RE: Adjustments to Demand-Side Management Balance Adjustment Component (DBA) of the Demand-Side Management Cost Recovery Mechanism for Louisville Gas and Electric Company

Dear Ms. Pinson:

Louisville Gas and Electric Company ("LG&E") files herewith LG&E Tariff P.S.C. Electric No. 11, Second Revision of Original Sheet No. 86.7, effective with service rendered on and after April 1, 2019.

LG&E is making revisions to the DSM Balance Adjustment Component ("DBA") of LG&E's Demand Side Management Cost Recovery Component ("DSMRC") to reflect over- and under-recoveries experienced in the 12-month period of January 1, 2018, through December 31, 2018.

The KPSC order in Case No. 2018-00005 increased the number of participants allowed in the Companies' Advanced Metering Systems ("AMS") Customer Service Offering from 10,000 to 20,000. In order to support the additional participants in the AMS program, the Companies are proposing new rates to mitigate the impact to the 2020 DBA. The AMS funds will only affect Residential Service and General Service rate customers through the DSM Capital Cost Recovery ("DCCR") component of the DSMRC.

Louisville Gas and Electric - Electric Service Method

# Methodology of DSM Balance Adjustment Component (DBA) 12-Month Period Beginning April 1, 2019

The Demand-Side Management Cost Recovery Mechanism (DSMRM) includes a provision for the recovery of demand-side management (DSM) program and administrative costs. The DSMRM further provides a balancing mechanism for reconciling differences in the costs recovered through the DSMRM and the expected DSM recovery.

The expected DSM recovery includes the actual expenditure incurred during the year and a proportion of lost sales and incentive which is adjusted according to actual expenditure versus budget expenditure. Over- or under-recovery is calculated as the actual revenues received versus the expected revenues.

Interest at a rate equal to the average of the "3-Month Commercial Paper Rate" for the immediately preceding 12-month period is applied to any over- or under-recovery of revenues as part of the adjustment. The interest is applied monthly to the average balance of the cumulative net (over-) under-recovery revenues.

# Summary of DSM Balance Adjustment Component (DBA) Over / Under Collection through 2018

Rate Schedule		Actual Collection	Expected Collection	(over) Variance	Interest	Net Variance

# Summary of DSM Balance Adjustment Component (DBA) DCCR Adjustment

Weighted Average Cost of Capital (WACC)

LG&E Electric Company	9.19%	See DCCR2 attachment for WACC calculation detail.

The Adjusted DCCR expenses are derived as follows by company and by rate class: The actual capital expenditures, weighted average adjusted by month, is multiplied by the WACC to compute the return. The return is then combined with the actual depreciation values by month, and actual O&M expenses to compute the expected E(M) for the DCCR mechanism for the year's balancing adjustment.

#### Adjusted DCCR Expenses by Rate Class

# Louisville Gas and Electric Company Electric Service

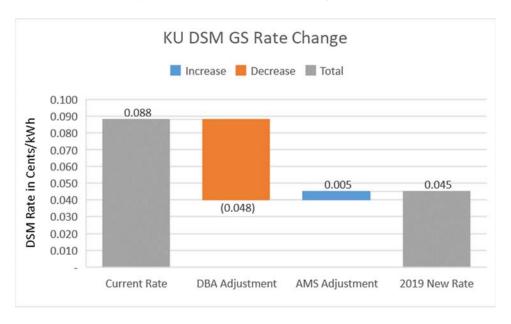

Summary of 2019 DSM Budget AMS Opt-In

In October 2018, Louisville Gas and Electric Company ("LG&E) and Kentucky Utilities Company ("KU") (collectively the "Companies") received approval for their 2019-2025 Demand-Side Management and Energy Efficiency ("DSM-EE") Program Plan filed in Kentucky Public Service Commission ("KPSC") Case No. 2017-00441. The DSM-EE tariffs were approved as amended on October 31, 2018. Given the case approval for tariffs effective in January, 2019, the Companies did not make the traditional DSM tariff filing in November 2018 as it was unnecessary. This DSM balancing adjustment ("DBA") filing adjusts actual spend in 2018 against the amounts collected through the tariffs approved in 2017, effective January 1, 2018. The KPSC order increased the number of participants allowed in the Companies' Advanced Metering Systems ("AMS") Customer Service Offering from 10,000 to 20,000. In order to support the additional participants in the AMS program, the Companies are proposing new rates to mitigate the impact to the 2020 DBA. The revised tariffs are being included with the annual DBA filing with proposed effective date of April 1, 2019. AMS only affects rates RS and GS for the Companies based upon the AMS Opt-In approval. The changes for LG&E and KU are shown in the graphs below. KU GS customers and LG&E and KU RS customers will see an overall decrease in their DSM rate. LG&E GS customers will see an increase in their DSM rate of \$0.0013/kWh. Details are included in the paragraphs, spreadsheets, and tariffs which are attached. On average the Companies spent \$458 per meter on the original 10,000 meter opt-in program over four years and are projecting \$423 per meter on the additional 10,000 meters across four years.

# Advanced Metering Systems (AMS) Customer Service Offering

# **Program Overview**

In Case No. 2014-00003, the Commission approved the AMS Customer Service Offering which allows the Companies to offer up to 10,000 advanced meters to those Rate RS or GS customers who elected to participate. In Case No. 2017-00441, the Commission approved an additional 10,000 advanced meters over the previously approved 10,000 meters for those Rate RS or GS customers who elected to participate. As of January 31, 2019, more than 9,600 customers have AMS meters deployed to their residences or places of business. Participants' consumption is captured, communicated, and stored, allowing participants to monitor their hourly usage through an online portal (MyMeter). To allow customers to participate subject to the 20,000 meter limit, the Companies plan to support and expand as necessary the existing AMS infrastructure, and to continue to permit participants to have the ability to view their hourly usage via the MyMeter online portal. The costs included in this filing are for meters, network infrastructure, the meter data management system, customer education, and expenses of the systems to display consumption data to customers.

# **Program Audience**

Up to 10,000 LG&E and 10,000 KU RS and GS customers will receive an advanced meter on a voluntary basis.

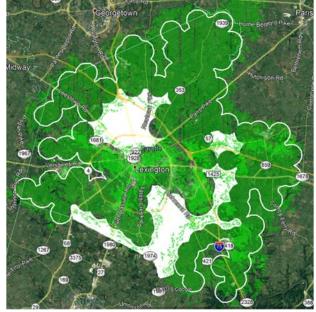

# **Implementation Plan**

The Commission's provided guidance in its conclusion in Case No. 2018-00005 stating that "The increased investment in AMS will not result in wasteful duplication because the pilot program meters can be used going forward if the Companies refile an application for AMS that satisfies the evidentiary requirements for a CPCN." For the meters to remain useful going forward it is

imperative that the Company deploy meters operating on the mesh network. As such, there are gaps in the existing communication coverage, particularly in Lexington, that limit the number of customers able to receive such a meter. See Figure 1 illustrating the over 41,000 customers in Fayette County without mesh communications today, represented by the white polygons within the figure. To address these gaps the Companies plan to deploy additional routers.

Pilot Subscription and Engagement Levels

Figure 1 - Lexington Fayette County Mesh Coverage

The Companies plan to provide customer

education and marketing of the AMS Opt In program in areas where RF mesh communications is established. Educational materials will be provided multiple times per year through various media channels. Customer education informs customer about the benefits of AMS and has historically proven to produce AMS enrollments. Examples of these customer communications have been provided previously to this commission.

Additionally, the Companies plan to provide customers with "tips" on how to better utilize their smart meter data and the capabilities of MyMeter such as text alerts based upon usage. The goal of this initiative is to create effective customer engagement with MyMeter capabilities to help customers save energy.

# Innovative Programs.

The Company has initiated a rate comparison tool for AMS customers through the MyMeter portal. This tool allows customers to use their actual data to compare how choosing an alternative residential time of day rate to their standard residential electric rate would affect them. Specifically, the rate comparison tool provides two benefits. First, it provides customers with data from their AMS meter that recommends the least cost rate based upon their actual consumption pattern. Second, the tool provides value and education for customers who may not otherwise be interested in or aware of existing alternative rates.

In addition to the rate comparison tool, the Company has implemented a household comparison option for customers through the MyMeter portal. This program is similar to the Smart Energy Profile Program (SEP) the Companies offered through DSM previously, allowing customers to compare their efforts to conserve energy with their "neighbors". The SEP program showed that customers saved energy when engaged in a comparison program with their "neighbors."

Adjustments to Demand-Side Management Balance Adjustment Component (DBA)

Attachment 1

Page 20 of 29

# Louisville Gas and Electric Company and Kentucky Utilities Company Summary of 2019 DSM-EE Budget Increase

The Company has implemented a new option for customer within the MyMeter portal to allow customers to authorize third-parties to access their consumption information. This allows a customer to provide access to their consumption without providing access to their full account information within MyAccount. The benefit is that this 3rd party could be for anything from elder care to energy services that provide energy efficiency measures based upon analysis of the customers consumption data.

The Companies are exploring and evaluating additional functionality that includes Green Button Connect, an enhanced mobile app, and a bill prediction tool.

# Timeliness of Data Availability

To improve customer's access to more timely data consumption the Companies are planning to implement a new data process for the customers with mesh AMS meters. This process improves the data availability from its current 24-48 hour latency to every 4 hours. The Companies are evaluating options for AMS customers with cellular connected meters but the current plans are that they will remain at the 24-48 timeframe based on system limitations.

Additionally the Company is evaluating in-home device ("IHD") types that would provide customers with more real-time types of data access consistent with the KPSC order in Case No. 2018-00005. These devices would be of two types. One that utilizes the customers Wi-Fi network to transmit meter data to the MyMeter portal in real-time. The other type would not be connected to MyMeter portal (it would connect directly to the meter through Zigbee) but would enable those without Wi-Fi, such as low-income customers, to view their usage in real-time from a display which shows consumption information from their meter. The plan is to deploy a limited number of IHDs with a total cost less than \$10,000.

The Companies are providing the following budget to accomplish the mentioned activities.

# **Annual Program Budget**

The original budget, actual expenses and a revised annual budget for the Advanced Metering Systems Customer Service Offering is presented in tables below.
