Daniel , I have attached a sample tariff that I updated to this email. Does the bulk loading station look right? Also we reduced the High school meter we have to a 2 in so now they fall under a different category so I removed their minimum bill part since that has now changed. Also , what do I add in the case number part at the bottom or will that be filled in once I submit this for review?

Actually, $9.85 per 1,000 gallons is the last rate step in the regular rate schedules.

Thank you for all this information. I have attached my tariff to this email. It looks like I will have to charge the rate of .01185 per gallon since its already on my tariff? Does that sound right?

Austin,

I found where we had directed a utility to update their bulk loading station rate via a non-recurring charge filing in 2020 (see link below). I've also included links to what the utility filed with the Commission. I think that would be the best way to add a bulk loading station rate to the tariff. It can be filed as a tariff filing. It would need to comply with 807 KAR 5:011, Sections 8 and 10 (see link below).

As far as support, I was told that the last rate step in the rate schedules should approximate the cost of water, so the bulk loading rate should be comparable to that. The rate should be set at a level where the district is at least not losing money on bulk loading sales.

If you have any questions, please let me know.

Thanks.

Daniel

I am looking to speak with someone about the proper method to add a bulk loading station to our tariff and how to determine the cost of water. Any information would be very helpful. Thank you.
