**Importance:** Normal

---

Yes. I thought I would go ahead and get the allocations entered in the base case, so all I have to do when I get the first run is drop in the consumption and price.

You're referring to the 15-yr runs, correct?

Mike,

Could you provide the SO<sub>2</sub>, NO<sub>X</sub> Annual, and NO<sub>X</sub> Seasonal allowances allocated to Big Rivers for 2013-2026 under the base case (CAIR) and under the environmental case (CSAPR). The PCM runs should provide allowances consumed and the prices.

This should allow me to determine the amount of allowance expense each year under each scenario.
