Mission

CSWR OWNED SYSTEMS

FILED ACQUSITION CASES NOT CURRENTLY OWNED

Our mission is to bring safe, reliable and environmentally responsible water resources to every community in the U.S.

SAFE WATER, HEALTHY COMMUNITIES

- Largest owner/operator of individual domestic wastewater systems in the U.S.
- We have removed 190 systems from compliance agreements with state environmental agencies.

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 2 of 32

- One in every four Americans is exposed to potentially unsafe drinking water or wastewater systems.
- Water systems across the U.S. often lack staff, expertise and funding to address critical water safety, reliability and quality standards.
- Most water systems have been in operation between **50 100 years**, often leading to unsafe and environmentally damaging conditions including hazardous lead levels and E.coli contamination.

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 3 of 32

Our investments in water resources are investments in communities overall, ultimately enhancing value, driving outside investment and growth.

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 4 of 32

- Operating 809 plants at the end of 2022.
- Single largest operator of wastewater plants in the United States.
- **100% compliance** with Agreed Orders (environmental compliance agreements) to bring over 200 wastewater plants into compliance in 10 states.
- Over 20,000 samples taken at CSWR owned water & wastewater facilities to monitor system performance.
- Outperformed all other utilities during Hurricane Ida response and restored service to all affected customers within 48 hours while some competitors' customers were without service for weeks.
- We have reduced receivership systems in every state where CSWR operates, lowering the amount of state-appointed trustee-run systems by as much as **77 percent** in one jurisdiction.
- No sustained Customer Complaints with Public Utility Regulators.

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 5 of 32

CSWR - Environmental Performance

- CSWR currently delivers on average 15.52MM gallons of water and treats 22.40MM gallons of wastewater daily for over 300,000 customers in 11 states.
- CSWR's wastewater treatment removes approximately 53.6 million lbs. of pollution from local water bodies annually. This is calculated from removal of the primarily measured residential effluent pollutants (BOD, TSS, and Ammonia).
- The annual level of treatment improvement post-CSWR acquisition is estimated to be in excess of **9.0 million lbs.** of pollution removed from local water bodies (BOD, TSS and Ammonia).
- CSWR sends internal compliance personnel to conduct site visits annually on **ALL** owned plants.
- CSWR completed voluntary testing of all drinking water sources for PFAS to protect human health and safety in communities served.

System Updates

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 10 of 32

Before: Failed bar screens, clogged structure

After: Screen replaced, guard rails added, repairs made

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 11 of 32

Before: Rusted tank, compromised fencing

After: New fencing, recoated tank

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 12 of 32

Before: Clogged contact chamber, channel erosion

After: New contact chamber, erosion control implemented

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 13 of 32

Before: Leaking, eroding, vegetation growing in berms

After: Berms cleared and erosion control implemented

Before: Failed fencing, broken barbed wire, trash, deteriorated tank coating, no safety rails

After: Facility fencing repaired, tanks recoated

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 15 of 32

Before: Deteriorated service area, no safety rails

After: Improved influent lift station, safety rails installed

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 16 of 32

After: Corroded equipment replaced, safety rails installed, remote technology installed

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 17 of 32

Before: Failing catwalk & handrails, sludge accumulation & overgrowth

After: Safe catwalk & handrails restored; Accumulated sludge & vegetation cleared

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 18 of 32

Before: Failed digester out of service due to leaking into contact chamber, improper influent lines, tank corrosion

After: Repairs made, catwalk screens replaced, new proper influent line with flow meter installed

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 19 of 32

Before: Obsolete, broken UV disinfection system, damaged handrails & catwalk

After: Replacement UV disinfection during installation, repaired catwalk and handrails

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 20 of 32

After: Aeration plant repaired, new blower housing, new contact chamber, new influent screen box

Before: Failing disinfection shed, no safety rails around treatment basin

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 22 of 32

Before: Overgrowth of vegetation and duckweed in lagoon

After: Berms cleared and duckweed reduced

Failed drain field, in the process of being permitted for drain field replacementand additional work

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 23 of 32

poorly dosed chlorine with no monitoring scale

After: Improved aeration, repaired lagoon baffle, new chlorine system with scale & precise dosing

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 24 of 32

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 25 of 32

After: Improved effluent quality, new aeration piping

Before: Digester filled with solids, severe corrosion throughout plant

After: Digester repaired, cleaned out and recoated, repaired corrosion, replaced catwalks & handrails

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 26 of 32

Before: Failing blowers & control system, poor influent lift station with overhead line causing splashing of waste

After: New blowers, lift station repaired and regraded with new below ground influent line

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 27 of 32

Before: Overgrown, stagnant lagoon with damaged berms, failing contact chamber

After: Berms repaired and lagoon cleaned, new chlorine contact chamber

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 28 of 32

Before: Corroded, leaking tanks, corrosion on much of the equipment and catwalks

After: Tank leaks patched, aeration improved, influence screen replaced

Case No. 2022-00432 Bluegrass Water's Supplemental Response to PSC 2-3 Exhibit PSC 2-3 Page 29 of 32

- Out of an estimated 651 NPDES regulated domestic wastewater facilities in Kentucky, 563 have had some form of noncompliance in the last 3 years (86%). These facilities have, over the last 5 years, incurred an average of 7.1 informal enforcement actions and 1.1 formal enforcement actions.
- For the systems it owns, CSWR has worked closely with DOW/EEC to form "Friendly Agreed Orders" recognizing noncompliance at wastewater systems and establishing a path to compliance.
- CSWR has formed these agreements for 15 historically noncompliant systems and has brought **5 facilities into consistent compliance** (Airview, Brocklyn, Golden Acres, Lake Columbia, LH) and expect to have **4 more** removed by the end of 2023 (Fox Run, Kingswood, River Bluffs, Timberland).
- We work closely with the environmental regulators to provide an option to resolve long-term noncompliance at systems which do not have the resources to reinvest or properly operate the systems on their own.
- An additional Friendly Agreed Order is currently being negotiated for the upcoming acquisitions of Magruder Village, Moon River, and Yung Farms.

- **CBOD: Carbonaceous Biochemical Oxygen Demand** is a measure of how much organic material is in the H2O for bacteria using oxygen consumes. Too high a measure means there's too much organic material in the water.
- NH3: Ammonia contributes to algae growth. Too much algae in the receiving waters will snuff out naturally occurring plant and fish life
- TRC: Total Residual Chlorine is the amount of chlorine left after the disinfection process which can kill plant and animal life if left unchecked
- DO: High Dissolved Oxygen levels are crucial for the breakdown of organic material by bacteria and are necessary for fish and other aquatic organisms to survive

Thank you!
