**Subject:** Big Rivers comments on environmental document

Adam, attached is a marked up version of changes from the original version. In addition, I offer these general comments.

- 1 Add an index
- 2 Update all values to CSAPR
- 3 Indicate how much reduction in emissions (in both percentage basis and actual allowances) will be required for 2012 and 2014
- 4 But do not propose solutions in this document
- 5 Need to highlight impact of NAAQS update more
- 6 We are trying to confirm heat input for Coleman 3, It shows about 30% higher than 1 and 2 for similar MW, so something is amiss

Do we even want to comment on old Hg and other tests that aren't consistent?

Eric
