# INFRASTRUCTURE IMPROVEMENT PLAN for the UNACCOUNTED-FOR WATER LOSS REDUCTION PLAN

# CUMBERLAND COUNTY WATER DISTRICT DECEMBER 2023

The Cumberland County Water District (CCWD) is in the process of implementing their Infrastructure Improvement Plan for the Unaccounted-For Water Loss Reduction Plan (Plan). The Plan consists of replacing 18 existing zone meters, purchasing and installing six new 2-inch zone meters, and purchasing 78 residential radio read meters.

CCWD operates a potable water system that serves all of Cumberland County, with the exception of the City of Burkesville, and also serves a few customers in Clinton, Metcalfe, and Monroe Counties. According to the Kentucky Infrastructure Authority's (KIA) Water Resource Information System (WRIS), Asset Inventory Report, the water system consists of approximately 306 miles of water lines that range in size from 3-inch diameter to 8-inch diameter, and according to KIA's WRIS System Data Report, CCWD has a Connection Count of 2,762 meters which consists of 2,306 Serviceable Households with a Serviceable Population of 3,953 people. Most of the customers are residential users. The KIA's WRIS Asset Inventory Report is in Appendix 1 and the KIA's WRIS System Data Report is in Appendix 2.

CCWD utilizes a radio read metering system throughout their entire system that allows for instantaneous meter readings via the drive by method. The installation of the radio read meters was initiated in 2009 and was completed in 2011. Since that time CCWD has worked toward replacing meters that are inaccurate or over ten years in service and a typical record of this activity is contained in a Quarterly Meter Report and kept on file. A copy of the most recent Quarterly Meter Report for the last quarter of 2023 is in Appendix 3. Presently they have approximately 78 meters that are either or approaching ten years in service that are scheduled to be replaced.

In addition, CCWD has divided their water system into 10 zones that are currently monitored by 18 zone meters. Four of the zone meters are at supply purchase points of which three are owned

and operated by the City of Burkesville and one is owned and operated by the City of Albany. The remaining 14 zone meters are owned and operated by CCWD and are located strategically throughout their water system. The meters have been in service for over or approaching ten years and are scheduled to be replaced and upgraded through the water surcharge program. These meters are read on a daily basis of which monthly readings are compared to the customer service meter readings to determine water loss and are also used to monitor trends in day to day demand. A Master Meter List is attached and it lists the Zone where the meter is located and its referred Master Meter name along with the size of the meter. In addition is a map of the water system that indicates the individual zones and their boundaries.

The new meter shall be that as manufactured by the Neptune Technology Group, and it shall be an ultrasonic meter in accordance with their Mach 10 model, or an approved equal. It shall have the capability of Advanced Metering Infrastructure (AMI) which is a communication network and data management system that enables two-way communication between the meter end points and CCWD. Unlike the drive by method of meter reading that CCWD uses for its service meters the new zone master meter will transmit meter readings directly to CCWD at predetermined intervals via a cellular system. A copy of their product literature is in Appendix 4

According to their Annual Report for the calendar year 2022, and on file at the Kentucky Public Service Commission (PSC), for that year CCWD purchased 228,461,000 gallons of water and had unaccounted for water loss of 89,222,000 gallons of water which calculates to an unaccounted for water loss of 39.1 percent. In addition, CCWD compiles water loss on a monthly basis in the form of a Monthly Water Loss Report. An excerpt from the Annual Report and CCWD's Monthly Water Loss Reports for the for the period of January 2023 through November 2023 are shown in Appendix 5.

On October 5, 2023, PSC authorized CCWD to assess a monthly water surcharge of \$2.85 per active meter for 48 months, or until \$386,460 has been assessed, whichever occurs first, to fund its unaccounted-for water loss reduction efforts.

The Plan consists of increasing the number of zones of their water system service area from 12 zones to 19 zones. All of the existing zone meters are either or approaching 10 years in age and they are to be replaced. In addition, six new zone meters will be installed which will result in a total of 24 zone meters throughout the entire water system. A list of the new meters is attached and it lists the Zone and Master Meter name along with the size of the meter. The new zone meters will be read in conjunction with the reading of the service meters. The comparison of the readings of the zone meters versus the service meters will allow CCWD to determine the water loss in each zone. A map of the water system with the breakdown of the current zones and the existing zone meters is posted in the CCWD's office.

The Plan also consists of the purchase and replacement of 78 residential radio read meters that are known to be either over or approaching 10 years in service.

In determining the amount of the surcharge that is collected each month, the number of customers used to determine the month surcharge was taken from the latest Quarterly Meter Report for the period of October – December, 2023, and that number was 2,790 customers. Applying the surcharge amount of \$2.85 per customer equates to a surcharge collection total of \$7,951.50 per month and over a 48 month period that cumulative total is \$381,672. This amount is slightly less than the amount as shown in the PSC's Order for Case Number 2023-00228 regarding the surcharge, that amount being \$386,460.

In order to implement the Plan, attached is a Preliminary Cost Estimate that lists the items to be addressed along with the quantity of each item and their respective cost. The first five items consist of the replacement of the existing zone master meters and the furnishing and installation of the new zone master meters. This work is planned to be performed by an outside contractor and will require engineering design and construction inspection. The sixth item consists of the replacement of the radio read service meters and it will be performed by CCWD.

A Detailed Spending Plan is attached and it outlines a monthly schedule to perform the improvements and lists the activity and its cost. Once CCWD begins to collect the surcharge they plan to accumulate enough funds in month 2 to purchase 20 residential meters and install them in month 3. This activity will be repeated in months 6 and 7. During the period of months 16 through 18 the engineering design will be completed for the replacement and installation of the zone master meters. During month 20 CCWD will solicit construction bids for the replacement of the 18 existing zone master meters. Payment for 80 percent of the engineering design will be in month 22. The installation of the 6 new zone master meters will be solicited for construction bids in month 45 once sufficient funds have been accumulated. The replacement of the existing zone master meters will take place in month 23, and the installation of the new zone master meters will take place in month 47. To close out the Plan, CCWD will purchase 32 residential meters in month 48 and install them in months 48 and 49.

A Cash Flow Plan is also attached and it outlines for each month the collected surcharge, expenses, and a running cash flow so that the expenses don't exceed the amount collected from the surcharge.

A list of Attachments is as follows:

Appendix 1: Kentucky Infrastructure Authority's Water Resource Information System Asset Inventory Report

- Appendix 2:Kentucky Infrastructure Authority's Water Resource Information System<br/>System Data ReportAppendix 3:Quarterly Meter ReportAppendix 4:Neptune Meter Specifications

### WRIS System Data Report KY0290271 - Cumberland County Water District

Office of the Governor	KY0290271 - Cumberland County Water District	mation 64				
	SYSTEM MAINTENANCE					
<ul> <li>The management of this system particip</li> </ul>	ates in an Area Water Management Planning Council (AWMPC).					
✓ The management of this system particip	bates in regular training activities.					
✓ System operator(s) participate in regula	r training activities.					
○ This system has an asset management	plan.					
Date asset management plan last updat	ted:					
O This system as a capital improvement p	lan.					
Date capital improvement plan last upda	ated:					
✓ This system has GIS capabilities.						
Date GIS data last submitted to the WR	IS: <b>01/01/2020</b>					
This system has a policy manual in place	containing the following items:					
V Personnel Policies	Standard Operating Procedures					
✓ Line Maintenance Program	✓ Meter Testing Program					
✓ Routine Pressure Checks	V Pump Station Maintenance Schedule					
<ul> <li>Emergency Operation Procedures</li> </ul>	V Backup Sources					
✓ A Water Shortage Plan	A Water Conservation Plan					
Date of last DOW Sanitary Survey: Month: 2	, Year: <b>2023</b>					
✓ This system has periodic service outage						
Cause(s): Line breaks						
<ul> <li>This system has periodic pump failures.</li> </ul>						
Cause(s):						
✓ This system has periodic line breaks.						
The following components are associa	ted with periodic line breaks:					
Typical line size: 6.00,	3.00, & 4.00					
Typical line location(s): Priva	te easement					
Typical cause(s): Natur	al breaks, cable and road contractors					
Other cause(s):						
Est. Water Loss Percentage: 34.0 9	/6					
O This system has localized problems.						
The following components are associa	ted with localized problems:					
Problem location(s):						
Problem diameter(s):						
Problem pressure(s);						
Problem cause(s):						
Other problem characteristics:						
✓ This system has as-built plans (record d	Irawings).					
Est. degree of accuracy for as-built p	olans (%): <b>31%</b>					
O This system uses an on-staff inspector(s	s) for construction projects.					

Maintenance notes for this system:

#### NOTES AND INSTRUCTIONS

#### A) ANSWER ALL THE QUESTIONS ON PAGES 1, 2, 3, & 4.

Answer all the questions on each page completely before proceeding to the next page. Click on the Link at the bottom of the page to "jump" to the corresponding page.

#### B) PROCEED TO PAGE 5 FOR YOUR QUARTERLY METER REPORT.

Check to make sure the Quarterly Meter Report is completely filled out. If data is missing, go back through pages 1, 2, 3, & 4 and make sure all questions have been answered.

#### C) SAVE THE SPREADSHEET AND E-MAIL IT TO THE KENTUCKY PUBLIC SERVICE COMMISSION

Click on the Link below to proceed to e-mail, attach this completed spreadsheet and hit send

#### Division of Inspections: PSC.Water.Notice@ky.gov

#### D) PRINT OUT THE QUARTERLY METER REPORT FOR YOUR RECORDS

#### E) TABLE OF CONTENTS

Click on the Link below to proceed to that page

- <u>1 GENERAL INFORMATION</u> Information pertaining to the utility and quarterly meter report.
- <u>2 METER STATISTICS</u> Information pertaining to number of meters tested and in system.

<u>3 - METER TESTING</u> Information pertaining to meter test results.

4 - METER & REFUND INFORMATION Information pertaining to customers and refunds.

5 - **OUARTERLY REPORT** Information summarized into the quarterly report for printing.

#### E) REGULATION 807 KAR 5:066 Section 16. Periodic Tests.

(1) Each utility shall test periodically all water meters so that no meter will remain in service without test for a period longer than specified in the following table:

SIZE OF METER (inches)	INTERVAL BETWEEN TEST YEARS		
5/8	10		
5/8 x 3/4	10		
3/4	10		
1	10		
1 1/4	4		
1 1/2	4		
2	4		
3	2		
4 and larger	1

# **APPENDIX 4**

# Superior Accuracy. Zero Maintenance.

### Neptune® MACH 10® Ultrasonic Meter

The MACH 10<sup>®</sup> ultrasonic water meter features solid state ultrasonic technology including a factorycalibrated, replaceable unitized measuring element (UME) with no degradation of accuracy over time. Combined with a corrosion-resistant, lead free, high-copper alloy maincase, the MACH 10 is built to withstand demanding service conditions and deliver sustained accuracy over the life of the meter.

- Sizes 3" through 12"
- Extended low-flow range for superior leak detection
- Accuracy sustained over meter life
- Can be installed in both horizontal and vertical applications
- Open flow path design with low pressure loss

- Advanced ultrasonic technology with easily replaceable UME design
- Lead free, high-copper alloy maincase
- UL Listed and FM Approved (standard)
- Available in standard turbine and compound lay lengths
- No maintenance

### **Specifications**

AWWA C715 Compliant

**NSF/ANSI 61 Certified** 

UL Listed/FM Approved (Standard)

#### **Maximum Operating Water Pressure**

• 175 psi

**Operating Water Temperature Range** 

- +33°F to +122°F (+0.5°C to +50°C)

#### **Environmental Conditions**

- Operating temperature: +14°F to +149°F (-10°C to +65°C)
- Storage temperature: -40°F to +158°F (-40°C to +70°C)

#### **Expected Battery Life**

• 10 years

### **Applications**

- Potable water
- Fire service
- Reclaim water

### Warranty

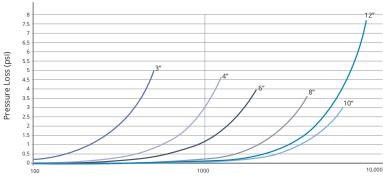

• Neptune provides a limited warranty for performance, materials, and workmanship. See warranty statement for details.

### System Compatibility

 Compatible with Neptune R900<sup>®</sup> System. Also available as MACH 10<sup>®</sup>)R900*i*<sup>™</sup> for an integrated radio solution and MACH 10<sup>®</sup>)TC for Sensus Touch Coupler compatibility.

### **Pressure Loss**

This chart shows typical meter performance. Individual results may vary.

Flow Rate (U.S. gpm)

# AMI Your Way

### Neptune® R900® System: Cellular Endpoint

Neptune's cellular endpoint allows you to progress at your own pace to AMI when integrated into your Neptune® R900® System. Neptune's cellular endpoint provides all of the benefits of an advanced meter reading solution without the operational burden of network infrastructure while allowing you to protect existing asset investments. An easily deployable AMI solution, the cellular endpoint allows you to start collecting actionable meter data immediately. Powered by the FirstNet® cellular network, you are assured a reliable, highly secure, and easy-to-deploy AMI data solution for both current and future needs.

- No AMI fixed network infrastructure installation, maintenance, operations, or upgrade costs for the life of the deployment.
- Seamless integrations with existing R900 technology for a flexible AMI solution.
- Access all of your meter data from anywhere at any time with Neptune<sup>®</sup> 360<sup>™</sup>.
- Improve operations and customer service with real-time, high-resolution AMI data and advanced analytics.
- Automatically recover from network outages with 96 days of stored data.

#### FirstNet<sup>®</sup>, Built with AT&T

- Two-way solution using the FirstNet<sup>®</sup> LTE-M cellular technology helps ensure robust coverage.
- Prioritized connectivity, even during natural disasters, protects against commercial traffic congestion.
- Network resources and mobile cell sites can be dispatched during disaster recovery to support network connectivity.
- Sensitive information is highly secure on the FirstNet<sup>®</sup> network.

### **Specifications**

#### **Environmental Conditions**

- Operating temperature: -22°F to +149°F (-30°C to +65°C)
- Storage temperature: -40°F to +158°F (-40°C to +70°C)
- Operating humidity: 100% condensing

#### Antennas

- Wall: standard internal antenna
- Pit: internal or external antenna

#### **Encoded Register Compatibility**

- Neptune<sup>®</sup> MACH 10<sup>®</sup>, ARB<sup>®</sup>V, ProRead<sup>™</sup>, E-CODER<sup>®</sup>, and ProCoder<sup>™</sup>
- Sensus ECR II, ICE, iPerl, Electronic Register and OMNI
- Hersey/Mueller Translator
- Badger ADE, HR E|LCD, E-Series
- Elster/AMCO InVision (Sensus protocol version)

#### Operation

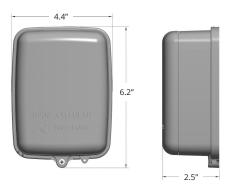

- Regular cellular LTE-M transmissions with configurable transmission windows
- Mobile 900 MHz backup transmissions
- Verify installation via the cellular endpoint manager tool
- 15-minute interval data with automatic back-fill
- Priority alerts

#### Warranty

 Neptune provides a limited warranty for performance, materials, and workmanship.
 See warranty statement for details.

### Dimensions

#### Wall Endpoint

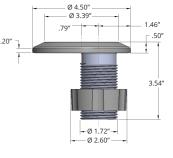

#### Pit Endpoint (Internal Antenna)

#### Pit Endpoint with External Through-the-Lid Antenna

FREQUENTLY ASKED QUESTIONS

# Commercial & Industrial (C&I) MACH 10<sup>®</sup> Ultrasonic Meters

### **Maincase**

#### Why did Neptune design the C&I MACH 10<sup>®</sup> ultrasonic meter with a bronze maincase?

The corrosion-resistant lead free high copper alloy maincase is built to withstand demanding service conditions, internal water pressure, rough handling, and in-line piping stress. With the C&I MACH 10 meter, there is no concern of corrosion due to the casing material. Neptune believes that if a meter is capable of providing sustained accuracy over its life, the maincase must be designed to last the meter's life as well.

#### Is the C&I MACH 10 meter bronze maincase lead free?

Yes. Like all Neptune MACH 10 meters, the C&I MACH 10 meter is lead free and ANSI/NSF 61 approved.

### **Battery**

#### Does the MACH 10 utilize a battery?

Yes. All solid state meter technologies require a battery to operate. The battery powers the metrology and the LCD.

### What is the battery life of the C&I MACH 10?

The battery inside the UME has a life of 10 years.

#### Can the C&I MACH 10 meter's battery be replaced?

No. The battery in the C&I MACH 10 meter is permanently potted and sealed as part of the meter assembly for protection against moisture intrusion.

#### How will I know if a C&I MACH 10 meter's battery is low on power?

The C&I MACH 10 meter features low battery detection and notification. A low battery icon will appear on the LCD panel. With an enhanced R900<sup>®</sup>, the low battery condition will also be reported to the host software.

### **Unitized Measuring Element (UME)**

#### Does the C&I MACH 10 meter have a replaceable UME?

Yes, if required, the meter's UME can be replaced easily, eliminating the need to replace the entire meter.

#### Can the battery in the UME be replaced?

No. Because the electronics are fully potted for waterproofing, the UME must be replaced when the battery dies.

#### Can the C&I MACH 10 UME be used with a mechanical meter's maincase?

The unique shape of the C&I MACH 10 flow tube and internal sealing requirements make the UME incompatible with existing turbine and compound maincases.

#### Can I order replacement parts?

If the plastic meter lid becomes damaged or broken, it can be replaced. The UME assembly for sizes 3"-6" may also be replaced, but there are no other replacement parts for the MACH 10 ultrasonic meter.

#### **Warranty**

#### What is the C&I MACH 10 warranty?

The C&I MACH 10 meters have a 10-year accuracy and electronics warranty. Coverage for the electronics, which includes the battery, is five years full and five years prorated. The maincase is covered for the life of the meter and can remain in service during a UME changeout. Please contact your TM for a copy of the full warranty.

### Liquid Crystal Display (LCD)

#### Does the MACH 10 meter's LCD remain on when the lid is closed?

No. A photo cell senses when the lid is closed and turns off the LCD for battery conservation.

#### Will the LCD remain on if the lid is broken off of the C&I MACH 10 meter?

No. After ten minutes the LCD will power down for battery conservation. The LCD can be reactivated by temporarily covering the photo cell sensor.

#### **Applications**

#### Can the C&I MACH 10 meter be installed in flooded meter pit applications?

Yes. The C&I MACH 10 meter's electronics and battery are fully potted, suitable for submersion in a pit environment.

#### What happens if an empty pipe condition occurs?

The C&I MACH 10 meter will not be able to register consumption and will display an empty pipe icon on the LCD.

#### Can the MACH 10 register reverse flow?

Yes. The C&I MACH 10 meter is capable of measuring reverse flow. The LCD odometer will run in reverse when reverse flow occurs. A flag is set in the meter firmware to communicate this occurrence to the host software for notification when the meter is read. The C&I MACH 10 meter communicates reverse flow exactly like the E-CODER<sup>®</sup>.

#### Does the C&I MACH 10 meter measure the speed of particles moving with the flow of water?

No. The C&I MACH 10 meter measures fluid velocity by measuring transit times of upstream and downstream ultrasonic waves; the difference in these times is proportional to flow rate. Volume is determined by the multiplication of the velocity of water, area of the pipe, and elapsed time.

#### Is a ground strap required for the C&I MACH 10 meter?

Neptune does not specifically require a ground strap for correct meter operation. Check your local codes to ensure ground straps are not required for your particular installation.

#### Does air in the meter chamber affect its accuracy?

Yes. If air remains in the meter chamber, accuracy can be affected. The C&I MACH 10 meter provides an air bleed screw to facilitate purging air at the time of installation.

#### Are there any upstream or downstream straight pipe length requirements when installing a MACH 10 meter?

The C&I MACH 10 does not require any straight pipe upstream or downstream the meter to meet AWWA C715 standards. Neptune's flow ranges and accuracy standards exceed those of AWWA, so in order to meet our more stringent standards some configurations may require minimum amounts of straight pipe. Any configuration with five (5) diameters of straight pipe upstream the meter will meet Neptune accuracy standards.

#### What length of straight pipe is required upstream and downstream the meter in order to maximize accuracy?

While no straight pipe is required to meet AWWA C715 accuracy standards, in order to meet Neptune's standards and maximize the accuracy of your measurements, consider following recommendations below:

**Strainer:** The meter does not require the use of a strainer. If a strainer is desired, it may be installed immediately downstream the meter or five (5) diameters upstream the meter. During meter replacement, if a strainer is already installed upstream, the C&I MACH 10 will meet all AWWA C715 accuracy standards for static meters. To attain the meter's highest accuracy capabilities, consider moving the strainer downstream the meter.

**Elbows:** Elbows (90°) may be installed five (5) pipe diameters upstream the meter and/or directly downstream the meter.

**Valves:** Fully open gate valves or ball valves may be installed immediately upstream or downstream the meter. Fully open isolation valves or butterfly valves may be installed at least five (5) pipe diameters upstream the meter or immediately downstream the meter. If control valves, check valves, or backflow preventers are needed, install them downstream of the meter to avoid cavitation. Do not install the meter on a pump suction side.

**Test Tee:** If a test tee is desired, install it so that the test port is facing straight up, aligned with the meter's register. The center of the test port must be a minimum of one (1) pipe diameter from the outlet flange of the meter. 2" test ports are recommended.

#### Can the C&I MACH 10 meter be installed vertically?

Yes, the MACH 10 can be mounted horizontally, vertically, or in a slanted orientation.

#### Will the C&I MACH 10 meter be UL Listed and FM approved?

Yes, all C&I MACH 10 meters come standard with both UL Listing and FM Approval. They can be used as a replacement for both Fire Service HP Turbine and PROTECTUS<sup>®</sup> meters. Refer to the product sheet for the meter flow rate specifications.

#### Is the C&I MACH 10 susceptible to build-up on the mirrors?

Our tests show that the material we selected for transducers and mirrors/reflectors resists build-up and the MACH 10 generates a robust signal. However, no metering technology is completely immune to build-up.

#### Can I use the C&I MACH 10 in an application where water is known to freeze in-line?

Unlike traditional positive displacement meters, MACH 10 meters do not offer traditional frost protection bottom caps, since they are not repairable. MACH 10 meters should not be placed in settings where freezing is possible.

#### Can I use a TRICON/E/S with my C&I MACH 10?

The TRICON/E<sup>®</sup> and TRICON/S<sup>®</sup> cannot be used with a MACH 10. Neptune has evaluated third-party output module products from Scadametrics<sup>®</sup> and F.S. Brainard & Co., and confirmed their compatibility with the C&I MACH 10. Compatible interfaces include: 1) 4-20mA current loop 2) scaled switch closure 3) digital pulse output. These modules allow for simultaneous ARB and industrial output and are available through the manufacturer.

#### **Communication**

#### What meter protocol does the MACH 10 output?

The C&I MACH 10 meter outputs standard E-CoderPLUS protocol and is compatible with Neptune R900, Pocket ProReader, and Advantage Reading Systems. In addition, the C&I MACH 10 meter is compatible with other suppliers' endpoints, such as the Itron 100W, Sensus RadioRead and FlexNet, Aclara MTUs, and Badger Orion LTE-M (so long as these companies continue to follow the published E-CODER 8-digit mode specifications).

#### Does the MACH 10 transmit alarms/flags to competitive radios?

Neptune shares the details of our E-CODER 8-digit protocol with Badger, Sensus, Aclara, and Itron so that they can interface their reading devices to the MACH 10. Meter generated alarm flags are only available with Neptune endpoints. Most competitive radios/HES generate alarms independently using volume data from the meter, please consult with these suppliers for details on which alarms they generate.

#### Is the C&I MACH 10 meter AMR/AMI capable?

Yes. The C&I MACH 10 supports operation with Neptune's full range of endpoints, which provide Smart Water AMI Network Connectivity via LoRaWAN, cellular/LTE, Neptune's proprietary AMI protocols, and select third-party AMR/AMI meter reading systems.

#### Does the C&I MACH 10 meter provide data logging?

Yes, data logging is provided when connected to, or integrated with, an R900 v4 or newer endpoint.

#### How many digits of volume does the C&I MACH 10 provide?

LCD resolution for visual reading and test purposes is nine digits. E-CoderPLUS protocol output provides 8-digit resolution to all Neptune endpoints, and many competitive endpoints (Aclara, Sensus, Itron, Badger) when these are configured appropriately.

#### **Specifications & Performance**

Does the C&I MACH 10 meter have any internal moving parts? No. The C&I MACH 10 meter utilizes "transit time" ultrasonic technology featuring no moving parts.

#### What is the pressure rating of the C&I MACH 10 meter?

Maximum operational pressure is 175PSI.

## Does the C&I MACH 10 meter have excessive pressure loss due to the flow conditioner and mirrors inside the maincase?

No. The pressure loss exceeds all requirements of AWWA C715. Additionally, the C&I MACH 10 meters utilize a mirror position that does not impede flow and also does not use an adjunct flow conditioner.

#### What sizes are offered in the C&I MACH 10 meter? The C&I MACH 10 meter is offered in 3", 4", 6", 8", 10", and 12" sizes.

Can the C&I MACH 10 meter easily retrofit existing turbine and compound meter installations?

Yes. The C&I MACH 10 meter's lay lengths are the same as common turbine and compound meter lay lengths for drop in replacements.

#### Does accuracy diminish over time with the C&I MACH 10 meter?

No. A benefit of solid state meter technologies is no moving parts, meaning no wear over time to diminish meter accuracy.

#### Does the MACH 10 need to be calibrated?

All MACH 10 meters are individually calibrated in our factory. The calibration lasts for the life of the meter. No field calibration is necessary or possible.

#### How does the C&I MACH 10 low flow compare to a TRU/FLO® compound meter?

Overall, the C&I MACH 10 accuracy is comparable to the TRU/FLO. While extended low flow rates are not the same, the MACH 10 benefits from not having a crossover range which negatively impacts the compound meter's accuracy. Because a significant portion of metered consumption happens in the crossover range, the MACH 10 has a significant advantage in measurement accuracy over compound meters.

A tool for comparing the details of the C&I MACH 10 to Neptune's mechanical meters can be found at neptunetg.com/mach10.

#### Does stray noise affect the ultrasonic measurement?

There are several ways that we manage the effect of stray signals. The transducers themselves have a specific resonance frequency so any other noise does not excite the receiving transducer. There is a time window based on pipe size and time of flight in which the transducers are looking for the signal and everything outside of that window is ignored. This window takes into account the minimum and maximum time of flight based on flow rate and water temperature. Additionally, there are checks in place to correct for stray signals based on the history of the time of flight.

#### Do particulates in the water affect the meter's accuracy?

Small particles and small bubbles suspended in solution do not adversely affect ultrasonic wave propagation, so high turbidity is not a problem. However, larger solids and voids (bubbles) can adversely affect sound propagation and should be avoided .

#### Does Neptune recommend a testing program?

Because all C&I MACH 10 meters have guaranteed accuracy for 10 years, Neptune recommends that regular sample/testing programs are not necessary. For utilities wishing to verify accuracy, Neptune recommends following the AWWA M6 standard for testing. While the AWWA M6 committee is still in the process of reviewing of the standard to add guidance pertinent to ultrasonic meters, we have created a Product Support Document (PSD) detailing some best testing practices for the C&I MACH 10 meters. This PSD can be found at neptunetg.com.

#### **Register**

#### Can the register be replaced on the C&I MACH 10 meter?

No. The electronic register of the C&I MACH 10 meter is permanently potted and sealed as part of the meter assembly for protection against moisture intrusion.

#### What is the significance of the serial number on the dial face?

This number will be used to identify the meter.

# R900<sup>®</sup> Cellular Endpoint

#### What is the R900<sup>®</sup> cellular endpoint?

The Neptune R900 cellular endpoint is a meter interface unit that utilizes a cellular network to transmit data to Neptune<sup>®</sup>  $360^{TM}$ . A network infrastructure is not required, eliminating the operational and capital burden that can come with having a traditional RF fixed network. The cellular endpoint supports targeted or full-scale deployments, providing a solution that can be tailored to each utility's unique needs.

#### What networks support the cellular endpoint?

The cellular endpoint is supported by the FirstNet<sup>®</sup> or Verizon<sup>®</sup> cellular network and their respective roaming partners to ensure robust coverage and secure, reliable delivery of AMI data.

#### What is FirstNet<sup>®</sup>?

FirstNet is the nationwide public safety broadband network built with and for First Responders (Primary) and those who support them (Extended Primary). Water utilities and their suppliers, such as Neptune Technology Group, are classified as Extended Primary.

#### What are the benefits of FirstNet?

FirstNet data is routed through a core network separated from commercial traffic allowing for:

- Data prioritization over commercial traffic
- Enhanced cybersecurity
- Protection from network congestion

FirstNet also provides augmented coverage with dedicated network resources and mobile cellular units that can be dispatched during disaster recovery to support agencies and organizations on FirstNet.

#### Why is the Neptune cellular endpoint able to use the FirstNet network?

The Neptune cellular endpoint and the Neptune 360 head-end system (HES) offer the utility a means of providing valuable information related to the state of water at a particular location. This includes information such as leak detection, reverse flow, continuous flow, etc. and meter reading for billing, enabling the utility to provide safe and dependable drinking water for their service territory.

#### How do I know whether I have FirstNet service in my area?

A coverage map can be used to identify service locations and is available on the FirstNet website: https://www.firstnet.com/coverage.html

#### How do I know whether I have Verizon service in my area?

A coverage map can be used to identify service locations and is available on the Verizon website: <u>https://www.verizon.com/coverage-map/</u>

#### Does the cellular endpoint require any programming?

No, the cellular endpoint auto-detects the type of encoded register it is connected to and only requires a magnet swipe along the endpoint housing to be activated.

#### With what registers will the cellular endpoint function?

The cellular endpoint is part of the Neptune R900<sup>®</sup> System and is compatible with the following encoder registers: Neptune<sup>®</sup> ARB<sup>®</sup> V, ProReadTM, ProCoderTM, E-CODER<sup>®</sup>, MACH 10<sup>®</sup>, KROHNE WATERFLUX 3070, Sensus (Invensys) ECR II, ECR III, ICE, iPerl, Electronic Register, OMNI, Hersey/Mueller Translator, Badger ADE, HR E|LCD, E-Series. Please refer to the latest product sheet for any updates to the compatibility list.

FREQUENTLY ASKED QUESTIONS

#### If I change the register attached to the cellular endpoint, do I need to wait to get an updated reading?

No, magnet swiping the endpoint will force it to interrogate the register and initiate network transmits of the data. Any subsequent readings after the magnet swipe will contain the latest reading from the new register.

#### How often is data sent from the cellular endpoint to Neptune 360?

The endpoint interrogates the meter register every 15 minutes. This data is stored in the cellular endpoint data log and is transmitted via the cellular network to Neptune 360 every six hours.

#### Does the endpoint allow for custom configuration of when and how often it sends data?

Yes, cellular endpoint users can now schedule the four daily cellular transmissions. These schedules are managed via the COMMS SCHEDULER function in Neptune 360.

#### Is a local data unload of the endpoint's data log supported?

No, the endpoint does not support a local data log unload. Instead, usage profile information can be accessed remotely from Neptune 360. Additionally, the endpoint stores up to 96 days of data to backfill readings into Neptune 360 in the event of a cellular network interruption. Once communication is restored, any readings that are stored and have not been transmitted will be queued and transferred via the cellular network so that there are no missed readings.

#### Does the cellular endpoint support mobile messages?

Yes, the cellular endpoint will transmit a mobile message every 30 seconds after 24 consecutive hours of unsuccessful cellular transmission. After a successful cellular transmission, the endpoint will stop transmitting the mobile messages.

#### How is the cellular endpoint activated?

The endpoint is shipped in a "sleep" mode and requires a magnet swipe along the left side of the endpoint to activate and begin transmitting meter reading data.

#### Is the battery replaceable on the cellular endpoint?

No, the cellular endpoint is fully potted for field reliability and there is no mechanism for field replacement of the battery.

#### How can I distinguish the cellular endpoint from other R900 System endpoints?

The cellular endpoint can be distinguished from other R900 System endpoints in the following ways:

- Pit units with an internal antenna have a distinct mounting arm with a circular hole through it that extends from the side of the endpoint's housing.
- Cellular endpoints have the cellular carrier abbreviation printed on the cover of the unit.
  - NOTE: Carrier abbreviations are FN=FirstNet, ATT=AT&T and VN=Verizon
- The label on the endpoint housing for all units includes the endpoint ID number and required regulatory information.

#### Can the cellular endpoint be connected to two separate registers?

No, the cellular endpoint does not support networking and can only be connected to a single register.

#### How do I verify that the cellular endpoint is connected to the cellular network once installed?

Connectivity can be verified by using the Neptune 360 Field Manager app. The Field Manager app will display information regarding the endpoint's cellular network status and meter reading from the connected register. This displayed information can be used to verify that you have properly wired the endpoint to the register along with a verification of cellular signal strength at the installation location.

#### How do I download and install the Field Manager to my iOS or Android device?

Contact Neptune Customer Support to obtain a license key and directions for installing the application to your device.

#### Is the Field Manager app required for installation?

No, the Field Manager app is not required for endpoint installation, but it is useful to verify a valid meter reading and good cellular network connectivity at the time of installation.

#### Why is the cellular endpoint transmitting all colons (:::::::)?

The endpoint is not detecting a register. Check all wiring connections and magnet swipe the endpoint to force a register interrogation.

#### What head-end software is supported by the cellular endpoint?

The cellular endpoint is supported by Neptune 360 only.

#### Does the cellular endpoint support remote firmware updates?

Yes, the endpoint supports remote firmware upgrades, initiated from Neptune 360, for future enhancements and bug-fixes.
