RE: Martin County Water District
PSC Case No. 2016-00142

Dear Mr. Greenwell:

Enclosed please find an original and one (1) copy of Motion for Confidentiality and the redacted Martin County Water District's Response to information requested in Appendix H of the Public Service Commission's Order entered April 11, 2016 regarding the above matter.

Thank you for your attention to this matter.

Very truly yours,

BRIAN CUMBO

Martin County Water District

Before the Public Service Commission

Martin County Water District ("Martin District"), a water district organized pursuant to KRS Chapter 74, owns and operates facilities that treat and distribute water to approximately 3,533 customers in Martin County, Kentucky.

Joe Hammond
Jhammond58@bellsouth.net

PSC Data Request Response Case No. 2016-00142

Questions 1-17 are related to ongoing Management Audit recommendations steps.

1. Refer to the 2007 Management Audit Action Plan, Recommendation 11-1

Step 3. Provide a current list of work orders for leak repairs, meter sets, meter rereads, meter pulls, low pressure, meter reads (in and out), tap relocates, and similar distribution work, and explain how Martin District addresses these work orders.

- a. Exhibit #1

2. Refer to the 2007 Management Audit Action Plan, Recommendation 11-1

Step 4. Provide the following:

- A. The number of tap requests processed and completed since October 6, 2015 (the date the new NRC tariff was issued).

- a. Exhibit #2
- b. 5 Tap request

- B. The number of tap request pending as of November 13, 2015.

- c. Exhibit #3
- d. No tap request pending

- C. An estimate of when Martin District expects to complete the taps outstanding as of November 13, 2015.

- e. No taps outstanding

3. Refer to the 2007 Management Audit Action Plan, Recommendation 11-1

Step 5. Provide the following:

- A. The number of turn-offs performed since October 6, 2015.

- a. Exhibit #4

- B. The number of outstanding or past-due accounts.

- b. 137 Customers - 30-60-90 days

4. Refer to the 2007 Management Audit Action Plan, Recommendation 11-1

Step 7. Provide the following:

- A. Identify the number and location of additional pumps Martin District plans to install to allow pumping at night. For each, provide an estimate of when Martin District plans to install the pumps.
 - a. None at this time
- B. A comparison of electricity costs for each month for the past two years.
 - b. Electricity comparison for 2014 - 2015
 - c. Exhibit #5

5. Refer to the 2007 Management Audit Action Plan, Recommendation 11-1

Step 9. Provide the following:

- A. Explain whether or not Martin District will reach the goal of five treatment plant operators.
 - a. At present the District has two (2) part-time and two (2) full-time operators.
 - b. The District has one employee full-time training for his class II operator license. He will be testing in July 2016. Hopefully by January 2017, he will be ready for his class III.
 - c. As everyone knows, treatment operators are difficult to find and to hire. In-house training is a must and that is the District's goal.

6. Refer to the 2007 Management Audit Action Plan, Recommendation 11-2

Step 1. Provide the following:

- A. The amount and percentage of line loss on each system (A and B) through December 31, 2015.
 - a. Amount of water loss = 393.097 million gallons
 - b. Percentage = 62%
- B. The amount and percentage of line loss for calendar years 2014, 2013, and 2012.
 - a. Amount of water loss 2012 = 370.087 million gallons
=56% Loss

- b. Amount of water loss 2013 = 399.816 million gallons = 61% Loss
- c. Amount of water loss 2014 = 376.606 million gallons = 52%

7. Refer to the 2007 Management Audit Action Plan, Recommendation 11-1

Step 2 and 3. Provide the following:

- A. Identify known leaks and prioritize the mains and services for replacement or repair based on volumes.
 - a. Pigeon Roost under railroad tracks – casing broke and broke a 4" line. Repaired March 2016. Leak detection assisted by KRWA and District personnel.
 - b. Little Peter Cave, Wolf Creek Area, estimated 2 to 3 million a month. Repaired April 2016. Leak detection assisted by KRWA and District personnel.
 - c. Elk Creek, Beauty KY, estimated 3 to 3.5 million a month. Repaired March 2016. Leak detection assisted by KRWA and District personnel.
- B. An estimate of when replacement or repair will be undertaken.
 - a. This will be an ongoing process until water loss is under control.
 - b. Replacement of old water lines will be determined when funding is in place.
 - c. Repairs to line breaks will be taken care of ASAP.

8. Refer to the 2007 Management Audit Action Plan, Recommendation 11-2

Step 4. Other than identification (of cheater bars) when reading meters, explain how Martin District is addressing this recommendation.

- a. Since August 2015, found 2 cheater bars and turned over to the County Attorney for prosecution.
- b. One customer is now paying his bill due to the County Attorney's action.
- c. No update on the other one.

9. Refer to the 2007 Management Audit Action Plan, Recommendation 11-2

Step 5. Provide an update of Martin District's progress in replacing or repairing all excessively leaking mains and services as outlined in Step 5. Identify any decreases in water loss resulting from it efforts.

- a. Reference Step 2 and 3 above. The leaks mention above have been repaired. Our storage tanks in these areas are maintained at the appropriate levels. Water loss in these areas will be determined at the end of the month.

10. Refer to the 2007 Management Audit Action Plan, Recommendation 11-3

Steps 1-4. Provide Martin District's formal, written preventive maintenance program.

- a. The District has a Water Loss and Leak Detection Program for Preventive Maintenance.
- b. Exhibit #6
- c. The District will begin to prepare a complete Preventive Maintenance Plan for all assets in the District.

11. Refer to the 2007 Management Audit Action Plan, Recommendation 11-5

- a. After consulting with the Health Inspector, concerning the water shed, he is aware of the situation and monitors the area where residents live. No complaints at this time.

12. Refer to the 2007 Management Audit Action Plan, Recommendation 11-6

Steps 1, 2, 3, and 6. Other than working with the electric providers to reduce power outages, explain how Martin District is addressing this recommendation.

- a. The District has purchased a 300kw mobile generator that can run the plant or any other pump station in the system. The District has spent approximately \$23000.00 for the generator. This has and will continue to assist the District in covering our power outages.
- b. Also, the power company has been clearing trees from overhead power lines.

13. Refer to the 2007 Management Audit Action Plan, Recommendation 111-1

Other than working with the Big Sandy ADD, explain what internal or other external steps Martin District is taking to address this recommendation.

- a. Continue to meet with BSADD, KRWA, PSC, and Division of Water planning and prioritizing our system to comply with the rules and regulation set forth for the District.
- b. The District will evaluate the upgrades made to the Capital Improvement Plan of 2003 and improve the Plan to current needs of the system. Plans updated (03/08/2016).
- c. Exhibit #7

14. Refer to the 2007 Management Audit Action Plan, Recommendation 111-2

Steps 1 and 2. Provide the following:

- A. Identify the water loss reduction related construction projects undertaken in the past year and identify those planned for the next six months.
 - a. The District is replacing old service lines and as funding permits, replacing old main lines.
 - b. Training and assistance from KRWA pertaining to the proper technique in locating hard to find leaks and to maintain proper records to ascertain when a leak occurs and repair and track the amount of water loss. This process will continue throughout the daily process of the District.
 - c. Replacing 100 Radio Read meters in the Wolf Creek Area. If funding becomes available, the District plans are to continue replacing all manual read meters. This will help with water loss and theft of services.
 - d. The District believes that each project identified above will contribute to less water loss.

15. Refer to the 2007 Management Audit Action Plan, Recommendation IV-3

Provide a report of pending disconnects for 30-60-90 days, for the most recent date, available at the time of your response.

- a. Exhibit #8

16. Refer to the 2007 Management Audit Action Plan, Recommendation V-4

Steps 1, 2, 3 and 4. Provide the following:

- A. External audit reports for years 2013, 2014, and 2015 when completed.

- a. The audit firm of White and Associates, PSC, Richmond, KY has been engaged to complete audits for the years in question. The projected completion dates are early summer 2016. Copies will be forwarded upon receipt.
 - B. If any of these reports are complete, provide an estimate of when each audit will be completed.
 - b. No audits are complete at this time.
17. Refer to the 2007 Management Audit Action Plan, Recommendation V-5
- Steps 1 and 2: Provide a description of the duties of the Business Manager position.
- a. Exhibit #9
18. Refer to the 2007 Management Audit Action Plan, Recommendation V-5
- A. Provide a copy of each written complaint or electronic mail message containing a complaint concerning water service received by Martin District during the period January 1, 2013 to the present. Include with the response a copy of Martin District's response to the complaint. If Martin District has not retained documentation of the complaints, explain why each document has not been retained.
 - a. 2013 - 2016 Exhibit #10
19. Provide a schedule that contains the date, time, and duration of each event in which Martin District was not in compliance with 807 KAR 5:066, Section 5(1). During the period January 1, 2013, to present.
- a. The District uses our Telemetry system to monitor the pressure (both Suction and Discharge) throughout our system.
 - a. Exhibit #11
 - b. Beginning this month, (April 2016) a pressure recording device will be installed in different areas of the system and charts maintained.
20. Provide a copy of each public notification that Martin District has been required to provide to its customers pursuant to federal or state drinking water regulations during the period January 1, 2013, to present.
- a. Exhibit #12
21. Provide a copy of all communication between Martin District and the Kentucky Division of Water, including its regional offices, during the period January 1, 2013, to present.

- a. Researching files to completely comply with this request.
- b. Exhibit #13

22. Refer to the Public Service Commission's Utility Inspection Report for Martin District dated December 23, 2014. Provide the following:

- A. Explain why Martin District failed to produce pressure surveys that showed a continuous 24-hour pressure recording for a minimum of one week per month as required by 807 KAR 5:066, Section 5(2).
 - a. Ongoing research as to the fail process of the pressure surveys required by 807 KAR 5:066, Section 5(2).
 - b. Policies have been implemented effective April 1, 2016 to be fully compliant.
- B. Explain Martin District's procedure for monitoring and documenting withdrawals from Martin District by fire departments.
 - c. Reports have been presented to the Fire Departments to complete the withdrawals from the Martin District's system, however, no cooperation.
- C. For each fire department that made a withdrawal from the Martin District system for the purpose of extinguishing fires or training purposes during the period January 1, 2013, to present, provide a copy of the fire department's estimate of the withdrawal.
 - d. Estimates were made by the District's Office since no reports were present for withdrawals and placed on the water loss report as estimates.
- D. For any instance in which a fire department failed to provide an estimate of a withdrawal during the period January 1, 2013, to present, state the actions that Martin District took concerning the failure.
 - e. A meeting was held with the County Judge Executive the Chairman of the Board and Business Manager, concerning the lack of water withdrawal reports from the Fire Departments and was informed that the Judge Executive would withhold funds from the Fire Departments.
- E. Provide a copy of each record kept by Martin District pursuant to 807 KAR 5:006, Section 26(3), for the period January 1, 2015, to date.
 - f. The District will be presented with a Utility Inspection Checklist for approval at the next meeting on May 24, 2016. The Inspection Checklist will then be sent to the Commission for review.

23. Identify each contract that Martin District has with another water system for the purchase or sale of water. For each contract, state the date the contract was filed with the Commission.
- a. Mountain Water District (04/16/1992)
 - b. Paintsville Utilities (05/01/2013)
 - c. Prestonsburg Utilities (Agreement (01/15/1998))
24. Confirm whether Martin District is currently providing water service to the United States Penitentiary, Big Sandy, and if not, explain why Martin District is unable to provide water service to the federal prison.
- a. The District supplies water to the Honey Branch Tank and that water pumped is metered at the pump station, located at the entrance to the Honey Branch Industrial Park. Martin County customers or businesses located on the Industrial Site and on New Route 3, Davella Road, Brookview Apartments, and Holding Hills Trailer Park are supplied by the Honey Branch Tank. The water supplied to District's customers is metered by the outgoing meter at the pump station. The difference in water going to the Honey Branch Tank and water supplied to the Martin County customers is purchased by Prestonsburg Utilities at \$3.05 per thousand. If we do not pump sufficient amount of water to supply our businesses and customers mention, we must pay Prestonsburg Utilities \$3.05 per thousand. Prestonsburg Utilities has the Contract with the United States Prison

VERIFICATION

I, Joe Hammond, of the Martin County Water District, hereby verify that the responses and exhibits attached hereto are true and correct to the best of my knowledge.

Exhibit #6
Water Loss and Leak Detection Program

**Martin County Water District
Water Loss Plan
February 2016**

Steps to follow:

- Read the master meters daily and at the same time each day. At a minimum, they should be read Monday through Friday. This will minimize water loss due to a large leak that can go undetected for a week or month.
- Divide the distribution system into zones or subsections where possible and calculate water loss for each zone. This will allow for the prioritizing of work based upon the severity of the problem in a particular zone.
- Utilize computer billing software to generate water loss reports for sections or zones as well as to generate an overall water loss report.
- Install bypass monitor meters as needed to isolate lines with potential leaks. A 5/8- x 3/4- inch meter will suffice for each 100 customer section of line.
- Install a 2 – inch bypass monitor meter at water storage tanks to isolate sections of the line with potential leaks during the night (1:00 a.m. to 4:00 a.m.)
- Utilize pressure recordings to detect fluctuating pressures and abnormally low or high pressures in distribution systems lines.
- Test and change-out all meters according to Kentucky Public Service Commission (PSC) regulations. PSC regulations require residential meters to be tested and changed-out in 10-year intervals. Four-inch and larger meters are to be tested annually.

- It may be feasible to hire a part-time operator to utilize leak detection equipment to search for leaks. A portion of the distribution system could be covered each month.
- Identify sections of pipe in the distribution system with the most frequent line breaks. Budgeting for infrastructure replacement is imperative in any water utility.
- Having a main transmission line from the master meter to a water storage tank will reduce pressure fluctuations in the distribution system and result in fewer line breaks.
- Provide the necessary resources for manpower and equipment to properly maintain the distribution system appurtenances such as gate valves, pressure reducing valves, and hydrants.

COMPONENTS OF A WATER LOSS PREVENTION PLAN

How do the terms "water loss" and "weight gain" relate? Can it be that apathy, procrastination, or plain idleness might apply to both situations? Definitely, good intentions abound with either problem. No one wants to be overweight, just as no one who is responsible for the management and operation of a water utility wants to have excessive water loss. How do we attack these problems? In either case, we must identify the root of the problem, focus on a solution and stick with it! How many times have we heard the phrase, "If you fail to plan, you plan to fail." A good plan is the key to any long-term solution.

A person's physical and psychological make-up has a huge impact when attempting to solve the weight problem. Heredity affects us in many ways, but especially in regards to our ability to lose weight. What about the person who accepted the position of manager and soon learned that they had inherited an inadequately operated water system?

Age is another common factor in both problems. A water distribution system that was installed in the WPA days of the 1930's will most likely experience problems that newly installed water lines will not possess. The older that I get, the harder it is to keep the weight off! We can list other analogies such as our body shapes and sizes compared to the geographical terrain of our utilities and our distribution system sizes. However, let's get going with a proactive approach to the problem of water loss.

Accurate records are vital to any water loss prevention plan. How do we know the status of our water loss if we do not keep records? There is a water loss template that is available for download from the Kentucky Rural Water Association website (www.krwa.org). This Excel spreadsheet, or a similar record keeping system, can be utilized in a preliminary water audit. The initial step in water loss prevention is the water loss calculation. Secondly we must locate and eliminate all water leaks. Sounds easy, doesn't it?

The following steps can be utilized to prevent or reduce water loss and should be incorporated into a water loss prevention plan:

1. Read the master meters daily and at the same time each day. At a minimum, they should be read Monday through Friday. This will minimize water loss due to a large leak that can go undetected for a week or month.
2. Read all meters in the distribution system within a 3- to 5-day window. When the meters are read over a

2-week period, this will cause fluctuations of monthly water loss numbers. However, these numbers will average out over a year's period of time.

3. Divide the distribution system into zones or subsections where possible and calculate water loss for each zone. This will allow for the prioritizing of work based upon the severity of the problem in a particular zone.
4. Utilize computer billing software to generate water loss reports for sections or zones as well as to generate an overall water loss report.
5. Install bypass monitor meters as needed to isolate lines with potential leaks. A 5/8- x 3/4-inch meter will suffice for each 100-customer section of line.
6. Install a 2-inch bypass monitor meter at water storage tanks to isolate sections of the line with potential leaks during the night (1:00 a.m. to 4:00 a.m.)
7. Utilize pressure recordings to detect fluctuating pressures and abnormally low or high pressures in distribution system lines.
8. Test and change-out all meters according to Kentucky Public Service Commission (PSC) regulations. PSC regulations require residential meters to be tested and changed-out in 10-year intervals. Four-inch and larger meters are to be tested annually.
9. It may be feasible to hire a part-time operator to utilize leak detection equipment to search for leaks. A portion of the distribution system could be covered each month.
10. Identify sections of pipe in the distribution system with the most frequent line breaks. Budgeting for infrastructure replacement is imperative in any water utility.
11. Having a main transmission line from the master meter to a water storage tank will reduce pressure fluctuations in the distribution system and result in fewer line breaks.
12. Provide the necessary resources for manpower and equipment to properly maintain the distribution system appurtenances such as gate valves, pressure reducing valves, and hydrants.

Today's advanced technology can certainly enhance our water loss prevention plan. Computers not only utilize software for spreadsheets to calculate water loss expediently, but can be used in a variety of ways to identify areas of the distribution system with potential leaks. Both master meters and customer meters can be read by satellites or other automated meter reading mechanisms.

Telemetry/SCADA systems operated with computers can produce trend charts for water flows, water pressures, and water levels in storage tanks. This kind of data is valuable in determining where leaks are or are not prevalent. Computers analyze hydraulic data to determine if theoretical and actual water flows and water pressures in the distribution system match. Computerized maps with GPS and GIS data are beneficial when used properly. A water utility's budget is the major limiting factor as to why technology is not used more frequently.

By industry standards, more than 15 percent water loss in a rural system is unacceptable. Probably, no one realizes this more than the managers of water districts, water associations, and investor-owned utilities under the jurisdiction of the Kentucky Public Service Commission. Just as we should be concerned with our health due to being overweight, the PSC is concerned with the financial health and well-being of water utilities under their jurisdiction in Kentucky. PSC inspectors routinely discuss water loss during their inspections. When a water system exceeds 15 percent water loss on their annual report to the PSC, a deficiency is issued.

Numerous water systems' response to the PSC's Deficiency Tracking Reports (DTR) has been deemed unacceptable by PSC. A common request from PSC to the water system with a deficiency due to water loss is for a water loss control plan. A good water loss control plan should include the above-mentioned components with a time frame to implement the improvements and follow-up evaluations to measure the success of the plan.

Whether we are weighing in or wading in, we should always do so with a goal in mind. We cannot continue to ignore our problem and hope it resolves itself. Just as there are various diets to control an individual's weight, there are various methods for controlling water loss.

Let's start implementing all of our good intentions!

Exhibit #12
Public Notification

Notice by Martin County Water District - System ID#: KY0800273
Your water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did (are doing) to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Testing results from 1/1/2013 through 3/31/2013 show that our system exceeds the standard, or maximum contaminant level (MCL), for trihalomethanes (THM) and haloacetic acids (HAA). The standard for THM is 0.080 mg/L and the standard for HAA is 0.060 mg/L. These are determined by averaging all samples collected by our system for the last 12 months. The level of THM averaged our system for 1/1/2013 to 3/31/2013 was 0.083 mg/L and HAA was 0.088 mg/L.

- There is nothing you need to do. You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water.

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

We are working to minimize the formation of trihalomethanes and haloacetic acids while ensuring we maintain an adequate level of disinfectant. We have taken additional steps to change disinfectant types/levels, remove natural organic matter, and increased flushing of water lines to determine if our efforts have been effective. We are also monitoring water storage tank levels and water flow patterns within the distribution system. We anticipate resolving the problem within the next quarter.

For more information, please contact John Mills at (606) 298-3885 or 397 E Main St. Suite 140, Inez, KY 41224

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

In 2012, Martin County Water District detected 13 contaminants in the drinking water and none of them were above the EPA accepted level for drinking water. Please go to www.krwa.org/2012ccr/martincounty.pdf to view your 2012 annual water quality report and learn more about your drinking water. This report contains important information about the source and quality of your drinking water. To speak with someone about the report, please call (606) 298-3885. If you would like a paper copy of the 2012 Annual Water Quality Report mailed to your home please check the paper copy box and mail back with your payment or call (606) 298-3885, Mail a copy

Notice by Martin County Water District - System ID#: KY0800273

Your water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did (are doing) to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Testing results from 1/1/2013 through 3/31/2013 show that our system exceeds the standard, or maximum contaminant level (MCL), for trihalomethanes (THM) and haloacetic acids (HAA). The standard for THM is 0.080 mg/L and the standard for HAA is 0.060 mg/L. These are determined by averaging all samples collected by our system for the last 12 months. The level of THM averaged our system for 1/1/2013 to 3/31/2013 was 0.083 mg/L and HAA was 0.088 mg/L.

- There is nothing you need to do. You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water.

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

We are working to minimize the formation of trihalomethanes and haloacetic acids while ensuring we maintain an adequate level of disinfectant. We have taken additional steps to change disinfectant types/levels, remove natural organic matter, and increased flushing of water lines to determine if our efforts have been effective. We are also monitoring water storage tank levels and water flow patterns within the distribution system. We anticipate resolving the problem within the next quarter.

For more information, please contact John Mills at (606) 298-3885 or 397 E Main St. Suite 140, Inez, KY 41224

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

In 2012, Martin County Water District detected 13 contaminants in the drinking water and none of them were above the EPA accepted level for drinking water. Please go to www.krwa.org/2012ccr/martincounty.pdf to view your 2012 annual water quality report and learn more about your drinking water. This report contains important information about the source and quality of your drinking water. To speak with someone about the report, please call (606) 298-3885. If you would like a paper copy of the 2012 Annual Water Quality Report mailed to your home please check the paper copy box and mail back with your payment or call (606) 298-7439, Mail a copy

Notice by Martin County Water District – System ID#: KY0800273

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did (are doing) to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During 2/1/2013 – 2/28/2013, we did not complete all monitoring or testing for chlorine and turbidity, and therefore cannot be sure of the quality of your drinking water during that time.

There is nothing you need to do at this time. You may continue to drink the water. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

By the 10th of each month we must submit a Monthly Operation Report (MOR) to the Division of Water. The MOR for February 2013 did not arrive by the required deadline and this caused three violations. One violation for not submitting the MOR by the required deadline, another for not submitting daily chlorine results, and another for failing to submit the daily turbidity readings. (The chlorine results and turbidity readings are contained within the MOR.) We have modified our procedures to assure that the MOR arrives by the required deadline.

For more information, please contact John Mills at (606) 298-3885 or 387 E Main St. Suite 140, Inez, KY 41224

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

Notice by Martin County Water District – System ID#: KY0800273

Template 2-6 Turbidity

Our water system recently violated a drinking water requirement. Although this was not an emergency, as our customers, you have a right to know what happened, what you should do, and what we did (are doing) to correct this situation. We routinely monitor your water for turbidity (cloudiness). This tells us whether we are effectively filtering the water supply. Water samples for January 2014 showed that 5.4 percent of turbidity measurements were over 0.3 turbidity units – the standard is that no more than 5 percent of samples may exceed 0.3 turbidity units per month. The turbidity levels are relatively low. However, their persistence is a concern. Normal turbidity levels at our plant are 0.1 units. This is not an emergency. If it had been, you would have been notified within 24 hours.

- There is nothing you need to do. You do not need to boil your water or take other actions. We do not know of any contamination, and none of our testing has shown disease-causing organisms in the drinking water.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1-800-426-4791.

Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease causing organisms. These organisms include bacteria, viruses, and parasites which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches. These symptoms are not caused only by organisms in drinking water. If you experience any of these symptoms and they persist, you may want to seek medical advice.

We made repairs to our equipment. We inspected and cleaned the filters. The problem is resolved. For more information, please contact John Mills at (606) 298-3885 or 387 E Main St. Suite 140, Inez, KY 41224.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

Notice by Martin County Water District – System ID#: KY0800273

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did (are doing) to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Testing results from 7/1/2014 through 9/30/2014 show that our system exceeds the standard, or maximum contaminant level (MCL), for trihalomethanes (THM) and haloacetic acids (HAA). The standard for THM is 0.080 mg/L and the standard for HAA is 0.060 mg/L. These are determined by averaging all samples collected at each sampling location for the last 12 months. The level of THM averaged at one of our system's locations for 7/1/2014 to 9/30/2014 was 0.101 mg/L and HAA was 0.081 mg/L.

- There is nothing you need to do. You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water.

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

We are working to minimize the formation of trihalomethanes and haloacetic acids while ensuring we maintain an adequate level of disinfectant. We have taken additional steps to change disinfectant levels, remove natural organic matter, and increased flushing of water lines to determine if our efforts have been effective. We are also monitoring water storage tank levels and water flow patterns within the distribution system. We anticipate resolving the problem within the next quarter but the compliance calculation is based upon annual averages and it may be several quarters before compliance is achieved.

For more information, please contact John Mills at 606-298-3885 or 387 E Main St. Suite 140, Inez, KY 41224.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). Printing Instructions

This template is designed to print the notice on the back of the water bill sheets prior to printing the water bills using procedures the same as printing a letter.

After the notice has been printed to all sheets place the stack of sheets upside down on a flat surface and place a weight on the stack to remove the curl.

When the stack of sheets have cooled and straightened print the water bills as usual.

Notice by Martin County Water District – System ID#: KY0800273

Our water system recently violated a drinking water requirement. Although this was not an emergency you have a right to know what happened.

We routinely monitor your water for turbidity (cloudiness). This tells us whether we are effectively filtering the water supply. On 2/23/2015 we had a turbidity result of 1.195 NTU. This was above the standard of 1.0 NTU. Water samples for February 2015 showed that 6.58 percent of turbidity measurements were over 0.3 turbidity units – the standard is that no more than 5 percent of samples may exceed 0.3 turbidity units per month. The turbidity levels are relatively low. However, their persistence is a concern. Normal turbidity levels at our plant are 0.12 units. This is not an emergency. If it had been, you would have been notified within 24 hours.

- There is nothing you need to do. You do not need to boil your water or take other actions. We do not know of any contamination, and none of our testing has shown disease-causing organisms in the drinking water.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1-800-426-4791.

Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease causing organisms. These organisms include bacteria, viruses, and parasites which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches. These symptoms are not caused only by organisms in drinking water. If you experience any of these symptoms and they persist, you may want to seek medical advice.

High turbidity on top of the filters occurred when a rake motor failed and due to high demand we had to continue operations. The problem was resolved within three days. For more information, please contact John Mills at (606) 298-3885 or 387 E Main St. Suite 140, Inez, KY 41224.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

Notice by Martin County Water District – System ID#: KY0800273

Our water system recently violated a drinking water requirement. Although this was not an emergency you have a right to know what happened. We routinely monitor your water for turbidity (cloudiness). This tells us whether we are effectively filtering the water supply. On 2/23/2015 we had a turbidity result of 1.195 NTU. This was above the standard of 1.0 NTU. Water samples for February 2015 showed that 6.58 percent of turbidity measurements were over 0.3 turbidity units – the standard is that no more than 5 percent of samples may exceed 0.3 turbidity units per month. The turbidity levels are relatively low. However, their persistence is a concern. Normal turbidity levels at our plant are 0.12 units. This is not an emergency. If it had been, you would have been notified within 24 hours.

- There is nothing you need to do. You do not need to boil your water or take other actions. We do not know of any contamination, and none of our testing has shown disease-causing organisms in the drinking water.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1-800-426-4791.

Notice by Martin County Water District – System ID#: KY0800273

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did (are doing) to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Testing results from 4/1/2015 through 6/30/2015 show that our system exceeds the standard, or maximum contaminant level (MCL), for trihalomethanes (THM) and haloacetic acids (HAA). The standard for THM is 0.080 mg/L and the standard for HAA is 0.060 mg/L. These are determined by averaging all samples collected at each sampling location for the last 12 months. The level of THM averaged at one of our system's locations for 4/1/2015 to 6/30/2015 was 0.088 mg/L and HAA was 0.077 mg/L.

- There is nothing you need to do. You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water.

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

We are working to minimize the formation of trihalomethanes and haloacetic acids while ensuring we maintain an adequate level of disinfectant. We have taken additional steps to change disinfectant levels, remove natural organic matter, and increased flushing of water lines to determine if our efforts have been effective. We are also monitoring water storage tank levels and water flow patterns within the distribution system. We anticipate resolving the problem within the next quarter but the compliance calculation is based upon annual averages and it may be several quarters before compliance is achieved.

For more information, please contact John Mills at 606-298-3885 or 387 E Main St. Suite 140, Inez, KY 41224.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

THM & HAA Stage 2
DBPR Template 2-19

Insert water system name and ID# in header. Insert compliance period begin date, end date, and average level. Remove brackets. Do not modify mandatory language!

Printing Instructions

This template is designed to print the notice on the back of the water bill sheets prior to printing the water bills using procedures the same as printing a letter.

After the notice has been printed to all sheets place the stack of sheets upside down on a flat surface and place a weight on the stack to remove the curl.

When the stack of sheets have cooled and straightened print the water bills as usual.

Notice by Martin County Water District – System ID#: KY0800273

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did (are doing) to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Testing results from 7/1/2015 through 9/30/2015 and 10/1/2015 through 12/31/2015 show that our system exceeds the standard, or maximum contaminant level (MCL), for trihalomethanes (THM) and haloacetic acids (HAA). The standard for THM is 0.080 mg/L and the standard for HAA is 0.060 mg/L. These are determined by averaging all samples collected at each sampling location for the last 12 months. The level of THM averaged at one of our system's locations for 7/1/2015 to 9/30/2015 was 0.081 mg/L and HAA was 0.070 mg/L. The level of THM for 10/1/2015 to 12/31/2015 was 0.100 mg/L.

- There is nothing you need to do. You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water.

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

We are working to minimize the formation of disinfection by-products while ensuring we maintain an adequate level of disinfectant. We have taken steps to change disinfectant levels, remove natural organic matter, and increased flushing of water lines. We anticipate resolving the problem within the next six months.

For more information, please contact John Mills at 606-298-3885 or 387 E Main St. Suite 140, Inez, KY 41224.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

Inez, Kentucky 41224

RE: Martin Co Water District -- 2987
Permit No.: KY0800273
Martin County, Kentucky
Activity ID: CIN20160002

Dear Martin Co Water Dist:

Attached for your information and records is a copy of the DW Comp-Surface performed at Martin Co Water District on February 22, 2016.

The system should continue efforts to leak detect the distribution system and repair any issues as they are found. Measure should be taken to perform a full system flush twice per year while flushing dead ends as often as needed.

If you have any questions or comments concerning this inspection, please contact the Hazard Regional Office at: (606) 435-6022.

Sincerely,

Robert Back
Environmental Inspector
Hazard Regional Office
Division of Water

Phone No.: 606-298-3885	Fax No:	Email Address:

I. Administrative Requirements

Comments:

I. Compliance Status - Not Evaluated

II. Operator Certification/Accreditation Requirements

Operator in Charge or on duty.

Operator Name	Plant Certification #	Distribution Certification #
Tom Alley	17562	
Mike Sartin	21944	
Tim Reed/ Elbert Osborne	24590	27800

Comments:

II. Compliance Status - Not Evaluated

III. Record Keeping Requirements

Comments:

III. Compliance Status - No violations observed

Comments: Wolf creek, Coldwater, Inez 1&2 tanks are not in service. The system does not use these tanks at this time. The System has switched from gas chlorine to liquid bleach disinfectant. The system is using a Thornsorb activated carbon system. The water treatment plant has a 100,000 gallon clearwell at the plant and two 500,000 gallon clearwell tanks on the hill above the plant.

The system needs to perform a complete system flush however approximately 50% water loss and low storage due to distribution leaks in the Warfield area make it difficult. Failure to properly flush the system will make meeting future DBP limits a difficult task.

V. **Compliance Status** - No violations obs-but impending viol trends obs

VI. Discharge/Emission Compliance

Comments:

VI. **Compliance Status** - No violations observed

VII. Monitoring/Analyses Evaluation

Comments: The system has multiple violations for disinfection by-products from the 2015 year. The Division of Enforcement is addressing these violations.

VII. **Compliance Status** - Out of Compliance- No action taken

VIII. Environmental/Health Impact

Work Site Hazard Assessment : ATTACHED REVIEWED

Comments:

VIII. **Compliance Status** – No violations observed

IX. Documentation

- Samples taken by DEP
- Samples taken by outside source
- Instrument readings taken by DEP regional office
- Photographs obtained by DEP
- Copies of records obtained by DEP
- Other documentation

Dear Mr. Mills:

The Kentucky Department for Environmental Protection (DEP) has issued the enclosed Notice of Violation for violations discovered at your facility. Please review this Notice of Violation carefully to ensure that all remedial measures are completed by the specified deadlines.

Failure to comply with all remedial measures could result in enforcement action and the assessment of penalties. Your cooperation and attention to this matter is appreciated. If you have any questions, please contact Kellee Husband at (502)564-3410 ext. 4986 or email at kelteem.husband@ky.gov.

NOTICE OF VIOLATION

MARTIN CO WATER DISTRICT #1
287 E MAIN ST SUITE 140
INEZ, KY 41224

PWSID: KY0800273
PWS Name: MARTIN CO WATER DISTRICT AI ID: 2987
County: MARTIN
Violation Number: 2016 - 9951 175
Determination Date: 02/10/2016
Compliance Period: 10/01/2015 - 12/31/2015
Violation Type: 02 MCL, LRAA Tier Level: 2
PWS Facility: IDSE9999 IDSE - MARTN CO WATER DIST Contaminant:
2950 TTHM

Public Water Systems are subject to the requirements of 401 KAR Chapter 8. [401 KAR 8:020 Section 1]
This is to advise that you are in violation of the provision(s) cited below:

Description of Non Compliance:

401 KAR 8:510 mHM The public water system exceeded the MCL for locational running annual average (LRAA) of samples for the specific contaminant in compliance period 10/01/2015 - 12/31/2015. The reported result of .123 mg/l exceeded the MCL of 0.080 mg/l,

The remedial measure(s) and date(s) to be completed by are as follows: Begin or continue quarterly monitoring for TTHM

Perform public notification for the above-mentioned violation in accordance with 401 KAR 8:070. The public notification must not contain language that contradicts or detracts from the standard mandatory language or the purpose of the notice. Submit proof of public notification and its certification within ten (10) days of executing public notification. [401 KAR 8:070] The specific public notification activities to be performed are listed below.

PWS must give notice to consumers, including other water systems you may provide water to, about a violation by mail delivery or hand delivery. The notice must be executed within thirty (30) days following receipt by the PWS of this Notice of Violation.

If not all consumers can be notified by mail or hand delivery then the PWS must give notice to consumers about a violation by 1) publication in a newspaper of general circulation in the area served by the PWS or 2) by continuous posting in conspicuous places within the area served by the PWS. The notice must be executed within thirty (30) days following receipt by the PWS of this Notice of Violation.

Submit proof of public notification and its certification within ten (10) days of executing public notification.

Violations of the above cited statutes and/or regulations are subject to a civil penalty. Violations carry civil penalties of up to \$25,000 per day per violation depending on the statutes/regulations violated. In addition, violations may be concurrently enjoined. Compliance with remedial measures and their deadlines does not provide exemption from liability for violations during the period of remediation, nor prevent additional remedial measures from being required.

Detailed information about your water system's violations & monitoring requirements can be easily accessed on Kentucky Drinking Water Watch at <http://dep.gateway.ky.gov/DWW/>

If you have questions or need further information, write or call Kellee Husband at (502)564-3410 ext 4986 or email at kelleem.husbandt@ky.gov.

Notice by Martin County Water District - System ID#: KY060273
Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did (are doing) to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Testing results from 7/1/2015 through 9/30/2015 and 10/1/2015 through 12/31/2015 show that our system exceeds the standard, or maximum contaminant level (MCL), for trihalomethanes (THM) and haloacetic acids (HAA). The standard for THM is 0.080 mg/L and the standard for HAA is 0.060 mg/L. These are determined by averaging all samples collected at each sampling location for the last 12 months. The level of THM averaged at one of our system's locations for 7/1/2015 to 9/30/2015 was 0.081 mg/L and HAA was 0.070 mg/L. The level of THM for 10/1/2015 to 12/31/2015 was 0.100 mg/L.

- There is nothing you need to do. You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water.

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

We are working to minimize the formation of disinfection by-products while ensuring we maintain an adequate level of disinfectant. We have taken steps to change disinfectant levels, remove natural organic matter, and increased flushing of water lines. We anticipate resolving the problem within the next six months.

For more information, please contact John Mills at 606-298-3885 or 387 E Main St, Suite 140, Inez, KY 41224.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

THM & HAA Stage 2
DBPR Template 2-19

Insert water system name and ID# in header. Insert compliance period, begin date, end date, and average level. Remove brackets. Do not modify mandatory language!

Printing Instructions

This template is designed to print the notice on the back of the water bill sheets prior to printing the water bills using procedures the same as printing a letter.

After the notice has been printed to all sheets place the stack of sheets upside down on a flat surface and place a weight on the stack to remove the curl.

When the stack of sheets have cooled and straightened print the water bills as usual.

Re: Repeat Public Notice Extension
AI ID: 2987
PWSID: KY0800273
PWS NAME: Martin County Water District #1
COUNTY: Greenup

Dear Mr. Alley,

The Division of Water has considered your request and will grant an extension to the required repeat public notice for the ongoing disinfection byproduct MCL exceedance *or* a reduction in frequency of the repeat public notice. This will depend on the Locational Running Annual Average that is calculated for the 4th quarter of 2015.

If the water system continues to exceed the MCL for disinfection byproducts for the 4th quarter, the water system will use the 4th quarter results in the repeat public notice. If the water system comes back into compliance in the 4th quarter, the water system will be required to perform a public notice using the 3rd quarter results.

The public notice shall be performed no later than **February 10th, 2016**.

It is not required for the water system to receive a 4th quarter Notice of Violation before issuing the public notice. The water system may issue the notice as soon as they receive 4th quarter TTHM analysis results and can make a determination whether or not they are in compliance for the 4th quarter.

Please note all violations shall be listed in the 2015 Consumer Confidence Report.

If you have any questions or concerns, please contact Brook Overbay at (502) 564-3410, extension 4958.
Or ashlee.overbay@ky.gov

Sincerely,

Brook Overbay

NOTICE OF VIOLATION

To:
MARTIN CO WATER DISTRICT #1
287 E MAIN ST SUITE 140
INEZ, KY 41224

PWSID: KY0800273
PWS Name: MARTIN CO WATER DISTRICT #1 **AI ID:** 2987
County: MARTIN
Violation Number: 2016 - 9951173
Determination Date: 11/09/2015
Compliance Period: 07/01/2015 - 09/30/2015
Violation Type: 02 MCL, LRAA **Tier Level:** 2
PWS Facility: IDSE9999 IDSE - MARTN CO WATER DIST
Contaminant: 2456 TOTAL HALOACETIC ACIDS (HAA5)

Public Water Systems are subject to the requirements of 401 KAR Chapter 8. [401 KAR 8:020 Section 1]
This is to advise that you are in violation of the provision(s) cited below:

Description of Non Compliance:

401 KAR 8:510 TOTAL HALOACETIC ACIDS (HAA5) The public water system exceeded the MCL for locational running annual average (LRAA) of samples for the specific contaminant in compliance period 07/01/2015 - 09/30/2015. The reported result of .07 mg/l exceeded the MCL of 0.060 mg/l.

The remedial measure(s) and date(s) to be completed by are as follows:

Begin or continue quarterly monitoring for TOTAL HALOACETIC ACIDS (HAA5)

Perform public notification for the above-mentioned violation in accordance with 401 KAR 8:070. The public notification must not contain language that contradicts or detracts from the standard mandatory language or the purpose of the notice. Submit proof of public notification and its certification within ten (10) days of executing public notification. [401 KAR 8:070] The specific public notification activities to be performed are listed below.

PWS must give notice to consumers, including other water systems you may provide water to, about a violation by mail delivery or hand delivery. The notice must be executed within thirty (30) days following receipt by the PWS of this Notice of Violation.

If not all consumers can be notified by mail or hand delivery then the PWS must give notice to consumers about a violation by 1) publication in a newspaper of general circulation in the area served by the PWS or 2) by continuous posting in conspicuous places within the area served by the PWS. The notice must be executed within thirty (30) days following receipt by the PWS of this Notice of Violation.

Submit proof of public notification and its certification within ten (10) days of executing public notification.

Violations of the above cited statutes and/or regulations are subject to a civil penalty. Violations carry civil penalties of up to \$25,000 per day per violation depending on the statutes/regulations violated. In addition, violations may be concurrently enjoined. Compliance with remedial measures and their deadlines does not provide exemption from liability for violations during the period of remediation, nor prevent additional remedial measures from being required.

Detailed information about your water system's violations & monitoring requirements can be easily accessed on Kentucky Drinking Water Watch at <http://dep.gateway.ky.gov/DWW/>
