**Subject:** One Smelter Close Information

Mark, FYI, As a follow up to our conversation this morning, I reviewed the analysis that Duane Braunecker provided and I confirmed that if one Smelter were to close we could lay-up the Wilson unit and Comply with CSAPR without building the Wilson FGD and the Green SCR. If we ran the other units at 100% capacity factor we would be required to purchase some allowances and the volume would be within our variability limit.

Bob
