

Grant County Sanitary Sewer Rate Increase Response (Case No.2022-00377)

Intervenor City of Crittenden's Request for an Alternative Rate Adjustment

**Question #** 2a,2b, 2c, 2d

- a) Provide a detailed comparison between GCSD's current average monthly rates for all customer classes, and the national average monthly rates for all customer classes.
- b) Provide a detailed comparison between GCSD's proposed average monthly rates for all customer classes, and the national average monthly rates for all customer classes.
- c) Provide a detailed chart comparing GCSD's current average monthly residential rates to all other privately and publicly owned water utilities average monthly residential rates in Kentucky.
- d) Provide a detailed chart comparing GCSD's proposed average monthly residential rates to all other privately and publicly owned water utilities average monthly residential rates in Kentucky.

**Witness** Dianne Cook

**Answer**

- a) Our current monthly rate for residential customers for a 5,000 gallon usage bill is \$50.57. The statewide average monthly rate for a 5,000 gallon usage bill is \$46.60. Per our PSC order from May of 2020 our commercial rates were omitted from the schedule. We currently do not bill differently between residential and commercial customers. An item worth noting is that we offer a minimum bill to customers for 2,000 gallon usage and the charge for that is \$23.24. The charge for a 3,000 gallon usage would be \$32.35 and the charge for a 4,000 gallon usage would be \$41.46.

We do not have national rate information to share but we have attached a 2022 Kentucky Water and Sewer Utility Survey which will detail statewide information. However, the statewide survey only compares the 5,000 gallon usage charge between sewer providers. We are unsure if other providers charge less for a bill under 5,000 gallons but we do.

- b) Our Commissioners have proposed a 12.1% increase on our sewer rates. If approved that would bring our monthly charge for a 5,000 gallon usage to \$56.69.

We do not have national rate information to share but we have attached a 2022 Kentucky Water and Sewer Utility Survey which will demonstrate statewide information. However it doesn't take into effect any utilities who are currently in the rate increase process or completed the rate increase process after the survey was conducted. We aren't able to propose what other providers are looking to increase their charge to.

- c) Grant County Sanitary Sewer District is not a water utility and therefore doesn't have current average monthly residential rates to provide.
- d) Grant County Sanitary Sewer District is not a water utility and therefore doesn't have proposed average monthly residential rates to provide.

## RATE SURVEY SUMMARY

Cannon and Cannon, Inc. is pleased to present the 2022 Water and Sewer Utilities Rate Survey for the Commonwealth of Kentucky. Our goal is that you find the information compiled within this survey to be informative and useful.

The information contained in the survey reflects the data received and is provided in alphabetical order with Water Rate Schedules in **Appendix A** and Sewer Rate Schedules in **Appendix B**. Rate schedules not provided by the utility were obtained from either the PSC's tariff database, the 2018 Kentucky Water and Sewer Survey, or Utility Website. The average residential customer cost was estimated for consuming 5,000 gallons per month for each utility as well.

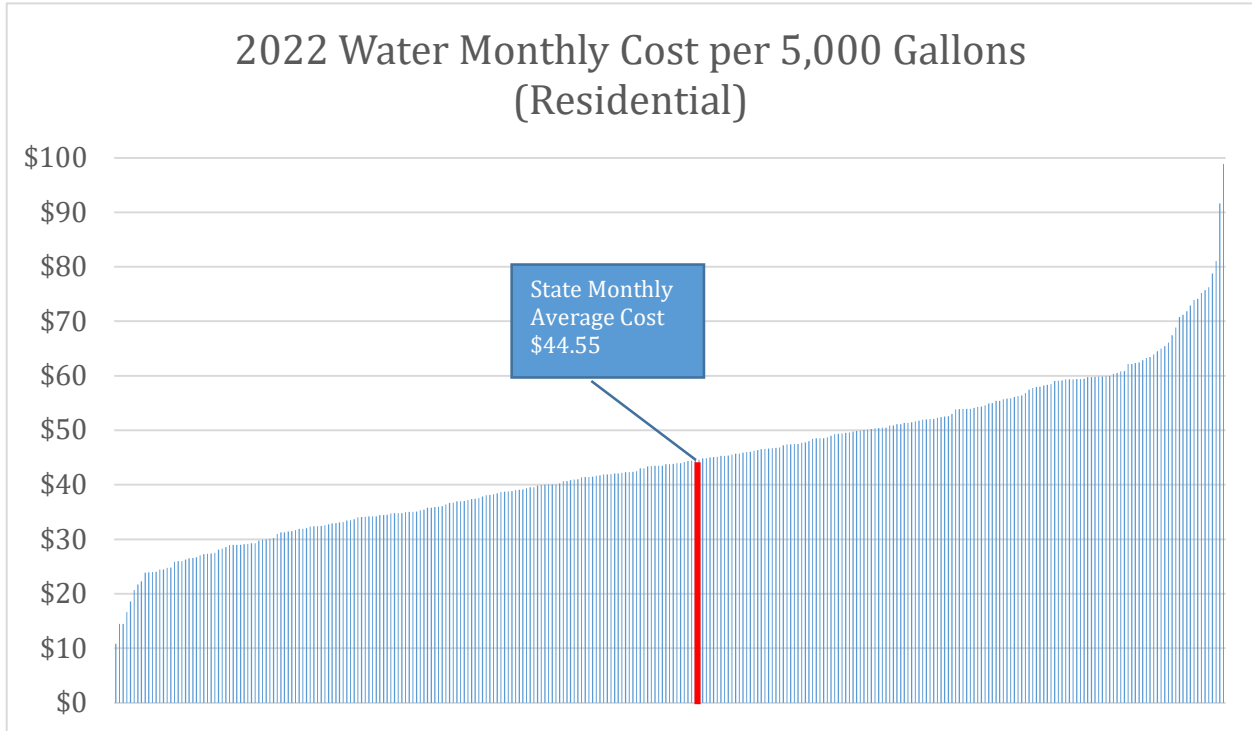

For the survey 303 water rate responses were recorded with the distribution of 5,000 gallon usage shown in **Graph 1**. Sewer rates are shown in the same manner in **Graph 2** for 5,000 gallon of sewer for 195 different utilities. A summary of average rates for 5,000 gallons of water and sewer usage per month is shown below in **Table 1** and is compared to the 2 previous surveys from 2016 and 2018.

Contained in this survey are maps containing 5,000 gallons of water and sewer of each utility surveyed broken down by Area Development District. Utilities were separated into 5 groups based on the number of customer connections in a quantile distribution. Meaning each group has a similar quantity of utilities for their respective range. For example, there is a similar number of utilities with less than 500 water customers as there is utilities with 500 to 1,000 customers. Customer number data was retrieved from the WRIS database.

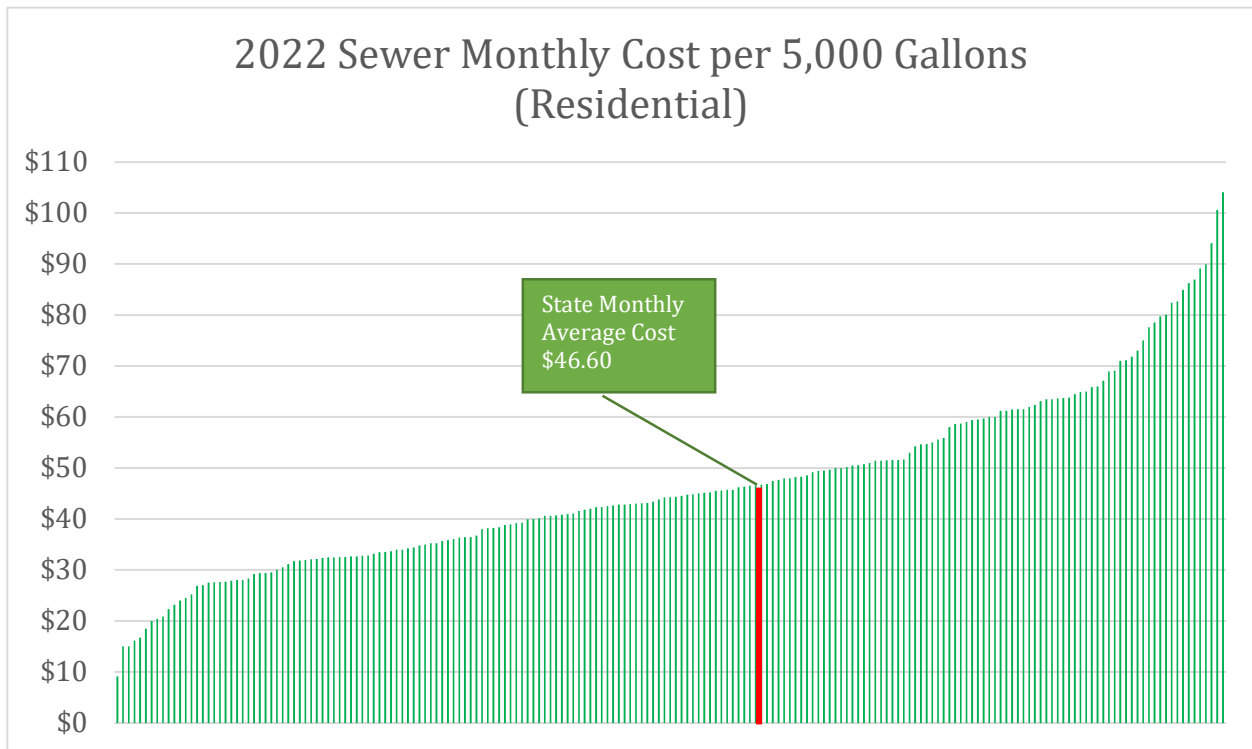

If you have any questions regarding the survey including additional information please contact Cannon and Cannon, Inc. by phone at 865-770-8555 or email [tbaker@cannon-cannon.com](mailto:tbaker@cannon-cannon.com).
