Extreme cold and pressure on the regional energy grid -- how you can help.
Extreme cold and pressures on the regional grid are resulting in scattered power outages and we need our customers' help by reducing energy consumption.

Our team is working diligently to help minimize extended impacts to our customers and as part of those efforts, we are performing brief service interruptions in intervals across our service territories.

While the outage durations will vary, we are targeting about 30 minutes.

We appreciate our customers' patience and their energy conservation efforts. Simple actions like turning down your thermostat to the lowest comfortable setting and turning off all unnecessary lights (including holiday lights) can help.

As always, but especially in times of extreme cold, our employees are working around the clock to ensure safe, reliable service to our customers and the communities we serve.

Crews are responding safely and as quickly as possible. Wicked wintry weather has caused scattered outages and some isolated issues across our service area. Our crews continue to work safely and as quickly as possible to restore power to affected customers. Track and report outages on our mobile app: lge-ku.com/app. Report any downed wire immediately by calling:

LG&E Customers: (502) 589-1444 (fast path 1-1-2)
KU/ODP Customers: 800-981-0600 (fast path 1-1)

Please be safe!

We appreciate our customers' ongoing support. Customers' energy conservation efforts remain important. Thanks to our customers' ongoing support, we continue to closely manage the high energy demands on our system. Energy conservation efforts from our customers (both residential homes and businesses) continue to be important.

Simple actions like turning down the thermostat to its lowest comfortable setting -- especially if you can take advantage of the body heat from a crowded house -- and throwing on that ugly holiday sweater can help save energy while staying cozy.

And, consider using a slow cooker whenever you can, as that uses less energy than a conventional oven. Our team continues to work around the clock to provide safe, reliable service to the communities we're proud to serve.
