Duke Energy Kentucky
Case No. 2020-00266
Attorney General's Second Set Data Requests
Date Received: October 26, 2020

AG-DR-02-001

REQUEST:

Reference the response to AG-DR-1-3, Attachment. Given the failure of the “Assess Kit w LEDs Blower Door” and the “Specialty Candelabra LED” to pass the Total Resource Test, explain why DEK is not moving / canceling these programs.

RESPONSE:

The Company discovered that its initial response contained calculation errors. On October 26th, the Company filed revised scores in AG-DR-01-002(c)(ii) Revised Attachment. With the revised scores, the measures in question now pass the TRC: Assess Kit w LEDs Blower Door with a TRC score of 1.12 and the Specialty Candelabra LED with a TRC score of 2.10. However, with the revised scores, two measures are not passing with a TRC score of 0.97. Those measures are Smart Thermostat Elec and Smart Thermostat - Only CAC Fuel Htd.

The smart thermostat measures use a blended savings calculation from other programs that offer smart thermostats. The blended calculation includes both electric and non-electric heating sources in addition to central air conditioning. The program is tracking both electric heat and non-electric heat implementations of this offering separately to determine actual program savings by heating type. The program chose to take a conservative estimation of savings in the filing.

PERSON RESPONSIBLE: Trisha Haemmerle
Greg Simmons
