To: Public Service Commission of Kentucky

RE: Louisville Gas and Electric company Gas and Electric Rate increase Request

The latest request by the reference organization is a blatant slap in the face to the people of the community which said organization is supposed to serve. The amount of change in the request is, as usual, outrageous, knowing the Commission will reject that rate but permit an increase which will appease L.G.& E. It is the same scenario every cycle year.

I am requesting that the Public Service Commission disallow ANY increase for this year and have L.G.& E manage the business more keenly, as should be done. It is absurd, given the current economic situation for many families and businesses in Kentucky, for L.G & E to even ask for a rate increase.

Actually, the proposed rate structure decreases incentives of the consumer to reduce energy consumption and places a higher cost percentage burden on those customers who use less energy. I am sure the Commission understands the facts of the proposal.

I look forward to your response.

A handwritten signature in black ink that reads "Donald Bradbury". The signature is written in a cursive, flowing style.
