

Dear Kentucky Public Service Commission, President, agents, officers, employees, contractors and interested parties of Ky PSC;

**This Letter is for Public Comment in regards to Case File 2016-00394**

**I am enclosing a CD with Unbiased Research and Documentation which I wish you to study thoroughly and then post with the public comments so that those unaware can be educated to the dangers of these wireless utility meters.**

I live in a different state where all of us have become symptomatic and sick after chronic exposure to wireless utility meters. We were recently made aware that Ky PSC is considering allowing Kentucky American Water to deviate from annually inspecting their meters, meter settings, and valves. In regards to the wireless water meters that these utility companies have forced unknowingly on the public, I feel it is my responsibility to protest this deviation. These wireless water meters are known to cause billing errors based on malfunctions, spiking during usage, incorrect data information at collector units, and much, much, more! The following information provided should be more than enough to warrant the removal of the wireless water meters. If the removal is not done, then the utilities should be forced to inspect the dangerous wireless water meters on a monthly basis due to all the malfunctions and damages associated with their installations!

Any and every party intending to install (or who have installed) any "wireless" utility meters (Also referred to as; AMI, AMR, ERT, AMS, Smart Meters or any other deceptive name) or any activity-monitoring device on anyone's home should be denied consent for installation and denied consent for use of all such devices on all properties. Any wireless utility meters already installed, should definitely not be allowed to deviate from inspection requirements, but instead should be required to remove the devices immediately and be required to inspect them monthly until they are removed! Installation and use of any activity-monitoring device should be refused and prohibited. Based on the Federal Wiretap Act and the Stored Electronic Communications Act, informed consent is legally required for installation of any surveillance device and any device that will collect and transmit private and personal data to undisclosed and unauthorized parties for undisclosed and unauthorized purposes. Authorization for sharing of personal and private information may only be given by the originator and subject of that information.

The United States Federal Energy Policy Act of 2005 states as follows: **the utility shall offer customers** a time-based rate; and for customers who request a time-based rate, the utility will provide a time-based smart meter. Therefore, the customer **has the right to decide to refuse a smart meter**, and the customer should not be challenged on this decision by a utility representative. The customer should not incur any additional charge for this decision nor for maintaining the utility meter presently in operation on their properties. **In essence, the smart meter program is truly an "Opt-In" program.**

As a customer of other similar utility companies in a different state, I feel it is my responsibility to help other individuals who are being affected by these dangerous wireless meters just as we are here. I am opposed to all wireless utility meters for the following reasons:

1. **Duke Energy, all of its associated Utilities, (as well as other Utility Companies not listed here) and the Kentucky Public Service Commission are well aware of not only the violations listed above, but the Health and Environmental Damages caused by accumulation of exposure to these Class 2b labeled Carcinogenic / DNA damaging, wireless utility meters.** This is evidenced by carefully reading all of the case files listed below as well as reading the unbiased medical research, doctors letters, public complaints, lawsuits, etc... that have been filed against the utilities and the PSC's;

RECEIVED

\*Florida PSC: Case File Docket No. 130223

\*North Carolina PSC: Docket No. E-7 Sub 1115 (Note: Originally Docket No. E-100, SUB 141)

2. In May 2011, the World Health Organization's International Agency for Research on Cancer (IARC) classified radiofrequency electromagnetic fields (RF-EMF) as a possible human carcinogen (Group 2B) in the same classification as lead, DDT, and chloroform. We do not want additional layers of pulsed radiofrequency electromagnetic fields in our homes.
3. Wireless meters identify electrical devices inside the home and record when and for how long they are operated, resulting in an invasion of our privacy. They monitor household activity and occupancy in violation of our rights to privacy in our homes. According to a February 2012 Congressional Research Service Report entitled *Smart Meter: Privacy and Cybersecurity*, the Department of Energy reported that by matching data with known appliance load signatures, smart meters will be able to reveal people's daily schedules, their appliances and electronic equipment, and whether they use certain types of medical equipment. *1*
4. Wireless meters transmit information-carrying radio waves which can be intercepted by unauthorized and unknown parties. The signals can be used to monitor behavior and occupancy, and they can be used by criminals to aid criminal activity against the occupants. Former CIA Director James Woolsey accounted the wireless security threat at [http://www.metacafe.com/watch/4260978/jim\\_woolsey\\_grid\\_security\\_is\\_afterthought](http://www.metacafe.com/watch/4260978/jim_woolsey_grid_security_is_afterthought)
5. Data about residents' daily routines and activities are collected, recorded, and stored in the utility's databases, which are accessed by parties not authorized by occupants to know and share that private data. Those databases may be handed off to criminals, blackmailers, corrupt law enforcement, private hackers, power company employees, and anyone who may act against the interests of the occupants who are under metered surveillance.
6. Medical research has documented that smart meters can negatively impact health. In April 2012, the American Academy of Environmental Medicine (AAEM) issued a position paper entitled, *Electromagnetic and Radiofrequency Fields Effect on Human Health*. According to the report, "Multiple studies correlate RF exposure with diseases such as cancer, neurological disease, reproductive disorders, immune dysfunction, and electromagnetic hypersensitivity... many *in vitro*, *in vivo* and epidemiological studies demonstrate that significant harmful biological effects occur from non - thermal RF exposure... Genetic damage, reproductive defects, cancer, neurological degeneration and nervous system dysfunction, immune system dysfunction, cognitive effects, protein and peptide damage, kidney damage, and developmental effects have all been reported in the peer - reviewed scientific literature." In a press release, the AAEM calls for immediate caution regarding smart meter installations due to potentially harmful exposure to pulsed radiofrequency radiation.
7. **Dr. Magda Havas, Associate Professor of Environmental & Resource Studies at Trent University in Peterborough, Ontario, Canada has received emails and phone calls from occupants of properties where wireless meters were recently installed. They complain of ill health, including new symptoms such as headaches, insomnia, anxiety, skin rashes, tinnitus, heart palpitations, depression, fatigue, and short-term memory loss. The following link (EMF Safety Network), has specific accounts of deteriorating health after wireless meters were installed: [http://emfsafetynetwork.org/?page\\_id=229](http://emfsafetynetwork.org/?page_id=229)**
8. Wireless meters continually transmit pulsed digital microwave radiation (RF-EMF) 24/7. According to a report issued by Pacific Gas and Electric Company, some wireless meters transmit up to 190,000 pulses per day. *2*
9. Wireless meters can interfere with arc-fault circuit interrupters and have been the suspected cause of explosions and fires.
10. The required power conversion of wireless meters causes harmonic distortion within electrical systems (otherwise known as "dirty electricity"). Dirty electricity has links to cancer.
11. Wireless meters cause radiofrequency interference. On November 19, 2011, Portland Press Herald reported that the Maine Public Advocate's Office issued the following statement, "*Smart Meters are interfering with a wide range of household electronic devices, from garage door openers and WiFi devices to security systems.*" "
12. Utilities claim that wireless meters will cause customers to monitor their electrical usage to conserve more electricity. However, a British study reported on Sept. 2, 2011 that thousands of citizens with a wireless meter on their home over the course of one year experienced little to no change in electrical usage. In many other states consumers have reported outrageous billing errors and problems with collector units associated with the wireless meters which cause severe spikes and mis-information regarding billing.

13. Dr. David Carpenter states in his letter to the NCUC;

While the strongest evidence for hazards coming from RFR is for cancer, there is a growing body of evidence that some people develop a condition called electrohypersensitivity (EHS). These individuals respond to being in the presence of RFR with a variety of symptoms, including headache, fatigue, memory loss, ringing in the ears, "brain fog" and burning, tingling and itchy skin. Some reports indicate that up to three percent of the population may develop these symptoms, and that exposure to smart meters is a trigger for development of EHS.

- Smart meters operate with much more frequent pulses than do cell phones, increasing the potential for adverse health impacts.
- Smart meter pulses can average 9,600 times a day, and up to 190,000 signals a day. Cell phones only pulse when they are on.
- Cell phone RFR is concentrated, affecting the head or the area where the phone is stored, whereas smart meter RFR affects the entire body.
- An individual can choose whether or not to use a cell phone and for what period of time. When smart meters are placed on a home the occupants have no option but to be continuously exposed to RFR.

I am asking that the Kentucky Public Service Commission respond ethically and morally by stopping the abuse of money and power in relationship to these unethical and criminal acts against our freedoms and health.

I am asking that the Kentucky Public Service Commission protect all humans, pets, wildlife, and the environment against the damages caused by the accumulation of these wireless radiation frequencies which will only continue to increase unless responsible, ethical, and morally responsible leaders take action to stop this illegal activity.

Please protect all consumers in Kentucky against the above mentioned by installing only safe analog utility meters and not charging any fees for insisting upon the usage of, and/or returning to the usage of safe analog utility meters.

Please stop all deceptive practices in regards to ignoring the unbiased research and allow the public to be made aware of all the dangers related to wireless utility meters so that they can make "informed" decisions regarding their utility services.

I am asking you to protect our rights to privacy and protection as stated above and to require Kentucky American Water to inspect their wireless water meters monthly until they are replaced again with Safe Analog Water Meters!

Sincerely,

Brandy Calvert

Name: Brandy Calvert

Address, City, State: 38 Big Buck Trl. Old Fort, NC 28762

County: McDowell

Date: Feb. 4<sup>th</sup>, 2017.

The first part of the report deals with the general situation in the country. It is a very interesting and detailed account of the political and economic conditions. The author has done a great deal of research and his writing is clear and concise. The report is well organized and easy to read. It is a valuable contribution to the study of the country's development.

The second part of the report deals with the specific aspects of the country's development. It covers the areas of agriculture, industry, and services. The author provides a detailed analysis of the current situation and offers some suggestions for improvement. The report is well written and easy to read. It is a valuable contribution to the study of the country's development.

The third part of the report deals with the social and cultural aspects of the country's development. It covers the areas of education, health, and culture. The author provides a detailed analysis of the current situation and offers some suggestions for improvement. The report is well written and easy to read. It is a valuable contribution to the study of the country's development.

The fourth part of the report deals with the international relations of the country. It covers the areas of foreign trade, international organizations, and international law. The author provides a detailed analysis of the current situation and offers some suggestions for improvement. The report is well written and easy to read. It is a valuable contribution to the study of the country's development.

The fifth part of the report deals with the future prospects of the country. It covers the areas of economic growth, social development, and international relations. The author provides a detailed analysis of the current situation and offers some suggestions for improvement. The report is well written and easy to read. It is a valuable contribution to the study of the country's development.

The report is a very interesting and detailed account of the political and economic conditions in the country. It is a valuable contribution to the study of the country's development. The author has done a great deal of research and his writing is clear and concise. The report is well organized and easy to read.
