Kentucky Division of Water, Surface Water Permits Branch 300 Sower Boulevard, 3<sup>rd</sup> Floor Frankfort, KY 40601

### RE: KPDES No. KY0003221 Mill Creek Generating Station, Jefferson County, KY; Permit Reissuance Request Agency Interest # A.I. 2122

The Louisville Gas and Electric Company (LGE) provides this enclosed information to the Kentucky Division of Water (KDOW) for the reissuance of the expiring Mill Creek Generating Station KPDES permit KY0003221. KPDES Form 1, Form C, and an application fee check are enclosed with other related support documents.

Significant process water management changes have been initiated at the Mill Creek Station to comply with Steam-Electric Effluent Limitations Guidelines (ELG) issued by the USEPA. Generally, these changes are required for:

• construction of a biological wastewater treatment system and ancillary Ultrafiltration (UF) for Flue Gas Desulfurization (FGD) process waters.

Also, construction activities to dewater and close-in-place the site Ash Treatment Basin (ATB) were completed in September 2021, satisfying the closure requirements set by the USEPA Coal Combustion Residual (CCR) Rule.

EPA recently issued communications that it will reconsider the 2020 ELG rule with potential changes to limits for FGD wastewater, bottom ash transport water, legacy wastewater, and landfill leachate. However, until such proposed rulemaking is published and finalized, steam-electric utilities must comply with the 2020 ELG rule and its compliance dates. Therefore, LGE is proceeding with ELG rule construction activities under the applicability dates granted in the Mill Creek Generation Station KPDES permit KY0003221 modification with an effective date of November 1, 2021. Bottom ash is managed with a dry, pneumatic conveyance system which has no discharge of Bottom Ash Transport Water (BATW).

LGE is requesting permitting to allow wash waters from LGE distribution electrical vaults to be delivered to Mill Creek Generation Station and discharged into the site Process Pond. The Process Pond discharges through internal Outfall 002 to the high-rate multiport diffuser at external Outfall 025 to the Ohio River.

The KPDES Permit Application Synopsis, provided in **Attachment 1** of this submission, details site information and outfalls listing including categorization of outfalls discharges which contain process flows and many outfalls which consist only of uncontaminated stormwater runoff flows.

Form 1 and the application filing fee (\$7,000.00 check for a major industry) are provided in **Attachment 2** and Attachment 3. The USGS (United States Geological Survey) topographic map for the area including the Mill Creek Plant is provided in **Attachment 4**.

As directed by KPDES staff, Form C (provided in **Attachment 5**) has been prepared using recent 2022 samples including analyses for the Priority Pollutants constituents for KPDES Outfalls 002, 009, 023 and 025. Laboratory analyses supporting chemical information used in preparation of Form C is supplied in Attachment 6. Per KPDES staff direction, DMR analyses results from 2021 and 2022 are provided in **Attachment 7**.

The Plant water balance diagrams (**Attachment 8**) may sometimes include stormwater runoff flows from various site areas. Process flows are calculated as PMAC (Peak Monthly Average Conditions) value to reflect the average daily flow for the combination of 28 days normal operations, 1 day maximum operations and 1 day maintenance operations.

Stormwater Runoff Calculations and Diagrams (**Attachments 9** and **10**) were prepared using current information regarding construction of new wastewater treatment buildings, impoundments removal/refurbishment, CCR landfill and the ultimate stormwater controls-runoff management to be or already installed for all the affected areas. As such, the stormwater runoff calculations for industrial activity areas reflect the plant site conditions expected in-place by end-of-2028 (i.e., appropriate for the KPDES 5-year duration and to reflect end-of-permit-conditions).

The information mentioned above and provided in **Attachment 11**, Construction Projects Work Required for USEPA CCR and for USEPA ELG Federal Rules Compliance, also illustrates details of changes in Plant process equipment, impoundments flows management and combined discharges (besides inclusion of scheduling impacts information previously mentioned).

Provided in **Attachment 12** is the § 316(b) § 122.21(r)(2)-(8) studies report detailing efforts to establish cooling water intake technologies utilized at Mill Creek Generation Station as Best Available Technology (BAT) as established by USEPA. As discussed in the report, LGE expects to retire Mill Creek Unit 1 (and associated once-thru cooling system) in 2024.

Provided in Attachment 13 is the water quality analysis for the AOC electrical vault wash waters.

As directed by, and discussed with KPDES staff, enclosed are:

- 1. Attachment 1: KPDES Permit Application Synopsis;
- 2. Attachment 2: KPDES Form 1;
- 3. Attachment 3: Check to Kentucky State Treasurer for KPDES application filing fee;
- 4. Attachment 4: USGS Topographic Map (noting the facility site and discharge points);
- 5. Attachment 5: KPDES Form C;
- 6. Attachment 6: Sample results for the priority pollutant analysis required for Form C from the contracted commercial laboratory provides priority pollutant analyses performed in 2022 (per KPDES staff guidance);
- 7. Attachment 7: Quarterly Metals Analyses Summarized for 2021 and 2022;

- 8. Attachment 8: Water Balance Diagrams 30-Day Peak Monthly Process and Average Rainfall conditions;
- 9. Attachment 9: Stormwater Runoff Calculations;
- 10. Attachment 10: Stormwater Runoff Diagram(s);
- 11. Attachment 11: Construction Activities Required at Mill Creek Generating Station to Comply with USEPA ELG Rule;
- 12. Attachment 12: Mill Creek Generation Station § 316(b) § 122.21(r)(2)-(8) Information and Factors that Must and May be Considered for the Entrainment BTA Determination
- 13. Attachment 13: Water Quality Analysis for LGE Distribution Electrical Vault Wash Waters

Chemical metal cleaning wastewaters (e.g. boiler chemical cleans) and non-chemical metals cleaning wastes (e.g. air heater wash waters include boiler/SCR/flue gas ductwork washing for maintenance activities, etc.) are shown on the flow diagrams and calculated as though these activities occur once in typical month.

If I may be of assistance or you have any questions concerning the attached information, please feel free to contact me at (502) 627-4144 (or by email at philip.imber@lge-ku.com) or Michael O'Guin at (502)-627-2338 (or by email at michael.o'guin@lge-ku.com).

Sincerely,

DocuSigned by:

#### RE: KPDES No. KY0041971 Trimble County Generating Station, Trimble County, KY; Permit Reissuance Request Agency Interest # A.I. 4054

The Louisville Gas and Electric Company (LGE) provides this enclosed information to the Kentucky Division of Water (KDOW) for the reissuance of the expiring Trimble County Generating Station KPDES permit KY0041971. KPDES Form 1, Form C, and an application fee check are enclosed with other related support documents.

Significant process water management and Coal Combustion Residual (CCR) impoundment changes have been initiated at the Trimble County Station to comply with CCR federal regulatory rules and Steam-Electric Effluent Limitations Guidelines (ELG) issued by the USEPA. Generally, these changes are required for:

- dewatering and closure-in-place of the site Bottom Ash Pond (BAP) and dewatering and cleanclosure of the site Gypsum Storage Pond (GSP);
- construction of a dry, CCR Rule compliant landfill (phase I is complete and is expected to have an operating life of ten (10) years);
- and construction of a biological wastewater treatment system and ancillary Ultrafiltration (UF) for Flue Gas Desulfurization (FGD) process waters.

EPA recently issued communications that it will reconsider the 2020 ELG rule with potential changes to limits for FGD wastewater, bottom ash transport water, legacy wastewater, and landfill leachate. However, until such proposed rulemaking is published and finalized, steam-electric utilities must comply with the 2020 ELG rule and its compliance dates. Therefore, LGE is proceeding with ELG rule construction activities under the applicability dates granted in the Trimble County Generation Station KPDES permit KY0041971 modification with an effective date of December 1, 2021. The existing bottom ash handling systems for both Unit 1 and 2 are compliant with the Final ELG Rule and has no discharge of Bottom Ash Transport Water (BATW).

The KPDES Permit Application Synopsis, provided in Attachment 1 of this submission, details site information and outfalls listing including categorization of outfalls discharges which contain process flows and many outfalls which consist only of uncontaminated stormwater runoff flows.

**KPDES Permit No. KY0003221 Application Synopsis – 2022 Technical Update** 

Page 1 of 2

Name and Address of Applicant

(Corporate) Louisville Gas and Electric Company P.O. Box 32010 Louisville, Kentucky 40232 c/o Michael O'Guin

(Facility) Mill Creek Generating Station 14660 Dixie Highway Louisville, Kentucky 40272 c/o Cody Gibbons

Description of Applicants' Operation

Fossil fuel fired steam electric power plant for the generation, transmission and distribution of electricity (SIC Code 4911 and NAICS Code 221112). Located on a 626+ acre site along the Ohio River at mile mark 626.0.

Production Capacity of Facility

Generation of electric power is from two fossil fired units with the following nominal generating capacity:

Unit 1 – 355 MW Unit 2 – 355 MW Unit 3 – 463 MW Unit 4 – 544 MW Total 1717 MW Coal-fired Steam Boilers

# LOUISVILLE GAS AND ELECTRIC COMPANY MILL CREEK GENERATING STATION

### **KPDES Permit No. KY0003221 Application Synopsis – 2022 Technical Update**

Page 2 of 2

### **Description of Submitted Outfalls**

Note: See attached flow diagrams and rainfall runoff calculations for flow and acreage information)

Construction to close/cap the Ash Treatment Basin (ATB) CCR impoundment concluded in September 2021. Construction to provide FGD wastewaters treatment have begun and will continue to Q2 2024. This construction is being done for compliance with the USEPA ELG rule.

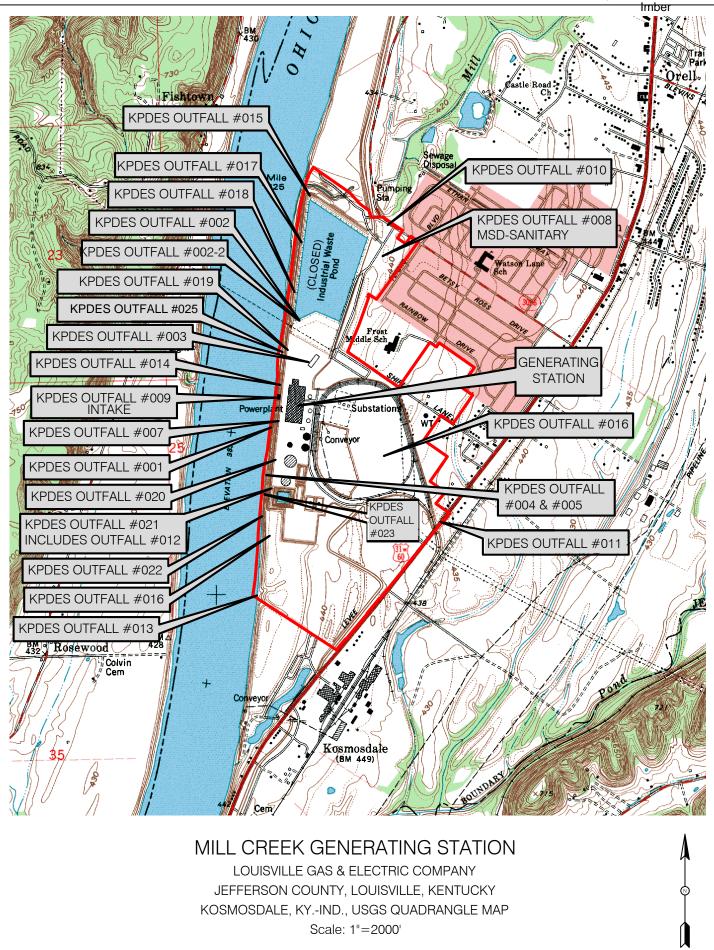

Outfall descriptions are mostly consistent with those described in the Mill Creek Generating Station KPDES permit KY0003221 modification with an effective date of November 1, 2021 with one exception which is as follows:

### **Outfall 002 Existing Description**

Process Water Pond overflow which will consist of treated FGD wastewaters (all process and solids dewatering flows) from Units 1-4, Units 1-4 sumps, landfill stormwater runoff and leachate, boiler chemical metal cleaning wastes (006), water treatment wastewaters, Units 1-4 boiler blowdown and quench waters, natural gas system wastewaters, and stormwater runoff from Area 2.

### **Outfall 002 New Description**

Process Water Pond overflow which will consist of treated FGD wastewaters (all process and solids dewatering flows) from Units 1-4, Units 1-4 sumps, landfill stormwater runoff and leachate, boiler chemical metal cleaning wastes (006), water treatment wastewaters, Units 1-4 boiler blowdown and quench waters, natural gas system wastewaters, **AOC electrical vault wash waters**, and stormwater runoff from Area 2.

## **KPDES FORM C – INSTRUCTIONS**

Listed below are explanations of select Form C questions. If further information is needed concerning any questions, please contact the Division of Water, at (502) 564-3410.

#### Section I: Outfall Location

Use the map you provided for Item II of Form 1 to determine the latitude and longitude of each of your outfalls and the name of the receiving water.

#### Section II: Flows, Sources of Pollution, and Treatment Technologies

- A. The line drawing should show generally the route taken by water in your facility from intake to discharge. Show all operations contributing wastewater, including process and production areas, sanitary flows, cooling water, and storm water runoff. Group similar operations into a single unit and label to correspond to the more detailed listing in Item II.B. The water balance should show average flows. Show all significant losses of water to products, atmosphere, and discharge. Use actual measurements whenever available. Otherwise, use your best estimate.
- B. List all sources of wastewater to each outfall. Operations may be described in general terms (for example, "dye-making reactor" or "distillation tower"). Estimate the flow contributed by each source if no data are available. For storm water, use any reasonable measure of duration, volume, or frequency. For each treatment unit, indicate its size, flow rate, and retention time; and describe the ultimate disposal of any solid or liquid wastes not discharged. Treatment units should be listed in order. Select the proper code from Table C-1 to fill in the treatment code for each treatment unit. Insert "XX" for the treatment code if no code corresponds to a treatment unit you have listed.

If the permit application is for a privately-owned treatment works, you must also identify all of your contributors in an attached listing.

C. A discharge is intermittent unless it occurs without interruption during the operating hours of the facility, except for shutdowns for maintenance, process changes, or other similar activities. A discharge is seasonal if it occurs during certain parts of the year. Fill in every applicable column in this item for each source of intermittent or seasonal discharge. Base your answers on actual data whenever available, otherwise, provide your best estimate. Report the highest daily for flow rate and total volume in the "Maximum Daily" columns. Report the average of all daily values measured during days when discharge occurred within the last year in the "Long Term Average" columns.

#### Section III: Production

- A. All effluent guidelines promulgated by EPA appear in the Federal Register and are published annually in 40 CFR Subchapter N. A guideline applies to you if you have any operations contributing process wastewater in any subcategory covered by a BPT, BCT, or BAT guideline. If you are unsure whether you are covered by a promulgated effluent guideline, check with the Department for Environmental Protection, Division of Water. You must check "yes" if an applicable effluent guideline has been promulgated, even if the guideline limitations are being contested in court. If you believe that promulgated effluent guideline has been remanded for reconsideration by a court and does not apply to your operation, you may check "no."
- B. An effluent guideline is expressed in terms of production (or other measure of operation) if the limitation is expressed as mass of pollutant per operational parameter, for example, "pounds of BOD per cubic foot of logs from which bark is removed," or "pounds of TSS per megawatt hour of electrical energy consumed by smelting furnace." An example of a guideline not expressed in terms of a measure of operation is one that limits the concentration of pollutants.
- C. This item must be completed only if you check "yes" to Item III.B. The production information requested here is necessary to apply effluent guidelines to your facility and you may not claim it as confidential. However, you do not have to indicate how the reported information was calculated.

Report quantities in the units of measurements used in the applicable effluent guidelines. The figures provided must be a measure of actual operation over a one month period, such as the production for the highest month during the last twelve months, or the monthly average production for the highest year of the last five years, or other reasonable measure of actual operation. But these figures may not be based on design capacity or on predictions of future increases in operation.

If you have two or more substantially identical outfalls, request permission from the Division of Water to sample and analyze only one outfall and submit the results of the analysis for other substantially identical outfalls. If your request is granted, identify on a separate sheet attached to the application form the outfall tested, and describe why the outfalls not tested are substantially identical to the tested outfall.

#### Section IV: Improvements

A. If you check "yes" to this question, complete all parts of the chart or attach a copy of any previous submission you have made to the Department for Environmental Protection containing the same information.

#### Section V: Intake and Effluent Characteristics

This item requires you to collect and report data on the pollutants discharged for each of your outfalls. Each part of this item addresses a different set of pollutants and must be completed in accordance with the specific instructions for that part. The following general instructions apply to the entire item.

#### GENERAL INSTRUCTIONS

In the "Mark X" columns of Parts B and C mark only one box per pollutant. Part D requires you to list any of a group of pollutants which you believe to be present, with a brief explanation of why you believe it to be present. See specific instruction on the form and below for Parts A through D.

Base your determination that a pollutant is present in or absent from your discharge on your knowledge of your raw materials, maintenance chemicals, intermediate and final products and byproducts, and any previous analyses known to you of your effluent or of any similar effluent. (For example, if you manufacture pesticides, you should expect those pesticides to be present in contaminated storm water runoff.) If you would expect a pollutant to be present solely as a result of its presence in your intake water, you must mark "Believed Present" but "X" in that "Intake" column.

#### REPORTING

All levels must be reported as concentration and as total mass. Use the following abbreviations in the columns headed "Units" (column 3, Part A, and column 4, Parts B and C).

	CONCENTRATIONS		MASS
ppm	parts per million	lbs.	Pounds
mg/l	milligrams per liter	ton	Tons (english tons)
ppb	parts per billion	mg	Milligrams
μg/l	micrograms per liter	g	Grams
		kg	Kilograms
		Т	Tonnes (metric tons)
		MGD	Million Gallons Per Day

If you measure only one daily value, complete only the "Maximum Daily Values" columns and insert "1" into the "Number of Analyses" columns (columns 2-a and 2-d, Part A, and columns 3-a and 3-d, Parts B and C).

For composite samples, the daily value is the total mass or average concentration found in a composite sample taken over the operating hours of the facility during a 24-hour period. For grab samples, the daily value is the arithmetic

or flow-weighted total mass or average concentration found in a series of at least four grab samples taken over the operating hours of the facility during a 24-hour period.

If you measure more than one daily value for a pollutant, determine the average of all values within the last year and report the concentration and mass under the "Long-Term Average Values" columns (column 2-c, Part A, and column 3-c, Parts B and C). Also report the total number of daily values under the "Number of Analyses" columns (column 2-d, Part A, and column 3-d, Parts B and C). Determine the average of all daily values taken during each calendar month, and report the highest average under the "Maximum 30-Day Values" columns (2-b, Part A, and column 3-b, Parts B and C).

#### SAMPLING

The collection of the samples for the reported analyses should be supervised by a person experienced in performing sampling of industrial wastewater. You may contact the Department for Environmental Protection or appropriate regional office for detailed guidance on sampling techniques and for answers to specific questions. Any specific requirements contained in the applicable analytical methods should be followed for sample containers, sample preservation, holding times, the collection of duplicate samples, etc. The time when you sample should be representative of your normal operation, to the extent feasible, with all processes which contribute wastewater in normal operation, and with your treatment system operating properly with no system upsets.

#### ANALYSIS

Use test methods promulgated in 40 CFR Part 136; however, if none have been promulgated for a particular pollutant, use any suitable methods for measuring the level of the pollutant in your discharge provided that you submit a description of the methods or a reference to a published method. Your description should include the sample holding times, preservation techniques, and the quality control measures used.

#### **REPORTING OF INTAKE DATA**

You are not required to report data under the "Intake" columns unless you wish to demonstrate your eligibility for a "net" effluent limitation for one or more pollutants, that is, effluent limitations adjusted by subtracting the average level of the pollutant(s) present in your intake water. 401 KAR 5:065, Section 3(7), allows net limitations only in certain circumstances. To demonstrate your eligibility, report the average of the results of analysis on your intake water in the "Intake" columns (if your water is treated before use, test the water after it is treated), and attach a separate sheet containing the following for each pollutant:

- 1. A statement that the intake and discharge are from the same water body (Otherwise, you are not eligible for net limitations);
- 2. A statement of the extent to which the level of the pollutant is reduced by treatment of your wastewater (Your limitations will be adjusted only to the extent that the pollutant is not removed);
- 3. When applicable (for example, when the pollutant represents a class of compounds), a demonstration of the extent to which the pollutants in the intake vary physically, chemically, or biologically from the pollutants contained in your discharge. (Your limitations will be adjusted only to the extent that the intake pollutants do not vary from the discharged pollutants.)

#### SPECIFIC INSTRUCTIONS

A. This part must be completed by all applicants for all outfalls, including outfalls containing only noncontact cooling water or storm runoff. However, at your request, the Division of Water may waive the requirements to test for one or more of these pollutants upon a determination that testing for the pollutant(s) is not appropriate for your effluents.

Use grab samples for pH and temperature. Use composite samples for all pollutants in this part. See discussion in General Instructions to Item V for definitions of the columns in Part A. The "Long-Term

Average Values" column (column 2-c) and "Maximum 30-Day Values" column (column 2-b) are not compulsory but should be filled out if data are available.

B. This part must be completed by all applicants for all outfalls including those containing only noncontact cooling water or storm runoff.

Use composite samples for all pollutants you analyze in this part, except use grab samples for residual chlorine, oil and grease, fecal coliform, and E.coli. The "Long-Term Average Values" column (column 3-b) are not compulsory but should be filled out if data are available.

C. Table C-2 lists the 34 "primary" industry categories in the left-hand column. For each outfall, if any of your processes which contribute wastewater falls into one of those categories, you must mark "X" in "Testing Required" column (column 2-a) and test for: (A) all of the toxic metals, cyanide, and total phenols; and (B) the organic toxic pollutants contained in the gas chromatography/mass spectrometry (GC/MS) fractions indicated in Table C-2 as applicable to your category, unless you qualify as a small business (see below). The organic toxic pollutants are listed by GC/MS fractions on pages V-4 through V-10 in Part V-C. For example, the Organic Chemical industry has an "X" in all four fractions; therefore, applicants in this category must test for all organic toxic pollutants in Part V-C. If you are applying for a permit for a privately owned treatment works, determine your testing contributors. The industry category you use for testing requirements is not used to categorize you for any other purpose.

For all other cases (secondary industries, non-process wastewater outfalls, and non-required GC/MS fractions), you must mark "X" in either the "Believed Present" column (column 2-b) or the "Believed Absent" column (column 2-c) for each pollutant, and test for those you believe present (those marked "X" in column 2-b). If you qualify as a small business (see below) you are exempt from testing for the organic toxic pollutants listed on page V-4 through V-10 in Part C. For pollutants in intake water, see discussion in General Instructions to this item. The "Long-Term Average Values" column (column 3-c) and "Maximum 30-Day Values" column (column 3-b) are not compulsory but should be filled out if data are available.

Use grab samples for total phenols and cyanide. Use composite samples for all other pollutants in this part.

Mark "Testing Required" for dioxin if you use or manufacture one of the following compounds:

- A. 2,4,5-trichlorophenoxy acetic acid (2,4,5-T);
- B. 2-(2,4,5-trichlorophenoxy) propanoic acid (Silvex, 2,4,5,-TP);
- C. 2-(2,4,5-trichlorophenoxy) ethyl 2,2-dichloropropionate (Erbon);
- D. 0, 0-dimethyl 0-(2,4,5-trichlorophenyl) phosphorothioate (Ronnel);
- E. 2,4,5-trichlorophenol (TCP); or
- F. Hexachlorophene (HCP)

If you mark "Testing Required" or "Believed Present" you must perform a screening analysis for dioxins, using gas chromotography with an electron capture detector. A TCDD standard for quantification is not required. Describe the results of this analysis in the space provided, for example, "no measurable baseline deflection at the retention time of TCDD" or "a measurable peak within the tolerances of the retention time of TCDD." You may be required to perform a quantitative analysis if you report a positive result.

The Engineering and Analysis Division of EPA has collected and analyzed samples from some facilities for the pollutants listed in Part C in the course of its BAT guidelines development program. If your effluents were sampled and analyzed as part of this program in the last three years, you may use this data to answer Part C. This may be done provided that no process change or change in raw materials, process or operating practices has occurred since the samples were taken which would make the analyses unrepresentative of your current discharge.

#### **Small Business Exemption**

If you qualify as a "small business," under 401 KAR 5:060, Section 2(8) you are exempt from the reporting requirements for the organic toxic pollutants listed on pages 9 through 18 in Part C. If your facility is a coal mine with a probable total annual production of less than 100,000 tons, you may submit past production data or estimated future production (such as a schedule of estimated total production under 30 CFR Section 795.14(c)) instead of conducting analyses for the organic toxic pollutants. If your facility is not a coal mine, and if your gross total annual sales for the most recent three years average less than \$100,000 per year (in second quarter 1980 dollars), you may submit sales data for those years instead of conducting analyses for the organic toxic pollutants.

The production or sales data must be for the facility that is the source of the discharge. The data should not be limited to production or sales for the process or processes that contribute to the discharge, unless those are the only processes of your facility. For sales data, in situations involving intra-corporate transfers of goods and services, the transfer price per unit should approximate market prices for those goods and services as closely as possible. Sales figures for years after 1980 should be indexed to the second quarter of 1980 by using the gross national product prices deflator (second quarter of 1980 = 100). This index is available in "National Income and Product Accounts of the United States" (U.S. Department of Commerce, Bureau of Economic Analysis).

D. List any pollutants in Table C-3 that you believe to be present and explain why you believe them to be present. No analysis is required, but if you have analytical data, you must report it also.

**NOTE:** Under 40 CFR 117.12(a)(2), certain discharges of hazardous substances (listed in Table C-3 of these instructions) may be exempted from the requirements of Section 311 of the Clean Water Act (33 USC Section 1321), which establishes reporting requirements, civil penalties, and liability for cleanup costs for spills of oil and hazardous substances. A discharge of a particular substance may be exempted if the origin, source, and amount of the discharged substance are identified in the KPDES permit application or in the permit, if the permit contains a requirement for treatment of the discharge, and if the treatment is in place. To apply for an exclusion of the discharge of any hazardous substance from the requirement of Section 311, attach additional sheets of paper to your form, setting forth the following information:

- A. the substance and the amount of each substance which may be discharged;
- B. the origin and source of the discharge of the substance;
- C. the treatment which is provided or to be provided for the discharge by:
  - 1. an on-site treatment system separate from any treatment system treating your normal discharge;
  - 2. a treatment system designed to treat your normal discharge and which is additionally capable of treating the amount of the substance identified under paragraph 1 above; or
  - 3. any combination of the above.

See 40 CFR Section 117.12(a)(2) and (c), published on August 29, 1979, or contact the Division of Water for further information on exclusions from Section 311.

#### Section VI. Potential Discharges Not covered by Analysis

- A. You may not claim this information as confidential. However, you do not have to distinguish between use of production of the pollutants or list the amounts. Under KPDES regulations, your permit will contain limits to control all pollutants you report in answer to this question, as well as pollutants reported in Item V and VI.B at levels exceeding the technology-based limits appropriate to your facility. Your permit will also require you to report to the Department for Environmental Protection if you begin or expect to begin to use or manufacture any toxic pollutant as an immediate or final product or byproduct which you did not report here. Your permit may be modified at that time if necessary to control that pollutant.
- B. Consider only those variations which may result in the concentrations of pollutants in effluents which exceed twice the maximum values you reported in Item V. These variations may be part of your routing operations, or part of your regular cleaning cycles.

Under KPDES regulations, your permit will contain limits to control any pollutant that you report in this item at levels exceeding the technology-based limits appropriate to your facility. Your permit will also

require you to report to the Department for Environmental Protection if you know or have reason to believe that any toxic pollutant two times the maximum values reported in Item V-C or in this item. Your permit may be modified at that time if necessary to control the pollutant.

Do not consider variations that are the result of bypasses or upsets. Increased levels of pollutants that are discharged as a result of bypasses or upsets are regulated separately under KPDES regulations.

C. Variation exemptions to be described here include:

Changes in raw or intermediate materials Changes in process equipment or materials; Changes in product lines; Significant chemical reactions among pollutants in waste streams; and Significant variation in removal efficiencies of pollution control equipment.

You may indicate other types of variations as well, except those that are the result of bypasses or upsets. You may be required to further investigate or document variations you report here.

Base your prediction on expected levels of these pollutants upon your knowledge of your processes, raw materials, past and projected product ranges, etc., or upon any testing of your effluent which indicates the range of variability that can be expected over the next five years.

**EXAMPLE:** Outfall 001 discharges water used to clean six 500-gallon tanks. These tanks are used for formulation of dispersions of synthetic resins in water (adhesives). Use of toxic pollutants which can be expected in the next 5 years is:

- 1. copper acetate inhibitor, 1/2 lb. per tank;
- 2. dibutyl phthalate, 50 lbs. per tank;
- 3. toluene, 5 lbs. per tank; and
- 4. antimony oxide, 1 lb. per tank.

Based on normal cleaning, an average of 1% and a maximum of 3% of the contents of each tank is collected and discharged once every two weeks in the 150 gallons of water used for cleaning. Treatment (pH adjustment, flocculation, filtration) removes 85% of metals and 50% of organic compounds.

#### Section IX: Certification

The permit application must be signed as follows:

- **Corporation:** by a principal executive officer of at least the level of vice president.
- **Partnership or sole proprietorship:** by a general partner or the proprietor respectively.
- Municipality, state, federal, or other public agency: by either a principal executive officer or ranking elected official.

# TABLE C-1CODES FOR TREATMENT UNITS(For use with Form C, Item II, Part B)

#### PHYSICAL TREATMENT PROCESSES

1-A Ammonia Stripping	1-M Grit Removal
1-B Dialysis	1-N Microstraining
1-C Diatomaceous Earth Filtration	1-O Mixing
1-D Distillation	1-P Moving Bed Filters
1-E Electrodialysis	1-Q Multimedia Filtration
1-F Evaporation	1-R Rapid Sand Filtration
1-G Flocculation	1-S Reverse Osmosis (Hyperfiltration)
1-H Flotation	1-T Screening
1-I Foam Fractionation	1-U Sedimentation (Settling)
1-J Freezing	1-V Slow Sand Filtration
1-K Gas-Phase Separation	1-W Solvent Extraction
1-L Grinding (Comminutors)	1-X Sorption

#### CHEMICAL TREATMENT PROCESSES

2-A	Carbon Adsorption	2-G	Disinfection (Ozone)
2-B	Chemical Oxidation	2-Н	Disinfection (Other)

Project Description

Form C - KPDES Renewal - Mill Creek

Michael O'Guin

LG&E - KU ENERGY LLC.

820 West Broadway

Louisville, KY 40202

Customer Relationship Specialist JOAN HEINSOHN

Tuesday, November 15, 2022

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac Laboratories, Inc., Louisville. If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed above.

I certify that all test results meet all of the requirements of the accrediting authority listed within this report. Analytical results are reported on a 'as received' basis unless specified otherwise. Analytical results for solids with units ending in (dry) are reported on a dry weight basis. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories. The reported results are related only to the samples analyzed as received.

Results in **bold** have exceeded a limit defined for this project. Limits are provided for reference but as regulatory limits change frequently, Microbac Laboratories, Inc. advises the recipient of this report to confirm such limits and units of concentration with the appropriate Federal, state or local authorities before acting on the data.

### CERTIFICATE OF ANALYSIS

### L2I1199

### Definitions

Indons	
°C:	Degrees Celsius
A7:	Insufficient sample.
B:	Analyte found in the blank at or above the method acceptance criteria.
B2:	The analyte value in the Method Blank is between the MDL and the Reporting Limit.
CU:	Color Unit
H1:	Sample received outside of holding time for these analytes.
H2:	Initial analysis was within holding time. Reanalysis was past holding time.
M1a:	Matrix Spike recovery outside Control Limits due to sample matrix interference; biased high.
MDL:	Minimum Detection Limit
mg/L:	Milligrams per Liter
MGD:	Millions Of Gallons per Day
MPN/100mL	Most Probable Number per 100 Milliliters
ng/L:	Nanograms per Liter
pCi/L:	Picocuries per Liter
Q:	One or more quality control criteria failed.
Q10:	Analysis of acrolein and/or acrylonitrile was performed from a sample that was field preserved to pH < 2, which is less
Q11:	than the pH range of 4-5 specified in the test method and required for NPDES compliance per 40CFR Part 136. Analysis of 2-chloroethyl vinyl ether was performed from a sample that was field preserved to pH < 2 with HCI. Acid
QTI.	preservation is not allowed for this parameter by the test method or for NPDES compliance per 40CFR Part 136.
Q2:	LCS recovery is above acceptance limits. However there is no impact on the reported value.
Q3:	LCS recovery is below acceptance limits. The reported value is estimated.
Q8:	CCV recovery is below acceptance limits. The reported value is estimated.
RL:	Reporting Limit
S.U.:	Standard Units
S2:	Surrogate recovery is below acceptance limits.
U:	Result not detected above the detection limit
ug/L:	Micrograms per Liter
ug/mL:	Micrograms per Milliliter
Y:	This analyte is not on the laboratory's current scope of accreditation.

#### **Cooler Receipt Log**

Cooler ID: Default Cooler	Temp:	1.8°C		
Cooler Inspection Checklist				
Ice Present or not required?		Yes	Shipping containers sealed or not required?	Yes
Custody seals intact or not required?		Yes	Chain of Custody (COC) Present?	Yes
COC includes customer information?		Yes	Relinquished and received signature on COC?	Yes
Sample collector identified on COC?		Yes	Sample type identified on COC?	Yes
Correct type of Containers Received		Yes	Correct number of containers listed on COC?	Yes
Containers Intact?		Yes	COC includes requested analyses?	Yes
Enough sample volume for indicated tests received?		Yes	Sample labels match COC (Name, Date & Time?)	Yes
Samples arrived within hold time?		Yes	Correct preservatives on COC or not required?	Yes
Chemical preservations checked or not required?		Yes	Preservation checks meet method requirements?	Yes
VOA vials have zero headspace, or not recd.?		Yes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
