PUBLIC SERVICE  
COMMISSION

Aug. 23, 2017

Gentlemen,

I recently called your offices and now I put my comments on paper.

I have recently been hearing that Kentucky Power is planning to ask for yet another rate increase here in Kentucky.

**NO!!!!**

The increases brought on by the failed policies of Obama are being felt here in eastern Kentucky every month. We are paying more than enough for electricity.

The power generating plant at Louisa is now just a shadow of its former self. There were several good paying jobs lost there. Many, many, many good paying coal jobs across this region have been lost because of Obama's War on Coal. Other business have felt the pinch because these coal miners no longer have their good paying jobs-they don't have the money to pay for the goods and services of other businesses in this area.

It's called a 'trickle down economy' Gentlemen. The 'trickle' is going in the wrong direction right now.

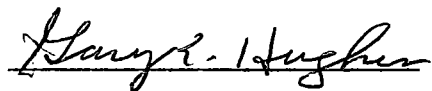

Good paying jobs are gone. What is left?? Minimum wage or barely above it. That won't put bread on the table. It certainly won't pay for the ever increasing power rates/bills.

It is time -and past time-for the PUBLIC Service Commission to

**JUST SAY "NO!!!!"**

Then, begin to consider a percentage DECREASE in the current rates.

We must have some relief from these ever increasing prices.
