To whom it may concern:

I am writing in reference to net metering, case# 2019-00256. Because of climate change, humans, animals, & vegetation are suffering & dying, & this will only continue to get worse if we do nothing. One way we can work to save our planet is through the use of renewables, including wind & solar. Private citizens can help by installing solar panels, but only if this is affordable. Many new jobs can be created in renewables, but again, only if these are affordable. Net metering's one-on-one credit needs to go up, not down. We don't have time to waste; our planet is dying. Please do your part so that our children may survive.

Thank you,

Jesse Adair
