VERTICALBRIDGE FOR ISSUANCE OF A	)	
CERTIFICATE OF PUBLIC	)	CASE NO. 2022-0016
CONVENIENCE AND NECESSITY TO CONSTRUCT	)	
A WIRELESS COMMUNICATIONS FACILITY	)	
IN THE COMMONWEALTH OF KENTUCKY	)	
IN THE COUNTY OF BALLARD	)	

SITE NAME: BARLOW

\* \* \* \* \*

**THIRD AMENDED APPLICATION FOR  
CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY  
FOR CONSTRUCTION OF A WIRELESS COMMUNICATIONS FACILITY**

Cellco Partnership, d/b/a Verizon Wireless and Vertical Bridge REIT, LLC d/b/a Verticalbridge (“Co-Applicants”), by counsel, pursuant to (i) KRS §§278.020, 278.040, 278.650, 278.665, and other statutory authority, and the rules and regulations applicable thereto, and (ii) the Telecommunications Act of 1996, respectfully submits this Third Amended Application requesting issuance of a Certificate of Public Convenience and Necessity (“Application”) from the Kentucky Public Service Commission (“PSC”) to construct, maintain, and operate a Wireless Communications Facility (“WCF”) to serve the customers of the Applicant with wireless communications services.

In support of this Application, Applicant respectfully provides and states the following information:

1. The complete name and address of the Co-Applicants:

- a. Cellco Partnership, d/b/a Verizon Wireless, having a local address of 2421 Holloway Road, Louisville, KY 40299.
- b. Vertical Bridge REIT, LLC d/b/a Verticalbridge, 750 Park of Commerce Drive, having an address of Suite 200, Boca Raton, FL 33487

2. Co- Applicants

- a. Cellco Partnership, d/b/a Verizon Wireless is a Delaware general partnership and a copy of the Amended Certificate of Assumed Name is on file with the Secretary of State of Commonwealth of Kentucky is included as part of **Exhibit A**.
- b. Vertical Bridge REIT, LLC d/b/a Verticalbridge is a Delaware general partnership and a copy of the Amended Certificate of Assumed Name is on file with the Secretary of State of Commonwealth of Kentucky is included as part of Exhibit A.

3. Co-Applicants propose construction of an antenna tower for communications services, which is to be located in an area outside the jurisdiction of a planning commission, and Co-Applicants submit this application to the PSC for a certificate of public convenience and necessity pursuant to KRS §§ 278.020(1), 278.040, 278.650, 278.665, and other statutory authority.

4. The Co-Applicant, Cellco Partnership, d/b/a Verizon Wireless operates on frequencies licensed by the Federal Communications Commission ("FCC") pursuant to applicable FCC requirements. A copy of the Applicant's FCC licenses to provide wireless services are attached to this Application or described as part of **Exhibit B**, and the facility will be constructed and operated in accordance with applicable FCC regulations.

5. The public convenience and necessity require the construction of the proposed WCF. The construction of the WCF will bring or improve the Co-Applicants' services to an area currently not served or not adequately served by the Co-Applicants by increasing coverage or capacity and thereby enhancing the public's access to innovative and competitive wireless communications services. A statement from Co-Applicant, Cellco Partnership, d/b/a Verizon Wireless RF Design Engineer outlining said need is attached as **Exhibit Q** along with Propagation Maps attached as **Exhibit Qa**. The WCF is an integral link in the Co-Applicant's network design that must be in place to provide adequate coverage to the service area.

6. To address the above-described service needs, Co-Applicants propose to construct a WCF at 2244 Steve Denton Road, Barlow KY 42024 (37° 06' 42.15" North latitude, 89° 02' 44.58" West longitude), on a parcel of land located entirely within the county referenced in the caption of this application. The property on which the WCF will be located is owned by Myatt Family Trust pursuant to a Deed recorded at Deed Book 93, Page 150 in the office of the County Clerk. The proposed WCF will consist of a 280-foot tall tower, with an approximately 10-foot tall lightning arrestor attached at the top, for a total height of 290-feet. The WCF will also include concrete foundations and a shelter or cabinets to accommodate the placement of the Applicant's radio electronics equipment and appurtenant equipment. The Co-Applicant's equipment cabinet or shelter will be approved for use in the Commonwealth of Kentucky by the relevant building inspector. The WCF compound will be fenced and all access gate(s) will be secured. A description of the manner in which the proposed WCF will be constructed is attached as **Exhibit C** and **Exhibit D**.

7. A list of utilities, corporations, or persons with whom the proposed WCF is likely to compete along with a map showing the proposed location as well as the identified like facilities is attached as **Exhibit E**.

8. The site development plan and a vertical profile sketch of the WCF signed and sealed by a professional engineer registered in Kentucky depicting the tower height, as well as a proposed configuration for the antennas of the Applicant has also been included as part of **Exhibit C**.

9. Foundation design plans signed and sealed by a professional engineer registered in Kentucky and a description of the standards according to which the tower was designed are included as part of **Exhibit D**.

10. Co-Applicants have considered the likely effects of the installation of the proposed WCF on nearby land uses and values and has concluded that there is no more suitable location reasonably available from which adequate services can be provided, and that there are no reasonably available opportunities to co-locate Co-Applicant's antennas on an existing structure. When suitable towers or structures exist, Co-Applicants attempts to co-locate on existing structures such as communications towers or other structures capable of supporting Co-Applicants' facilities; however, no other suitable or available co-location site was found to be located in the vicinity of the site.

11. A copy of the Determination of No Hazard to Air Navigation issued by the Federal Aviation Administration ("FAA") is attached as **Exhibit F**.

12. A copy of the Kentucky Airport Zoning Commission ("KAZC") Application to construct the tower is attached as Exhibit G.

13. A geotechnical engineering report was performed at the WCF site by Alt & Witzig Engineering, Inc. Indianapolis, IN, dated August 30, 2018, and is attached as **Exhibit H**. The name and address of the geotechnical engineering firm and the professional engineer registered in Kentucky who prepared the report are included as part of **Exhibit H**.

14. Clear directions to the proposed WCF site from the County seat are attached as **Exhibit I**. The name and telephone number of the preparer of **Exhibit I** are included as part of this exhibit.

15. Co-Applicant, pursuant to a written agreement, has acquired the right to use the WCF site and associated property rights. A copy of the agreement or an abbreviated agreement recorded with the County Clerk is attached as **Exhibit J**.

16. Personnel directly responsible for the design and construction of the proposed WCF are well qualified and experienced. The tower and foundation drawings for the proposed tower submitted as part of **Exhibit D** bear the signature and stamp of a professional engineer registered in the Commonwealth of Kentucky. All tower designs meet or exceed the minimum requirements of applicable laws and regulations.

17. The Construction Manager for the proposed facility is Vince Caprino and the identity and qualifications of each person directly responsible for design and construction of the proposed tower are contained in **Exhibit R**.

18. As noted on the Survey attached as part of **Exhibit C**, the surveyor has determined that the tower site and access easement are not within any flood hazard area per Flood Hazard Boundary Map, Community Panel Number 21007C0085C, Dated July 7, 2014. Also find a letter from the surveyor regarding the Flood Data, attached as **Exhibit Ca**.

19. **Exhibit C** includes a map drawn to an appropriate scale that shows the location of the proposed tower and identifies every owner of real estate within 500 feet of the proposed tower (according to the records maintained by the County Property Valuation Administrator). Every structure and every easement within 500 feet of the proposed tower or within 200 feet of the access road including intersection with the public street system is illustrated in **Exhibit C**.

20. Co-Applicants has notified every person who, according to the records of the County Property Valuation Administrator, owns property which is within 500 feet of the proposed tower or contiguous to the site property, by certified mail, return receipt requested, of the proposed construction. Each notified property owner has been provided with a map of the location of the proposed construction, the PSC docket number for this application, the address of the PSC, and will be informed of his or her right to request intervention. A list of the notified property owners and a copy of the form of the notice to be sent by certified mail to each landowner are attached as **Exhibit K** and **Exhibit L**, respectively.

21. Co-Applicants have notified the applicable County Judge/Executive by certified mail, return receipt requested, of the proposed construction. This notice included the PSC docket number under which the application will be processed and informed the County Judge/Executive of his/her right to request intervention. A copy of this notice is attached as **Exhibit M**.

22. Notice signs meeting the requirements prescribed by 807 KAR 5:063, Section 1(2) that measure at least 2 feet in height and 4 feet in width and that contain all required language in letters of required height, have been posted, one in a visible location on the proposed site and one on the nearest public road. Such signs shall remain posted for at least two weeks after filing of the Application, and a copy of the posted text is attached as **Exhibit N**. A legal notice advertisement regarding the location of the proposed facility has been published in a newspaper of general

circulation in the county in which the WCF is proposed to be located. A copy of the newspaper legal notice advertisement is attached as **Exhibit O**.

23. The general area where the proposed facility is to be located is undeveloped and removed a significant distance from any residential structures. The nearest residential structure is 284.38 feet from the proposed tower site.

24. The process that was used by the Co-Applicant Cellco Partnership, d/b/a Verizon Wireless radio frequency engineers in selecting the site for the proposed WCF was consistent with the general process used for selecting all other existing and proposed WCF facilities within the proposed network design area. Co-Applicant's radio frequency engineers have conducted studies and tests in order to develop a highly efficient network that is designed to handle voice and data traffic in the service area. The engineers determined an optimum area for the placement of the proposed facility in terms of elevation and location to provide the best quality service to customers in the service area. A radio frequency design search area prepared in reference to these radio frequency studies was considered by the Co-Applicant when searching for sites for its antennas that would provide the coverage deemed necessary by the Co-Applicant. A map of the area in which the tower is proposed to be located which is drawn to scale and clearly depicts the necessary search area within which the site should be located pursuant to radio frequency requirements is attached as **Exhibit P**.

25. The tower must be located at the proposed location and proposed height to provide necessary service to wireless communications users in the subject area, as set out and documented in the RF Design Engineers' Statement of Need and Propagation Maps attached as **Exhibit Q**. The proposed tower will expand and improve voice and data service for Verizon Wireless customers.

26. All Exhibits to this Application are hereby incorporated by reference as if fully set out as part of the Application.

27. All responses and requests associated with this Application may be directed to:

Russell L. Brown

TO: PIKE LEGAL GROUP  
 AMERICAN TITLE COMPANY, INC FILE NO. CT-566  
 COMMITMENT DATE: NOVEMBER 27, 2017 @8:00 AM  
 SITE NAME: EV BARLOW "STEVE DENTON ROAD"  
 GRANTEE: THE MYATT FAMILY TRUST  
 DATE: NOVEMBER 16, 2016  
 GRANTOR: CHARLES MYATT AND DEENA MYATT, HUSBAND & WIFE, AND CHARLES MYATT AS EXECUTOR OF THE ESTATE OF JIMMY MYATT  
 BOOK/PAGE: 112, 227

**SCHEDULE B-SECTION II**

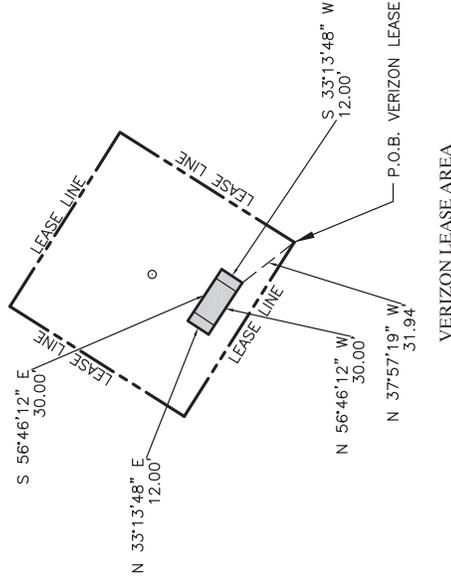

I CERTIFY THAT THIS PLAT AND SURVEY WERE MADE UNDER MY SUPERVISION, AND THAT THE ANGULAR AND LINEAR MEASUREMENTS, AS WHITNESSED BY MONUMENTS SHOWN HEREON, ARE TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE AND BELIEF.  
 THIS SURVEY AND PLAT MEETS OR EXCEEDS THE MINIMUM STANDARDS OF THE GOVERNING AUTHORITIES.

SURVEYOR STATEMENT-MY COMMENTS ARE BASED SOLELY ON THE TITLE DOCUMENT THAT HAVE BEEN SUPPLIED TO ME BY THE TITLE COMPANY. SINCE THE TITLE DOCUMENTS ARE FURNISHED FOR THE PARENT TRACT, OUR TOPOGRAPHIC SURVEY IS OF A PORTION OF THAT TRACT. MY COMMENTS ARE RESTRICTED TO EXCLUSIONS THAT I CAN DETERMINE AFFECT ONLY OUR PORTION OF THE PARENT TRACT. NO BOUNDARY SURVEY WAS PERFORMED ON THE PARENT TRACT, THUS IT IS NOT POSSIBLE TO DETERMINE WITH CERTAINTY EXCLUSIONS REFERRING TO THE PARENT TRACT.

SCHEDULE "B" SECTION II EXCEPTIONS  
 ITEM 1 -NOT A SURVEYOR RELATED ITEM  
 ITEM 2 -NOT A SURVEYOR RELATED ITEM  
 ITEM 3 -NOT A SURVEYOR RELATED ITEM

*Ralph M. Wallem*

END OF SCHEDULE B-II  
 RALPH M. WALLEM INDIANA LAND SURVEYOR  
 EFFECTIVE DATE: NOVEMBER 10, 2015

**EROSION & SEDIMENT CONTROL NOTES**

1. ALL WORK SPECIFIED AS AN NOT ITEM SHALL BE COVERED BY THE STATE OF INDIANA DEPARTMENT OF TRANSPORTATION CONSTRUCTION AND MATERIAL SPECIFICATION HANDBOOK. IF THIS HANDBOOK IS NOT AVAILABLE, THE SPECIFICATIONS FROM THE LATEST EDITION OF THE REQUEST FOR PROPOSALS SHALL BE MADE AVAILABLE ON SITE AT ALL TIMES AND PRESENTED UPON REQUEST TO THE SUPERVISOR.
2. ALL CONSTRUCTION SHALL BE COMPLETED BY THE SPECIFIED DATE AND TIME AND THE COUNTY ENGINEER, PROJECT ENGINEER OR SOIL CONSERVATION SERVICE REPRESENTATIVE AT ANYTIME. SUCH REQUESTS SHALL BE IMPLEMENTED IMMEDIATELY BY CONTRACTORS WORKING UNDER THE EROSION & SEDIMENT CONTROL PLAN. THIS SHALL BE INDICATED BY SHOWN ON THE PLAN.
3. PLANT TEMPORARY SEEDING AND MULCHING IN ALL AREAS THAT ARE INACTIVE FOR 7 DAYS OR MORE SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD. THE SEEDING SHALL BE PROVIDED AS DEFINED ABOVE AND AS SHOWN ON THE TABLE BELOW. TO ESTABLISH STABILITY AND PROVIDE SEDIMENT CONTROL, WHERE POSSIBLE, TEMPORARY SEEDING GROWTH SHALL NOT BE MOVED UNTIL IT HAS GONE TO SEED ONLY STAGE.

PERMANENT SEEDINGS	A	B	C	D	E	F
JAN.						
FEB.						
MAR.						
APR.						
MAY						
JUN.						
JUL.						
AUG.						
SEP.						
OCT.						
NOV.						
DEC.						

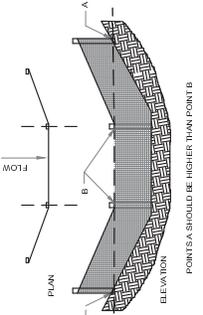

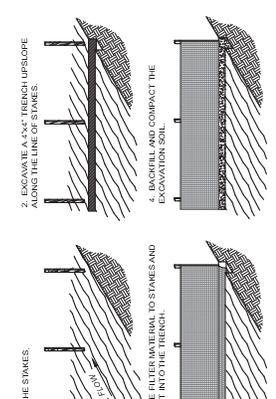

A. KENTUCKY BLUEGRASS 90 LBS./AC. PER ANNUAL PREPARATION RECOMMENDATIONS. B. KENTUCKY BLUEGRASS 135 LBS./AC. 2 TON STRAW MULCH PER ACRE.  
 C. SPRING OATS 180 LBS./ACRE. D. WHEAT OR CEREAL RYE 150 LBS./ACRE.  
 E. SOY (HUSKEY CROWN KENTUCKY BLUEGRASS) 150 LBS./ACRE.  
 F. STRAW MULCH 2 TONS PER ACRE.  
 - IRRIGATION NEEDED DURING JUNE, JULY & SEPTEMBER  
 - IRRIGATION NEEDED FOR 2-3 WEEKS AFTER SOODING

5. PERMANENT VEGETATION SHALL BE INSTALLED WITHIN 10 DAYS AT THE COMPLETION OF ANY GRADING OPERATIONS. PERMITTING ALL PERMANENT VEGETATION SHALL CONSIST OF STABLE, NITROGEN FIXING PLANTS. PLANTS SHALL BE AT LEAST 18" HIGH AT THE TIME OF PLANTING.
6. AT SUCH THE ROUGH GRADING OF THE SITE IS COMPLETE AND DRAINAGE DIVERSITY TO INLETS, SILENT DRAINAGE SYSTEMS SHALL BE INSTALLED AT ALL INLET STRUCTURES TO KEEP PIPES AND STORM DRAINAGE SYSTEMS OPEN.
7. SILT BARRIERS SHALL BE INSTALLED AROUND ALL EXISTING OR NEW STORM INLETS, CATCH BASINS, POLLUTION PREVENTION. ALL CHECK DAMS FOR REMOVAL OF SILT FROM STORM WATER.
8. STORM WATER POLLUTION PREVENTION MEASURES SHALL BE INSTALLED OR TOPSOIL STOCKPILES SHALL BE PROTECTED FROM DISTURBANCE AND SHOWN ON THESE PLANS AND AS DIRECTED BY THE ENGINEER.
9. CONTRACTOR SHALL INSPECT ALL SWP MEASURES DAILY AND REPAIR AS NECESSARY TO MAINTAIN AVERAGE SEEDING DENSITY OF 250 PLANTS PER SQUARE FOOT. ANY DEFICIENCIES OCCURRED AND CORRECTIVE ACTION TAKEN WITHIN 24 HOURS TO MAINTAIN AVERAGE SEEDING DENSITY OF 250 PLANTS PER SQUARE FOOT.
10. SILT BARRIERS, CONSTRUCTION ENTRANCES, AND SILT FENCES SHALL REMAIN IN PLACE UNTIL A SUFFICIENT PERCENTAGE OF PERMANENT VEGETATION IS ESTABLISHED. THE CONTRACTOR SHALL KEEP SILT FROM ENTERING ANY STORM DRAINAGE SYSTEM OR DRAINAGE SYSTEM COMPLETELY STABILIZED. ANY SILT IN PIPES AND DRAINAGE SWALES SHALL BE REMOVED DURING CONSTRUCTION.
11. TEMPORARY SEDIMENTATION AND STORM WATER POLLUTION PREVENTION MEASURES MUST BE INSPECTED AND LOGGED BY THE CONTRACTOR FOR INSPECTION. LOGGING SHALL BE WEEKLY AND ALL DEFECTED AREAS SHALL BE STABILIZED WITHIN 7 DAYS OF FINAL GRADING.
12. UTILITY COMPANIES MUST COMPLY WITH ALL STORM WATER POLLUTION PREVENTION MEASURES AS DEFINED ON THE STORM WATER PREVENTION PLANS, DETAILS AND NOTES.
13. ALL EXISTING ROADWAYS WITHIN THE PROJECT LIMITS SHALL BE TEMPORARILY PROTECTED DURING LAND CLEARING AND GRADING OPERATIONS. SOILS WITHIN 50 FEET OF SAID WATER POLLUTION PREVENTION MEASURES SHALL BE STABILIZED WITHIN 2 DAYS OF THE FINAL CLEARING. GRADING OPERATIONS AS SHOWN ON PLANS.
14. ALL EXISTING WATER POLLUTION PREVENTION PRACTICES WILL BE INSTALLED BEFORE ANY OTHER POLLUTION PREVENTION ITEMS AT ALL TIMES.
15. ALL EXISTING TEMPORARY POLLUTION PREVENTION PRACTICES SHALL BE MAINTAINED THROUGHOUT THE FOLLOWING STORM WATER POLLUTION PREVENTION AND SEDIMENT CONTROL MEASURES WILL BE TAKEN:

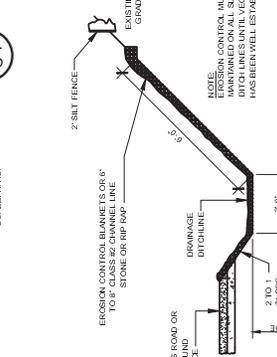

1. SILT BARRIERS.
2. SILT FENCE.
3. CONSTRUCTION ENTRANCES.
4. EROSION CONTROL SEED BLANKETS - SPECIFIC FOR TEMPORARY EROSION CONTROL.

**CONSTRUCTION SEQUENCE**

1. STAKE AND MAINTAIN ALL EXISTING EROSION & SEDIMENT CONTROL FACILITIES & PROCEDURES SHALL BE DISCUSSED.
2. DURING PRECONSTRUCTION MEETING ALL EROSION & SEDIMENT CONTROL FACILITIES & PROCEDURES SHALL BE DISCUSSED.
3. INSTALL SILT FENCE, SEDIMENT CONTROL, AS SHOWN ON PLANS.
4. INSTALL CONSTRUCTION ENTRANCE. IF CONDITIONS ARE SUCH THAT MUD IS COLLECTION ON ROADWAY, THE SITE ENTRANCE SHALL BE MAINTAINED IN A CONDITION THAT WILL PREVENT THE TRACKING OF MUD INTO THE PUBLIC RIGHT-OF-WAY. ALL MATERIALS SPILLED, WASHED OR TRACKED FROM VEHICLES ONTO THE ROADWAY MUST BE REMOVED PROMPTLY.
5. CLEANING & GRUBBING THE REMAINING SITE AS NECESSARY.
6. STABILIZE ALL EXISTING EROSION & SEDIMENT CONTROL FACILITIES.
7. CONSTRUCT AND MAINTAIN TEMPORARY EROSION & SEDIMENT CONTROL FACILITIES.
8. MAINTAIN EROSION & SEDIMENTATION CONTROL MEASURES UNTIL THE SITE HAS BEEN COMPLETELY STABILIZED.
9. MAINTAIN EROSION & SEDIMENTATION CONTROL MEASURES UNTIL THE SITE HAS BEEN COMPLETELY STABILIZED.
10. MAINTAIN EROSION & SEDIMENTATION CONTROL MEASURES UNTIL THE SITE HAS BEEN COMPLETELY STABILIZED.
11. MAINTAIN EROSION & SEDIMENTATION CONTROL MEASURES UNTIL THE SITE HAS BEEN COMPLETELY STABILIZED.

**SILT FENCE DETAIL**

**TEMPORARY STABILIZED CONSTRUCTION ENTRANCE**

1. CONCRETE EQUIVALENT SHALL BE USED, OR RECYCLED.
2. THE CONSTRUCTION ENTRANCE SHALL CONCLUDE WITH THE PROPOSED PAVEMENT THICKNESS. STONE LAYER SHALL BE AT LEAST 6" THICK.
3. DRIVEWAY WIDTH - THE ENTRANCE SHALL BE AT LEAST 10' WIDE, BUT NOT LESS THAN FULL WIDTH AT POINTS WHERE INGRESS/EGRESS OCCURS.
4. BEDDING - A GEOTEXTILE SHALL BE PLACED OVER THE ENTIRE AREA OF THE ENTRANCE AND UNDER THE DRIVEWAY. THE GEOTEXTILE SHALL BE AT LEAST 200 LBS. AND A MINIMUM BURST STRENGTH OF AT LEAST 18 LBS.
5. A TYPE ONE OR BETTER SHALL BE CONSTRUCTED UNDER THE ENTRANCE IF NEEDED TO PREVENT SURFACE WATER FLOWING ACROSS THE ENTRANCE FROM BEING DIRECTED OUT ONTO PAVED SURFACE.
6. WATER BAR - A WATER BAR SHALL BE CONSTRUCTED AS PART OF THE CONSTRUCTION ENTRANCE AND SHALL BE 2" HIGH AND 12" WIDE AND EXTEND OUT ONTO PAVED SURFACES.
7. MAINTENANCE - TOP DRESSING OF ADDITIONAL STONE SHALL BE MAINTAINED THROUGHOUT CONSTRUCTION. THE ENTRANCE SHALL BE IMMEDIATELY RECONSTRUCTED AS NECESSARY BY SCOWING OR SWEEPING.
8. TRACKING PREVENTION MEASURES SHALL NOT BE RELIED UPON TO REMOVE MUD FROM VEHICLES AND PREVENT OFF SITE TRACKING OF VEHICLES FROM MUDY AREAS.
9. THAT ENTER AND LEAVE THE CONSTRUCTION SHALL BE RESTRICTED FROM MUDY AREAS.

### CHAIN LINK FENCING NOTES

1. ALL FENCE AND FABRIC SHALL BE HOT DIPPER GALVANIZED WITH A MINIMUM OF 2.0Z PER SQUARE FOOT. 30 GAUGE WIRE (MIN. BREAKING STRENGTH OF 1,200 LBS) WITH 2" MESH. ALL BARBED WIRE SHALL BE ALUMINUM OR COATED PER NOTE #4.
2. BOTTOM EDGE OF FENCE FABRIC SHALL EXTEND TO UNFINISHED GRADE.
3. 3.12" O.D. SCH. 40 CORNER POSTS (TYP.) SHALL BE INSTALLED AT ALL CORNERS AND ENDS.
4. 3.12" O.D. SCH. 40 GATE POSTS (TYP.) SHALL BE INSTALLED AT ALL GATE LOCATIONS.
5. COATING SHALL BE THICKER THAN 0.8 OZ. PER SQ. FT. AND SHALL BE THREE STRAND 12.5 GAUGE W4 POINT BARB SAT 2 O.C.
6. BOTTOM EDGE OF CONCRETE FENCE SHALL BE SET BELOW FINISH GRADE (SEE LOCAL CODE). WHERE POST FOUNDATION DIAMETERS BY 4". PROVIDE CONCRETE WITH A 3500 PSI STRENGTH OF 2000 PSI (MIN.).
7. PROVIDE ALONGSIDE BRACE ROD AND TURN BRICKLE ON BOTH GATE LEAFS.
8. ALL RAILS AND BRACES SHALL BE SCHEDULE 40 STEEL PIPE, AND ALL FENCE POSTS SHALL BE 2" DIA. GALV. TUBES (TYP.) WITH 1/2" DIA. TUBES (TYP.) FOR BRACES.
9. CONTRACTOR SHALL ENSURE ALL POSTS ARE PLUMB.
10. ALL FENCE SHALL BE FABRICATED AND INSTALLED PER ASTM F2871-15, ASTM F907-14 AND CHAIN LINK FENCE MANUFACTURER'S INSTITUTE, CLAIM #M2445.
11. CONTRACTOR SHALL FURNISH AND INSTALL ONE (1) MASTER LOCK LONG SHANK #175H COMBINATION PADLOCK. COMBINATION TO BE SET AT 7011.

**STRUCTURAL NOTES**

**1. PLATFORM SYSTEM DESIGN LOADINGS:**  
ROOF SNOW LOAD 70 PSF  
ACTUAL MATERIAL WEIGHTS 120 MPH  
DEAD LOADS  
BASIC WIND SPEED  
DESIGN CORNER INTERNATIONAL BUILDING CODE (IBC) 2012  
MINIMUM DESIGN LOADS FOR BUILDINGS AND OTHER STRUCTURES AS PER ASCE 7-10  
OSHA REGULATIONS

**2. STRUCTURAL STEEL:**  
PIPE ASTM A53 TYPE E OR S GRADE B, OR ASTM A501.  
STRUCTURE FINISH - AFTER FABRICATION ACCORDING TO ASTM A123.

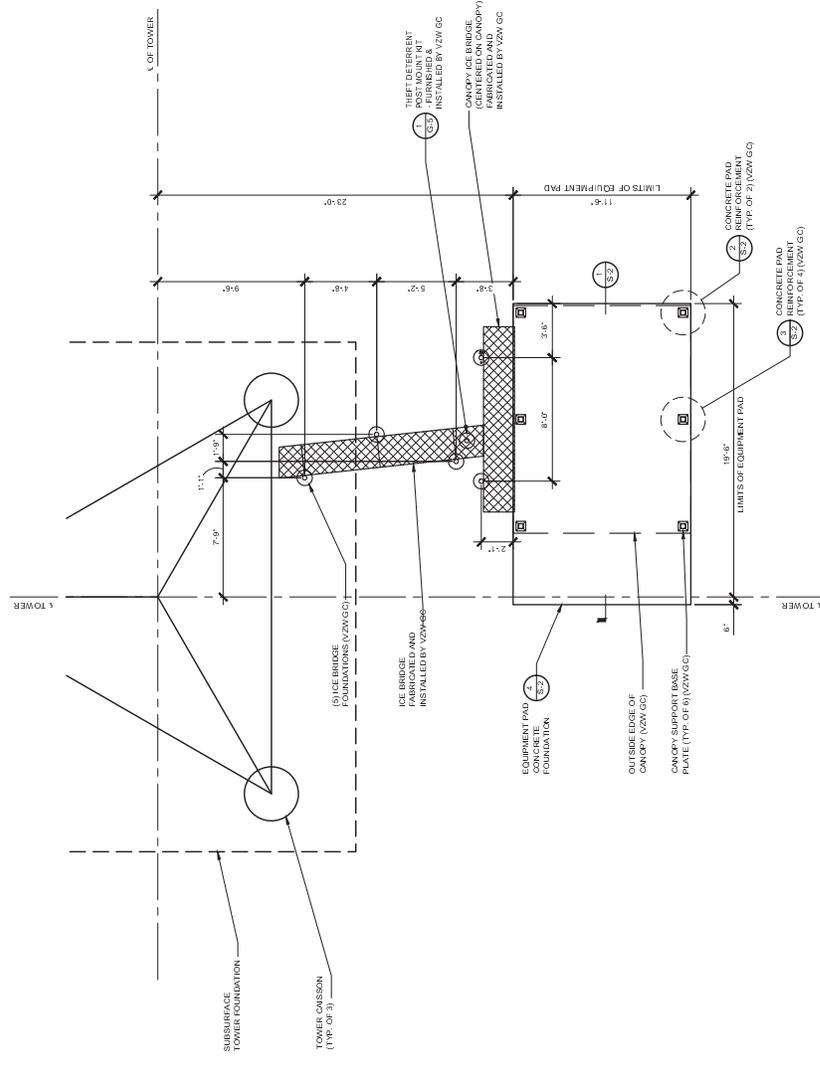

**3. BUILDING FOUNDATION SYSTEM:**  
THE SUBSURFACE REPORT WAS PROVIDED BY ALT & WITZ ENGINEERING INC. (ALT&W) REPORT # 19-018-016  
ALLOWABLE BEARING CAPACITY - BULG FOOTINGS 2,000 PSF  
ALL CONTRACTORS SHALL EXERCISE GREAT CARE DURING EXCAVATION. ALL CONTRACTORS SHALL NOTIFY ALL UTILITIES IN WRITING BEFORE ANY EXCAVATION. THE SUBSURFACE REPORT IS NOT TO BE CONSIDERED AS A COMPLETE RECORD OF THE EXISTING CONDITIONS AT THE SITE. THE CONTRACTOR SHALL VERIFY ALL EXISTING SITE CONDITIONS INCLUDING SUBSURFACE CONDITIONS. THE CONTRACTOR SHALL OBTAIN TESTING AND VERIFICATION OF EXISTING CONDITIONS FOR THE PURPOSE OF CONDUCTING SOIL FOUNDATION SUBBASES SHALL BE HAND TRIMMED AND COMPACTED. ALL BACKFILL TO BE COMPACTED TO 95% MAXIMUM DRY DENSITY IN ACCORDANCE WITH ASTM D-1587.

**4. CONCRETE WORK:**  
CONCRETE CHANGE IS TO BE TAKEN AND TESTED BY A QUALIFIED CONCRETE TESTING COMPANY FOR THE GENERAL CONTRACTOR. PROVIDE ONE (1) CHANGE ORDER NUMBER AFTER SUBMITTAL. THE GENERAL CONTRACTOR SHALL PROVIDE THREE (3) COPIES OF TESTING RESULTS TO SLUMP. THE GENERAL CONTRACTOR SHALL PROVIDE THIRTY (30) DAYS WRITING NOTICE FOR ANY TESTING. THE GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR ANY ADDITIONAL COSTS IN TESTING DUE TO THE GENERAL CONTRACTOR OR HIS SUBCONTRACTORS. USE AIR ENTRAINMENT IN EXTERIOR SLABS.

**SPECIFICATIONS**  
- LATEST EDITION OF ACI 318  
- PC - 4000 PSI @ 28 DAYS  
- CONCRETE FOR THE STATE OF KENTUCKY  
- 2" x 4" SLUMP

**ELECTRICAL NOTES**

1. EMERGENCY GENERATOR SHALL BE AS APPROVED BY THE (FPA) ASSIST CONTRACTOR OR APPROVED EQUAL.
2. GENERATOR EMERGENCY STOP SWITCH SHALL BE OF A SINGLE PUSH BUTTON OPERATING MODE USING A REPUTABLE MANUFACTURER'S PRODUCT OR MANUFACTURED APPROVED EQUAL.
3. CONTACT BLOCKS SHALL BE RATED AT CONTINUOUS CURRENT OF 10A @ 120VAC.
4. PROVIDE 6" MIN. LIQUIDTIGHT FLEXIBLE METAL CONDUIT AT ALL EQUIPMENT AND GENERATOR CONNECTIONS.
5. ALL CONDUIT SHALL BE ROUTED WITHIN 2'-0" OF PERMETER COMPOUND FENCE WHERE APPLICABLE.
6. CONDUIT TRENCH WIDTH SHALL NOT EXCEED 18" AT ANY POINTS WHERE CONDITIONS ARE SUCH THAT IT COULD CROSS THE COMPOUND GATE OPENING.
7. ALL CONDUIT RACKWAYS BETWEEN CABINETS SHALL BE WEATHERPROOF FITTINGS.
8. NO JOINT SERVICE TRENCHES ALLOWED ON VERIZON WIRELESS INSTALLATIONS. A MINIMUM 12" OF CLEAR SOIL MUST BE MAINTAINED BETWEEN SERVICES.

SEE PAD UTILITY PLAN ON SHEET E-3 FOR EQUIPMENT AND GENERATOR CONDUIT DESCRIPTIONS

- ELECTRICAL NOTES:**
- EMERGENCY GENERATOR SHALL BE AS MANUFACTURED BY HOFFMAN ENCLOSURE (PN AB85FG08PW) OR APPROVED EQUAL.
  - GENERATOR EMERGENCY STOP SWITCH SHALL BE OF A SINGLE PUSH BUTTON OPERATING MODE USING A MAINTAINED PUSH/PULL ACTUATOR AS MANUFACTURED BY PHLA ELECTRICAL PRODUCTS (PN GS 29) OR APPROVED EQUAL.
  - CONTACT BLOCKS SHALL BE RATED AT CONTINUOUS CURRENT OF 10A @ 120 VAC CONNECTIONS.
  - PROVIDE 6'-0" MAX. LIQUIDTIGHT FLEXIBLE METAL CONDUIT AT ALL EQUIPMENT AND GENERATOR CONNECTIONS.
  - ALL CONDUIT SHALL BE ROUTED WITHIN 2'-0" OF PERIMETER COMPOUND FENCE WHERE APPLICABLE.
  - CONDUIT TRENCH WIDTH SHALL NOT EXCEED 18" AT ALL ACCESS DRIVE LOCATIONS AND WHEN CROSSING THE COMPOUND GATE OPENING.
  - ALL CONDUIT BACKSTAYS BETWEEN CABINETS ABOVE PAD SHALL BE 2" DIAMETER IMC WITH WEATHERPROOF FITTINGS.
  - USE LIGHT BROWN WIRE MARKS ALL OWNERS ON OVERHEAD WIRELESS INSTALLATIONS. A MINIMUM 12" OF CLEAR SOIL MUST BE MAINTAINED BETWEEN SERVICES.

**TOWER DESIGN NOTES**

1. Tower is located in Ballard County, Kentucky.
2. Tower designed for Exposure C to the TIA-Z22-H Standard.
3. Tower is also designed for a 30 mph basic wind with 1.50 in ice, ice is considered to increase in thickness with height.
4. Deflections are based upon a 60 mph wind.
5. Topographic Category 1 with Crest Height of 0.000 ft.
6. Please see loading plan for proper feedline placement. Deviation from plan may reduce tower capacity.

SHEET TITLE: UNIT BASE FOUNDATION

SHEET NUMBER: SST-UBF 0

REVISION: 0

- NOTES:**
- THE REINFORCING STEEL SHALL CONFORM TO THE REQUIREMENT OF ASTM A-615 (GRADE 60) EXCEPT THAT TIES MAY BE ASTM-A15 (GRADE 40) WITH 3" MINIMUM CLEAR COVER.
  - REINFORCING STEEL SHALL BE DETAIL, FABRICATED, BENT, AND PLACED IN ACCORDANCE WITH THE CSI MANUAL OF STANDARD PRACTICE AND THE ACI 315 (LATEST EDITION).
  - REFER TO THE GEOTECH REPORT FOR THIS PROJECT AND FOLLOW THE RECOMMENDATIONS IN THAT REPORT WHEN CONSTRUCTING THE FOUNDATION.
  - GEOTECHNICAL PROPERTIES BY: ALT & WITZIG ENGINEERING INC. PROJECT NUMBER: 1808150, 2018
  - THIS FOUNDATION HAS BEEN DESIGNED IN ACCORDANCE WITH THE TA 222-H STANDARD. SPECIFICALLY FOR THE TOWER AND SOIL CONDITION REFERENCED ABOVE. IF ANYTHING DIFFERS THIS DESIGN SHALL BE CONSIDERED INVALID AND MUST BE REDESIGNED PRIOR TO CONSTRUCTION.
  - ALL CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 4000 PSI AT 28 DAYS.
  - ALL CONCRETE MIXTURES SHALL MEET DURABILITY REQUIREMENTS OF CHAPTER 19 OF THE ACI 318-14.
  - ALL CONCRETE TESTING SHALL BE IN ACCORDANCE WITH ACI 318-14, A MINIMUM OF 12 (6"/12" OR 3"-1/4") CONCRETE CYLINDERS PER SLUMP TEST SHALL BE MADE IN ACCORDANCE WITH ASTM C143. THE ALLOWABLE CONCRETE SLUMP SHALL BE 4 INCHES (±1) UNLESS OTHERWISE SPECIFIED.
  - ADDMIXTURES USED: ADMIXTURE SHALL BE IN ACCORDANCE WITH ASTM C494 STANDARD TYPES A, B, C, OR E. THE ENGINEER SHALL PRE-APPROVE SUPER PLASTICIZER USE. DO NOT USE CHLORIDE-CONTAINING ADMIXTURES. AIR ENTRAINING ADMIXTURES SHALL CONFORM TO ASTM C760 AND BE COMPACTED TO A MINIMUM UNIT WEIGHT SPECIFIED IN GEOTECH REPORT. THE SOIL SHALL BE INSTALLED IN 6" TO 8" LIFTS AND COMPACTED THOROUGHLY TO ACHIEVE APPROPRIATE UNIT WEIGHT UNLESS GEOTECH SPECIFIES OTHER COMPACTING REQUIREMENTS.
  - VERIFY ALL DIMENSIONS AGAINST MANUFACTURER'S DRAWINGS.
  - STIPULATION FOR REBAR: REBAR SPECIFICALLY DESIGNED FOR USE BY THE CUSTOMER ON THE DRAWINGS AT THE SPECIFIED LOCATION. USE OF THIS DRAWING FOR REFERENCE OR EXAMPLE ON ANOTHER PROJECT REQUIRES THE SERVICES OF A PROPERLY LICENSED ENGINEER.

MAP PANELS		Digital Data Available
		No Digital Data Available
		Unmapped

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

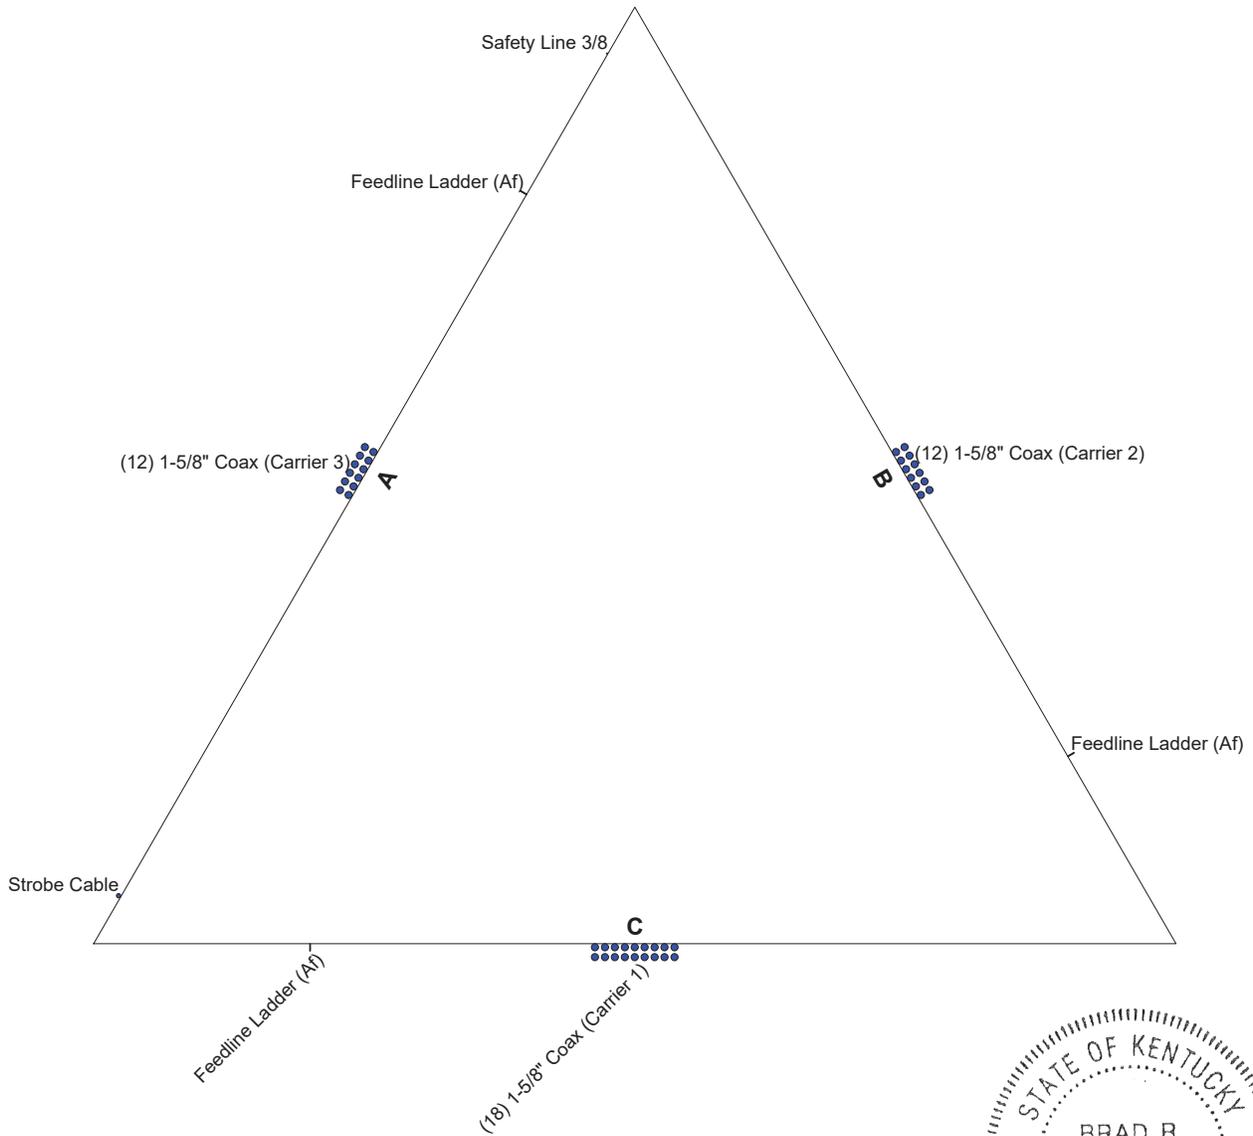

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 1/15/2019 at 12:38:07 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

## Tower Input Data

The main tower is a 3x free standing tower with an overall height of 280.000 ft above the ground line.

The base of the tower is set at an elevation of 0.000 ft above the ground line.

The face width of the tower is 4.500 ft at the top and 25.500 ft at the base.

This tower is designed using the TIA-222-H standard.

The following design criteria apply:

Tower is located in Ballard County, Kentucky.

Tower base elevation above sea level: 361.000 ft.

Basic wind speed of 107 mph.

Risk Category II.

Exposure Category C.

Simplified Topographic Factor Procedure for wind speed-up calculations is used.

Topographic Category: 1.

Crest Height: 0.000 ft.

Nominal ice thickness of 1.500 in.

Ice thickness is considered to increase with height.

Ice density of 56.000 pcf.

A wind speed of 30 mph is used in combination with ice.

Temperature drop of 50.000 °F.

Deflections calculated using a wind speed of 60 mph.

Please see feedline plan for proper feedline placement. Deviation from plan may reduce tower capacity..

A non-linear (P-delta) analysis was used.

Pressures are calculated at each section.

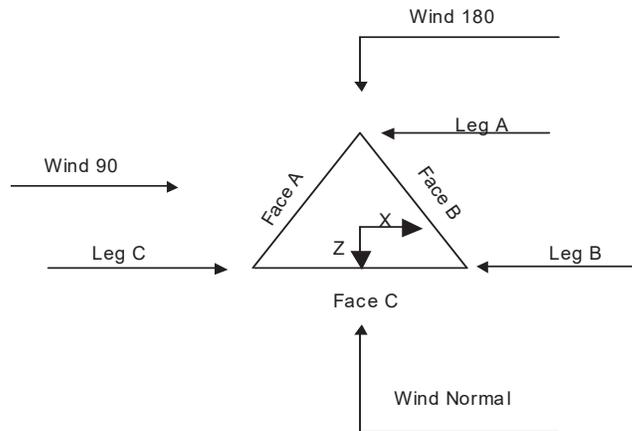

Stress ratio used in tower member design is 1.

Local bending stresses due to climbing loads, feed line supports, and appurtenance mounts are not considered.

**\*\* DETERMINATION OF NO HAZARD TO AIR NAVIGATION \*\***

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure:               Antenna Tower EV Barlow - B (2580839)  
 Location:               Barlow, KY  
 Latitude:                37-06-42.14N NAD 83  
 Longitude:              89-02-44.58W  
 Heights:                364 feet site elevation (SE)  
                               285 feet above ground level (AGL)  
                               649 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure does not exceed obstruction standards and would not be a hazard to air navigation provided the following condition(s), if any, is(are) met:

As a condition to this Determination, the structure is to be marked/lighted in accordance with FAA Advisory circular 70/7460-1 M, Obstruction Marking and Lighting, a med-dual system-Chapters 4,8(M-Dual),&15.

Any failure or malfunction that lasts more than thirty (30) minutes and affects a top light or flashing obstruction light, regardless of its position, should be reported immediately to (877) 487-6867 so a Notice to Airmen (NOTAM) can be issued. As soon as the normal operation is restored, notify the same number.

It is required that FAA Form 7460-2, Notice of Actual Construction or Alteration, be e-filed any time the project is abandoned or:

- At least 10 days prior to start of construction (7460-2, Part 1)
- Within 5 days after the construction reaches its greatest height (7460-2, Part 2)

This determination expires on 04/15/2023 unless:

- (a) the construction is started (not necessarily completed) and FAA Form 7460-2, Notice of Actual Construction or Alteration, is received by this office.
- (b) extended, revised, or terminated by the issuing office.
- (c) the construction is subject to the licensing authority of the Federal Communications Commission (FCC) and an application for a construction permit has been filed, as required by the FCC, within

6 months of the date of this determination. In such case, the determination expires on the date prescribed by the FCC for completion of construction, or the date the FCC denies the application.

**NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.**

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

A copy of this determination will be forwarded to the Federal Communications Commission (FCC) because the structure is subject to their licensing authority.

If we can be of further assistance, please contact our office at (718) 553-2611, or [angelique.eersteling@faa.gov](mailto:angelique.eersteling@faa.gov). On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2021-ASO-32010-OE.

**Report of Subsurface Investigation & Geotechnical Recommendations**

RE: EV Barlow – Cell Tower  
2244 Steve Denton Road  
Barlow, Kentucky  
Alt & Witzig File: **18IN0510**

Dear Ms. Preble:

In compliance with your request, we have completed a subsurface investigation and geotechnical evaluation for the above referenced project. It is our pleasure to transmit herewith one (1) electronic copy of our report.

The purpose of this subsurface investigation was to determine the various soils profile components and the engineering characteristics of the materials encountered in order to provide information to be used for preparing a foundation for the proposed cellular tower and equipment building.

**Project Description**

It is anticipated that a new 285-foot tall self-support cell tower will be constructed at this site. A prefabricated equipment building will also be constructed at this site

The site is located west of State Road 1105 and approximately one-hundred (100) feet south of Sallie Crice Road near Barlow, Kentucky (Exhibit 1). The site may be located using the Barlow Quadrangle, Kentucky-Illinois 7½ minute topographic map.

Based upon the project plans provided by GPD to Alt & Witzig Engineering, the ground surface elevation at the tower center is taken to be 348.0' AMSL. All depths referred to in this report and on the Boring Logs are referenced from the existing ground surface.

***Offices:***

Cincinnati • Columbus • Dayton, Ohio  
Evansville • Ft. Wayne • Indianapolis • Lafayette • Merrillville/South Bend, Indiana

***Subsurface Investigation and Foundation Engineering  
Construction Materials Testing and Inspection  
Environmental Services***

**Exhibit 1: 2017 Aerial Photograph with Overlay**

**Field Methods**

The field investigation included a reconnaissance of the project site, performing one (1) soil boring (B-1) for the proposed tower and one (1) soil boring for the equipment building (B-2), performing standard penetration tests, and obtaining soil samples retained in the standard split-spoon sampler. The apparent groundwater level at the boring location was also determined.

The soil boring was performed with an all terrain vehicle-mounted drilling rig equipped with a rotary head. Conventional hollow-stem augers were used to advance the holes. The advancement of the borings was temporarily stopped at regular intervals in order to perform standard penetration tests in accordance with ASTM Procedure D-1586. The standard penetration test involves driving a split spoon soil sampler into the ground by dropping a 140-pound hammer, thirty (30) inches. The number of hammer drops required to advance the split-spoon sampler one (1) foot into the soil is defined as the standard penetration value. The soil samples retained in the split-spoon sampling device as a result of the penetration tests were obtained, classified, and labeled for further laboratory investigation.

---

### **Laboratory Investigation**

A laboratory investigation was conducted to ascertain additional pertinent engineering characteristics of the subsurface materials at the site of the proposed tower. The laboratory testing program included:

- Visual classification of soils.
- Moisture content determination in accordance with ASTM D-2216.
- Samples of the cohesive soil were frequently tested in unconfined compression by use of a calibrated spring testing machine.
- A pocket penetrometer was used as an aid in determining the strength of the soil.

The values of the unconfined compressive strength as determined on soil samples from the split-spoon sampling must be considered approximate recognizing the manner in which they were obtained since the split-spoon sampling techniques provide a representative but somewhat disturbed soil sample.

### **Site Specific Subsurface Conditions**

At the ground surface, the borings encountered approximately six (6) inches of topsoil. Beneath the topsoil, the borings encountered very soft to stiff silty clays with varying amounts of sand and gravel extending to depths of twenty-three and one-half (23½) feet (Elev. 319.5 feet) in boring B-1 and ten (10) feet (Elev. 338.0 feet) in boring B-2. In boring B-1, these soils transitioned into a hard consistency that extended to a depth of twenty-eight and one-half (28½) feet. At this depth, dry, very dense, clayey sand was encountered to the termination depth of the boring at thirty-seven (37) feet, where auger refusal was encountered. Detailed soil descriptions at the boring location have been included on the *Boring Logs* in the Appendix of this report.

### **Bedrock**

The site is located along the Mississippi Embayment of the Mississippi Alluvial Plain within the Jackson Purchase Region of Kentucky. This part of Kentucky is relatively flat-lying, with numerous lakes, ponds, sloughs, and swamps. Geologic maps published by the US Geological Service indicate the Mississippi Embayment is the northward continuation of the fluvial sediments of the Mississippi River Delta. The current sedimentary area was formed in the Cretaceous and early Cenozoic periods by the filling with sediment of an existing basin. The soils in this region consists primarily of loess. The underlying bedrock in this region consists primarily of limestone formed in the Ordovician period.

## ***Groundwater***

Water level observations made during and upon completion of drilling operations yielded dry boreholes. These measurements are noted on the *Boring Logs* presented herewith. The exact location at which water is encountered should be anticipated to fluctuate somewhat depending upon normal seasonal variations in precipitation and surface runoff.

It should be noted that the groundwater level measurement recorded on the individual *Boring Logs* in the Appendix of this report is accurate for the specific date on which the measurements was performed. It must be understood that the groundwater level will fluctuate throughout the year. The *Boring Logs* do not indicate these fluctuations.

## **Seismic Parameters**

An evaluation of the seismic site class has been performed for this site. The State of Kentucky has integrated the 2015 International Building Code into the Indiana Building Code (IBC). The seismic site class is determined by averaging soil conditions within the top 100 feet with respect to the shear wave velocity in accordance with ASCE 7. Our evaluation is based on data obtained for borings performed to depths of 33 feet at this site and information provided by the Indiana Geological Survey for a depth of 100 feet. A detailed report generated by the USGS Earthquake Hazard program (<http://earthquake.usgs.gov/designmaps/us/application.php>) has been attached to this letter. Following are the summarized requested seismic parameters.

### ***Seismic Parameters***

<b>Site Soil Classification</b>	Site Class D
<b>MCE Spectral Response Accelerations</b>	$S_s = 2.506$ $S_1 = 0.951$
<b>Site Coefficients</b>	$F_a = 1.0$ $F_v = 1.5$

## **Geotechnical Recommendations**

Information provided by GPD Group indicates that the proposed 285-foot self-support cell tower will be constructed in the general vicinity of soil boring B-1; and an equipment building will be constructed in the general vicinity of boring B-2. Our experience with this type of structure indicates that the structural loads of the tower will be supported by an extended mat foundation or a caisson system and the buildings will be supported by conventional spread footings and continuous wall footings. It is recommended that a representative of Alt & Witzig Engineering, Inc. be on-site to monitor the excavation and inspect the base of the foundations.

**Tower Foundation Recommendations**

*Extended Footing or Extended Mat Foundation*

If spread footings are desired, they should be founded at a minimum depth of four (4) feet below existing grade. The soil parameters presented in *Table 1* may be utilized for the design of a shallow foundation.

**Table 1: Shallow Foundation Soil Parameters**

Soil Description	Depth Below Existing Grade (feet)	Allowable Bearing Pressure (psf) FS=3	Unit Weight (pcf)	C (psf)/ Φ (°)	Adhesion (psf)
Silty Clay	4-9	3,000	120	2,000	1250

It is anticipated that lateral wind loads and overturning moments will act on the spread footing. To help resist the overturning moment, it may be necessary to place a larger footing than necessary for bearing capacity. Also, any soil placed above the footing may be considered to help resist overturning moments if compacted to a minimum of 98 percent of the maximum dry density as determined from ASTM D-698 (Standard Proctor).

Depending upon the time of the year that the excavations are made, seepage from surface runoff may occur. Since these foundation materials tend to soften/loosen when exposed to free water, every effort should be made to keep the excavations dry should water be encountered. It is also recommended that concrete for footings be poured as soon as possible after the excavations are complete. A mud mat may be placed to provide the contractors a firm working surface and protect the exposed subgrade soils from softening.

*Caissons/Drilled Piers*

A caisson type foundation is advantageous to use when it is necessary to resist large overturning moments such as those caused by wind loads against the proposed structure. As an alternative to a shallow foundation system, a caisson type foundation system may be considered to support this tower structure. A straight shaft caisson/drilled pier may be considered. If a caisson or drilled shaft is used to support the structure, it should be designed using the soil parameters provided in *Table 2*.

**Table 2: Deep Foundation Soil Parameters**

Soil Type	Depth Below Grade (Feet)	Allowable Skin Friction for Gravity Loads SF=2	Design End Bearing Pressure SF=3	Effective Unit Weight (pcf)	C (psf) / $\Phi$ (°)
Silty Clay	6 – 23.5	600 psf	NA	120 pcf	2000 psf
Hard Silty Clay	23.5 – 28.5	600 psf	4,000 psf	130 pcf	2000 psf
Clayey Sand	28.5+	1000 psf	4,000 psf	130 pcf	28°

\*Skin friction may be utilized in shaft compression and tension. The top one-shaft diameter should be neglected.

***Equipment Building Foundation Recommendations***

A net allowable bearing pressure of **2,000 psf** is recommended for dimensioning continuous wall footings at this site. The above-suggested bearing pressure is provided assuming the footings will be founded on medium stiff natural soils or properly compacted fill materials at a minimum depth of three (3) feet below grade.

***Equipment Building Slab Recommendations***

This structure will be a slab-on-grade supported by natural soils and/or compacted fill materials. In those areas where the existing grade is lower than the design floor elevation, a well-compacted structural fill will be necessary to raise the site to the desired grade. The fill material shall consist of INDOT No. 53 Stone.

After the building areas have been raised to the proper elevation, a granular fill should be placed immediately beneath the floor slab. It is recommended that all material placed in the floor slab areas be compacted to a density of 100 percent of maximum dry density in accordance with ASTM D-698. Recommendations for proper filling procedures are presented later in the Appendix of this report.

**Statement of Limitations**

Our subsurface investigation was conducted in accordance with guidelines set forth in the scope of services and applicable industry standards.

An inherent limitation of any geotechnical engineering study is that conclusions must be drawn on the basis of data collected at a limited number of discrete locations. The geotechnical parameters provided in this report were developed from the information obtained from the test borings that depict subsurface conditions only at these specific locations and on the particular date indicated on the boring logs. Soil conditions at other locations may differ from conditions encountered at these

boring locations and groundwater levels shall be expected to vary with time. The nature and extent of variations between the borings may not become evident until the course of construction.

Often, because of design and construction details that occur on a project, questions rise concerning the soil conditions. If we can give further service in these matters, please contact us at your convenience.

Very truly yours,

**Alt & Witzig Engineering, Inc.**

## APPENDIX

Recommended Specifications for Compacted Fills and Backfills

Site Location Map

Boring Location Plan

Boring Logs

General Notes

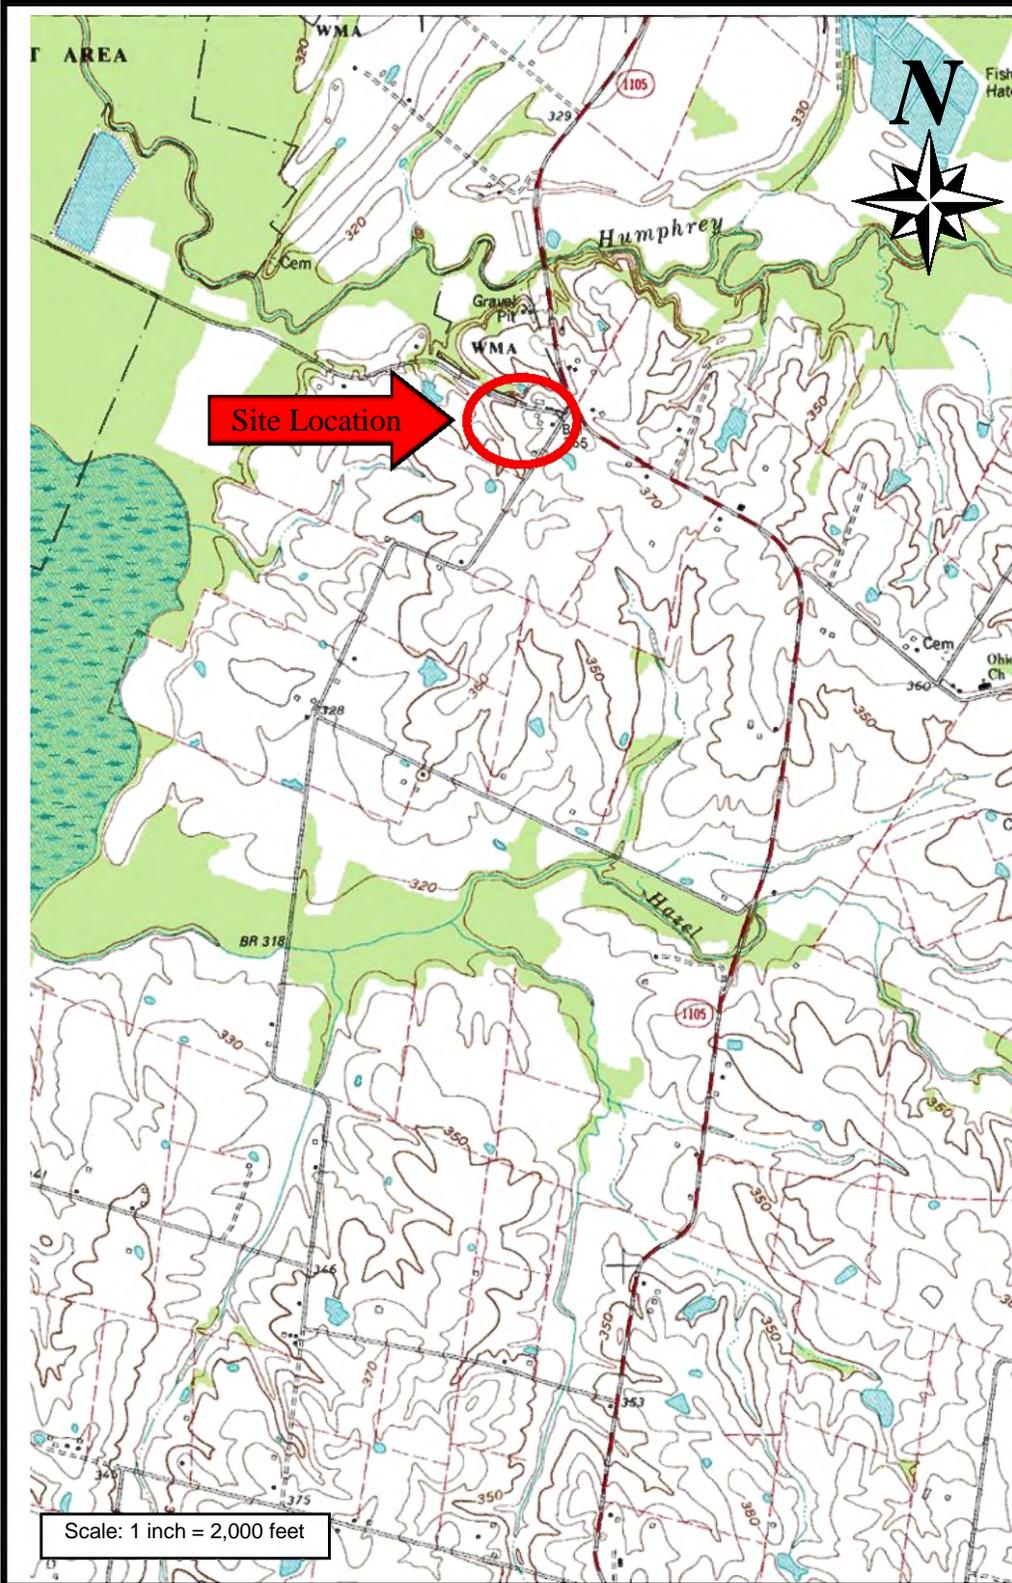

USGS Design Maps Summary

Custom Soil Resource Report for Ballard and McCracken Counties, Kentucky

## RECOMMENDED SPECIFICATIONS FOR COMPACTED FILLS AND BACKFILLS

All fill shall be formed from material free of vegetable matter, rubbish, large rock, and other deleterious material. Prior to placement of fill, a sample of the proposed fill material should be submitted to the soils engineer for his approval. The fill material should be placed in layers not to exceed eight (8) inches in loose thickness and should be sprinkled with water as required to secure specified compactions. Each layer should be uniformly compacted by means of suitable equipment of the type required by the materials composing the fill. Under no circumstances should a bulldozer or similar tracked vehicles be used as compacting equipment. Material containing an excess of water so the specified compaction limits cannot be attained should be spread and dried to a moisture content which will permit proper compaction. All fill should be compacted to the specified percent of the maximum density obtained in accordance with ASTM density Test D-698 (100 percent of maximum dry density below and above the base of footing elevation). Should the results of the in-place density tests indicate that the specified compaction limits are not obtained; the areas represented by such tests should be reworked and retested as required until the specified limits are reached.

# USGS Design Maps Summary Report

## User-Specified Input

**Report Title** 18IN0510  
Wed August 15, 2018 15:23:27 UTC

**Building Code Reference Document** 2012/2015 International Building Code  
(which utilizes USGS hazard data available in 2009)

**Site Coordinates** 37.11175°N, 89.04577°W

**Site Soil Classification** Site Class D – "Stiff Soil"

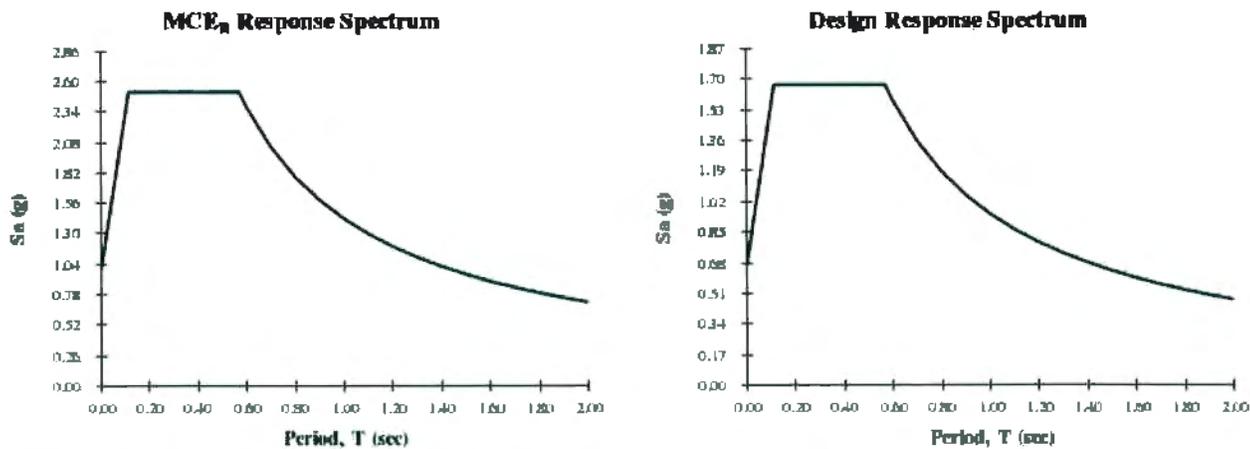

**Risk Category** I/II/III

## USGS-Provided Output

$$\begin{array}{lll}
 S_S = 2.506 \text{ g} & S_{MS} = 2.506 \text{ g} & S_{DS} = 1.671 \text{ g} \\
 S_1 = 0.951 \text{ g} & S_{M1} = 1.426 \text{ g} & S_{D1} = 0.951 \text{ g}
 \end{array}$$

For information on how the  $S_S$  and  $S_1$  values above have been calculated from probabilistic (risk-targeted) and deterministic ground motions in the direction of maximum horizontal response, please return to the application and select the "2009 NEHRP" building code reference document.

Although this information is a product of the U.S. Geological Survey, we provide no warranty, expressed or implied, as to the accuracy of the data contained therein. This tool is not a substitute for technical subject-matter knowledge.

# Design Maps Detailed Report

2012/2015 International Building Code (37.11175°N, 89.04577°W)

Site Class D – “Stiff Soil”, Risk Category I/II/III

## Section 1613.3.1 — Mapped acceleration parameters

Note: Ground motion values provided below are for the direction of maximum horizontal spectral response acceleration. They have been converted from corresponding geometric mean ground motions computed by the USGS by applying factors of 1.1 (to obtain  $S_5$ ) and 1.3 (to obtain  $S_1$ ). Maps in the 2012/2015 International Building Code are provided for Site Class B. Adjustments for other Site Classes are made, as needed, in Section 1613.3.3.

From **Figure 1613.3.1(1)** <sup>[1]</sup>

$$S_5 = 2.506 \text{ g}$$

From **Figure 1613.3.1(2)** <sup>[2]</sup>

$$S_1 = 0.951 \text{ g}$$

## Section 1613.3.2 — Site class definitions

The authority having jurisdiction (not the USGS), site-specific geotechnical data, and/or the default has classified the site as Site Class D, based on the site soil properties in accordance with Section 1613.

2010 ASCE-7 Standard – Table 20.3-1  
SITE CLASS DEFINITIONS

Site Class	$\bar{v}_s$	$\bar{N}$ or $\bar{N}_{ch}$	$\bar{s}_u$
A. Hard Rock	>5,000 ft/s	N/A	N/A
B. Rock	2,500 to 5,000 ft/s	N/A	N/A
C. Very dense soil and soft rock	1,200 to 2,500 ft/s	>50	>2,000 psf
D. Stiff Soil	600 to 1,200 ft/s	15 to 50	1,000 to 2,000 psf
E. Soft clay soil	<600 ft/s	<15	<1,000 psf
Any profile with more than 10 ft of soil having the characteristics:			
<ul style="list-style-type: none"> <li>• Plasticity index <math>PI &gt; 20</math>,</li> <li>• Moisture content <math>w \geq 40\%</math>, and</li> <li>• Undrained shear strength <math>\bar{s}_u &lt; 500</math> psf</li> </ul>			
F. Soils requiring site response analysis in accordance with Section 21.1	See Section 20.3.1		

$$\text{For SI: } 1\text{ft/s} = 0.3048 \text{ m/s } 1\text{lb/ft}^2 = 0.0479 \text{ kN/m}^2$$

### Section 1613.3.3 — Site coefficients and adjusted maximum considered earthquake spectral response acceleration parameters

TABLE 1613.3.3(1)  
VALUES OF SITE COEFFICIENT  $F_s$

Site Class	Mapped Spectral Response Acceleration at Short Period				
	$S_s \leq 0.25$	$S_s = 0.50$	$S_s = 0.75$	$S_s = 1.00$	$S_s \geq 1.25$
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.2	1.2	1.1	1.0	1.0
D	1.6	1.4	1.2	1.1	1.0
E	2.5	1.7	1.2	0.9	0.9
F	See Section 11.4.7 of ASCE 7				

Note: Use straight-line interpolation for intermediate values of  $S_s$

**For Site Class = D and  $S_s = 2.506$  g,  $F_s = 1.000$**

TABLE 1613.3.3(2)  
VALUES OF SITE COEFFICIENT  $F_v$

Site Class	Mapped Spectral Response Acceleration at 1-s Period				
	$S_1 \leq 0.10$	$S_1 = 0.20$	$S_1 = 0.30$	$S_1 = 0.40$	$S_1 \geq 0.50$
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.7	1.6	1.5	1.4	1.3
D	2.4	2.0	1.8	1.6	1.5
E	3.5	3.2	2.8	2.4	2.4
F	See Section 11.4.7 of ASCE 7				

Note: Use straight-line interpolation for intermediate values of  $S_1$

**For Site Class = D and  $S_1 = 0.951$  g,  $F_v = 1.500$**

---

**Equation (16-37):**  $S_{MS} = F_a S_s = 1.000 \times 2.506 = 2.506 \text{ g}$

---

**Equation (16-38):**  $S_{M1} = F_v S_1 = 1.500 \times 0.951 = 1.426 \text{ g}$

---

Section 1613.3.4 — Design spectral response acceleration parameters

---

**Equation (16-39):**  $S_{DS} = \frac{2}{3} S_{MS} = \frac{2}{3} \times 2.506 = 1.671 \text{ g}$

---

**Equation (16-40):**  $S_{D1} = \frac{2}{3} S_{M1} = \frac{2}{3} \times 1.426 = 0.951 \text{ g}$

---

## Section 1613.3.5 — Determination of seismic design category

TABLE 1613.3.5(1)

SEISMIC DESIGN CATEGORY BASED ON SHORT-PERIOD (0.2 second) RESPONSE ACCELERATION

VALUE OF $S_{DS}$	RISK CATEGORY		
	I or II	III	IV
$S_{DS} < 0.167g$	A	A	A
$0.167g \leq S_{DS} < 0.33g$	B	B	C
$0.33g \leq S_{DS} < 0.50g$	C	C	D
$0.50g \leq S_{DS}$	D	D	D

For Risk Category = I and  $S_{DS} = 1.671 g$ , Seismic Design Category = D

TABLE 1613.3.5(2)

SEISMIC DESIGN CATEGORY BASED ON 1-SECOND PERIOD RESPONSE ACCELERATION

VALUE OF $S_{D1}$	RISK CATEGORY		
	I or II	III	IV
$S_{D1} < 0.067g$	A	A	A
$0.067g \leq S_{D1} < 0.133g$	B	B	C
$0.133g \leq S_{D1} < 0.20g$	C	C	D
$0.20g \leq S_{D1}$	D	D	D

For Risk Category = I and  $S_{D1} = 0.951 g$ , Seismic Design Category = D

Note: When  $S_1$  is greater than or equal to 0.75g, the Seismic Design Category is **E** for buildings in Risk Categories I, II, and III, and **F** for those in Risk Category IV, irrespective of the above.

Seismic Design Category  $\equiv$  "the more severe design category in accordance with Table 1613.3.5(1) or 1613.3.5(2)" = E

Note: See Section 1613.3.5.1 for alternative approaches to calculating Seismic Design Category.

# Custom Soil Resource Report for **Ballard and McCracken Counties, Kentucky**

**18IN0510**

# Preface

---

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (<http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/>) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (<https://offices.sc.egov.usda.gov/locator/app?agency=nrcs>) or your NRCS State Soil Scientist ([http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2\\_053951](http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951)).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

### MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
 Web Soil Survey URL:  
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Ballard and McCracken Counties, Kentucky  
 Survey Area Data: Version 11, Oct 3, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 13, 2011—Oct 7, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
GrB2	Grenada silt loam, 2 to 6 percent slopes, eroded	0.2	21.8%
GrC3	Grenada silt loam, 6 to 12 percent slopes, severely eroded	0.9	78.2%
<b>Totals for Area of Interest</b>		<b>1.1</b>	<b>100.0%</b>

## Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the

## Custom Soil Resource Report

development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

### GrB2—Grenada silt loam, 2 to 6 percent slopes, eroded

#### Map Unit Setting

*National map unit symbol:* 2wn5t  
*Elevation:* 310 to 640 feet  
*Mean annual precipitation:* 52 to 62 inches  
*Mean annual air temperature:* 48 to 69 degrees F  
*Frost-free period:* 175 to 244 days  
*Farmland classification:* All areas are prime farmland

#### Map Unit Composition

*Grenada, eroded, and similar soils:* 90 percent  
*Minor components:* 10 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

#### Description of Grenada, Eroded

##### Setting

*Landform:* Ridges  
*Landform position (two-dimensional):* Shoulder  
*Landform position (three-dimensional):* Nose slope  
*Down-slope shape:* Convex  
*Across-slope shape:* Linear  
*Parent material:* Fine-silty noncalcareous loess

##### Typical profile

*Ap - 0 to 5 inches:* silt loam  
*Bw - 5 to 21 inches:* silt loam  
*E - 21 to 28 inches:* silt loam  
*Btx/E - 28 to 38 inches:* silt loam  
*Btx - 38 to 80 inches:* silt loam

##### Properties and qualities

*Slope:* 2 to 6 percent  
*Depth to restrictive feature:* 17 to 36 inches to fragipan  
*Natural drainage class:* Moderately well drained  
*Runoff class:* Medium  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* About 18 to 32 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Available water storage in profile:* Moderate (about 6.0 inches)

##### Interpretive groups

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 2e  
*Hydrologic Soil Group:* C  
*Ecological site:* Northern Loess Fragipan Upland - PROVISIONAL (F134XY012AL)  
*Hydric soil rating:* No

**Minor Components**

**Calloway**

*Percent of map unit:* 6 percent  
*Landform:* Flats  
*Landform position (three-dimensional):* Tread  
*Down-slope shape:* Concave  
*Across-slope shape:* Linear  
*Hydric soil rating:* No

**Collins**

*Percent of map unit:* 4 percent  
*Landform:* Flood-plain steps  
*Landform position (three-dimensional):* Talf  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Hydric soil rating:* No

**GrC3—Grenada silt loam, 6 to 12 percent slopes, severely eroded**

**Map Unit Setting**

*National map unit symbol:* 1qls1  
*Elevation:* 320 to 500 feet  
*Mean annual precipitation:* 40 to 56 inches  
*Mean annual air temperature:* 46 to 69 degrees F  
*Frost-free period:* 177 to 222 days  
*Farmland classification:* Not prime farmland

**Map Unit Composition**

*Grenada, severely eroded, and similar soils:* 85 percent  
*Minor components:* 15 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

**Description of Grenada, Severely Eroded**

**Setting**

*Landform:* Ridges  
*Landform position (two-dimensional):* Backslope  
*Landform position (three-dimensional):* Side slope  
*Down-slope shape:* Convex  
*Across-slope shape:* Linear  
*Parent material:* Thick fine-silty noncalcareous loess

**Typical profile**

*H1 - 0 to 4 inches:* silt loam  
*H2 - 4 to 18 inches:* silt loam  
*H3 - 18 to 22 inches:* silt loam  
*H4 - 22 to 32 inches:* silt loam  
*H5 - 32 to 80 inches:* silt loam

## Custom Soil Resource Report

### Properties and qualities

*Slope:* 6 to 12 percent  
*Depth to restrictive feature:* 18 to 23 inches to fragipan  
*Natural drainage class:* Moderately well drained  
*Runoff class:* High  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* About 18 to 24 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Available water storage in profile:* Low (about 4.9 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 4e  
*Hydrologic Soil Group:* D  
*Hydric soil rating:* No

### Minor Components

#### Purchase, severely eroded

*Percent of map unit:* 7 percent  
*Landform:* Ridges  
*Landform position (two-dimensional):* Backslope  
*Landform position (three-dimensional):* Side slope  
*Down-slope shape:* Convex  
*Across-slope shape:* Linear  
*Hydric soil rating:* No

#### Calloway

*Percent of map unit:* 4 percent  
*Landform:* Ridges  
*Landform position (two-dimensional):* Shoulder  
*Landform position (three-dimensional):* Side slope  
*Down-slope shape:* Convex  
*Across-slope shape:* Linear  
*Hydric soil rating:* No

#### Falaya

*Percent of map unit:* 2 percent  
*Landform:* Drainageways  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Hydric soil rating:* No

#### Collins

*Percent of map unit:* 2 percent  
*Landform:* Drainageways  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Hydric soil rating:* No

**Resistivity Results**

RE: EV Barlow – Cell Tower  
2244 Steve Denton Road  
Barlow, Kentucky  
Alt & Witzig File: **18IN0510**

Dear Ms. Preble:

To aid in the design of the grounding equipment for the referenced project, soil resistivity tests were performed at the site. The resistivity testing was performed using an AEMC Model 6472 Soil Resistance Meter per ASTM G-57 (The Wenner Vertical Profiling Method). A qualified technician familiar with this equipment and testing procedure performed the appropriate test to obtain the resistivity values at multiple depths. Alt & Witzig Engineering, Inc. was able to gather the necessary resistivity information in all four (4) directions.

The Wenner Vertical Profiling Method was used by centering the potential electrodes on a traverse line between the current electrodes and maintaining an equal “a” spacing between the electrodes. The depths of interests or “a” spacing of 2½ feet, 5 feet, 12½ feet, 20 feet and 50 feet.

The resistivity test was performed on August 28, 2018. The weather during data collection was between 80 and 92 degrees and sunny. The measurements were taken in general vicinity of the proposed tower location and approximately one-hundred (100) feet south of Sallie Crice Road. The layouts of the arrays are shown below in *Exhibit 1*.

Cellco Partnership, d/b/a Verizon Wireless has filed an application with the Kentucky Public Service Commission ("PSC") to construct a new wireless communications facility on a site located at Steve Denton Road, Barlow, KY, 42024 (North Latitude: (37° 06' 42.15", West Longitude 89° 02' 44.58"). The proposed facility will include a 285-foot tall antenna tower, plus a 5-foot lightning arrestor, for a total height of 290 feet with related ground facilities. This facility is needed to provide improved coverage for wireless communications in the area.

This notice is being sent to you because the County Property Valuation Administrator's records indicate that you may own property that is within a 500' radius of the proposed tower site or contiguous to the property on which the tower is to be constructed. You have a right to submit testimony to the Kentucky Public Service Commission ("PSC"), either in writing or to request intervention in the PSC's proceedings on the application. You may contact the PSC for additional information concerning this matter at: Kentucky Public Service Commission, Executive Director, 211 Sower Boulevard, P.O. Box 615, Frankfort, Kentucky 40602. Please refer to docket number 2022-00016 in any correspondence sent in connection with this matter.

We have attached a map showing the site location for the proposed tower. Applicant's radio frequency engineers assisted in selecting the proposed site for the facility, and they have determined it is the proper location and elevation needed to provide quality service to wireless customers in the area. Please feel free to contact us at 317-637-1321 if you have any comments or questions about this proposal.

Sincerely,  
Russell L. Brown

RE: Notice of Proposal to Construct Wireless Communications Facility  
Kentucky Public Service Commission Docket No. 2022- 00016  
Site Name: Barlow

Dear Judge Cooper:

Cellco Partnership, d/b/a Verizon Wireless has filed an application with the Kentucky Public Service Commission ("PSC") to construct a new wireless communications facility on a site located at Steve Denton Road, Barlow, KY, 42024 (North Latitude: (37° 06' 42.15", West Longitude 89° 02' 44.58"). The proposed facility will include a 285-foot tall antenna tower, plus a 5-foot lightning arrester, for a total height of 290 feet with related ground facilities. This facility is needed to provide improved coverage for wireless communications in the area.

You have a right to submit comments to the PSC or to request intervention in the PSC's proceedings on the application. You may contact the PSC at: Executive Director, Public Service Commission, 211 Sower Boulevard, P.O. Box 615, Frankfort, Kentucky 40602. Please refer to docket number 2022-00016 in any correspondence sent in connection with this matter.

We have attached a map showing the site location for the proposed tower. Verizon Wireless' radio frequency engineers assisted in selecting the proposed site for the facility, and they have determined it is the proper location and elevation needed to provide quality service to wireless customers in the area. Please feel free to contact us with any comments or questions you may have.

Sincerely,

Russell L. Brown

RE: Proposed Verizon Wireless Communications Facility

Site Name: **EV Barlow.**

Type of Tower: 280' self-support Tower.

Location: 2557 Steve Denton Rd Barlow, KY 42024.

To Whom It May Concern:

As a radio frequency engineer for Verizon Wireless, I am providing this letter to state the need for a Verizon Wireless site called **EV Barlow.**

The **EV Barlow** site is proposed with the below objectives:

1. Offload 4G traffic from busy site to the northwest.
2. Offload 4G traffic from busy site to the northeast.
3. Improve 4G throughput to existing heavy data users.
4. Improve 4G network reliability by increasing the amount of time our customers operate on 4G instead of 3G.

Currently the area is experiencing high demand for wireless high-speed data. Growth forecasts have triggered the need for an additional site in the area. The tower is needed to provide all Verizon customers in the area with the best experience on their 4G wireless devices.

Raw Land – Design plans for a new tower would provide tower height of **280'**. The new structure height was decided upon to best cover the offload area and interact with the existing Verizon sites. If we are limited to building a structure less than the proposed height, another tower would be needed in the vicinity in the near future. In addition, building a structure that is too short can cause existing taller sites to shoot over the proposed site and building a site that is too tall can cause the proposed site to shoot over existing sites. Both situations create a poor experience from a user perspective. The new structure will be placed near the center of the area with high traffic demand and offload the surrounding sites greatly. The new tower design meets stated objectives.

Verizon Wireless cares about the communities as well as the environment and prefers to collocate on existing structures when available. It can be noticed from any map that Verizon Wireless is currently collocated on many existing structures in the area. We prefer collocation due to reduced construction costs, faster deployment, and environment protection. However, Verizon Wireless was unable to find a suitable structure within the center of demand area to collocate the proposed **EV Barlow** site.

Verizon Wireless design engineers establish search area criteria in order to effectively meet coverage objectives as well as offload existing Verizon cell sites. When met, the criterion also reduces the need for a new site to cover the area in the immediate future. Each cellular site covers a limited area, depending on site configuration and the surrounding terrain. Cell sites are built in an interconnected network; which means each cell site must be located so that their respective coverage areas are contiguous. This provides uninterrupted communications throughout the coverage area.

Since collocation is generally the most cost-effective means for prompt deployment of new facilities, Verizon Wireless makes every effort to investigate the feasibility for using existing towers or other tall structures for collocation when designing a new site or system expansion. However, collocation on an existing tower or tall structure is not always feasible due to location of existing cell sites. Cell sites are placed in a way so they provide smooth hand off to each other and are placed at some distance from each other to eliminate too much overlap. Too much overlap may result in a waste of resources and raise a system capacity overload concern.

This cell site has been designed, and shall be constructed and operated in a manner that satisfies regulations and requirements of all applicable governmental agencies that have been charged with regulating tower specifications, operation, construction, and placement, including the FAA and FCC.

Sincerely,

Michael Fahim.

RF Engineer, Verizon Wireless

RE: Ballard County Zoning Plots

Site Name: **EV Barlow.**

To Whom It May Concern:

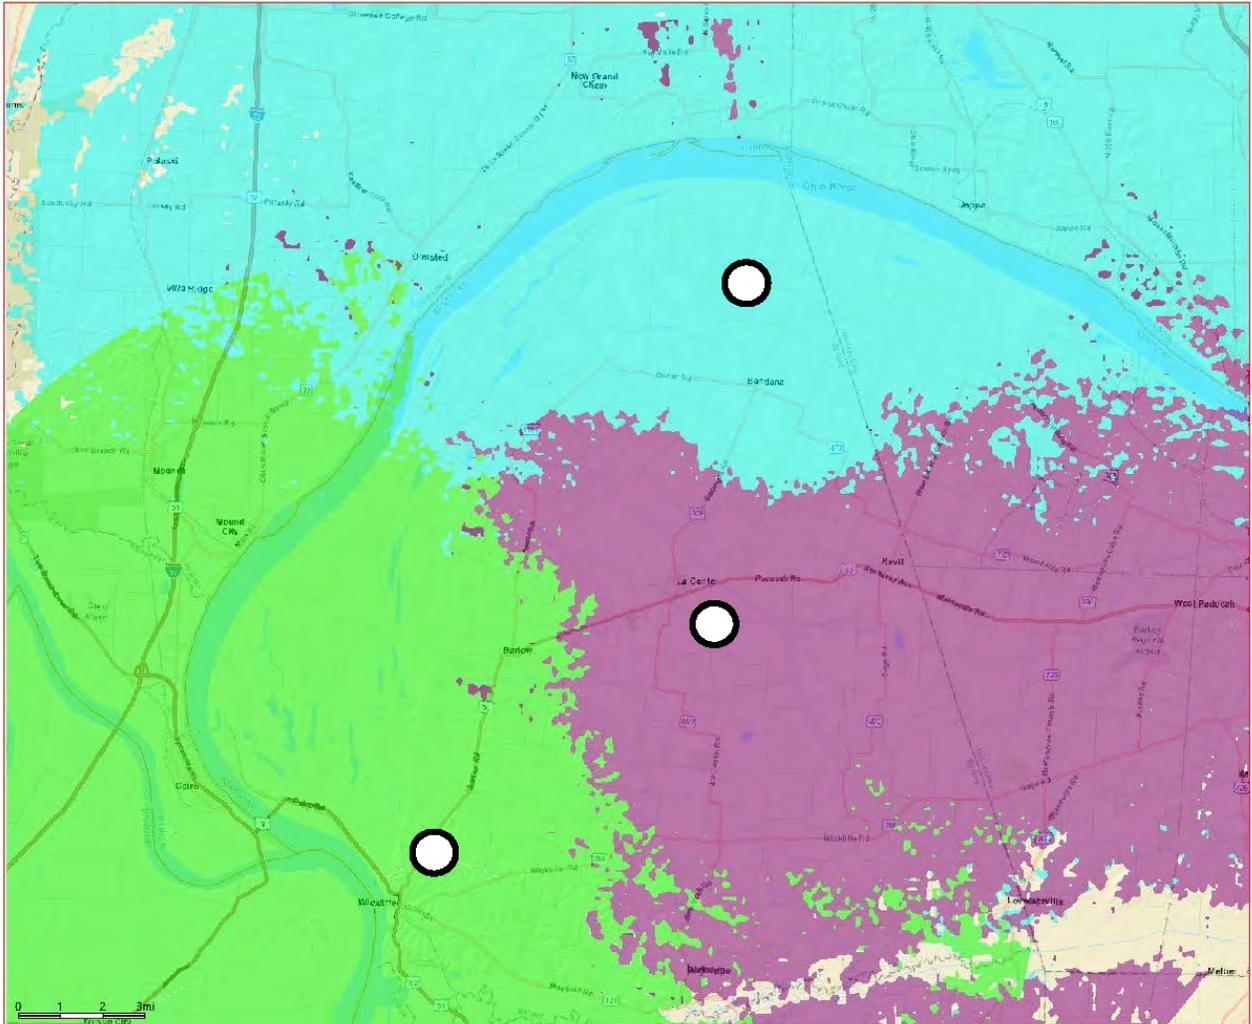

This map is not a guarantee of coverage and may contain areas with no service. This map reflects a depiction of predicted and approximate wireless coverage of the network and is intended to provide a relative comparison of coverage. The depictions of coverage do not guarantee service availability as there are many factors that can influence coverage and service availability. These factors vary from location to location and change over time. The coverage areas may include locations with limited or no coverage. Even within a coverage area shown, there are many factors, including but not limited to, usage volumes, service, outage, and customer's equipment, and terrain, proximity to buildings, foliage, and weather that may impact service.

The proposed site is needed to offload capacity from existing sites. This map reflects the predicted coverage area that will be offloaded from existing sites and transferred to the proposed site.

Michael Fahim.

RF Engineer, Verizon Wireless
