Lindsay,

A correction below regarding the “base case” run that Bob asked for last week that is being run as we speak.

(this does leave a “base case” CSAPR by Gen with APM energy prices that has not been run to date.)

Sorry,

Mike T.

Lindsay,

I've added some clarification below just so we are all on the same page?

Let me know what else?

Thanks,

Mike T.

Mike,

Per our conversation, below is a recap of the runs I believe we still need.

**BASE CASE (CSAPR comply by equip) MATS compliance w/ ACI/DSI in 2016**

Recreate this Base Case used in the ECP with the EXACT assumptions used previously, but with the ACES price curve (please have ACES use the same curve that was used in scenarios 4-8, so it is comparable).

---

**REVISION TO RUNS DELIVERED ON 5/6/12**

Revise both the runs as shown below:

**No Century, No Coleman**

Mercury Investment Only

Century Exit 1/1/2014

Coleman Off 1/1/2014

ACES Price curve (Use the same price curve used in scenarios 4-8) **I've gone back and confirmed that this run did use the "original" APM energy.**

Don't allow generation beyond the variability limit **but up to the variability if needed**

-

**No Century, No Wilson**

Mercury Investment Only

Century Exit 1/1/2014

Wilson Off 1/1/2014

ACES Price curve (Use the same price curve used in scenarios 4-8) **I've gone back and confirmed that this run did use the "original" APM energy.**

Don't allow generation beyond the variability limit **but up to the variability if needed**

-

If you have any questions, please let me know.

Thanks for your help with these!
