Subject: Case Related Question 2021-00072

I am a resident of State Route 283 in Robards KY that is affected by the Sebree Solar Project. I am opposed to this project for many reasons. There is an attempt by those proposing this project to skate under the public's awareness about the project. My wife and I and most of our neighbors were unaware about anything until people from a surveyor company were crossing our properties for Nextera Energy. When these people were asked about what they were doing they would not answer and some were very evasive about their actions. We never saw anything in the news or online. Our only confirmation as to what was taking place was when my next door neighbor stopped the farmer in the field and asked him. He informed my neighbor that he was leasing his property for solar farm usage due to the amount of money offered him. Our home sits in front of this farm and is surrounded on two sides. The view will be devastated and the rich wildlife in this area will be harmed. We regularly sit on our back deck or pole barn porch to watch the wildlife which includes a vast population of deer, turkey, rabbit, squirrel, many birds including bald eagles. I am also opposed for the reason that vital farm land is being traded for solar farms that will never produce again. This will affect the future cost of food and other related goods. I was told by a Nextera Energy representative that these sites were chosen for convenience to the Reid Power Station where the transmission lines will feed into the grid. Just because it is convenient doesn't make it right or morally responsible for our future generations. There has to be more sites isolated from residents and less intrusive on the wildlife that could be used. I am not against solar energy, but responsible people need to think about the future. Our property values will drop because of these solar farms in spite of what the Nextera Energy spokesperson told us.

I am asking that the Ky Public Service Commission take these concerns into consideration in their decision process.
