As a solar owner of 17 rooftop solar panels on my house, @811 Cramer ave., lex.40502, I feel compelled to comment on the attempted power grab, both literal and figurative, by Kentucky's electric utilities. The bottom line is they want to control the solar energy market, and view homeowners as unnecessary competition. By proposing a reduction in the compensation currently offered homeowners thru a different net metering formula, they seek to disincentivize home solar ownership. I can tell you that I would not have invested a substantial sum in solar based on this new proposal. Nowhere in their calculations is there a nod to the capacity buildout investment they've saved on due to private solar investment. Homeowners want the relative freedom from constant rate increases that utilities currently enjoy, mostly to satisfy shareholders. We as a country need to minimize fossil fuel consumption, home solar ownership affords that opportunity—much more so on

the current playing field.

Please consider more than the utility side of these proposals.

Thank you. John g.scott

P.s.if they're allowed this rate change,what's to stop them from trying to make it retroactive in the future,thus cheapening my investment?

Subject: Reject KY Power's Net-Metering Proposal (case 2020-00174)

Dear Kentucky Public Service Commission,

I am a fed up rate payer from eastern Kentucky. You all have jacked up prices too much. Stop it and make solar easier.

Please reject Kentucky Power's unfair and harmful proposal to rig the rules against rooftop solar and future solar net-metering customers. The PSC should instead establish a process to determine a fair value for distributed renewable energy, including a full accounting of costs and benefits.

1. The KY Public Service Commission was correct in pointing out key flaws in Kentucky Power's net-

metering proposal. KY Power failed to justify their proposed net-metering rates with data about actual costs of service to solar customers. The utility failed to provide data to back up its claim that the company's avoided cost is an appropriate way to determine the value of distributed renewable energy. (Setting the value of rooftop solar at the avoided cost means solar customers would be credited only 3.7 cents per kwh for excess energy fed to the grid, rather than at the current retail rate of 11 cents per kwh.) I urge the Commission to follow through on these valid concerns by denying Kentucky Power's new net-metering rate.

2. The Commission's final decision in this case should rely on careful consideration of expert testimony and on rigorous data analysis, including a full accounting of the costs and benefits of customer-generated renewable energy. Since this case is likely to set a precedent for how solar net-metering will be treated by other utilities in Kentucky, it is very important for the Commission to establish and use a fair and transparent methodology for determining the value of small-scale distributed renewable generation.

3. The PSC's decision in this case should take into account a number of serious problems with Kentucky Power's net-metering proposal. Specifically:

- Rooftop solar owners are not trying to be wholesale energy producers. Kentuckians want solar on our roofs for other important reasons, for example: to be self-sufficient; to save money, especially on the retail utility charges; to be responsible by protecting our environment; to support clean energy development; and to support local business growth. Rooftop solar customers with net-metering service never receive payment for excess energy provided to the grid, only credit against future consumption. It is not fair to treat rooftop solar customers under rules designed for wholesale energy producers.
- Kentucky Power's plan ignores rooftop solar's value to the utility and other customers: Solar helps with costly peak demand and has other documented benefits to the grid, climate, and health. These benefits, as well as any costs, must be included in a fair calculation of the value of net-metered solar energy.
- Kentucky Power's plan will make rooftop solar far less affordable, as it severely limits the ability for solar users, including homeowners, small businesses and non-profits, to pay off their installations through savings on their electricity bills
- Kentucky Power's plan will likely kill the local rooftop industry in our state, just when Kentucky badly needs these good-paying jobs.

4. The Public Service Commission's final decision should also take into account that Kentucky Power has already caused significant harm to potential solar customers and existing solar businesses by temporarily imposing their new net-metering rate instead of waiting for the PSC's final decision. Kentucky Power could have and should have chosen to wait for a final ruling from the PSC. Instead, by temporarily imposing their new net-metering rates effective January 14, 2021, Kentucky Power created grave uncertainty for any customers in their service territory who planned to install solar in the first two quarters of 2021. This disruptive and unnecessary action is likely to have halted new

solar investments in this timeframe, depriving eastern Kentucky communities and residents of the associated jobs and financial benefits.

Thank you for your consideration.

Sincerely,

Randall Wilson
