
11 by 6:00?

12 CHAIRMAN SCHMITT: Yes, but let's see if we
13 can finish this witness and go on.

14 COMMISSIONER MATHEWS: Well, my concern is
15 not so much myself, but the reams of notes that I
16 see
17 Mr. Garcia taking during everyone else's
18 questioning.

19 CHAIRMAN SCHMITT: Well, Mr. Garcia can ask
20 all the questions that he wants. Personally, I
21 don't think it's necessary to have asked very many
22 questions during the cross, but whatever.

23 Go ahead. Let's finish it up unless -- the
24 only thing that would make me take a contrary
25 position, what -- I'd want to first talk to

1 Ms. Grundmann and see how her law partner is doing,
2 because that -- that would be a primary concern.

3 How is your partner, Ms. Grundmann?

4 MS. GRUNDMANN: My cocounsel has adopted a
5 far more agreeable demeanor and is prepared to join
6 us for as long as we need.

7 CHAIRMAN SCHMITT: Okay. Well, if that
8 becomes a problem, you just let us know. Okay?

9 MS. GRUNDMANN: No, we're good. He had his
10 moment. It corresponded with almost exactly when I
11 was preparing to ask my cross, and then of course as
12 soon as I was done, he was perfectly fine with
13 quieting up and taking a nap. So thank you.

14 CHAIRMAN SCHMITT: All right. Thank you.

15 Dr. Mathews, do you have a question or two or
16 three or whatever?

17 COMMISSIONER MATHEWS: I think maybe we can
18 do it in one.

19 EXAMINATION

20 By Commissioner Mathews:

21 Q. When you're looking at the -- because is it
22 not important that we look at relative risk of
23 companies?

24 A. Yes, it is important that we look at the
25 overall risk.

1 Q. Still getting the proper (indiscernible) and
2 so forth?

3 A. That's correct.

4 Q. So companies that have trackers such as the
5 fuel adjustment clause, companies that are granted
6 the opportunity to earn their environmental
7 surcharge mechanisms and so forth, those companies
8 would be lower in risk in your group, correct?

9 A. Yeah, other things equal. I address this in
10 my testimony, and I presented it in my direct
11 testimony. Exhibit AMM-3 compares the various
12 regulatory mechanisms that are in place for the
13 proxy group companies.

14 So on that basis it's my determination that
15 Kentucky Power is not lower risk compared with the
16 proxy group on the -- based on those considerations.

17 I think the other factor to keep in mind that
18 was discussed earlier with Mr. Messner is that
19 investors really care about what actually
20 transpires. They don't so much care about what the
21 -- they care about what the authorized ROE is, but
22 they also are very invested in whether the utility
23 is able to earn it.

24 And I think the evidence in Mr. Mattison's
25 testimony shows that despite the tracking mechanisms

1 and regulatory mechanisms in place, Kentucky Power
2 has been unable to do that for quite some time. I
3 think that's a significant risk for investors.

4 Q. And I was having that conversation from that
5 all other things being held equal.

6 COMMISSIONER MATHEWS: I'm done, Mr.
7 Chairman.

8 CHAIRMAN SCHMITT: I'm sorry. Have you
9 completed your --

10 COMMISSIONER MATHEWS: I'm finished.

11 CHAIRMAN SCHMITT: Mr. Garcia? I know you
12 probably have 20 pages of notes, but go right ahead.
13 You're welcome to spend all the time you want on
14 redirect.

15 MR. GARCIA: Your Honor, first of all, let me
16 emphasize I will ask the questions at your pleasure.
17 If you would prefer that we go on, I am ready to
18 proceed now or we can --

19 CHAIRMAN SCHMITT: Let's go ahead and finish.
20 If we finish now, we can start with Mr. Phillips in
21 the morning, and I suspect your last four witnesses
22 will probably take some time. So we might as well
23 go ahead and finish this witness now and start fresh
24 in the morning with someone else.

25 MR. GARCIA: I will do my efforts to do it

1 quicker, Your Honor, but I need --

2 CHAIRMAN SCHMITT: You take whatever time
3 you -- no, Mr. Garcia, you take whatever time you
4 need. Don't worry about that. We want you to have
5 every opportunity to ask every question that you'd
6 like to ask, and that's only fair.

7 MR. GARCIA: I'll try to be efficient. I
8 have been teased before about lawyer minutes, which
9 are, like, three times longer than everybody else's.

10 CHAIRMAN SCHMITT: I'm a lawyer. I know how
11 lawyers are.

12 MR. GARCIA: Thank you, Your Honor. May I
13 proceed?

14 CHAIRMAN SCHMITT: Yes, you may.

15 MR. GARCIA: Thank you.

16 REDIRECT EXAMINATION

17 By Mr. Garcia:

18 Q. Mr. McKenzie, if I can draw your attention to
19 AMM-21. You were asked questions about that.

20 A. Yes.

21 Q. Actually, let me ask you at a general level.
22 The DCF model, is it vulnerable to market anomalies?

23 A. Yes. I mean, there's model risks associated
24 with any approach we use to estimate the cost of
25 equity. That's why I recommend using multiple

1 approaches. I think that's one of the problems that
2 I have with Mr. Baudino's analysis because he relies
3 only on the DCF for his recommendation.

4 So I think it's important to use more than one
5 model. And certainly there's -- there's the
6 potential that conditions in the market can cause a
7 method like the DCF to be -- to produce results that
8 are unrepresentative.

9 Q. Great. And under your analysis, one of the
10 things that you did was the information in AMM-21
11 was it to -- I'm going to use the word temper it
12 with the use of other methodologies to arrive at
13 your conclusions about what is the required ROE from
14 investors for Kentucky Power?

15 A. Yes, that's correct. I mean, AMM-21 was the
16 DCF model for the nonutility group, which actually
17 didn't factor directly into my recommendations, but
18 as I indicated earlier, I think it's an important
19 benchmark that should be considered, but it's just
20 one of a number of methods that I believe the
21 Commission should give weight to.

22 Q. If I can, then, turn your attention on the
23 same spirit of the question to AMM-14, which I think
24 follows the table, the exhibit that you were asked
25 about, AMM-13. So I'm asking you about AMM-14.

1 A. AMM-14? Okay.

2 Q. Okay. And am I correct, Mr. McKenzie, if you
3 could explain a little bit the relationship between
4 the information that you present in AMM-14 and the
5 midpoint -- the range of reasonableness in the
6 Baudino proxy group as illustrated in AMM-13,
7 please.

8 A. Okay. I'm having a little bit of a problem.
9 AMM-14 in my rebuttal testimony is the summary of my
10 updated results. Is that where you wanted to point
11 me?

12 Q. That's correct, with the use of the multiple
13 methodologies that you have?

14 A. Okay. I mean, I think in some ways it's
15 better summarized in Hearing Exhibit 9, which
16 basically condenses those numbers down using
17 averages which demonstrates that the indicated ROE
18 for the proxy group is on the order of 10.1, which
19 is actually higher than my recommended midpoint.

20 And so I think that is adequate support for my
21 recommendation. The range is certainly reflective
22 of the results. As I pointed out earlier, it's not
23 the case that the range reflects the extremes, but
24 it reflects a necessary narrowing of the results of
25 the individual analysis down to a reasonable range.

1 Q. Okay. And I'm going to take a shortcut and
2 ask you a question that I think will consolidate
3 some of the pages that the Commissioner Mathews so
4 aptly observed.

5 Kentucky Power, within the range of utilities,
6 with its Baa3 Moody's rating would tend to be a
7 riskier investment. Like, for example, Duke
8 Utilities with -- Duke Kentucky with Baal or
9 Louisville Gas & Electric with A3 or similar peers
10 that are rated higher by credit rating agencies,
11 correct?

12 A. Yes, that's correct. And, as I think I
13 indicated earlier, as you get down to the very
14 bottom of the investment grade scale, that
15 consideration becomes even more important because
16 any further degradation of the Company's credit
17 metrics or credit rating would imply speculative
18 grade rating, which entails a very significant
19 increase in risk and cost of capital.

20 Q. Thank you. If I can draw your attention to
21 AMM-19, please.

22 A. Okay. I'm there.

23 Q. And this page reflects a portion of the
24 analysis for the risk premium methodology; is that
25 correct?

1 A. Yes.

2 Q. Okay. And that is, again, one of the
3 alternative methodologies that would provide a
4 richer picture than relying, for example, only on
5 the DCF methodology?

6 A. Yes, sir.

7 Q. Okay. Can you explain to me why is it
8 necessary to have dates range that goes in this page
9 from 2019 to 1974? Would it be possible to have a
10 significantly shorter sample and still be able to
11 rely on this analysis, like, say, five years?

12 A. Well, in my view, that wouldn't be the proper
13 approach. I think when we look at historical
14 studies, we really should consider all of the
15 available data. Just like I don't think it's
16 appropriate to suggest that we should subjectively
17 take out information when we construct beta values
18 based on an argument about whether it applies or
19 didn't apply. I think the more sound basis for this
20 analysis is to consider all of the available data,
21 which is what I've done here.

22 Q. Okay. And, Mr. McKenzie, you were asked
23 about beta and about the utility industry as it
24 compares to the oil market. Do you recall that line
25 of questioning?

1 A. Yes.

2 Q. And, if you could explain, sir, projected
3 beta, future beta, you know, the ones that would
4 make us lots of money if we could know them, are
5 they any or predictable than, say, for example,
6 interest rates, which cannot be predicted even if
7 they can be projected?

8 A. Yeah. It's analogous. It's analogous to
9 many of the inputs that goes into estimating the
10 cost of equity. The same -- the same is true about
11 the growth rate that's used in the DCF study, for
12 example. It's an unknown quantity. It presumably
13 shouldn't reflect investors' expectations, but we
14 can't observe those. So we have to go out and
15 develop a proxy, and the Value Line beta is the most
16 widely relied upon for that purpose.

17 Q. Okay. You were asked about distinctions with
18 the Duke Kentucky order that recently authorized
19 9.2 percent ROE?

20 A. Yes.

21 Q. And I think you started to point out that
22 there were some important distinctions, and I want
23 to make sure that the record is clear what those
24 important distinctions are.

25 A. Well, the first one we discussed earlier is

1 the credit rating. So Duke's Moody's rating is Baa1
2 versus a Baa3 rating for Kentucky Power. Now, their
3 S&P rating is A minus, which is the same at Kentucky
4 Power, but I think it's important to point out that
5 S&P's rating methodology is generally based on the
6 entire corporate entity. So it focuses -- it
7 focuses on AEP and all of the subsidiaries. It's
8 less company-specific.

9 So if you look, for example, in the S&P
10 reports, they indicate a company-specific credit
11 profile for Kentucky Power of BBB. So, in other
12 words, they're saying that on a stand-alone basis
13 perhaps the risk of Kentucky Power would be
14 considerably lower, but they get support from AEP,
15 they're not paying dividends right now, and they're
16 able to access the capital markets through AEP, and
17 all of those things contribute to the A minus
18 rating.

19 Aside from the distinction of ratings, the
20 capital structure was different. Duke had about
21 48 percent equity. That's higher than what the
22 Company is requesting in this case.

23 And then, as I mentioned earlier, the order
24 specifically noted that Duke was in a position to be
25 able to mitigate regulatory lag. And as I think you

1 know, the evidence that we've seen in President
2 Mattison's testimony in this case demonstrate that
3 isn't the case for Kentucky Power. They're well
4 behind the eight ball in terms of actually earning
5 the allowed ROE that the Commission has found to be
6 just and reasonable in the last case.

7 Q. You mentioned the equity layer of Kentucky
8 Power as a point of comparison. Is it your
9 understanding that the equity for Kentucky Power is
10 relatively lower at 42 percent?

11 A. Yes, it is, and this goes back to an earlier
12 question about -- that I had about pretax versus
13 after-tax returns as well. I mean, the fact that
14 Kentucky Power's equity layer is lower than the
15 companies in the proxy group. If you look at the
16 allowed equity layers for utilities where -- that
17 were authorized ROEs in 2020, for example, those are
18 averaging around 49 percent. Many of them are well
19 above 50.

20 So that's implying a greater tax burden as
21 well as a greater cost burden and is associated with
22 Kentucky Power's capital structure.

23 Q. In other words, am I correct that authorizing
24 a higher ROE for Kentucky Power actually has a
25 lessened effect on customers because of that

1 relatively low equity layer?

2 A. Yes, that's correct. And, in fact, there's a
3 chart in my direct testimony that illustrates that
4 impact, that compares Kentucky Power's weighted
5 average cost of equity with comparable statistics
6 for others in the industry that were recently
7 authorized at the time I prepared my direct
8 testimony, and Kentucky Power's is right in the low
9 end.

10 Q. Okay. You were asked some questions about
11 the relationship between the ability of Kentucky
12 Power to attract capital and the economic
13 circumstances in its service territory.

14 From an investor point of view, Mr. McKenzie,
15 the economic condition of Kentucky Power, would that
16 be a -- a risk factor actually would make an
17 investment riskier and, therefore, would require a
18 higher return?

19 A. Yes, that's true. I mean, that is one of the
20 features of the utility that credit rating agencies
21 and other investors would consider, common equity
22 investors would consider because it directly impacts
23 the utility's ability to earn a fair return and meet
24 its financial obligations.

25 So to the extent that the service territory is

1 weak, that would imply greater risks to investors.

2 Q. And then let me then ask you one last
3 question in connection with this. You were asked
4 about the Bluefield and Hope standards. And it's
5 your understanding, sir, that the interest of the
6 consumers and the utilities are misaligned under the
7 Hope and Bluefield standard? Or are they consistent
8 with each other?

9 A. No, I think under the Hope and Bluefield
10 standards there's a balancing of those interests.
11 So they would not be misaligned if those standards
12 are applied.

13 Q. So let me ask you, then, one final question
14 just to verify that. Would it be bad for the
15 customers of Kentucky Power if the Company had an
16 ROE that wasn't sufficient to attract capital and
17 assure financial integrity?

18 A. Yes. There's definite harms that can come to
19 consumers if the utility is unable to attract
20 capital.

21 Q. And, conversely, it's good for customers if
22 the Company actually has an ROE and is able to
23 achieve that ROE that is consistent with Bluefield
24 and Hope?

25 A. That's correct. And as Vice Chairman pointed

1 out, that doesn't imply a return on a speculative
2 enterprise, but it implies a fair return that's
3 based on capital market evidence.

4 MR. GARCIA: Your Honor, if I can have a
5 second?

6 CHAIRMAN SCHMITT: Yes, you may.

7 MR. GARCIA: Your Honor, that's it.

8 CHAIRMAN SCHMITT: Okay. Thank you.

9 Well, we'll now go into recess until 9:00 in
10 the morning, at which time we'll come back. And I
11 guess is Mr. Phillips our next witness?

12 MR. GARCIA: That's my understanding, Your
13 Honor.

14 CHAIRMAN SCHMITT: Okay. We'll now be in
15 recess until 9:00 a.m. in the morning. Thank
16 you-all.

17 (Hearing adjourned at 6:30 p.m.)

STATE OF KENTUCKY)
)
) SS.
)
COUNTY OF JEFFERSON)

We, Laura J. Kogut and Jennifer R. Janes,
Notaries Public within and for the State at Large,
with commissions expiring 25 July 2023 and 1 May
2023 respectively, do hereby certify that the
foregoing hearing was taken before us at the time
and place and for the purpose in the caption stated;
that witnesses were first duly sworn to tell the
truth, the whole truth, and nothing but the truth;
that the hearing was reduced by us to shorthand
writing; that the foregoing is a full, true, and
correct transcript of the hearing to the best of our
ability; that the appearances were as stated in the
caption.

WITNESS our hand this 22nd day of November
2020.

Laura J. Kogut, RMR, CRR, CRC
Notary Public, State at Large

Jennifer R. Janes, RPR, CRR, CRC
Notary Public, State at Large
