Dear Sirs) RE: Case # 2012-00221 I totally disagree with the rate increases you're proposing; it's all backwards. The monthly charge was just raised in 2010 from $5 to $5.50, now you want to go to $13! The ones of rate increases should fall on those using the most energy, by increasing the kilowatt-hour charge by more than the proposed 15%. Where are the incentives for people, like myself, with renewable energy systems? If anything, my monthly service charge should go down or I should be paid a premium for the electricity I provide (think solar energy credits). Finally, in view of the sense of urgency about climate change, everyone has a stake in ensuring a healthy planet; burning fossil fuels should be minimized as much as possible.
