Pertaining to case # 2020-00174

It's a sad day in Kentucky when electricity gets so high that people goes in debt 10's of thousand dollans to buy a rooftop solar system trying to save money on their power bills. Is Kyppo going to keep on raising rates so they can show a increase in profit every year. Is Kyppo going to keep on inventing projects which is not needed in a declining population just to keep AEP'S profits up. Kyppo need to work cheaper and manage to save its customers money. as long as Kyppo profits are based on 90 of the budget and projects electric bills will never go down. Its like putting a fox in the hen house.

Rooftop solar ^{customers} think they are being treated unfair because they have to pay tariffs and expense toward maintaining Kyppo electrical system. Rooftop solar customers

②

must pay their fair share of these expense because their solar systems depend on the Kypco grid and transmission lines because

① solar is part time electricity

② does not generate well on cloudy days, during winter months, and not at all during the night

③ most roof top solar systems are designed to work with the electrical grid

④ solar customers has to depend on Kypco grid when solar is not working very good or at all

⑤ House top solar owners want to use Kypco grid as a storage place for their so called extra generation to when they will need it.

Most house top solar systems are sized for their household needs. There should be very little extra generation. If there's any extra generation it would be so weak that it would not help the grid at all.

The poor, and people on fixed incomes will never be able to buy a roof top

solar system. Is the poor going be forced to keep the 150 miles or so of Kypco Electrical system up and pay the expense to maintain it. People on social security got a 6.4% raise over the past 3 years. Medicare and supplemental Health ins. took all of that. NO raise. House top solar customers must not be given a free ride.

I ask the Kpsc to make Roof top solar customers pay their fair share of expense to maintain the Kypco electrical system.

I ask the Kpsc to deny any request for Kpsc customers to pay a carbon tax or tariff because President Trump pull the U.S. out of the Paris accord and there is no state or federal law requiring it.

I ask the Kpsc to deny any rate increase. AEP is making enough profits and poor people is doing without.

Respectfully
Freddie Colburn
