ELECTRONIC APPLICATION OF JACKSON)	
ENERGY COOPERATIVE CORPORATION FOR)	Case No. 2024-00324
A GENERAL ADJUSTMENT OF RATES PURSUANT)	
TO 807 KAR 5:078)	

APPLICATION

Comes now Jackson Energy Cooperative Corporation ("Jackson Energy"), by counsel, pursuant to 807 KAR 5:078, and other applicable law, and for its Application requesting a general adjustment of its existing rates, respectfully states as follows:

- 1. Jackson Energy is a not-for-profit, member-owned, rural electric distribution cooperative organized under KRS Chapter 279 and is engaged in the business of distributing retail electricity to approximately 53,372 members who are located primarily in the Kentucky counties of Jackson, Rockcastle, Estill, Laurel, Clay, Lee and Owsley. Jackson Energy also has a small number of members in other counties adjoining its service territory.
- 2. The street and mailing address for Jackson Energy is 115 Jackson Energy Lane, McKee, Kentucky 40447, phone 606-364-1000. Jackson Energy's email address is psc@jacksonenergy.com. This Application, including the Exhibits attached hereto and incorporated herein, contains fully the facts on which Jackson Energy's request for relief is based, and an Order from the Commission granting the rate adjustment proposed herein is requested.

- 3. Pursuant to 807 KAR 5:001 Section 14(2), Jackson Energy states that it incorporated in Kentucky on July 26, 1938, and is currently in good standing.
- 4. Jackson Energy is seeking an adjustment in the rates it charges for residential service to its members. No other rate classes would be affected by this application. The adjustment in rates, as set forth in more detail in this application, would consist of an increase in the monthly customer charge and a decrease in the rate charged for energy usage.
- 5. Jackson Energy filed a revenue neutral streamlined rate case in Case No. 2019-00066 and Jackson Energy last received a general rate adjustment in Case No. 2013-00219. Since that time, Jackson Energy's sales have experienced minimal growth while the costs of conducting business have increased. The primary reason for this request is to continue to provide the necessary funds to properly maintain and operate the distribution system and to provide safe and reliable service to our members. Since Jackson Energy's most recent general rate adjustment went into effect nearly 13 years ago, Jackson Energy has experienced increased expenses in most areas of its operations. Some of the primary increases in costs have occurred in right-of-way maintenance, interest rates, general labor costs, construction materials and system maintenance costs. Incorporating various cost reductions, we were able to meet financial metrics in previous years until 2023. While Jackson Energy has had several cost-saving initiatives, these cost-drivers, along with inflation, have made it necessary to increase the rates to properly maintain and operate the distribution system. This has resulted in financial metrics that are below what is necessary in most recent years. Moreover, Jackson Energy's existing rates do not align with its cost of providing service, which makes its margins more susceptible to volatility. Without an adjustment of its rates, Jackson Energy's insufficient rate structure will continue and thus put at risk not only the

cooperative's contractual relationships with its lenders, but also the safe and reliable service its members deserve and expect.

- 6. This application is filed pursuant to 807 KAR 5:078 which is an alternative rate adjustment for electric cooperatives. Jackson Energy hereby moves the Commission for an order accepting this application for filing under the alternative rate adjustment for electric cooperatives as set forth in the above-cited statute.
- 7. To improve vital financial metrics, Jackson Energy's Board of Directors, in conjunction with its management, has determined that a general adjustment of retail rates is necessary. Consistent with KRS 278.030(1), Jackson Energy seeks Commission approval to demand, collect and receive fair, just and reasonable rates for the services it provides; specifically, Jackson Energy seeks approval to increase its annual revenues by \$5,793,612 or 5%. This application is supported by a twelve-month historical test period ending on December 31, 2023, which is the most recent annual report on file with the Commission.
- 8. Jackson Energy has met the prerequisites for an alternative rate adjustment for electric cooperatives rate case as set forth in 807 KAR 5:078 as follows:
- (1) Ten (10) or fewer years have elapsed since the effective date of new rates resulting from a cooperative's most recent base rate adjustment (Case Number 2019-00066).
 - (2) At least twelve (12) months have elapsed since the effective date of Jackson Energy's most recent base rate adjustment.
 - (3) Jackson Energy requests a rate increase not exceeding (1) percent per (12) month period since the cooperative's last base rate adjustment.
 - (4) Jackson Energy requests an increase that does not exceed 1.85 OTIER.

- (5) Aggregating multiple twelve (12) month periods in the application, the overall cumulative rate increase does not exceed five (5) percent.
- (6) Jackson Energy's most recent embedded class cost of service study (COSS) was completed within the five (5) years prior to the submission of the cooperative's application under this section.
- (7) Jackson Energy's application includes only request for: (a) adjustments in revenue requirements; (b) changes to rate design; and (c) changes to the cooperative's tariff necessary to reflect changes in rates; and
- (8) The proposed rate increase is based upon a historical test year that corresponds with the most recent annual report filed with the commission.
- (9) Jackson Energy's application is filed electronically pursuant to the requirements of 807 KAR 5:001, Section 8.
- (10) Jackson Energy has notified the commission in writing of the cooperative's intent to file a rate application at least thirty (30) days, but not more than (60) days, prior to filing an application; and
- (11) Upon filing the notice of intent with the commission, the cooperative sent by electronic mail in a portable document format, to rateintervention@ag.ky.gov.
- 9. The Board of Directors of Jackson Energy has discussed the filing of this rate application and the effect it would have upon the financial stability of the Cooperative. The Board passed a resolution on November 6, 2024, which approved the application. A copy of the resolution is attached as Exhibit 6.

- 10. Members of staff may contact Jackson Energy's witnesses directly, without counsel present, to seek clarification of certain factual information contained in the Application or in responses to requests for information. Jackson Energy's witnesses are as follows:

V. REVENUE REQUIREMENT

4 Q. PLEASE DESCRIBE JEC'S PROPOSED REVENUE REQUIREMENT.

The revenue requirement is first calculated based on the actual financials of JEC for the test period from the utility's official books and records, adjusted for known and measurable changes. However, that amount exceeds the limits set in the Alternative Rate Adjustment Regulation, which ultimately dictates the amount of the requested revenue increase. See Exhibit JW-2.

10 Q. WHAT IS THE HISTORICAL TEST PERIOD FOR THE RATE CASE

11 **APPLICATION?**

- A. The historical test period for the filing is the 12 months ended December 31, 1
- 2023. 2

- HAVE YOU PREPARED AN EXHIBIT THAT SHOWS HOW JEC'S 3 0.
- REVENUE DEFICIENCY IS CALCULATED? 4
- Yes. Exhibit JW-2 shows the calculation of JEC's revenue deficiency. 5 A.
- 6 Q. PLEASE EXPLAIN THE REVENUE DEFICIENCY CALCULATION IN EXHIBIT JW-2 IN DETAIL. 7
- A. The purpose of Exhibit JW-2 is to calculate the difference between JEC's net margin 8 9 for the adjusted test year and the margin necessary for JEC to achieve an OTIER of 10 1.85. Page 1 of the exhibit presents revenues and expenses for JEC for the actual test year, the proposed pro forma adjustments, the adjusted test year at present rates, and 11 the adjusted test year at proposed rates. The revenues include total sales of electric 12 energy and other electric revenue.

Expenses are tabulated next. The Total Cost of Electric Service is shown on line 22. Total Cost of Electric Service includes operation expenses, maintenance expenses, depreciation and amortization expenses, taxes, interest expenses on longterm debt, other interest expenses, and other deductions. Utility Operating Margins are calculated by subtracting Total Cost of Electric Service from Total Operating Revenue. Non-operating margins and capital credits are added to Utility Operating Margins to determine JEC's Net Margins.

The TIER, OTIER, Margins at Target OTIER, and Revenue Deficiency amounts are calculated at the bottom of page 1 of Exhibit JW-2.

Q. WHAT ARE THE NET MARGINS FOR THE TEST YEAR?

- Exhibit JW-2 shows that the net margins for the unadjusted test year are (\$618,010) and the net margins for the adjusted test year are (\$4,086,667).
- **Q.** WHAT IS THE OTIER FOR JEC FOR THE TEST YEAR?
- 4 **A.** Exhibit JW-2 shows that the OTIER for the test year is 0.06 and the OTIER for the adjusted test year is (0.30), both of which are below the target OTIER of 1.85.
- 6 Q. WHAT IS THE REVENUE DEFICIENCY CALCULATED IN EXHIBIT
 7 JW-2?
- Based on the OTIER of 1.85, JEC has a net margin requirement of \$4,836,136.

 Because the adjusted net margin before applying the OTIER is (\$4,086,667) and the margin requirement is \$4,836,136, JEC's total revenue deficiency is the difference between those two numbers, or \$8,922,803. However, this amount exceeds the cap of one percent for every twelve months since the last rate increase or five percent total. For this reason, the overall revenue increase is limited to 5 percent of test year actual revenues or \$5,797,581.

VI. PRO FORMA ADJUSTMENTS

- Q. PLEASE BROADLY DESCRIBE THE NATURE OF THE PRO FORMA
 ADJUSTMENTS MADE TO JEC'S ELECTRIC OPERATIONS FOR THE
 TEST YEAR SHOWN IN EXHIBIT JW-2.
- A. JEC has made adjustments which remove revenues and expenses that are addressed in other rate mechanisms, are ordinarily excluded from rates, or are non-recurring on a prospective basis, consistent with standard Commission practices. The pro forma adjustments are listed in Exhibit JW-2 on page 2 and are detailed starting on

- page 5 of the exhibit. The pro forma adjustments are summarized below for convenience.

- 5 Q. DID YOU PREPARE A DETAILED INCOME STATEMENT AND
- 6 BALANCE SHEET RELECTING THE IMPACT OF ALL PROPOSED
- 7 **ADJUSTMENTS?**
- 8 A. Yes. These are included in Exhibit JW-2 pages 3 and 4.
- 9 Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
 10 OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.01.
- 11 A. This adjustment removes the contribution for the least generous plans for employer
- retirement contributions for employees participating in multiple benefit packages.
- Specifically, for employees under R&S Pension Plan and 401(k) Plan, this
- adjustment removes the 401(k) employer match.

1	Q.	PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
2		OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.02.
3	A.	This adjustment revises the actual test year health insurance premium costs to a
4		lower amount to removed what employee contributions would be at the most recent
5		levels published by the U.S. Bureau of Labor and Statistics.
6	Q.	PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
7		OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.03.
8	A.	This adjustment removes all life insurance premiums from the test period, including
9		coverage above the lesser of an employee's annual salary or \$50,000, pursuant to

11 Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES

and beyond the requirements of the Alternative Rate Adjustment Regulation.

OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.04.

10

- 13 A. This adjustment eliminates donations, promotional advertising, and dues expenses 14 pursuant to 807 KAR 5:016, consistent with Commission practice.
- 15 Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
 16 OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.05.
- 17 A. This adjustment has been made to account for the fuel cost expenses and revenues 18 included in the Fuel Adjustment Clause ("FAC") for the test period. Consistent with 19 Commission practice, FAC expenses and revenues included in the test year have 20 been eliminated.
- Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
 OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.06.

- 1 A. This adjustment has been made to remove Environmental Surcharge ("ES")
- 2 revenues and expenses because these are addressed by a separate rate mechanism.
- This is consistent with the Commission's practice of eliminating the revenues and
- 4 expenses associated with full-recovery cost trackers.
- 5 Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
- 6 OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.07.
- 7 A. This adjustment normalizes JEC's employee wages and salaries to account for
- changes due to wage increases, departures, or new hires for a standard year of 2,080
- 9 hours. The exhibit shows adjustment data for all employees based on regular time,
- overtime, and other/vacation payout time adjusted from the test year.
- 11 Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
- OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.08.
- 13 A. This adjustment removes certain Director expenses, including costs for directors
- attending EKPC / KAEC / NRECA annual meeting(s) or training when the director
- is not the JEC representative for the respective organization. Expenses that may not
- be fully removed for rate-making purposes include the costs of attending NRECA
- director training/education seminars (especially for new directors). These seminars
- help directors to meet their fiduciary duties to the membership by educating them
- on industry issues. Also included is Liability Insurance that protects the directors
- for decisions they make on a routine basis.
- 21 Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
- OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.09.

- A. This adjustment adjusts the test year expenses and revenues to reflect the number 1 of customers at the end of the test year. The numbers of customers served at the end 2 3 of the test period for some rate classes differed from the average number of customers for the test year. The change in revenue is calculated by applying the 4 average revenue per kWh for each rate class to the difference between average 5 customer count and test-year-end customer count (at average kWh/customer) for 6 each class. The change in operating expenses was calculated by applying an 7 operating ratio to the revenue adjustment, consistent with the approach accepted by 8 9 the Commission for other utilities in rate proceedings (e.g., Case Nos. 2019-00053, 10 2012-00221 & 2012-00222, 2017-00374, and numerous other, more recent rate 11 filings).
- 12 Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
 13 OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.10.
- 14 A. This adjustment estimates the rate case costs amortized over a 3-year period for 15 inclusion in the revenue requirement, consistent with standard Commission 16 practice.
- Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
 OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.11.
- 19 A. This adjustment normalizes depreciation expenses by replacing test year actual expenses with test year-end balances at approved depreciation rates.
- Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
 OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.12.

- 1 A. This adjustment normalizes the interest on Long Term Debt and Other Interest
 2 Expense from the test year to recent amounts.
- Q. PLEASE EXPLAIN THE ADJUSTMENT TO OPERATING REVENUES
 OR EXPENSES SHOWN IN REFERENCE SCHEDULE 1.13.
- 5 A. This adjustment removes the G&T Capital Credits from the test period, consistent 6 with conventional Commission practice.

8

VII. COST OF SERVICE STUDY

9 Q. DID YOU PREPARE A COSS FOR JEC BASED ON FINANCIAL AND 10 OPERATING RESULTS FOR THE TEST YEAR?

12 Yes. I prepared a fully allocated, embedded COSS based on pro forma operating
12 results for the test year. The objective in performing the COSS is to assess JEC's
13 overall rate of return on rate base and to determine the relative rates of return that
14 JEC is earning from each rate class. Additionally, the COSS provides an indication
15 of whether each class is contributing its appropriate share towards JEC's cost of
16 providing service.

17 Q. WHAT PROCEDURE WAS USED IN PERFORMING THE COSS?

A. The three traditional steps of an embedded COSS – functionalization, classification,
and allocation – were utilized. The COSS was prepared using the following
procedure: (1) costs were functionalized to the major functional groups; (2) costs
were classified as energy-related, demand-related, or customer-related; and then (3)
costs were allocated to the rate classes.

1	Q.	IS THIS A STANDARD APPROACH USED IN THE ELECTRIC UTILITY
2		INDUSTRY?
3	A.	Yes.
4	Q.	HAS THIS APPROACH BEEN USED IN PREVIOUS CASES BEFORE
5		THIS COMMISSION?
6	A.	Yes. The same approach has been employed and accepted in several cases filed by
7		other utilities in Kentucky, including rate cases noted in Exhibit JW-1.
8	Q.	IN THE COST OF SERVICE MODEL, HOW ARE COSTS
9		FUNCTIONALIZED AND CLASSIFIED?
10	A.	JEC's test-year costs are functionalized and classified according to the practices
11		specified in The Electric Utility Cost Allocation Manual published by the National
12		Association of Regulatory Utility Commissioners ("NARUC") dated January 1992.
13		Costs are functionalized to the categories of power supply, transmission, station
14		equipment, primary and secondary distribution plant, customer services, meters,
15		lighting, meter reading and billing, and load management.
16	Q.	IS THE COSS UNBUNDLED?
17	A.	Yes. This unbundling distinguishes between the functionally-classified costs
18		components $-i.e.$, purchased power demand, purchased power energy, distribution
19		demand, and distribution customer – which allows the development of rates based

Q. HOW WERE COSTS CLASSIFIED AS ENERGY-RELATED, DEMAND-

22 **RELATED OR CUSTOMER-RELATED?**

on these separate cost components.

20

A. Costs are classified in connection with how they vary. Costs classified as energyrelated vary with the number of kilowatt-hours consumed. Costs classified as demand-related vary with the capacity needs of customers, such as the amount of transmission or distribution equipment necessary to meet a customer's needs, or other elements that are related to facility size. Transmission lines and distribution substation transformers are examples of costs typically classified as demand costs. Costs classified as customer-related include costs incurred to serve customers regardless of the quantity of electric energy purchased or the peak requirements of the customers and vary with the number of customers. These include the cost of the minimum system necessary to provide a customer with access to the electric grid. Distribution costs related to overhead conductor, underground conductor, and line transformers were split between demand-related and customer-related using the "zero-intercept" method, which I explain further below. Customer Services, Meters, Lighting, Meter Reading, Billing, Customer Account Service, and Load Management costs were classified as customer-related.

A.

Q. PLEASE EXLAIN THE APPLICATION OF THE ZERO INTERCEPT METHOD TO THE CLASSIFICATION OF CERTAIN DISTRIBUTION COSTS.

In preparing this study, the "zero-intercept" method was used to determine the customer components of overhead conductor, underground conductor, and line transformers. The zero-intercept method uses linear regression to determine the theoretical cost for connecting a customer of zero size to the grid. This method is less subjective than other approaches and is preferred when the necessary data are

- available. With the zero-intercept method, a zero-size conductor or line transformer
- is the absolute minimum system. The zero-intercept analysis is included in Exhibit
- 3 JW-8.
- 4 Q. IS THE ZERO-INTERCEPT METHOD A STANDARD APPROACH
- 5 GENERALLY ACCEPTED WITHIN THE ELECTRIC UTILITY
- 6 **INDUSTRY?**
- 7 A. Yes. The NARUC Electric Utility Cost Allocation Manual identifies the zero-
- 8 intercept (or "minimum intercept") as one of two standard methodologies for
- 9 classifying distribution fixed costs. The manual states on page 92 that the zero-
- intercept method "requires considerably more data and calculation than the
- minimum-size method. In most instances, it is more accurate, although the
- differences may be relatively small." The Commission has accepted the zero
- intercept method in many rate filings for many years. The Commission should do
- so in this case also, because the zero intercept calculations shown in Exhibit JW-8
- are consistent with the previously accepted, industry-standard approach and
- provide mathematically sound results.
- 17 Q. HAVE YOU PREPARED AN EXHIBIT SHOWING THE RESULTS OF
- 18 THE FUNCTIONALIZATION AND CLASSIFICATION STEPS OF THE
- 19 COSS?
- 20 A. Yes. Exhibit JW-4 shows the results of the first two steps of the COSS -
- 21 functionalization and classification.

- 1 Q. IN THE COST OF SERVICE MODEL, ONCE COSTS ARE
 2 FUNCTIONALIZED AND CLASSIFIED, HOW ARE THESE COSTS
 3 ALLOCATED TO THE CUSTOMER CLASSES?
- A. Once costs for all of the major accounts are functionalized and classified, the resultant cost matrix for the major groupings (e.g., Plant in Service, Rate Base, Operation and Maintenance Expenses) is then transposed and allocated to the customer classes using allocation vectors. The results of the class allocation step of the COSS are included in Exhibit JW-5.
- 9 Q. HOW ARE ENERGY-RELATED, CUSTOMER-RELATED AND

 10 DEMAND-RELATED COSTS ALLOCATED TO THE RATE CLASSES IN

 11 THE COSS?

A.

Power supply energy-related costs are allocated based on total test year kWh sales to each customer class. Power supply and transmission demand-related costs are allocated using a 12CP methodology, to mirror the basis of cost allocation used in the applicable EKPC wholesale tariff. With the 12CP methodology, these demand-related costs are allocated on the basis of the demand for each rate class at the time of EKPC's system peak (also known as "Coincident Peak" or "CP") for each of the twelve months. Customer-related costs are allocated based on the average number of customers served in each rate class during the test year. Distribution demand-related costs are allocated based on the relative demand levels of each rate class. Specifically, the demand cost component is allocated by the maximum class demands for primary and secondary voltage and by the sum of individual customer demands for secondary voltage. The customer cost component of customer services

is allocated based on the average number of customers for the test year. Meter costs were specifically assigned by relating the costs associated with various types of meters to the class of customers for whom these meters were installed. The demand analysis is provided in Exhibit JW-6. The purchased power, meter, and service analyses are provided in Exhibit JW-7.

6 Q. HOW IS THE TARGET MARGIN INCORPORATED INTO THE COSS?

A. The COSS first determines results on an actual or unadjusted basis. The COSS then considers the pro forma adjustments and a target margin. The target margin is based on the rate of return on rate base that will yield the target revenue requirement.

Q. PLEASE SUMMARIZE THE RESULTS OF THE COSS.

The results of the COSS are provided in Exhibit JW-3 on page 1. The following table summarizes the rates of return for each customer class in the study. The Pro Forma Rate of Return on Rate Base was calculated by dividing the net utility operating margin (including the pro forma adjustments) by the net cost rate base for each customer class. Any negative values for pro forma rate of return on rate base indicate that expenses exceed revenues. Also, any rate class for which the rate of return is greater than the total system rate of return is providing a subsidy to the other rate classes; any class with a rate of return that is less than the total system rate of return is receiving a subsidy.

Q. DOES THE COSS PROVIDE INFORMATION CONCERNING THE UNIT

COSTS INCURRED BY JEC TO PROVIDE SERVICE UNDER EACH

5 RATE SCHEDULE?

- A. Yes. Customer-related, demand-related, and energy-related costs for each rate class are shown in Exhibit JW-3 page 2 and at the end of Exhibit JW-5. Customer-related costs are stated as a cost per member per month. Energy-related costs are stated as a cost per kWh. For rate classes with a demand charge, demand-related costs are stated as a cost per kW per month. For rate classes without a demand charge, the demand-related costs are incorporated into the per kWh charge.
- 12 Q. BASED ON THE COSS, DO JEC'S EXISTING RATES APPROPRIATELY
 13 REFLECT THE COST OF PROVIDING SERVICE TO EACH RATE
 14 CLASS?

No. The low rate of return for the Residential rate class indicates that existing rates for this class are too low, creating a high degree of subsidization between the other rate classes and Residential. In fact, as shown in Exhibit JW-3 page 1 line 1, the margins for Residential Rate 10 are (\$5,935,136), a shortfall that actually exceeds the total revenue increase requested in the instant case. Also, the unbundled costs within each rate class indicate an imbalance within the current rate structure between the recovery of fixed costs and variable costs for the residential class.

A.

A.

Q. WHAT GUIDANCE DOES THE COSS PROVIDE FOR RATE DESIGN?

First, the COSS indicates that rates for the residential class are insufficient and should be increased. The need to increase rates is not entirely limited to the residential rate schedule, but because the overall increase is limited to five percent, and because the other underperforming rate classes (Rates 22 and 52) provide such a small portion of JEC's total revenue – less than one percent combined — the need to adjust residential Rate 10 revenues is most significant.

Second, the COSS supports a fixed monthly charge of \$36.48 for the residential class. This is shown on Exhibit JW-3, page 2. Since the current charge is \$24.76 per month, the fixed customer charge should be increased. This is a significant issue for JEC because the current charge is only two-thirds of the cost-based rate. This means that the current rate structure places too little recovery of fixed costs in the fixed charge, which results in significant under-recovery of fixed costs, particularly when members embrace conservation or energy efficiency or otherwise reduce overall consumption. At bottom, this is a fundamental challenge facing JEC from a cost recovery standpoint, particularly because residential

members make up the vast majority of JEC's membership, and it is essential for JEC's financial well-being to address this issue.

VIII. ALLOCATION OF THE PROPOSED INCREASE

5 Q. PLEASE SUMMARIZE HOW JEC PROPOSES TO ALLOCATE THE

6 REVENUE INCREASE TO THE CLASSES OF SERVICE.

- 7 A. JEC relied on the results of the COSS as a guide to determine the allocation of the 8 proposed revenue increase to the classes of service. For the reasons mentioned
- before, the entire increase is allocated to Residential Rate 10.

10 Q. What is the proposed base rate revenue increase for each rate class?

11 A. JEC is proposing the base rate revenue increases in the following table.

12

13

Table 4. Proposed Base Rate Increases

	Incre	ase
Rate Class	Dollars	Percent
Residential – A	\$5,793,612	7.2%
TOTAL	\$5,793,612	5.0%

IX. PROPOSED RATES

- 16 Q. HAVE YOU PREPARED AN EXHIBIT SHOWING THE
- 17 RECONSTRUCTION OF JEC'S TEST-YEAR BILLING
- **DETERMINANTS?**
- 19 A. Yes. The reconstruction of JEC's billing determinants is shown on Exhibit JW-9.

- 1 Q. DO THE BILLING DETERMINANTS TAKE INTO ACCOUNT THE
- 2 RECENT FAC ROLL-IN APPROVED BY THE COMMISSION IN CASE
- 3 **NO. 2023-00014?**
- 4 A. Yes. The roll-in is revenue neutral but the changes to base energy charges and FAC
- 5 annual totals is accounted for in the "Present Rates" and "Present Revenue" portion
- 6 of the analysis.
- 7 Q. WHAT ARE THE PROPOSED CHARGES FOR JEC'S RESIDENTIAL
- 8 RATE CLASS?
- 9 A. JEC is proposing to increase the Residential Rate A customer charge from \$24.76
- to \$36.48 per month, with a slight decrease to the energy charge from \$0.10180 to
- \$0.10011 per kWh. These revisions move residential rates much closer to cost-
- based rates.
- 13 Q. HOW WERE THE PROPOSED RATES CALCULATED?
- 14 A. First, the residential customer charge was set to the cost-based customer charge
- from the COSS. Then the residential energy charge was adjusted until the overall
- target revenue increase was achieved (as close as possible with rate rounding).
- 17 Q. DO THE PROPOSED RATES GENERATE THE EXACT TARGET
- 18 **REVENUE INCREASE?**
- 19 A. No, but it is extremely close. Due to rate rounding, the proposed rates generate
- \$5,793,612 which varies by \$3,969 or 0.07 percent from the exact revenue
- 21 deficiency for the test period of \$5,797,581.
- 22 Q. WHAT IS THE PROPOSED AVERAGE MONTHLY BILLING INCREASE
- FOR EACH RATE CLASS?

1 A. JEC is proposing the average billing increases in the following table.

2

3

Table 5. Proposed Average Monthly Billing Increases

	Average	Incr	ease
Rate Class	Monthly Usage (kWh)	Dollars	Percent

X. <u>CONCLUSION</u>

Q. DO YOU HAVE ANY CLOSING COMMENTS?

Yes. JEC's rates of return in the COSS clearly demonstrate that the proposed increase in base rates is necessary for JEC's financial health. JEC's revenue deficiency based on an OTIER of 1.85 exceeds the five percent limit established in the alternative rate adjustment regulation, so JEC's request is limited to \$5,797,581 or five percent. This increase is necessary for sufficient financial performance. The proposed rates are designed to produce revenues that achieve the target revenue increase. In particular, the increase in the residential customer charge is needed to move the rate structure to cost-based rates, in order to reduce the revenue erosion that results from having too great a portion of utility fixed cost recovery embedded in the variable charge. The Commission has recognized in recent orders that for an electric cooperative that is strictly a distribution utility, there is a need for a means to guard against the revenue erosion that often occurs due to the decrease in sales volumes that accompanies poor regional economics, changes in weather patterns, and the implementation or expansion of demand-side management and energy-

23

- efficiency programs. For JEC at this juncture, this is the case. The proposed rates
- 2 are just and reasonable and should be approved as filed.
- **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**
- 4 A. Yes, it does.

Sponsoring Witness: Carol Wright

Description of Filing Requirement:

All current agreements related to vegetation management, as well as a statement

identifying any changes that occurred since the cooperative's base rate adjustment to the

cooperative's policies on vegetation management, indicating the effective date and reason for these changes.

Response:

All current agreements are being filed under a Motion for Confidential Treatment.

Jackson Energy has not made any changes to its policies on vegetation management since the last

base rate adjustment. Jackson Energy's policy is to clear all circuits every 6 years or less on a

rotating basis and has achieved that every year. Jackson Energy also sprays all circuits the year

after clearing in order to slow new growth. Jackson Energy conducts a hazard tree mitigation

program to identify trees outside the right-of-way that pose a threat to our electric

infrastructure and proactively remove those trees.

Case No. 2024-00324

Alternative Rate Adjustment for Electric Cooperatives Filing Requirements / Exhibit List

Exhibit 30

807 KAR 5:078 Sec. 3(1)

Sponsoring Witness: Carol Wright

Description of Filing Requirement:

A narrative statement discussing any changes materially affecting the cooperative's rates

or service that have occurred since the effective date of its last base rate adjustment and

stating the reasons for the proposed adjustment.

Response:

Jackson Energy's Board of Directors, in conjunction with its management, have

determined that an alternative rate adjustment is necessary to account for cumulative inflationary

pressures since its last full rate case in 2013, improve its overall financial condition, and satisfy

current and future loan covenants.

Although Jackson Energy's request could have been greater, to reduce the burden to our

members, Jackson Energy decided to file under the alternative rate adjustment for electric

cooperatives – and believes the additional revenue will be sufficient to manage operations.

Since Jackson Energy's last general rate increase went into effect in 2013, the cost of doing

business and providing safe and reliable electric service has increased due to inflationary pressures.

In recent years, operating costs have increased substantially for all essentials needed to provide

electricity to our members; from meters to bucket trucks. For example, the cost of our residential

meters has increased 221% since 2013 and 25 KVA transformers has increased 65 - 97%.

Jackson Energy has been able to offset many of these costs through changes such as reducing its

workforce by 19 full-time equivalents since Jackson Energy's last rate case, refinancing

\$26,613,944 of RUS debt to save \$6,705,731 in interest expense, restructuring the employee

benefits package, revising its annual meeting format, and reducing subscriptions to member

newsletter, however, variability of weather impacting residential usage and significantly increased

expenses have resulted in financial metrics that are below what is necessary in most recent years.

Moreover, Jackson Energy's existing rates do not align with its cost of providing service, which

makes its margins more susceptible to volatility. Without an adjustment of its rates, Jackson

Energy's insufficient rate structure will continue and thus put at risk not only the cooperative's

contractual relationships with its lenders, but also the safe and reliable service the members deserve

and expect.
