About installing smart meters.

There are people in our community who suffer from electromagnetic field sensitivity. For instance, I have some EMF sensitivity myself, I can't use an electric blanket because I can feel the current & I wake up sick. There is a man that comes to a place I dance at & I know he is there before he is seen because he wears a black box for something & when it operates it stops me in my tracks, I can feel the EMF's from it & it totally freezes me in place for a few seconds.

Please do not install smart meters. The poor can not afford \$22.00 a month more for already over priced services, just to opt out.

The installing of the smart meter will force people to have these currents disrupting their health.

Thank you,

Melva Smith
