Subject: FW: Emission testing schedule

Importance: Normal

An update on testing:

We have completed testing at the Coleman Station and will begin testing at the Wilson Station today.

Current Environmental testing schedule at Wilson;

7-14-11 – 417 net – normal blend – 7am to 9pm

7-15-11 - 417 net – normal blend – 7am to 9pm

7-16-11 – Run straight coal to unit 1st run and adjust for optimum performance.

7-18-11 – 417 net – straight coal – 7am to 7pm

7-19-11 – 417 net – straight coal – 7am to 7pm

7-20-11 – **290** net - straight coal – 8pm – 8am

7-21-11 – **290** net - straight coal – 8pm – 8am

Additional testing may be required the week of July 25 to complete testing at Wilson. The complexity of multiple sampling trains and recurrent weather conditions are presenting unforeseen delays as we move forward with the test schedule.

Anticipation is to begin testing at Green by July 28 then proceed to HMPL by August 5. I will be in contact with plant operations to schedule load as these dates approach.

Mike

Subject: Emission testing schedule

Following discussions with Bob and others, here is a revised test order:

Coleman in progress

Wilson Full load pet coke blend
 Full load Coal
 Partial load coal (one mill off)

Green Full load coal on one of the units
 Full load pet coke blend on the other unit

HMPL Full load both units

Should partial load testing at Wilson show any deterioration in environmental compliance, we will schedule a partial load test for one of the Green units

Mike Galbraith will coordinate with plant personnel for exact test dates and times

Eric
