Dear Commissioners', Chandler, Hatton, and Regan,

I support the initiative to increase solar generation to 4,200MW capacity, before considering the two new gas turbines requested by LGE-KU in case 2022-00402.

Last year Kentuckians were hit with the highest utility rates ever. This was because Kentucky and the U.S. are using unprecedented amounts of natural gas to generate electricity. In addition, Kentucky residential gas rates, already among the highest gas rates in the country, were 36% above the national average. Kentucky needs zero-fuel solutions NOT fossil fuels to stop rising utility rates and climate change.

By the way: Did you see that 7/3/23 was the hottest day on earth in recorded history. WE NEED CLEAN ENERGY SOLUTIONS NOW, not business as usual.
