Re: Case No. 2022-00066
Proposed Construction of Electric Transmission Line

Dear Ms. Bridwell,

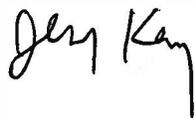

Kentucky Utilities (KU) has proposed a new transmission line to be constructed adjacent to an existing powerline through my farm, parcel numbers 189-00-00-009, 189-00-00-009.02, 189-00-00-009.03, 189-00-00-009.04, 189-00-00-009.05 and 189-00-00-009.09.

I strongly object to the new proposed transmission line with a massive 200 foot right-of-way being placed along an existing powerline already having its own significant easement. The placement of this proposed line will severely limit the potential use of the property. I ask that you consider combining the proposed and existing powerlines so as to minimize the amount of my property that will be adversely affected.

Furthermore, we have reviewed alternate routes proposed by the Brown family and ask that these routes be seriously considered as the final route of the proposed transmission line. Utilizing one of the alternative routes and combining the transmission lines will significantly reduce the amount of acreage of my property rendered unusable for future use.

Thank you for your consideration in this matter.

Thank you,

Jeff Key
