**Response to Commission Staff's First Request for Information  
Case No. 2021-00409**

Question No. 1

Responding Witness: L.J. Turner

**Q-1. Explain whether Hyden-Leslie District is aware of any of its customers currently having an individual pressure booster system. If so, explain how Hyden-Leslie District would handle the situation if the proposed removal of the provision of the tariff were approved. If not, explain whether Hyden-Leslie District would take proactive steps to determine whether any of its customers have individual pressure booster systems.**

A-1. Hyden-Leslie County Water District has not conducted any survey of its customers or search its customers property for installations of individual booster pumps. If the Public Service Commission permits the tariff provision to take effective, Hyden-Leslie County Water District does not intend to actively search for such systems. The District's limited resources do not permit such action. If hydraulic problems occur in a section of its distribution system that suggests that an individual booster pump is connected to its system and is causing or may cause hydraulic or public health problems, however, the District will conduct a search for such pump and take appropriate action to eliminate the problem. Similarly, the District will comply with any order or direction from the Division of Water mandating the removal of any found pumps.

Please note that the principal purpose for the proposed revision was to bring the District's tariff in compliance with Division of Water regulation and to eliminate a tariff provision that prospective customers might interpret as allowing the installation of such pumps was permissible.

**Response to Commission Staff's First Request for Information  
Case No. 2021-00409**

Question No. 2

Responding Witness: L.J. Turner

- Q-2. If Hyden-Leslie District is not currently aware of any of its customers having an individual pressure booster system but later becomes aware of such a situation, explain the actions, if any, Hyden-Leslie District would take regarding that customer's individual pressure booster system.**
- A-2. Hyden-Leslie County District will request the customer cease using the booster pump if the pump is causing or may cause hydraulic or public health problems or if the Division of Water mandate the removal of the pump. If the customer refuses to cease the use of such pump, the District will terminate service to the customer. Prior to any termination of service, the District will investigate whether adjustments to the District's distribution can provide relief to the customer without imposing unreasonable costs on the District.
