VERIFICATION

STATE OF NORTH CAROLINA)
)
COUNTY OF MECKLENBURG) SS:

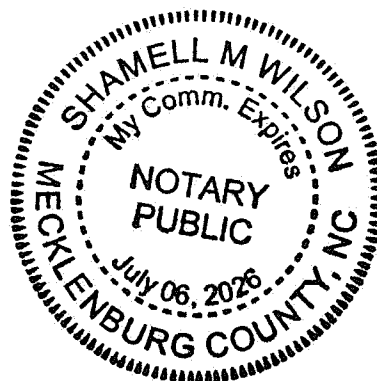

The undersigned, John D. Swez, Managing Director, Trading and Dispatch, being duly sworn, deposes and says that he has personal knowledge of the matters set forth in the foregoing post hearing data requests, and that the answers contained therein are true and correct to the best of his knowledge, information and belief.

John D. Swez, Affiant

Subscribed and sworn to before me by John D. Swez on this 1st day of October, 2025.

NOTARY PUBLIC

My Commission Expires:

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

STAFF-DR-02-001

REQUEST:

Refer to the Direct Testimony of Bruce Sailors (Sailors Direct Testimony), page 4, table 1.

a. Provide how many Net-Metering-2 (NM-2) participants are part of the residential class.

b. Provide how many NM-2 participants are part of the non-residential class. For this response, also provide a breakdown listing identifying the customer class in which each customer participates.

c. Provide how many queued NM-2 customers are part of the residential class.

d. Provide how many queued NM-2 customers are part of the non- residential class. For this response, also provide a breakdown listing identifying the customer class in which each customer participates.

RESPONSE:

a. All Net Metering II (NM-2) participants are in the residential class.

b. All NM-2 participants are in the residential class taking service under Rate RS. There are currently no non-residential NM-2 participants.

c. Zero, there are no customers queued for NM-2 participation.

d. Zero, there are no customers queued for NM-2 participation.

PERSON RESPONSIBLE: Bruce L. Sailors

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

STAFF-DR-02-002

REQUEST:

Refer to Sailers Direct Testimony, page 7. Explain how Duke Kentucky's billing will be impacted by the move from two customer classes to one.

RESPONSE:

The Company's billing system currently allows for two different credit values; one for residential customers and one for non-residential customers. The Company proposes to use the same value for both residential and non-residential customers. There should be no impact on the Company's billing system other than to implement the same credit value ordered by the Commission in this case for residential and non-residential customers.

PERSON RESPONSIBLE: Bruce L. Sailers

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

STAFF-DR-02-003

REQUEST:

Explain whether any NM-2 customers also utilize battery storage. If so, provide a breakdown of net-metering customers with battery.

RESPONSE:

NM-2 customers are permitted to use battery storage. There is currently one NM-2 participant that utilizes battery storage. The Company notes that net metering customers may not use their batteries to export power. Any export to the grid must only be from a qualifying net metering generation resource, *i.e.*, an eligible electric generating facility as defined in KRS 278.465(2).

PERSON RESPONSIBLE: Bruce L. Sailors

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

STAFF-DR-02-004

REQUEST:

Refer to Sailers Direct Testimony, page 2, line 18 through page 3, line 17. Explain if Duke Kentucky has plans to update the avoided cost rate on a regular basis in response to changing input assumptions.

a. If so, explain how frequently Duke Kentucky plans to file to update the rate.

b. If Duke Kentucky does not plan to update the avoided cost rate in response to changing input assumptions on a regular basis, why explain why not.

RESPONSE:

The Company has not committed to a specific regular schedule. In response to discovery in Case No. 2023-00413, KYSEIA-DR-01-006, the Company responded that the Avoided Cost Excess Generation Credit (ACEGC) would be updated either in electric base rate proceedings or stand-alone filings. This remains the Company's position. The Company anticipates that updates would typically be made in electric base rate proceedings, but could also be made in a stand-alone filing if the Company believes that circumstances warrant an update. If the Commission prefers an update to the ACEGC on a regular basis, the Company suggests refreshing the ACEGC every 2 years coincident with the Company's Cogeneration tariff sheets. Given the close proximity of the next cogeneration tariff update, approximately March 2026, the Company suggests the next ACEGC update coincide with the 2028 cogeneration tariff update and continuing forward every two years after.

a. The Company plans to file updates as described above, but is open to setting a regular schedule if the Commission prefers. See response above.

b. The Company believes that scheduling filings at regular intervals would not be the most administratively efficient option. See also above response.

PERSON RESPONSIBLE: Bruce L. Sailors

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

STAFF-DR-02-005

REQUEST:

Refer to the Direct Testimony of Dominic “Nick” J. Melillo (Melillo Direct Testimony), generally.

- a. Explain how Duke Kentucky determined the capital and operating and maintenance (O&M) cost specific to transmission and distribution (T&D) capacity.
- b. Provide all calculations, workpapers, and assumptions used in determining the portion of capital cost specific to capacity expansion. Workpapers should be in original format if in Excel, with all formulas, rows, and columns unprotected and fully accessible.
- c. Explain if any customer Contribution In Aid of Construction (CIAC) payments were netted out of this cost of capacity expansion.

RESPONSE:

- a. The capital cost specific to Duke Energy Kentucky T&D capacity is on the Input tab of Attachment NJM-1. This data is from Duke Energy Kentucky's Finance team and is all the capital costs for projects to increase the capacity of the T&D system.

The O&M cost specific to Duke Energy Kentucky T&D capacity is on the Input tab of Attachment NJM-1. This data is from FERC Form 1 reporting. It includes all O&M expenses for T&D except for the costs for Distribution Services since that does not support T&D grid capacity. T&D O&M totals are divided by the 2024 Peak load to get an O&M cost per kW per year. The value represents the cost to operate and maintain a kW of

capacity for a year. Each kW of capacity that is not needed has this amount of O&M that is also not needed.

b. Please see STAFF-DR-02-005(b) Attachment which contains the cost details for the T&D capacity projects included in the ACEGC calculation provided in Bruce Sailors' testimony. The costs vary by an immaterial amount to the ACEGC calculation provided in testimony due to timing of when the data was pulled. The ACEGC calculation will be updated in a supplemental response to STAFF-DR-01-008.

c. CIAC was netted out of the costs of the capacity projects in part (b).

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

STAFF-DR-02-006

REQUEST:

Refer to Sailors Direct Testimony, page 11, line 16 through page 12, line 2.

- a. Explain why it is appropriate to use Effective Load Carrying Capability (ELCC), a metric calculated by PJM specific to generation, for transmission and distribution avoided costs.
- b. Provide the peak hour (day and time), and peak load in that hour, for the transmission and distribution system in each month for the past three years.
- c. Explain if the monthly peak hour on the distribution system varies across feeders where the majority of load is comprised of commercial customers as compared to feeders where the majority of load is comprised of residential customers.
- d. Describe the difference in distribution system peak hours between majority commercial and majority residential customers quantitatively, if possible, or qualitatively, if quantitative data is unavailable.

RESPONSE:

- a. ELCC analysis results in a value for a class of generation resources to reflect how those resources contribute to load carrying on the most critical days. The ELCC value for a class of generation resources can be used to convert generation ICAP (Installed Capacity) into UCAP (Unforced Capacity). Rooftop solar is a generation resource. In regard to transmission and distribution avoided cost, the presumption is that net metering generation resources, rooftop solar in this case, avoids the need to build transmission and

distribution capacity and therefore should be paid an avoided cost. The Company applies ELCC to recognize the UCAP capacity value of the generation resource. A simple example is helpful. Assume a utility's system peak value is 870 MWs and there is 10 MWs of fixed solar rooftop resources that contribute 100% to the system peak value which occurs at 4:00 PM during a hot and sunny summer afternoon. For this hour, the system peak is reduced to 860 MWs; a 10 MW reduction. However, on a cold and dark winter morning at 6:00 AM, the system peak value is 869 MWs. The fixed solar rooftop resources contribute 0 MWs to the winter peak hour in the morning before the sun rises. Therefore, the Company cannot avoid 10 MWs of transmission lines. They can only avoid 1 MW at the most since the actual load the system must serve is 869 MWs. The Company utilizes the PJM ELCC to capture the ability of the generation resources to address critical peak loads as determined by PJM.

b. The Company's peak loads are provided in STAFF-DR-02-006(b) Attachment. All loads are inclusive of transmission and distribution losses, as well as Duke Energy Kentucky Long Branch load located inside the EKPC zone.

c. Residential class loads typically peak in the early evening on hot summer days when people return home from work. Residential peaks also have more seasonal variation as compared to commercial peaks, with summer and winter peaks due to cooling and heating demand. Commercial load demand typically rises steadily in the morning and remains stable and high all day, dropping in the evening. But commercial loads can vary significantly based on the type of business/industry located on any given feeder.

d. Please see STAFF-DR-02-006(d) Attachment for the 2024 peak day load profiles for Duke Energy Kentucky Commercial and Residential loads. These load curves

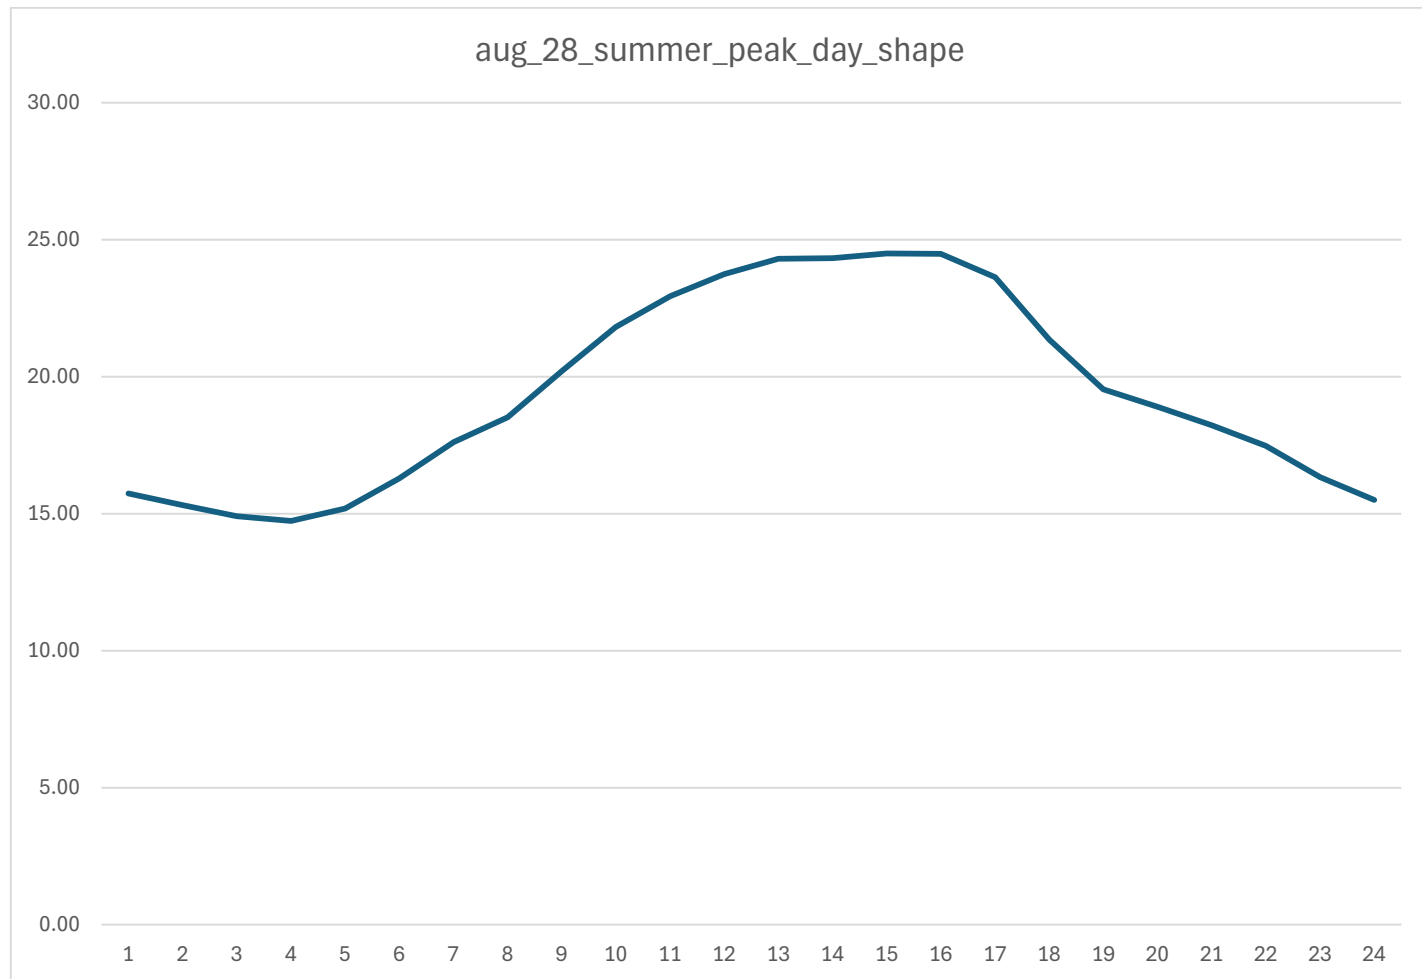

represent the average Duke Energy Kentucky Commercial and Residential customer on the summer peak day. While these profiles provide some indication of the difference between residential and commercial loads on a hot summer day, any given feeder may look different depending on the proportion of residential and commercial loads and particularly the type and size of the commercial load relative to the residential load.

PERSON RESPONSIBLE: Bruce L. Sailors – a., b.
Dominic “Nick” J. Melillo – c., d.

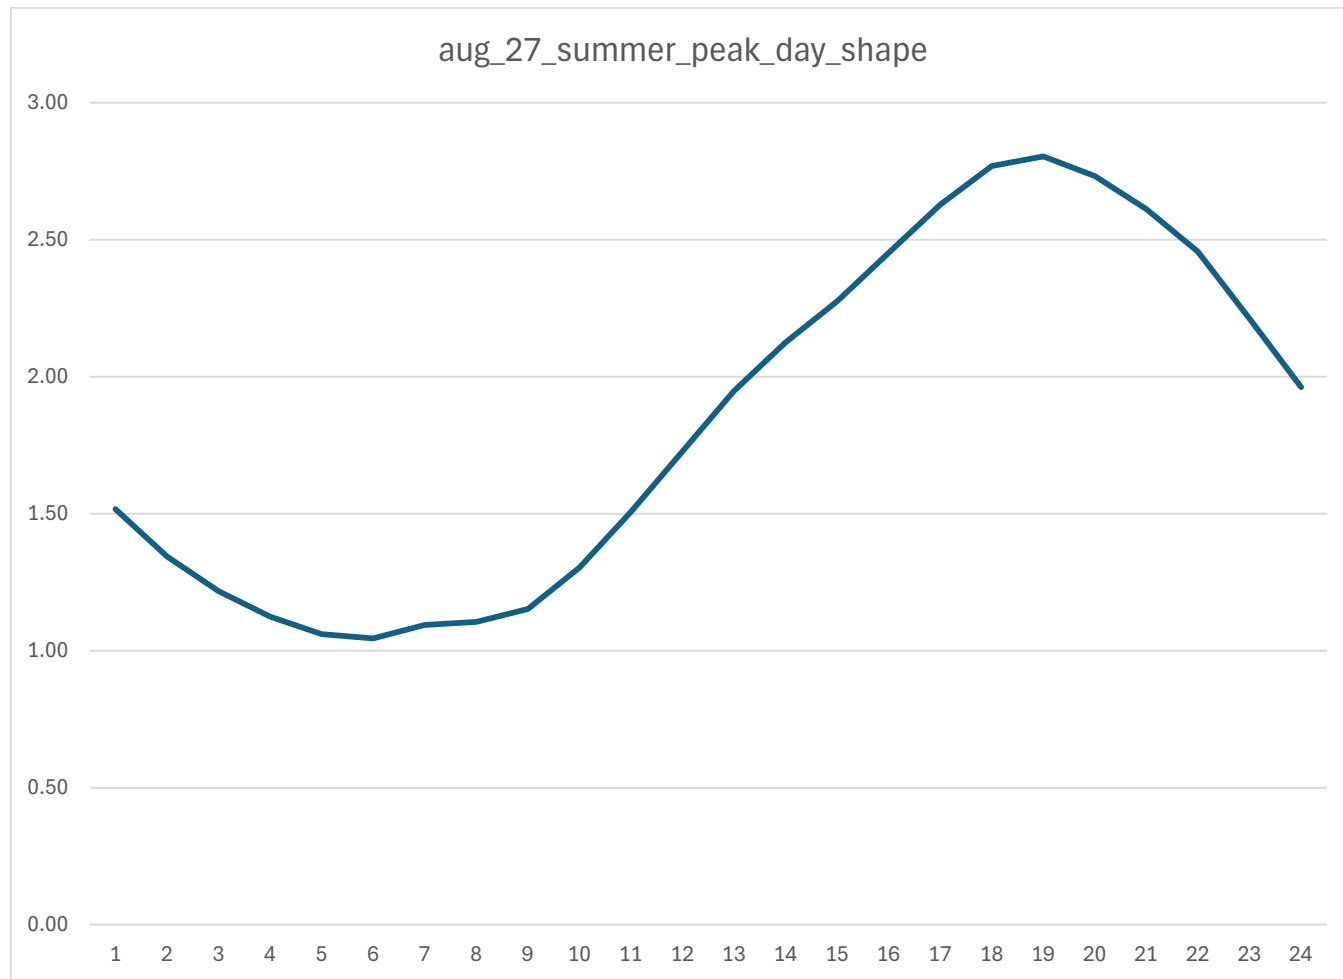

Duke Energy Kentucky System Peak Load (MWs)

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

STAFF-DR-02-007

REQUEST:

Refer to Sailers Direct Testimony, Public Attachment BLS-1, page 6.

a. Confirm that the 0.639 percent in Transmission Losses and the 4.304 percent in Distribution Losses is an annual average. If confirmed, provide the source of those figures. If not confirmed, indicate the period of time the losses are calculated over and provide the calculation, including any inputs and assumptions used.

b. Provide any monthly or hourly energy loss values for Duke Kentucky's transmission and/or distribution system in Duke Kentucky's possession.

RESPONSE:

a. The 0.639 percent Transmission Loss is the sum of 0.362%, the Peak Demand Loss (Variable) and 0.277%, the Energy Loss (Variable). The 4.304 percent Distribution Loss is the sum of 2.287%, the Peak Demand Loss (Variable) and 2.017%, the Energy Loss (Variable). The Peak Demand Loss (Variable) is the annual peak month loss divided by the annual peak. The Energy Loss (Variable) is the annual average loss percent. Please see STAFF-DR-02-007(a) Attachment (T Energy Loss Calcs and D Energy Loss Calcs tabs) for the detailed calculations. The period of time for the loss calculations is the 2024 calendar year.

b. Please see STAFF-DR-02-007(a) Attachment for the monthly energy loss values for Duke Energy Kentucky's Transmission (T Energy Loss Calcs tab) and

Distribution (D Energy Loss Calcs tab) systems.

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

CONFIDENTIAL STAFF-DR-02-008
(As to Attachment only)

REQUEST:

Refer to the Direct Testimony of John D. Swez (Swez Direct Testimony), page 18, line 17 through page 19, line 18.

- a. Explain why Duke Kentucky is unable to calculate the impact on PJM Billing Line Items charges or credits from behind the meter solar.
- b. Explain whether Duke Kentucky requested the information regarding its billing determinants and billing rates for the Billing Line Items from PJM.
- c. Provide the last 12 months of PJM bills related to Duke Kentucky. Provide a detailed explanation of the billing determinants and rates and how they are determined.

RESPONSE:

CONFIDENTIAL PROPRIETARY TRADE SECRET (As to Attachment only)

- a. Please refer to the response to STAFF-DR-01-006 and response to part (b) below.
- b. Duke Energy Kentucky has purchased software that allows the Company to access all available determinants supplied by PJM for each Billing Line Item charge or credit; thus, no request was made to PJM for the billing determinants. The unknowns discussed in STAFF-DR-01-006(a), regarding how PJM market participants would have changed their behavior in the market absent net metering customer generation, are not able to be obtained from PJM or anywhere, as these are counter-factual events that did not, in fact, occur.

c. Please see STAFF-DR-02-008 Confidential Attachment for the last 12 months of Duke Energy Kentucky PJM invoices. In addition, please refer to PJM Customer Guide to PJM Billing¹ and PJM Manuals 28² and 29³ for how Billing Line Item amounts are determined.

PERSON RESPONSIBLE: John D. Swez

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

STAFF-DR-02-009

REQUEST:

Refer to the Sailers Direct Testimony, Confidential Attachment BLS-1, Energy Inputs tab. Provide the PV Watts input assumptions used to generate the solar load profile, including the DC System Size (kW); Module Type; Array Type; System Losses; Tilt angle; Azimuth; and inverter efficiency.

RESPONSE:

All the inputs requested are documented in Mr. Sailers testimony attachment, Attachment BLS-2. The Company accepted all default values from PVWatts except to input the DC System Size and DC to AC Size Ratio to receive PVWatts output for a 1 kW-AC installation for Covington, KY. The Company obtains the output from a 1 kW-AC system so that the hourly outputs can be summed for use in the ACEGC calculation; the annual kWh output of a 1 kW-AC installation.

PERSON RESPONSIBLE: Bruce L. Sailers

Duke Energy Kentucky
Case No. 2025-00258
STAFF's Second Request for Information
Date Received: September 29, 2025

STAFF-DR-02-010

REQUEST:

Refer to Sailers Direct Testimony, page 4, Table 1: Net Metering Participation. Provide any solar production data from the 1,005 net metering participants shown and provide either annual solar production by customer (indicating which rate class each customer is billed under), or an annual average by rate class, indicating the number of customers included in each average.

RESPONSE:

The Company does not directly meter the output from customer generators and therefore does not have solar production data. The Company is unable to provide solar production data or the amount of energy consumed by the customer onsite from the solar installation. However, the Company does meter the amount of energy that is exported to the grid and provides annual reports to the Commission including information similar to what is requested above. Annual reports are filed with the Commission in regard to Case No. 2002-00240 and Case No. 2004-00393 by October 31, containing information on net metering customers as of August 31 each year. Although not solar production data, the Company can provide the following information for customers in Sailers Direct Testimony Table 1 regarding the amount of energy exported to the grid: please see STAFF-DR-02-010 Attachment. Please note that the Company is currently working to complete the 2025 annual net metering report that will contain an updated list of participation.

PERSON RESPONSIBLE: Bruce L. Sailers
