

Public Service Commission,

11/19/2018

As a homeowner of a total electric home I am very disturbed by the request from Kentucky Utilities for a huge rate increase and as I understand their request for a cancellation of the discounted rate for total electric homes. Their estimate of 1139 kWh of electricity use per month is grossly inaccurate for total electric homes. It would cause a rate increase of much more than their estimate of \$13.47 per month. As a customer I am very upset and outraged at Kentucky Utilities repeated requests for rate increases. It is time for Kentucky Utilities to decrease the huge profits it is paying shareholders of the company and consider the customers. The customers should be their priority, not shareholders. There are many customers that are barely making ends meet as it is. It is not like the customers have a choice of whether to buy electricity or not. I sincerely request that the Public Service Commission deny the request for more money at the customer's expense.
