Low-NOx Technology from Praxair

In the face of increasingly stringent global environmental regulations, customers look to us for solutions to their environmental emissions. Praxair gases are used by our customers to reduce pollution costs, improve productivity, energy efficiency, and to reduce manufacturing costs.

Through our oxygen-based combustion technologies, Praxair offers a range of services that helps customers use [oxygen](#) more effectively and efficiently, while meeting tough environmental regulations. As a leading provider of oxygen to the [chemical](#), [steel](#) and [glass](#) industries for over 50 years, Praxair is well known for its environmental compliance solutions and productivity improvements and now provides a new low-NOx emissions technology.

Praxair can reduce your NOx emissions by up to 60%.* And that's just the beginning. Read our [technical papers](#) to learn more.

* From air-fired, staged-combustion cases in lab, pilot, single commercial burner and full-scale boiler tests.
