Notes: (1) Natural gas utilities should deduct their cost of natural gas from pro forma operating expenses before performing the operating ratio calculation. The cost of natural gas should be added back and included in pro forma operating expenses when determining the total revenue requirement. (2) A provision for state and federal income taxes should only be included in the calculation of revenue requirements for utilities that file income tax returns and are liable for the payment of state and federal income taxes. Utilities whose income flows through to its owner's income tax returns for tax purposes should not include a provision for income taxes. (3) The conversion factor above is calculated using the minimum federal tax rate. Adjustment may be warranted where the actual federal tax rate exceeds the minimum federal tax rate.
