Re: PSC Case 2016-00274
Solar Generating Facility
Shelby County Kentucky

Dear Dr. Matthews,

Our subdivision is off Conner Station Road directly across the road from 35 acres that LGE/KU has proposed locating a solar generating facility on. I understand the site was selected because it is VISIBLE to I-64 and therefore, would be a great marketing tool for the utility to show the public they are working on alternative energy. This 35 acre parcel was until very recently part of a larger farm, and still adjoins that farm which is a Saddlebred horse broodmare farm.

This facility would be an eyesore in a neighborhood consisting 100% of well-maintained homes and farms. It would likely affect our property values adversely. It would be using agricultural/residential property for industrial uses. Why can't it be located on a site more suitable for a project like that?

I am opposed to locating a solar facility there, and would be happy to explain why to anyone that cares. Please make my very strong opposition known.

Thank you,

Sharon Karem
