

Kentucky Public Service Commission,

On behalf of 814 CREDO Action members in Kentucky, we urge you to reject Kentucky Power's proposal to spend \$940 million on retrofits on the Big Sandy coal plant. Instead, you should require Kentucky Power to invest in clean and renewable sources of energy that can power Kentucky's economy without making local residents sick.

The attached public comments were collected by CREDO Action, and though they vary throughout, the messages within can be summed up as follows:

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

If you have any questions about these public comments, don't hesitate to contact me through the information provided below.

Sincerely,
Josh Nelson
Campaign Manager, CREDO Action

RECEIVED

APR 27 2012

PUBLIC SERVICE
COMMISSION

To The Public Service Commission:

We urge you to reject Kentucky Power Company's proposal to spend \$940 million retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it. This proposal will cause the KPC's customer rate payments to go up 30%, which will place an unnecessary and heavy financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. The PSC has a duty to make sure KPC follows the least-cost-reasonable option to protect citizens from unnecessary financial burden.

It's time to move Kentucky forward, and put us on a path to a clean energy future. We call on the Public Service Commission to make Kentucky Power choose the most cost-effective option and retire the Big Sandy coal plant. Replacing this ancient power plant with cost-effective efficiency programs and clean, renewable sources of energy is the least-cost-reasonable option. This will be a much better deal for consumers by bringing health benefits and energy bill savings to Kentuckians.

Sincerely,

Subject: Kentucky Power Rate Hike Request

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Just say NO to rate in cress our power bills r to high now.. When alot of us are on FIXED Incomes in Eastern Ky....They just got a rate in cress last yr they don't need NO More... They have not even done what they was to do before clean the right aways... They even have worker sleeping on the job and getting PAID for it ! So why should we pay more When people on a FIXED income has to pay more to put food on the table more in Gas prices more for Meds we take every day... If the get a rate in cress what are we to do to pay are bills put food on the tables and get our Meds ... What will we have to leave out each Mo to pay Higher Power bills ! Tell them to do there jobs and stop thinking of Profit's

There is no doubt in anyone's mind that KPC will pass this needless expense onto the backs of its customers. Families who are homeowners strapped with monthly mortgage payments are already burdened with many hundreds of dollars in energy expenses each month that are related to KPC and AEP's failure to maintain its powerline infrastructure that was badly damaged during the ice storm that struck Kentucky and particularly Eastern Kentucky a few years ago. This is just one more bad decision on KPC and AEP's part in trying to keep this coal burning plant in operation.

Someone needs to take a stand now and start the process of energy efficient progress which will be required in the future. Please take the first step and stop this nearly \$1 Billion mistake that the customers and taxpayers of Kentucky will have to bear.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Subject: Kentucky Power Rate Hike Request

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently received testimony in this case from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the pollution from the coal plant. PSC, please help move Kentucky toward participating in the rapidly growing clean energy economy!

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Wallace McMullen

Subject: Kentucky Power Rate Hike Request

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the pollution from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Dr. Rick Clewett

Subject: Kentucky Power Rate Hike Request

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

It's odd the LG&E and KU decide to retire their aging coal plants as the most cost effective plan going forward but KPC determines the opposite.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the pollution from the coal plant.

This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the pollution from the coal plant.

As the country's energy mix shifts to cleaner and more renewable energy, the price of coal based energy will increase. This is an unfair economic burden on rate payers.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Subject: Kentucky Power Rate Hike Request

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

I oppose the proposed the proposed scrubber construction and additional surcharge to Kentucky Power ratepayers.

Kentucky's Fifth Congressional District, where the Big Sandy plant is located and where many residents are Kentucky Power ratepayers, is one of the poorest in the Country. In the entire Country. That says to me that, in order to make positive, cost-effective changes, we need to be looking well into the future, which sometimes means making hard, unpopular decisions.

The Mission on the Kentucky Public Service Commission website reads: "The mission of the Kentucky Public Service Commission is to foster the provision of safe and reliable service at a reasonable price to the customers of jurisdictional utilities while providing for the financial stability of those utilities by setting fair and just rates, and supporting their operational competence by overseeing regulated activities."

Reasonable price? Approval of KPC's plan and surcharge would go against this.

Financial stability of the utilities and supporting operational competence? While maybe providing financial stability in the short term it would not over the long term, nor would approval of KPC's plan and surcharge be supporting any form of operational competence.

Fair and just rates? Approval of KPC's plan and surcharge would be applauding the opposite and selecting the least cost-effective option available.

All in all, approval of KPC's plan and surcharge would be completely antithetical to the stated mission of the PSC.

If this construction and rate increase is approved, what happens the next time there are regulations set in place that the Big Sandy plant must comply with? Another surcharge? Why not use this opportunity to encourage Kentucky Power to find real solutions, to become a leader in what is to come instead of allowing them to drag their feet with

actions that will only be more costly for everyone in the long run? I like planning for my future and I don't want a monthly reminder (that I can't afford) of a company who is not willing to do the same.

Thank you so much for your time,

Elizabeth Sanders
Whitesburg, KY resident and Kentucky Power ratepayer

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. Clean, renewable energy is a much better deal for Kentucky.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Mr. Danny Stamper

Mr. David Runge

Subject: Kentucky Power Rate Hike Request

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. Clean, renewable energy is a much better deal for Kentucky.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Mr. Robert Pendygraft

Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. Clean, renewable energy is a much better deal for Kentucky.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Mr. Howard Bowden

Get smart and get Green! Do not put the burden of \$940 million on the rate payers of Kentucky Power to pay for an out of date Coal plant. Be proactive and go with the more effective option of clean renewable energy and improve the health of those Kentucky citizens that now have to breathe the polluted air from the existing plant.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Ms. Frances Mican

Subject: Kentucky Power Rate Hike Request

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. Clean, renewable energy is a much better deal for Kentucky.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Subject: Kentucky Power Rate Hike Request

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. Clean, renewable energy is a much better deal for Kentucky.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
David Stockland

This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time the PSC starts doing what it's title suggest, Public Service, instead of accommodating the financial needs and schemes of outdated and dangerous utilities. I'm not just making up accusations here. I spent two years as an ad hoc member of the PSC when Pioneer Energy wanted to build a garbage burning plant in Clark County. A plant that would have wrecked our air and the Kentucky River, and would have broken the back of Kentucky's solid waste laws.

During that time I was amazed by the PSC's willingness to let Pioneer miss filing deadlines and completely ignore the criteria of their own FEIS.

Do your job, and protect the Commonwealth, not just the wealth of utilities.

Shut down Big Sandy and start mandating clean energy.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
John Maruskin

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. Clean, renewable energy is a much better deal for Kentucky.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Ms. Ann Cecil

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Ms. Ruth Bamberger

Subject: Kentucky Power Rate Hike Request

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. Clean, renewable energy is a much better deal for Kentucky.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Dear Kentucky Public Service Commission,

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. Clean, renewable energy is a much better deal for Kentucky.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Ms. TERESA RALSTON

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to retrofit the outdated and heavily polluting Big Sandy coal plant instead of retiring it. Kentucky Power says this is the lowest cost option and wants to charge ratepayers \$940 million so they can continue burning coal. This is costly proposal will place an unnecessary financial burden on ratepayers.

I live 5 miles from this plant. Dust/crud continually in the air. As a pastor, I get many people coming in for help with electric bills NOW. Can't imagine how it will be when AEP raises our rates to pay for their obstinacy. Let's be smart about it, and invest in other forms of energy.

The PSC recently heard testimony from Synapse Energy Economics and Kentucky Industrial Utility Customers stating that retrofitting the Big Sandy coal plant to continue burning coal is the least cost effective option and that the Big Sandy should be retired. Clean, renewable energy is a much better deal for Kentucky.

I urge the PSC to rule that KPC must replace this ancient power plant with cost-effective efficiency programs and clean renewable energy. This will be a much better deal for consumers, and will bring health benefits to the Kentucky citizens who currently bear the health costs of breathing the toxic emissions from the coal plant.

It's time to move Kentucky forward and put us on a path to a clean energy future. I call on the Public Service Commission to make Kentucky Power choose the most cost-effective option by retiring the Big Sandy coal Plant and replacing it with cleaner energy sources.

Sincerely,
Mrs. Donna Aros

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

John Brantley
230 N. 4th St.
Danville, KY 40422

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

Of all the possible options, the KPC proposal being considered by the PSC is the most wasteful, most polluting and in the longer term the least effective and least economical. There are other far better options, the most effective and benign will be to close the Big Sandy plant and replace it with renewables and a conservation program on the demand side. I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. Kentucky Power Rate Hike Request

I am downwind from Big Sandy, just a few miles, in Louisa KY. Our prayer list is full of cancer victims and there are a number of funerals every week. As the Big Sandy plant is the dirtiest emitter in Kentucky, I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause KPC's customer rates to go up 30%. God's Food Pantry serves about 500 families a month, and with gas prices at \$4/gal there's no way anyone will be able to afford a 30% increase in the electric bill. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Jorge Aros
211 Eldorado St.
Sonora, KY 42776

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Terry Foreman

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Thomas Crothers
679 Halifax Dr.
Lexington, KY 40503

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

Lexington, KY 40517

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

We've suffered enough pollution and environmental damage in the pursuit of cheap energy. Now we are supposed to put up with a giant rate hike AND dirty energy? That makes NO SENSE! Please, please, please, let's make alternative energy sources what Kentucky is known for, not dirty coal. UK, UofL and even some cutting edge local companies (like Wind Energy Corp) are at the forefront of energy research. Let's use those sources and close down this dirty coal plant. I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Kristina Pattison

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am a Kentuckian and am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air. I'm also concerned about replacing it with a plant that runs on natural gas, as "frakking" has wreaked huge amounts of havoc on every area in which it has been introduced. I would urge the Public Service Commission to encourage electric projects in Kentucky that use solar and wind.

Sincerely,

Elizabeth Stewart
3404 Gatewood Court
Lexington, KY 40517

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air. I have developed asthma as a direct result of air pollution. I was asthma free for 58 years but moving into an area with poor air quality it only took two years to develop my asthmatic condition. This isn't about me its about everyone's health. It's time to move on from power generation that negatively affects health to clean sustainably power sources.

Sincerely,

David Lynch
144 Towne Square Park
Lexington, KY 40511

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I live in the Kentucky coalfields, my neighbors are coal miners, but nonetheless, I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it. The retrofit will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air. In fact it increases air pollution in two ways, the AEP rate increases of the past few years have forced more and more of my neighbors to provide all or at least a portion of their heat from burning wood and/or coal in home stoves. Even higher rates will cause even more people to start wood/coal burning stoves. As an asthma sufferer, this winter has been the worst I've ever experienced due to the additional burden of smoke in the air from people trying to escape the high price of electricity.

Sincerely,

Sue Greer-Pitt

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Kiley Brown
1922 Deerwood Ave
Louisville, KY 40205

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Kelly Lewis
4304 Switzer Rd
Frankfort, KY 40601

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air. As a native Kentuckian I am ashamed of your delusional behavior regarding coal. The TV commercials are nothing but propaganda. Coal pollution sickens people and coal mining destroys the environment. How does it feel to stand up for well to do coal executives and lobbyists at the expense of everyone else?

Sincerely,

Lea Howard
1042 Sioux Trail
Frankfort, KY 40601

Kentucky Public Service Commission

This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air. I believe going the natural gas path for electricity will benefit Kentucky's economy by putting people to work in the gas industry, which is growing and growing in KY. KY coal isn't as clean as needed and it has already begun cutting back on mining, so bite the bullet and go natural gas! I live & work with both coal & gas here in KY and want to see cleaner technology at work.

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Missy Sorg

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Deangelis
10793 Gleneagle Drive
Union, KY 41091

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I was born and raised in northern KY and currently reside in Fort Mitchell. I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Steve Hegge
420 Highland Ave
Ft. Mitchell, KY 41017

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Barbara Clewett
3099 Kirklevington Dr Apt 151
Lexington, KY 40517

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air. This plant should be shut down unless and until it can meet the current clean air and water standards. Please, I beg you, do not rush this permit through.

Sincerely,

Charles Tubbs

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air. Instead we should be pouring money into alternative forms of energy like solar power and wind farming! And we have got to stop this insane "mountain top removal" that is totally destroying Appalachia!

Sincerely,

Elizabeth Packard

This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air. Maybe you don't care about the environment, or how coal dust seeps into the water from runoff and pollutes our land, but I do. We still need coal right now to power our nation, but it's causing too much damage to the environment. I say it should be a gradual weening off of coal. Please, don't approve this outrageous retrofitting of Big Sandy Coal Plant. Nobody wants to pay more for coal when we can't even pay our own bills.

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Debbie Wheeler
4673 Spring Creek Dr
Lexington, KY 40515

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

Kentucky Public Service Commission

Kentucky Power Rate Hike Request

I am writing to ask the Public Service Commission to reject Kentucky Power Company's proposal to spend \$940 million on retrofitting the outdated and heavily polluting Big Sandy coal plant instead of retiring it, which will cause the KPC's customer rates to go up 30%. This costly proposal would place an unnecessary financial burden on ratepayers and allow the Big Sandy plant to continue dumping pollution into Kentucky's air.

Sincerely,

Rafael Romero
Capitol Avenue
Sevilla, KY 41005

Kentucky Public Service Commission
