---

Thank you for your comments on the application of Kentucky Power Company. Your comments in the above-referenced matter have been received and will be placed into the case file for the Commission's consideration. Please cite the case number in this matter, 2020-00174, in any further correspondence. The documents in this case are available at [http://psc.ky.gov/PSC\\_WebNet/ViewCaseFilings.aspx?Case=2020-00174](http://psc.ky.gov/PSC_WebNet/ViewCaseFilings.aspx?Case=2020-00174).

Thank you for your interest in this matter.

Best Regards,

Brandon Bruner

I feel it is important that there be no reduction in the amount of credit provided to anyone that supplies electricity to the electrical grid. If there is no incentive to install solar panels it won't happen.

There has to be an economic incentive for a homeowner to install electric panels. Full net metering provides a payback on the capital investment. In Germany, the government paid subsidies to have solar panels installed. Farmers were installing them in their fields and earning a steady annual income like tobacco at one time provided for Kentucky farmers.

As climate change increases with devastating costs, it is important that our world moves toward a fossil fuel free world. Instead of gas water heaters, we can buy electric water heaters. Instead of gas furnaces, we can buy heat pumps. Instead of gasoline-powered cars, we can buy electric vehicles to be charged at home. There will be plenty demand for electricity.

Localized power sources on homes reduce the need for increasing the electrical grid capacity.

In times of power outages, a solar panel can provide electricity instead of home electric generators.

Perhaps, in the very, very far future our electrical utilities will evolve into a power distribution network. Providing extra power when peak demands need to be met. Then the PSC can change the formulation of costs and profits. But we aren't even scratching the surface of that adjustment now.

**Subject:** solar energy credit

Solar energy is renewable and infinitely abundant, unlike other forms of power. We need to have access to it, and need to be able to upload power generated by our solar set-up to our power company. We also need to be able to get credits for investment in Solar or Wind or other alternative renewable energy. This is going to be our future, and we might as well move to it now.
