
RE: In the Matter of the Application) Third Discovery Request
of Public Service Company of Colorado) of the Energy Freedom
for Approval of its Solar*Connect Program) Coalition of America
) **Served on Public Service Company**
)
)
)
PROCEEDING NO. 16A-0055E) April 19, 2016

DISCOVERY REQUEST EFCA3-2:

Please reference the responses to EFCA1-8, which were provided on April 18, 2016.

- a. Please explain in detail why Public Service would not be interested in offering a voluntary solar program to its customers in which competitive third-party solar providers contracted to provide solar energy services to Public Service customers, interconnected with Public Service's system, and retired RECs on those customers' behalf. As part of your explanation, please specify whether Public Service's concerns with or objections to such a program are legal concerns, financial concerns, or some other types of concerns.
- b. With respect to the response to part e. of EFCA1-8, please confirm that, in its Phase II rate case currently pending before the Commission, Proceeding No. 16AL-0048E, Public Service has proposed not to grandfather into existing rates any customers who install solar that is interconnected with the Public Service system and does not surrender the RECs generated by the customer's solar installation (i.e., any customer who does not participate in the Solar*Rewards program).

OBJECTION:

Public Service objects to EFCA3-2a on the grounds it seeks information that is not relevant and the request is not reasonably calculated to lead to the discovery of admissible evidence. Public Service objects to EFCA3-2a on the grounds that the request is vague and ambiguous. Public Service objects to EFCA3-2a on the grounds that a response to the request requires speculation. Public Service objects EFCA3-2a on the grounds to the extent it seeks legal analysis and/or conclusions.

Sponsor: Andrew Crain

Date: April 29, 2016

RESPONSE:

- a. See objection.
- b. The grandfathering that Public Service has proposed in its Phase II rate case (16AL-0048E) relates to the rate design; Public Service does not propose that customers be grandfathered into existing rates. Customers who are eligible to remain on the Company's existing two part rate structure are customers who own or who have a third party owned solar generation connected in parallel with the Company's electric system and who are enrolled in the Company's Solar*Rewards[®] program and who receive service under Schedule NM as of December 31, 2016.

Under Public Service's proposed changes in the Phase II rate case, Customers who net meter outside of the Solar*Rewards[®] program will be subject to the new rate design, if adopted by the Colorado Public Utilities Commission. The Company has notified those customers in the past that their service was subject to regulatory changes.

Sponsor: Tandy Dilworth, Alice K. Jackson

Date: April 29, 2016

Sponsor: Andrew Crain

Date: April 25, 2016

SUPPLEMENTAL OBJECTION:

Public Service objects to EFCA2-9(d) on the grounds that it calls for a legal conclusion and speculation and on the grounds that it seeks information that is not relevant and the request is not reasonably calculated to lead to the discovery of admissible evidence.

Sponsor: Andrew Crain

Date: April 25, 2016

SUPPLEMENTAL RESPONSE:

Without waiving the above objection, the Company offers the following response:

- a. Yes.
- b. See objection.
- c. The only applicable restrictions or limitations on Public Service's ability to sell excess RECs are specific to program qualifications such as Green-e or specific transactions.
- d. See supplemental objection.
- e. There are no proceeds from the Windsource program however, all Windsource revenues are 100% shared back to customers through the RESA. All other REC proceeds are shared in accordance with Commission approved business rules for short-term Electric Energy and Renewable Energy Credit Transactions. See Proceeding No. 14A-0580E, Decision No. R14-1151.
- f. Yes.

Sponsor: Alice K. Jackson

Date: May 6, 2016

- i. Has Public Service made a profit of any kind from the Windsource program in the last four years?

OBJECTION:

Public Service objects to EFCA2-6(i) on the grounds that the information that it seeks would require a special study.

Sponsor: Andrew Crain

Date: April 28, 2016

SUPPLEMENTAL RESPONSE:

- i. When responding to EFCA2-6(i) the response inadvertently stated that Ponnequin Wind Farm is not retired. The correct response should read “This resource is now retired.”

Sponsor: Kerry Klemm, Kevin Schwain

Date: May 19, 2016

RESPONSE:

- a. Please see the response to OCC2-2.

The Company designed Solar*Connect to tie the rates paid by participants to the specific new renewable resource being added to the system for purposes of meeting the needs of the Solar*Connect program. Unlike Windsorce® which sources the program energy and RECs from existing system resources. The first Solar*Connect proposal under Proceeding No. 14A-0302E was denied in part due to the reliance on the RESA for program costs which our proposed Solar*Connect program does not. Whereas, Windsorce has a direct impact on the RESA.

- c. No. Windsorce RECs are sourced from Public Service’s portfolio of wind resources.
- d. The Company uses the WREGIS system to track RECs which has designators for each generator that records RECs in the WREGIS system. The Company can therefore use this identification system to ensure only wind RECs are retired on behalf of Windsorce customers.
- e. The retail rate premium for Windsorce flows to the RESA account.
- f. Please refer to the annual Renewable Energy Standard Compliance Reports.
- g. Please refer to the annual Renewable Energy Standard Compliance Reports.

- h. Because the resources that provide energy to the Windsource program consist of the pool of wind resources that the Company has acquired or owns on the system, yes. The Company is authorized to earn its rate of return for any owned wind resources.
- i. Notwithstanding the above objection, Public Service offers the following response.

Possibly. In previous years, the Company owned Ponnequin Wind Farm was one of the resources that provided energy to Windsource. This resource is not retired.

SUMMARY OF THE DIRECT TESTIMONY OF ROBIN KITTEL

Ms. Robin Kittel is Director of Regulatory and Strategic Analysis of Xcel Energy Services, Inc. In this position she is responsible for providing direction and regulatory leadership on a number of regulatory processes and functions for Public Service Company of Colorado (“Public Service” or “Company”), one of four utility operating company subsidiaries of Xcel Energy Inc. Her duties include in part, the direction, project management and implementation of Public Service’s regulatory strategy and programs related to renewable energy plans including customer choice programs.

In her testimony, Ms. Kittel presents an overview of the Company’s 2017-2019 Renewable Energy Compliance Plan (“2017 RE Plan” or “Plan”) as well as the RESA impacts of the proposed plan.

Public Service’s 2017 RE Plan proposes a three-year roadmap that further demonstrates the Company’s leadership in transiting to a more sustainable energy future, powered with less carbon-intensive fuel sources. Under the Plan, the Company expands on the customer choice program options previously offered to our customers.

Public Service proposes to add significant amounts of rooftop solar capacity to its Solar*Rewards program, while at the same time leveraging ongoing rate evolutions for such additions so that such capacity can be added in a cost effective manner for all of our customers. Public Service demonstrates a commitment to community solar gardens by committing to take increased amounts of capacity in each year of the Plan through our Solar*Rewards Community programs.

Solar is not the only renewable resource made more available to our customers through this 2017 RE Plan. Our Plan also recommends lowering the premium cost of the Windsource program, making wind energy more affordable for our customers. Lastly, the Plan finalizes a new Recycled Energy program which will allow customers to generate energy from what would otherwise be lost heat from various processes.

Public Service believes this Plan advances the goal of satisfying Colorado's growing energy needs in the most reliable, clean and affordable way possible. We respectfully ask the Commission for its approval.

DIRECT TESTIMONY AND ATTACHMENTS OF ROBIN KITTEL

1 **I. INTRODUCTION AND OVERVIEW**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Robin Kittel. My business address is 1800 Larimer Street, Denver,
4 Colorado 80202.

5 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT POSITION?**

6 A. I am employed by Xcel Energy Services, Inc., a wholly-owned subsidiary of Xcel
7 Energy Inc., the parent company of Public Service Company of Colorado. My
8 job title is Director, Regulatory and Strategic Analysis.

9 **Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THE PROCEEDING?**

10 A. I am testifying on behalf of Public Service Company of Colorado (“Public
11 Service” or the “Company”).

12

1 **Q. HAVE YOU INCLUDED A DESCRIPTION OF YOUR QUALIFICATIONS,**
2 **DUTIES, AND RESPONSIBILITIES?**

3 A. Yes. A description of my qualifications, duties, and responsibilities is included at
4 the end of my testimony.

5 **Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?**

6 A. The purpose of my testimony is to provide an overview of the Company's 2017-
7 2019 Renewable Energy Compliance Plan ("2017 RE Plan" or "Plan") including
8 an introduction of the Company witnesses filing testimony in support of this
9 Application. I explain the legislative background concerning Colorado's
10 Renewable Energy Standard ("RES"), present the requirements the Company
11 must meet in order to comply with the RES and in order to comply with the
12 Commission's RE Plan Rules, as well as lay out the Company's eligible energy
13 resource production that not only meet but also exceed these RES standards in
14 an economic manner.

15 I describe our proposal to grow our customer choice programs made up
16 of eligible energy resources over our acquisition planning period of 2017 through
17 2019. I provide an overview of the cost recovery under the Renewable Energy
18 Standard Adjustment ("RESA"). Finally, I provide a list of approval requests.

19 **Q. HAS THE COMPANY PROVIDED A COPY OF ITS RENEWABLE ENERGY**
20 **PLAN AS PART OF ITS APPLICATION?**

21 A. Yes, the Company's 2017 RE Plan is attached to my testimony in three
22 Volumes. Attachment RLK-1 is Volume 1 of the 2017 RE Plan. Attachment
23 RLK-2 is Volume 2. Attachment RLK-3 is Volume 3.

1 **Q. WHAT APPROVALS IS THE COMPANY SEEKING IN THE 2017 RE PLAN?**

2 A. Public Service respectfully requests that the Commission approve the overall
3 plan, including without limitation approval of:

- 4 • The Company's proposed acquisition levels, incentives, and program
5 changes for Solar*Rewards and Solar*Rewards Community pending
6 the outcome of the Phase II Rate Design in Proceeding No. 16AL-
7 0048E;
- 8 • The Company's proposed acquisition levels, incentives, Schedule RE
9 tariff as well as associated tariff changes for Recycled Energy service;
- 10 • The Company's proposed changes to the pricing of the Windsource
11 program and associated tariff changes;
- 12 • The Company's modeled incremental and avoided costs for resources
13 not previously locked down and the resetting of the lock down for
14 modeled incremental and avoided costs of resources previously
15 locked down, for the term of this Plan.

16 **Q. PLEASE PROVIDE AN OVERVIEW OF PUBLIC SERVICE'S 2017 RE PLAN.**

17 A. The Company is pleased to state that we have been in compliance with
18 Colorado's RES every year since 2007 and we are exceeding the compliance
19 standard today. This has been achieved because Public Service has taken a
20 proactive approach to adding eligible energy resources to our system.
21 Leadership on these types of acquisitions has been beneficial to our customers
22 and the State of Colorado. We appreciate the support of the Colorado Public

1 Utilities Commission and the numerous institutions and individuals who have
2 helped make these results possible.

3 The Company's 2017 RE Plan furthers what we believe should be the
4 goal everyone: the provision of energy in the most reliable, clean and affordable
5 way possible. The 2017 RE Plan provides a three-year roadmap that expands
6 customer choice programs that provides clean energy options for our customers
7 who want choices that support their environmental preferences and
8 sustainability goals. The Company is invested in our community and customers
9 with their growing energy preferences and therefore we are committed to
10 providing alternative energy solutions. Just as important, the 2017 RE Plan also
11 ensures that the Company's eligible energy acquisitions and on-going RES
12 compliance remains affordable for all of our customers.

13 **Q. DOES THE COMPANY SUPPORT ROOFTOP SOLAR RESOURCES?**

14 A. Absolutely. Our 2017 RE Plan demonstrates our commitment to rooftop solar.
15 We are recommending the capacity of our Solar*Rewards program. For our
16 residential customers we are expanding it by 50 MW over the course of the
17 Plan. We recognize that many of our commercial customers have sustainability
18 goals or environmental preferences and are therefore we are expanding the
19 capacities available under our Medium Solar*Rewards program for PV systems
20 25 kW up to 500 kW. For these customers we are proposing 18 MW each year
21 which is 50 percent more capacity every year in the medium program. For our
22 large customers with greater energy needs, we are reopening our Large

1 Solar*Rewards program to accommodate customer-sited systems that exceed
2 500 kW. We are proposing 24 MW of capacity be allocated to these customers.

3 **Q. DOES THE COMPANY SUPPORT OTHER FORMS OF SOLAR**
4 **RESOURCES?**

5 A. Yes. We recognize not all our customers are able to add solar directly on their
6 properties but still have an interest in participating further in renewable energy
7 options. For these customers, we offer additional options, one of those
8 presented as a part of this filing is more solar garden capacity every year under
9 our Plan. In a separate application filed in Proceeding No. 16A-0055E, the
10 Company is also proposing a new solar program called Solar*Connect which, if
11 approved by the Commission, will give customers another simple and
12 convenient way to choose to meet their renewable interests.

13 **Q. WHAT ABOUT OTHER ELIGIBLE ENERGY OPTIONS?**

14 A. Our 2017 RE Plan isn't just about solar; we are also proposing to reduce the
15 price of our Windsource program which has a long history of providing a green
16 product to our customers, paid for by them through their Xcel Energy bill.
17 Windsource is an easy, convenient way to participate in renewable energy for a
18 large segment of our customers. An independent third party certifies that every
19 Renewable Energy Credit (REC) generated and retired on a Windsource
20 customer's behalf is in fact generated by wind on the Public Service's system.

21 In addition to the wind and solar programs, the 2017 RE Plan also seeks
22 approval of a Recycled Energy program up to 20 MW per year. The Recycled

1 Energy program is a tariffed service whereby Recycled Energy is generated by
 2 what would otherwise be waste heat or steam at a customer's site.

3 **Q. COULD YOU PLEASE PROVIDE A SUMMARY OF ALL THE ELIGIBLE**
 4 **ENERGY CAPACITY ADDITIONS THE COMPANY IS PROPOSING?**

5 A. See Table 1.

6 **Table 1: 2017 RE Plan Proposed Capacities (In MW_{DC})**

Program	2017 Capacity	2018 Capacity	2019 Capacity	Total RES Capacity

II. WITNESS INTRODUCTIONS

Q. WHO ARE THE OTHER COMPANY WITNESSES AND HOW DOES THEIR TESTIMONY MEET THE FILING REQUIREMENTS OF RULE 3657?

- A. The following witnesses are providing testimony in support of this application.
- Ms. Jannell E. Marks, the Director of Sales, Energy and Demand Forecasting, sponsors Section 3 of Attachment RLK-1. Ms. Marks presents the Company’s sales forecast from 2005 through 2030 which reflect the RES compliance requirements in Table 4-1. This sales forecast is the same forecast the Company provided under Decision No. C16-0127 issued on February 16, 2016 and that will be used in the soon to be filed Electric Resource Plan (“ERP”). This Section is responsive to Rule 3657(b)(I)(D);
 - Mr. Jeffrey C. Haskins, Renewable Energy Portfolio Manager, sponsors Section 4 of Attachment No. RLK-1 which describes the Company’s estimates of the RECs that it needs to meet the Renewable Energy Standard; the Company’s projected REC transfers; the Company Windsource sales; and any RECs traded. He also sponsors Tables 4-1 through 4-4 in Attachment No. RLK-2 which provide estimated REC production by resource. This Section and Tables are responsive to Rule 3657(b)(I)(E) and 3657(b)(III);
 - Ms. Kerry R. Klemm, Manager, Consumer Product Management, sponsors portions of Section 5, specific to the Company’s proposed expansion of our customer choice solar program under Solar*Rewards and Solar*Rewards Community, as well as our Windsource program discussion under Section 6

1 of Attachment RLK-1. Ms. Klemm also sponsors Attachment RLK-3. These
2 Sections respond to Rules 3657 (b)(I)(E), (F), (G), (H) (J) and (L); Rule
3 3657(b)(II); Rule 3657(b)(V); and Rule 3665 (d)(I)(B).

4 • Mr. Samuel J. Hancock, Manager, Regulatory Project Management,
5 sponsors Sections 5's Non DG and Wholesale DG resources on the system
6 in Attachment RLK-1. Mr. Hancock also sponsors Section 7 of Attachment
7 RLK-1. Through Section 7 Mr. Hancock supports the RESA calculations
8 which project the retail rate impact for the period from 2015 through 2026.
9 Section 7 describes the requirements of Rule 3661(h)(V) regarding the
10 resetting the incremental costs of eligible energy resources previously locked
11 down under prior compliance plans. The Company's 2017 RE Plan is also
12 consistent with Rule 3661(h)(V) in that the incremental costs for eligible
13 energy resources not explicitly locked by prior Commission orders are to be
14 set by this Plan, for the term of the Plan. Mr. Hancock lastly sponsors
15 Tables 7-2 and 7-3 which provide the various costs and credits to the RESA
16 which are presented in Attachment RLK-2. Section 7 is responsive to Rules
17 3657(b)(I)(A), (B), (C), (E), (F), (G), and (I). Per Commission Decision No.
18 C16-0127, the RESA balance associate with a potential 1 GW of new Non
19 DG is offered in our Notice of Intent filing in this Proceeding.

20 • Mr. Scott B. Brockett, Director, Regulatory Administration sponsors the
21 portion of Section 6 specific to the Company's Recycled Energy program and
22 tariff offering filed in compliance with Commission Decision No. C15-1280 in
23 Proceeding 15AL-0118E.

1 **Q. WHAT SECTIONS OF THE PLAN DO YOU SPONSOR?**

2 A. I sponsor the following Section of Attachment RLK-1, again, Volume 1 of the
3 Plan:

- 4 • Section 1 is the Executive Summary;
- 5 • Section 2 briefly summarizes the various Sections of the Plan and lists
6 the filing requirements in Rule 3657;
- 7 • Section 8 describes the cost recovery mechanisms and accounting
8 treatment associated with implementing the Renewable Energy Standard,
9 which is responsive to Rule 3657 (b)(I)(A). The RESA has a positive
10 balance and is expected to remain so through the planning horizon.
- 11 • Section 9 describes the Company's net metering provisions allowed
12 under Commission Rule. Currently, the Company offers the ability of
13 customers with customer sited renewable resources to offset on a kWh
14 for kWh their energy charge commensurate with the energy produced by
15 the renewable resource. Section 9 is responsive to Rule 3657(b)(IV).
- 16 • Section 10 states that Public Service is not proposing any changes to the
17 Commission's interconnection rules or requirements at this time.
18 Solar*Rewards standard contracts, Request for Proposal (RFPs) and
19 Interconnection Agreements are found in Volume 3 of this Plan at
20 Attachment RLK-3. This Section is responsive to Rule 3657 (b)(V).
- 21 • In Section 11 is the Conclusion. It lists the approvals requested by the
22 Company in our 2017 RE Plan. This Section is responsive to Rule
23 3657(c).

1 **Q. ARE THERE ANY OTHER FILING REQUIREMENTS OF RULE 3657 YOU**
2 **WISH TO ADDRESS AT THIS TIME?**

3 A. Yes. Rule 3657 (b)(l)(K) requires the Company indicate its ownership outlook.
4 The Company reserves its rights under Rule 3660 to own new eligible energy
5 resources.

6 In Section 6, the Company includes a brief description of the
7 Solar*Connect filing and the effect it has on our REC tracking. Based on the
8 Solar*Connect filing in Proceeding No. 16A-0055E, the Company is not
9 projecting that Solar*Connect has an impact on the RESA.

10 **Q. IS THE COMPANY LOOKING FOR ELIGIBLE ENERGY ACQUISITIONS**
11 **BEYOND 2017 THROUGH 2019?**

12 A. No, This 2017 RE Plan requests the Commission to consider acquisition levels
13 of our customer choice programs offered under the Solar*Rewards,
14 Solar*Rewards Community, and Recycled Energy for the years 2017 through
15 2019. The Company is not proposing, in this Plan, any acquisitions of additional
16 wholesale DG or non-DG resources. The Company is also not seeking any type
17 of approvals for its Solar*Connect proposal which is currently being considered
18 in Proceeding No. 16A-0055E.

19

1 **Q. WHY IS IT APPROPRIATE TO PLAN FOR THE YEARS 2017-2019 IN THIS**
2 **PLAN?**

3 A. The Company believes that the Commission gave direction in Decision No. C14-
4 1505 at paragraph 32 that extending the planning of the eligible energy resource
5 programs into more years will provide further continuity and predictability in the
6 Company's programs over a single-year plan. The Company's believes the
7 2017 through 2019 RE Plan we are presenting here is consistent with the policy
8 of the Commission both under Rule 3657 as well as that prior Commission
9 decision. Over the next few years it is probable that the advancements of new
10 technologies and pricing alternative will influence future programs; setting an
11 acquisition period longer than the three years doesn't make sense. We have
12 seen the cost of solar drop quicker than past projections which further supports
13 a three year Plan is appropriate for market stability.

14 **Q. WAS THE 2017 RE PLAN DISCUSSED IN ANY OTHER RECENT**
15 **COMMISSION DECISIONS?**

16 A. Yes. In Decision No. C16-0127 in Proceeding 15V-0473E, the Commission
17 agreed to disaggregate the 2017 RE Plan filing with that of the Company's
18 Electric Resource Plan which is to be filed no later than June 1, 2016. In that
19 Decision, the Commission required the Company to file a Notice of Intent,
20 discussing the interrelationship of several Public Service proceedings, and
21 updated modeling assumptions to be used by the Company. The Company has
22 complied with the Commission's decision.

1 The sales forecasts, presented by Ms. Marks in Section 3, are the same
2 load forecast that was filed on February 29, 2016, via a separate application
3 providing the strategist modeling assumptions. The other modeling
4 assumptions used in the RES/No RES model runs are also consistent with the
5 assumptions filed in the separate application. RESA impacts associated with the
6 potential 1 GW of new eligible energy resources are included in the February
7 29, 2016 Notice of Intent filings, including the NOI in this Proceeding.

8 In this 2017 RE Plan, the Company is presenting a 10 year planning
9 horizon required by Rule 3661(e) and we have identified the acquisition period
10 of 2017 through 2019. The Company has not determined the resource
11 acquisition period of the Electric Resource Plan as of the filing of this testimony.
12 The Company would ask the Commission to find the eligible energy acquisition
13 planning for 2017 through 2019, as presented by the Company in this 2017 RE
14 Plan is appropriate, irrespective of the undetermined resource acquisition plan
15 period to be filed for in the upcoming Public Service ERP proceeding. In
16 response to the earlier question I explained why a three year acquisition period
17 for the 2017 RE Plan.

1 Credits from customer sited PV systems from 0.05 kW up to and including 500
2 kW.

3 In 2010, changes to the RES were enacted through the General
4 Assembly's passage of HB10-1001. The passage of HB10-1001 resulted in a
5 30 percent RES requirement by 2020. Another significant change brought about
6 through the enactment of HB10-1001 was the elimination of a solar-specific
7 renewable energy standard. The solar-specific renewable energy standard was
8 replaced with a much higher level Distributed Generation standard. By 2020,
9 HB10-1001 requires investor owned QRUs to acquire Distributed Generation
10 equal to 3 percent of their retail sales.

11 There were two types of Distributed Generation created by HB10-1001:
12 (1) retail distributed generation ("Retail DG"), defined as a renewable energy
13 resource that is designed primarily to provide electric energy to serve the
14 customer's load which is located on the site of a customer's facilities and
15 interconnected on the customer's side of the utility meter; and (2) wholesale
16 distributed generation ("Wholesale DG"), defined as a renewable energy
17 resource in Colorado with a nameplate rating of thirty megawatts or less that
18 does not qualify as retail distributed generation. At least one-half of the
19 distributed generation standard must be met with retail distributed generation.
20 Throughout this RE Plan, the Company refers to the various mandates of the
21 RES as "Wholesale DG", "Retail DG", and "non-DG" to ensure that we meet the
22 total RES and the minimum requirements in each category.

1 Thus, with the enactment of HB10-1001, the General Assembly almost
2 quadrupled the amount of generation a QRU must acquire from customer-sited
3 generation when compared to the levels the law required immediately prior to
4 the passage of HB10-100.1

5 In this same session, House Bill 10-1342 established what are commonly
6 termed “solar gardens,” a facility that is large enough to meet the solar needs of
7 many customers. Customers may participate in these solar projects by acquiring
8 a share of a larger facility for purposes of receiving a dollar credit on their
9 electric bills commensurate with their share of the solar garden generation that
10 they acquired. This bill limited Public Service Company to acquiring no more
11 than 6 MW of Solar Garden capacity each year from 2011 through 2013 and
12 provides for the Commission to establish the minimum and maximum capacity
13 starting in 2014 and beyond.

14 **Q. HAVE THERE BEEN OTHER LEGISLATIVE CHANGES THAT AFFECT THE**
15 **RES?**

16 A. Yes. Senate Bill 13-252 (“SB 13-252”) was recently enacted to expand the RES
17 compliance to cooperative electric associations and expanded the definition of
18 eligible energy resources to include resources using coal mine methane and
19 synthetic gas produced by pyrolysis of municipal solid waste so long as the
20 Commission determines that the greenhouse gases emitted by these resources
21 is not greater than the volume of greenhouse gases that would have been
22 emitted into the atmosphere over a subsequent five year period had the
23 resource not converted the gas to electricity.

1 **Q. ARE THERE ANY ADDITIONAL LEGISLATIVE CHANGES THAT AFFECT**
2 **THE RES?**

3 A. Yes, House Bill 15-1284 (“HB 15-1284”), enacted in 2015, changed the
4 requirement for the physical location of a solar garden. HB 15-1284 expanded
5 the authority of a solar garden be able to offer subscriptions to customers
6 located in the same county to the customers in adjacent counties. The
7 Company has already implemented this requirement in recognition of this
8 statutory change.

9 Three other bills (House Bill 15-1377, Senate Bills 15-046 and 15-254)
10 also affected the RES, however, these bills did not impact investor-owned
11 utilities such as Public Service.

12 **Q. HAS THE COMMISSION ADDRESSED SEVERAL RENEWABLE ENERGY**
13 **STANDARD ISSUES OVER THE YEARS?**

14 A. Yes. The Commission has considered the RES for the two investor-owned
15 utilities in Colorado through numerous rulemakings. In addition, the
16 Commission has considered and approved the specific Compliance Plans of
17 Public Service in separate proceedings for the Compliance Years of 2006
18 through 2016. Because of the long history of this topic through the legislature,
19 Commission rulemakings, and investor-owned utility compliance plans and
20 reports, there has been much discussion by the Commission on the RES before
21 this 2017 RE Plan was ever developed.

22

1 **Q. PLEASE DESCRIBE THE RENEWABLE ENERGY STANDARD RULES**
 2 **PROMULGATED BY THIS COMMISSION.**

3 A. The Commission enacted the Renewable Energy Standard Rules, which are
 4 codified at 4 CCR 723-3-3650 *et. seq.*, (“RES Rules”), to implement the
 5 provisions of Amendment 37 and subsequent changes to the law described
 6 above. The statutory requirements of the RES are codified at C.R.S. §40-2-124.
 7 Legislative changes associated with the 2010 statutory changes were included
 8 in the rulemaking proceeding initiated by the Commission, Proceeding No. 10R-
 9 674E. More recent 2015 statutory changes are the subject of the pending
 10 Commission rulemaking, Proceeding No. 15R-0699E.

11 Commission Rule 3654 now requires Public Service to generate or cause
 12 to be generated through various purchases, standard offers or other forms of
 13 incentives, eligible energy in the following amounts:

14 **Table 2. Renewable Energy Standard**

Period	RES	Distributed Generation (DG)	Retail Distributed Generation
2015 – 2016	20% of retail sales	1.75% of retail sales	At least ½ of DG
2017-2019	20% of retail sales	2% of RES	At least ½ of DG
2020 and beyond	30% of retail sales	3% of retail sales	At least ½ of DG

15 Rule 3659 requires RECs be used to meet the Renewable Energy
 16 Standard. RECs are defined in Rule 3652(y). Rule 3654 currently contains a 25
 17 percent multiplier for early eligible energy generated in Colorado. Since the

1 passage of Amendment 37, there have been two changes made to this in-state
2 multiplier. First, under Commission Rule 3654(f) in response to HB 10-1001,
3 eligible energy generated by retail distributed generation for which a qualifying
4 retail utility has entered into a purchase transaction prior to August 11, 2010,
5 qualifies for the 1.25 multiplier, but otherwise retail distributed generation does
6 not qualify for the 1.25 multiplier. The second change was created by SB 13-252
7 which eliminated any in-state preference; as a result all eligible energy,
8 wherever generated, is entitled to the 1.25 multiplier, except for retail distributed
9 generation and except for any facility beginning operation on or after January 1,
10 2015. So, in judging both planned compliance in advance of a calendar year (as
11 in this 2017 RE Plan) and in confirming actual compliance after a Calendar year,
12 the Commission looks at RECs generated in any calendar year, although the
13 Company would note that one day the energy from Recycled Energy Resources
14 maybe considered for compliance purposes. The Company retires RECs in
15 sufficient quantities to meet its compliance obligations and has a software
16 system in place to ensure that a REC is only used once, either for Compliance
17 with the RES or for some other purpose.

18 **Q. HAS THE COMPANY COMPLIED WITH THE RENEWABLE ENERGY**
19 **STANDARD?**

20 A. Yes. I am pleased to state the Company has complied with the RES every year,
21 since 2007. Since 2006, the Company has presented to the Commission in its
22 RES Compliance plans a proposal that allows us to meet and exceed the RES.

1 The Company has filed with the Commission annual compliance reports under
2 Rule 3662 that demonstrate that the Company has met compliance.

3 **Q. WILL PUBLIC SERVICE BE IN POSITION TO COMPLY WITH THE RES FOR**
4 **COMPLIANCE YEARS 2017, 2018 AND 2019?**

5 A. Yes. The Company is actually ahead of compliance in all categories of the
6 standard (Retail DG, Wholesale DG, and Non-DG) and will be able to meet the
7 2017 through 2019 RES requirements without additional generation
8 acquisitions. Notwithstanding that fact, this 2017 RE Plan requests additional
9 increases in solar acquisition levels for our Solar*Rewards programs, in an
10 economic manor without negatively impacting the RESA and leveraging ongoing
11 rate evolutions.

12

1 **IV. NON DG AND WHOLESALE DG ACQUISITIONS**

2 **Q. YOU MENTIONED THE COMPANY IS NOT REQUESTING AUTHORIZATION**
3 **FOR ACQUIRING ADDITIONAL WHOLESALE DG OR NON DG UNDER THIS**
4 **PLAN. PLEASE EXPLAIN.**

5 A. As stated earlier, the Company's existing eligible energy resource allow us to
6 exceed the RES beyond 2020. For example, the Company has acquired 234
7 MW of eligible energy resources that are classified as Wholesale DG that
8 produces approximately 500,000 RECs annually while our compliance
9 requirement is on average 296,000 RECs each year 2017 through 2019. These
10 are listed in Tables 4-2 in Attachment RLK-2. Likewise, the Company also
11 exceeds compliance with our non-DG eligible energy resources with the Non-
12 DG resources providing just under 7.4 million RECs annually versus a
13 compliance requirement of 5.3 million RECs on average.

V. RETAIL DG ACQUISITION

Q. WHAT ARE THE COMPANY’S PLANS FOR ACQUIRING CUSTOMER- SITED SOLAR?

A. In general, the Company meets our Retail DG requirement from our Solar*Rewards and Solar*Rewards Community programs (collectively called “Solar*Rewards Programs”). Since 2007 the Company has acquired 254 MW of Solar*Rewards program capacity resulting in the production of approximately 320,000 RECs on an annual basis which puts the Company beyond the RES compliance requirement for the retail DG component which requires approximately 296,000 RECs on average each year over 2017 – 2019.

To break it down, the Company has added by the end of 2015, 237 MW of Solar*Rewards since the start of our program in 2006 with acquisition plans for 2016 of 66 MW; furthering the Company’s REC bank for Retail DG compliance. Our 2017 RE Plan for our rooftop programs is proposing to add 201 MW over 2017 through 2019.

Recently, the Company filed a Verified Motion seeking approval of a settlement agreement with Solar*Rewards Community developers awarded projects in our 2015 RFP. That settlement agreement, if approved, would provide for the acquisition of potentially an additional 59 MW (2016 CSG RFP) of Solar*Rewards Community projects: 29.5 MW associated with 2014 and 29.5 MW for 2016. The settlement provides that Public Service may participate in the ownership of up to 4 MW of CSGs awarded through the 2016 CSG RFP to the extent that Public Service engages independently or with other entities for low

1 income subscriber participation through non-profit 501(c)(3) organization
2 participation in a specific CSG.

3 In Section 5 in Attachment RLK-1 of the Plan, the Company sets forth a
4 significant expansion of incremental Solar*Rewards beyond REC compliance
5 needs but consistent with the statutory declaration for C.R.S. 40-2-124, that
6 declares "...[i]t is in the best interest of the citizens of Colorado to develop and
7 utilize renewable energy resources to the maximum practicable extent." Through
8 this Plan, Public Service seeks to expand the options and capacity available for
9 Small Solar*Rewards program; expand its Medium Solar*Rewards option, and
10 reinstitute a Large Solar*Rewards program offering. Through this Plan we are
11 committing to increase solar garden capacity that we take every year under our
12 Plan through our Solar*Rewards Community program while also recommending
13 a consistent program maximum of 30 MW each year. In totality the Plan detail
14 in Section 5 proposes significant increases in the amount of capacity through
15 our Solar*Rewards programs during 2017-2019. The Company provides
16 program details related to the Solar*Rewards and Solar*Rewards Community
17 programs through the testimony of Ms. Kerry Klemm.

18 **Q. WHAT ARE THE PRINCIPAL CHANGES TO THE SMALL SOLAR PROGRAM**
19 **IN THIS 2017 RE PLAN?**

20 A. We are expanding the Small Solar*Rewards program offerings in this 2017 RE
21 Plan. We are proposing two Small Solar*Rewards options; Option A at 24 MW
22 on an annual basis to reflect the current Small program today. Option B is a new
23 offering which starts with 9 MW in 2017, increases to 18 MW in 2018 and 24

1 MW in 2019. As I explain below, the Option B program will be voluntary for
2 customer who elect to be on the RDTOU Rate proposed in the Phase II rate
3 case, Proceeding No. 16AL-0048E, and who elect to participate in
4 Solar*Rewards. The gradual increase in capacity is to recognize this program
5 option may have a slower adoption rate at the start and grow over time.

6 **Q. ARE THE INCENTIVES UNDER THE TWO SMALL SOLAR*REWARDS**
7 **OPTIONAL PROGRAMS DIFFERENT?**

8 A. Yes. First, the two new options are in recognition of the new rate designs
9 proposed under the Company's Electric Phase II rate design. We have
10 proposed to adjust the REC incentive to compensate customer commensurate
11 for any rate adjustment as a result of the fixed grid usage charge or a new
12 demand rate class for R class customer. For the traditional Small Solar*Rewards
13 program offering the REC incentive would compensate customers
14 commensurate with a fixed grid usage charge assessed on customers who are
15 taking retail electric service under the R Service schedule. In effect holding
16 potential new solar customers indifferent to the new grid usage charge. For
17 customers who would voluntarily elect to move to the new Residential Demand
18 Time of Use Rate schedule (RD TOU) we proposed to offer a higher REC
19 incentive again commensurate with the class average demand costs plus the
20 fixed grid usage charge. Again, in effect holding potential new Option B solar
21 customers indifferent to the new tariff rate. The details of these Options are
22 discussed more fully in Ms. Klemm's testimony.

1 **Q. ARE THE COMPANY'S PROPOSED CAPACITY AND PRICING LEVELS**
2 **CONTINGENT ON RECEIVING THE APPROVALS IT SEEKS IN PHASE II?**

3 A. In part. The Company recognizes the Phase II rate case was filed just over a
4 month ago and will take time to adjudicate. Our proposed REC incentives under
5 the Small Solar*Rewards program is based on the filed case. Should the
6 Commission approve tariffs and rates that differ from the filed case, the
7 Company requests that the incentives be reevaluated consistent with the
8 decision affecting the R Service class tariff or the RDTOU tariff.

9 **Q. WHAT ABOUT THE MEDIUM SOLAR*REWARDS PROGRAM?**

10 A. At this time, we believe an expansion of the Medium Program offering is
11 appropriate. For the Company's Medium program, we offered 12 MW in both
12 2015 and 2016 at a rate of 3 MW per quarter. The capacity was fully subscribed
13 before the end of each quarter. The Company also polled our employees who
14 are responsible for managing the accounts of many of our larger customer
15 regarding their current interest in adding solar to their facilities and received
16 indication that there is interest in this program. The Company seeks to address
17 this interest from these customers by offering 18 MW per year for the Medium
18 program; a 6 MW increase in capacity every year above the 2015 and 2016
19 capacity offerings of the Medium program.

20 **Q. WHAT ABOUT THE LARGE SOLAR*REWARDS PROGRAM?**

21 A. The Company believes that there may be interest by some of our larger
22 customers to participate in a Large Solar*Rewards program. The Large
23 Solar*Rewards program will solicit projects under a Request for Proposal (RFP)

1 for projects that are larger than 500 kW. Under the Large Program, the size
2 limitation is dictated by the limitation in statute of being no more than 120
3 percent of the customer's annual consumption. The last time the Company
4 offered any capacity under the Large Solar*Rewards Program was in the RFP
5 issued in 2012. We plan on having the Large Solar*Rewards program ramp-up
6 by offering 6 MW in 2017, 8 MW in 2018 and 10 MW in 2019.

7 **Q. IS THE COMPANY PROPOSING TO ACQUIRE OTHER CUSTOMER SITED**
8 **ELIGIBLE ENERGY RESOURCES UNDER THIS PLAN?**

9 A. Yes, we are proposing to continue offering additional Solar*Rewards Community
10 program and a Recycled Energy program.

11 **Q. IS THE COMPANY PROPOSING A MINIMUM AND MAXIMUM FOR THE**
12 **SOLAR*REWARDS COMMUNITY PROGRAM?**

13 A. Yes, as stated earlier, the Company is proposing a minimum Solar*Rewards
14 Community program of 10 MW with a maximum program size of 30 MW for each
15 of the three years under the Plan. Over the three year 2017 RE Plan, an
16 additional 30 MW up to possibly 90 MW of new capacity could be acquired
17 under this program. As Mr. Hancock explains, the RES/No RES modeling
18 included the costs of this program based on the maximum 30 MW each year for
19 modeling purposes. Ms. Klemm discusses in more detail the use of an RFP for
20 the acquisition of Solar*Rewards Community.

21

1 **Q. WILL THE RFP REFLECT OFFERING SUBSCRIBERS THE CLASS**
2 **AVERAGE BILL CREDIT?**

3 A. Yes. As mentioned earlier, on February 24, 2016 the Company filed a Verified
4 Motion seeking approval of a settlement agreement¹ between the successful
5 2015 Solar*Rewards Community RFP developers and the Company. The
6 settlement is a comprehensive settlement which included agreement to alter
7 subscriber's bill credits from individually calculating bill credits for demand class
8 customers to a class average bill credit stated in our SRCS tariff. Should the
9 Commission approve the tariff revisions filed with the settlement, the Company
10 is anticipating that the class average bill credit will continue to apply to all
11 Solar*Rewards Community subscribers as a result of any offer under the
12 Company's 2017 RE Plan. Included in our motion to approve the settlement are
13 the proposed changes to the SRCS tariff. The requested tariff changes in that
14 Proceeding also require a variance of Rule3665 (c)(l)(B). The Company
15 anticipates that the settlement will be approved well before this proceeding goes
16 to a hearing, therefore we have not at this time requested any tariff changes, or
17 associated rule waivers necessary to implement such changes at this time in
18 this proceeding

19 **Q. IS THE COMPANY INCLUDING A PROVISION IN THE SOLAR*REWARDS**
20 **COMMUNITY GARDENS RFP FOR BOTH POSITIVE AND NEGATIVE BIDS?**

21 A. Yes. The RFP process discussed in Section 5 will permit both positive and
22 negative bid submittals which will be used in the evaluation of the bids. The

¹ See Proceeding No. 13A-0836E

1 Company believes that we should not limit the value developers put on the
2 market opportunity of connecting to our system and providing subscriptions to
3 our customers. We believe the market will set the appropriate opportunity cost.
4 There should not be an artificial limitation on how a developer wishes to bid.

5 The Company recognizes that there has been concern from the solar
6 industry in regards to Public Service considering negative RFP bids for
7 Solar*Rewards Community. Although I am not a lawyer, I am not aware of any
8 provision either Colorado statutes or Commission Rules that limits the terms
9 under which the Company may acquire RECs. While the RES statute and RES
10 Rules reference the “purchase” of “the electricity and renewable energy credits
11 generated from one or more community solar gardens” both the rules and the
12 statute are silent as to how the garden developer may structure its response to a
13 competitive solicitation from the Company. The RECs that a utility is acquiring
14 and that a developer is selling are not being transferred on a stand-alone basis,
15 but are coupled with the production and delivery of energy to the grid.
16 Effectively a garden developer, if selected by Public Service, obtains the benefit
17 of three streams of revenue: from subscribers for the share of the garden that
18 they purchase (a negotiated amount), from a utility for excess energy (at our
19 average hourly incremental cost), and from the utility for RECs (based on CSG
20 bid prices). In this context the Solar*Rewards Community contract provides for
21 the Company’s purchase of electricity and RECs and gives the developer a
22 market opportunity, even if one component of the contract is set at a negative
23 price. Therefore, the Company believes a REC transaction must not be viewed

1 in isolation or that it has to be set at an some level above \$0 to satisfy
2 Commission rule because the REC transfer does not occur in isolation, but is
3 part of a larger transaction that includes the production of electricity for the
4 benefit of subscribers, the Company and garden owner as a result of being
5 selected as a winning bidder.

6

1 **VI. COST RECOVERY**

2 **Q. HOW DOES THE COMPANY RECOVER THE COSTS OF RENEWABLE**
3 **ENERGY?**

4 A. We recover the costs of renewable energy through a combination of the RESA
5 deferred account and the ECA deferred account. This allocation is consistent
6 with legislative directive as well as Commission rule. C.R.S. §40-2-124(1)(g),
7 implemented by Commission Rule 3661, which establishes a maximum retail
8 rate impact for the Renewable Energy Standard program of two percent of the
9 total electric bill annually for each customer. The statute provides: “The retail
10 rate impact shall be determined net of new alternative sources of electricity
11 supply from non-eligible energy resources that are reasonably available at the
12 time of the determination.” Public Service developed a deferred account to track
13 these incremental costs of the renewable energy acquired, called the
14 Renewable Energy Standard Adjustment (“RESA”) account. The RESA is a rate
15 adjustment mechanism that currently adds 2% to each customer’s total bill. The
16 RESA deferred account tracks the revenues received from the RESA rider and
17 the incremental costs of renewable energy incurred by the Company.

18 Only the incremental cost of eligible energy resources (sometime referred
19 to in shorthand as “renewable energy” although Recycled Energy is still included
20 in such shorthand) is paid through the RESA account. The non-incremental
21 cost is paid through the Electric Commodity Adjustment. The non-incremental
22 cost is equivalent to the cost of non-eligible energy resources that are displaced

1 by the acquisition of the eligible energy resources. On Public Service's system,
2 the non-incremental cost is sometimes referred to as the "avoided cost".

3 The incremental costs of eligible energy resources cannot be directly
4 measured because the utility must compare the actual cost of the resource that
5 is acquired with the hypothetical cost of the resource that it did not acquire (with
6 the proverbial "road not taken.") As a consequence, the incremental costs that
7 are paid through the RESA are determined by sophisticated computer modeling
8 of Public Service's generation system and through the development of two
9 plans, referred to in Commission Rule 3661(h) as the "RES Plan" and the "No
10 RES Plan." Mr. Sam Hancock describes this modeling in more detail in his
11 testimony as well as in Section 7 of the Plan.

12 The amount for eligible energy costs that match the costs of the avoided
13 non-eligible energy resources are recovered through the ECA account and
14 those costs above or "incremental" to the avoided non-eligible energy costs are
15 recovered through the RESA account.

16 By continuing to recover only the incremental costs through the RESA,
17 the RESA provides a ready check on whether the Company has complied with
18 the two percent retail rate impact limit in Rule 3661(a).

19 Although the net incremental costs have always been positive and thus
20 attributable to the RESA, should there ever be a negative net incremental cost,
21 the Company would only charge costs to the ECA which are actual costs. The
22 Company believes this is consistent with past Commission Decisions that
23 required the Company to only charge customers the actual costs of an eligible

1 energy resource cost. In other words, a net negative incremental charge would
2 not be charged to the ECA and transferred to the RESA.

3 **Q. IS THE RETAIL RATE IMPACT SECTION OF THE PLAN IN COMPLIANCE**
4 **WITH THE COMMISSION RULE?**

5 A. Yes, the Retail Rate Impact Section of the Plan is in compliance with
6 Commission Rule 3661. Specifically, Rule 3661(a) provides that the net retail
7 rate impact of Public Service's actions comply with the RES statute and
8 Commission Rule if the RESA rate does not exceed two percent of the annual
9 total electric bill for each retail customer. Public Service is not proposing to
10 charge our customers more than a 2 percent RESA charge. In addition, Rule
11 3661(f) requires the Company to estimate the retail rate impact of its RES at the
12 beginning of the Compliance Year and for a minimum of ten years after, and
13 identify the funds needed to comply with the RES and retail rate impact rules.
14 We provide this information in Section 7 of the Plan and related Table 7-2(c).

15 **Q. PLEASE SUMMARIZE THE RETAIL RATE IMPACTS FOR PUBLIC**
16 **SERVICE'S CUSTOMERS.**

17 A. As required by both Commission Rule 3661 and C.R.S. §40-2-124(1)(g)(I),
18 Public Service has completed a retail rate impact analysis. Beginning in
19 January 2009, the RESA was increased to 2 percent pursuant to Decision No.
20 C08-0203.² The revenues collected by the RESA are used to cover the
21 incremental costs of eligible energy resources and program administration
22 costs.

² Docket No. 08L-056E.

1 **Q. DOES THE COMPANY PROPOSE TO MAINTAIN THE CURRENT**
2 **ALLOCATION OF COST RECOVERY FOR RENEWABLES BETWEEN THE**
3 **ECA AND RESA?**

4 A. Yes. Public Service plans to use the same cost recovery mechanisms for our
5 2017 RE Plan that the Commission approved for prior Compliance Plans;³
6 namely, (1) the ECA to recover the costs of Eligible Energy that match the costs
7 of the avoided non-renewable resources and (2) the RESA to recover (a) the
8 costs of the Eligible Energy that are incremental to the costs of the avoided non-
9 renewable resources and (b) the program and administration costs. Included in
10 the calculation of costs paid for by the ECA is an equivalent avoided cost for the
11 solar production from our Solar*Rewards systems. Because the Solar*Rewards
12 costs are charged to the RESA a separate calculation of the avoided costs
13 equivalent to the production is performed and these costs are charged against
14 the ECA and credited to the RESA.

15 **Q. HAS THE COMPANY ALWAYS ALLOCATED THE SOLAR*REWARDS**
16 **AVOIDED COST TO THE ECA?**

17 A. Yes. Since the very first RES Compliance Plan, Proceeding No. 06A-478E, the
18 Company has provided to the Commission a forecast of incremental costs as
19 well as the amount of costs to be charged to the ECA. The Commission first
20 approved this allocation of in Decision No. C07-0676.

³ The Commission approved this cost recovery mechanism in Decision No. C09-1037 in Proceeding No. 08A-532E, R10-0586, C10-1033 and C12-0606 and reaffirmed it in Decisions No. R14-0902 and C14-1505.

1 **Q. WHAT IS THE STATUS OF THE COMPANY'S RESA BALANCE AT THE END**
2 **OF 2015?**

3 A. The status of the deferred balance in the RESA at the end of 2015 is
4 \$39,583,522. The Company used this balance as the starting balance for the 10
5 year planning horizon set forth in Table 7-2(c) in Column V.

6 **Q. DOES THE RESA REMAIN POSITIVE OVER THE 10 YEAR PLANNING**
7 **HORIZON?**

8 A. Yes. See Table 2.

9 **Table No. 3. RESA Balance Table 7-2(c)**

	RESA Rolling Balance (Deferred)
2015	39,583,522
2016	64,638,011
2017	36,188,360
2018	36,210,223
2019	56,574,095
2020	113,768,841
2021	191,921,872
2022	275,846,948
2023	367,596,986
2024	466,818,329
2025	573,011,274
2026	688,239,085

10 **Q. IS THE COMPANY'S PLAN IN COMPLIANCE WITH RULE 3661(h)(V) ?**

11 A. Yes. Rule 3661(h)(V) requires the Company to reset the avoided and
12 incremental costs of Eligible Energy Resources in the Company's RE Plan after
13 2015. As Mr. Hancock explains in his Direct Testimony, the Company's current
14 eligible energy resources have reset the assessed avoided cost and thus the

1 incremental costs which is reflected in Tables 7-1 through 7-3. One note, the
2 Commission locked down for the life of the asset the incremental costs of SunE
3 Alamosa and Solar*Rewards acquired before October 2009. Table 7-2(c)
4 summary reflects the unlocking of all Eligible Energy Resources excluding SunE
5 Alamosa and the early Solar*Rewards systems.

6

1 **VII. APPROVALS REQUESTED**

2 **Q. WHAT IS THE COMPANY REQUESTING THE COMMISSION APPROVE**
3 **UNDER THIS APPLICATION?**

4 A. Public Service has presented a comprehensive 2017 through 2019 Renewable
5 Energy Plan for the Commission's consideration.

6 Public Service respectfully requests that the Commission approve the
7 overall plan, including without limitation approval of:

- 8 • The Company's proposed acquisition levels, incentives, and program
9 changes for Solar*Rewards and Solar*Rewards Community pending
10 the outcome of the Phase II Rate Design in Proceeding No. 16AL-
11 0048E.;
- 12 • The Company's proposed acquisition levels, incentives, Schedule RE
13 tariff as well as associated tariff changes for Recycled Energy
14 service.;
- 15 • The Company's proposed changes to the pricing of the Windsource

21 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

22 A. Yes, it does

Statement of Qualifications

Robin Kittel

Experience	2001 – Present	<i>Xcel Energy Inc.</i>	Denver, Colorado
		Director, Regulatory and Strategic Analysis	May 2015 to present
		Director, Regulatory Administration	Sept 2006 – May 2015
		Director, Business Relations	August 2001- Sept 2006
		Manager, Policy Analysis	March 2001 – August 2001

As Director of Regulatory and Strategic Analysis, I am responsible for the regulatory and policy direction for Public Service Company of Colorado on environmental, transmission, and resource regulatory matters. In this capacity, I have testified before the Commission on previously filed RES Compliance Plans as well as other policy matters such as Innovative Clean Technologies, Transmission and Meter Testing Programs.

In my previous roles at Xcel Energy, I was responsible for our wholesale customers taking service under a number of different tariffs and rate schedules, which were administered under my supervision. Additionally, I was responsible for the coordination and effective participation in Regional Transmission Organization developments, implementation of new market rules and changes to reliability standards. I directed similar policy participation in other industry organizations such as Edison Electric Institute, North American Reliability Council, and North American Energy Standards Board. I represented Xcel Energy on key stakeholder committees with Southwest Power Pool (SPP) and Western Electricity Coordinating Council (WECC) board of directors; I chair the Market Operations Policy Committee for SPP and am a member of the WestConnect Steering Committee.

I actively participated in Federal Energy Regulatory Commission (FERC) activities such as rulemakings and other active dockets that effect Xcel Energy policies and practices. I provide Transmission policy comments on state jurisdictional legislative and regulatory matters as needed.

I am a registered Professional Engineer licensed in Texas.

[1]

[1] The grey shading denotes the costs for Northern Colorado I, Northern Colorado II, Solar Rewards Jan-Sept 2009, Cedar Creek II, Cedar Point, Iberdrola (aka San Luis Solar), Greater Sand Hill, Limon I and Limon II are presented as unlocked in this RE Plan. As such, for the greyed years the costs for these resources will move from the Locked to the Unlocked columns and will have their incremental costs calculated using current modeling assumptions.

RE: In the Matter of the Application) Sixth Discovery Request
of Public Service Company of Colorado) of the Energy Freedom
for Approval of its Solar*Connect Program) Coalition of America
) **Served on Public Service Company**
)
)
)
PROCEEDING NO. 16A-0055E) May 4, 2016

DISCOVERY REQUEST EFCA6-5:

Please reference the Direct Testimony of Public Service’s witness Ms. Alice Jackson, page 21, lines 23-25, where Ms. Jackson states, “Public Service will assume certain risks as part of offering this program. In return, Public Service likewise should have an opportunity to retain a limited amount of excess revenues.”

- a. Are the risks that Public Service would assume as a part of the Solar*Connect program the Company’s sole justification for why it should have an opportunity to retain a limited amount of excess revenues?
- b. If the answer to part a. is “no,” please list and explain all reasons that Public Service believes it should have an opportunity to retain a limited amount of excess revenues from the Solar*Connect program, other than the risks that Ms. Jackson refers to in the referenced testimony.

RESPONSE:

- a. Yes, all the program risks as detailed in testimony support the opportunity for the Company to retain the limited amount of excess revenues.
- b. Not applicable.

Sponsor: Alice K. Jackson
