Subject: Public comment on PSC case #2022-00402

[REDACTED]

Dear Kentucky Public Service Commission Public Comment,

I strongly oppose new fossil fuel generation. While I support closing coal plants, the solution is absolutely not to replace them with expensive and polluting 40 year gas plants and their infrastructure. The financial, human, and energy resources to build the new gas plants should instead be invested to expand efficiency programs, rooftop solar, utility scale solar, storage, and fully explore new capacity alternatives such as virtual power plants, joining regional grids.

The companies' proposed energy efficiency proposals are woefully inadequate. Kentucky has a terrible record on energy efficiency in terms of residential energy efficiency program savings as a percentage of sales, and revenues spent on energy efficiency programs. We need to ignore the companies' cap on rooftop solar and to continue to support clean energy.

In addition to my public comment above, please see the comment submitted by Kentuckians for Energy Democracy for important data and evidence that supports my lived experience and concerns.

Thank you for ensuring that Kentuckians' voices are an important part of the regulatory process.

Sincerely,
Ms. Amelia Powell

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Carol Noble Hampton

[REDACTED]

[REDACTED]

Coal is not the enemy and we do not want grid outages like in Texas.. eastern KY jobs and livelihoods are at stake!!!!

Germany and other countries that converted to other sources of energy are now returning back to coal because the other sources of energy could not keep up with demand.

"My concern is that demand will get even higher as we transition to electric vehicles and other things. Without the reliability that coal generation plants provide, this could cause more unannounced rolling blackouts in the future, which are dangerous, especially to the many people who depend upon electricity for health needs such as oxygen."

"Our state and nation should learn from what others are doing and not turn away from coal, that provides energy in a cost effective way using coal that is mined by Kentuckians that are living and paying taxes in this state,"

"Utilities argue that rate increases are necessary because of lost customers in our region. They're complicit in that loss by turning away from the very resource that has provided jobs for thousands of people and indirect jobs for thousands more,"

"Utility companies have become jaded by an agenda to turn away from coal. They've become bright-eyed at federal incentives to reduce the carbon footprint. The invisible box utilities have been put in is what I would commonly refer to as extortion,"

"Coal has consistently been the cheapest form of electricity and Kentucky was known for years for having some of the lowest utility rates in the nation because of it. Retiring coal plants and replacing

them with other sources will negatively impact rates.”

We are concerned that rate payers would be the ones footing the \$2.09 billion bill for the “The extra cost will be passed on to us,” adding that the move to “green” energy alternatives by the power company would not make a difference.

“Two-thirds of the world’s population is not worried about green energy,” he said. “China and India are building coal plants like crazy.”

“In the 60’s and 70’s we were told that we were going to run out of oil,” “Then it was we were going to create a new ice age. Then it was that we were damaging the ozone layer with aerosol sprays. Then it was that acid rain was going to kill plant life. Then it was global warming, and now that has moved to climate change. The weather patterns have been the same throughout time,” “It’s just you’ve not been slapped with it in your face 24-hours a day in the past.

“If you approve this, all you’re going to do is raise rates and eliminate jobs,” Look to European countries who have tried this and are now returning to coal.”

The fear of rising utility rates as the result of the closing of KU’s coal fired plants is a concern not only to those who will foot the bill, but the legislature as well.

“Kentucky Power rates have increased 80% since they closed their coal fired plant,” We now have people having to choose between groceries and paying their power bill.”

The reliability issue was also raised by several in attendance including Sen. Turner.

“Solar only works when the sun shines and other types of green energy only work when the wind blows,” “But we can always dig coal.”

countries around the world that rely on coal for their power needs including China, India, Australia and others in Europe and Japan who are returning to coal as other forms of energy production cannot provide what they

“Coal is the most reliable energy source,” Browning said. “If they want to add some alternative energy sources, then that’s fine. They can sell it on the market.”

“There is more to this than just retiring coal fired plants,”

“We in eastern Kentucky mine the coal that creates our power,”

“If approved, this proposal would not just take away our jobs, but raise our power rates at the same time. This does not bode well for the people you are serving.”

“We mine coal in Harlan County,”

“It provides jobs and a way for people to live the American dream. We should utilize more coal, not less, in our energy portfolio. If old coal fired plants are to be retired, then new coal fired plants should be built or old ones retrofitted to take their place.”

Germany and other countries that converted to other sources of energy are now returning back to coal because the other sources of energy could not keep up with demand.

“My concern is that demand will get even higher as we transition to electric vehicles and other things. Without the reliability that coal generation plants provide, this could cause more unannounced rolling blackouts in the future, which are dangerous, especially to the many people who depend upon electricity for health needs such as oxygen.”

“Our state and nation should learn from what others are doing and not turn away from coal, that provides energy in a cost effective way using coal that is mined by Kentuckians that are living and paying taxes in this state,”

“Utilities argue that rate increases are necessary because of lost customers in our region. They’re complicit in that loss by turning away from the very resource that has provided jobs for thousands of people and indirect jobs for thousands more,” he added.

“Utility companies have become jaded by an agenda to turn away from coal. They’ve become bright-eyed at federal incentives to reduce the carbon footprint. The invisible box utilities have been put in is what I would commonly refer to as extortion,”

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Mr. Thomas Barrett

Subject: Public comment on PSC case #2022-00402

Dear Kentucky Public Service Commission,

We cannot lock ourselves into paying for 40 more years of natural gas when we should be well into our transition away from fossil fuels. Please approve the coal retirements and reject the proposals for two new large scale 40-year fossil fuel plants.

LG&E/KU customers like me have struggled with paying our energy bills or are affected by the air pollution from fossil fuel power plants. Investing in energy efficiency (DSM) instead will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

In addition to my public comment above, please see the comment submitted by Kentuckians for Energy Democracy for important data and evidence that supports my lived experience and concerns.

Thank you for ensuring that Kentuckians' voices are an important part of the regulatory process.

Sincerely,
Mr. Joe Gallenstein

Subject: Public Comments for Case: 2022-00402 - Kentucky Utilities Company , Louisville Gas and Electric Company

Public Comments for Case 2022-00402 submitted by ([REDACTED]) on Thursday, August 10, 2023 at 11:01 AM

Name: Dave Stawicki
Address: 1748 Hawthorne Lane
City: Lexington
State: KY
Zip Code: 40505
Phone number where you can be reached: [REDACTED]
Home phone: [REDACTED]

Comments: My name is Dave Stawicki and I reside at 1748 Hawthorne Lane in Lexington, KY with my wife. We are current customers of Kentucky Utilities and submit these comments regarding the LGE/KU Joint Application, as described in Case No. 2022-00402. My biggest concern is that the building of 2 natural gas fired electric generation facilities, even with the retirement of 3 coal burning generation plants, still continues the practice of using costly non-renewable fuels, thus compromising the applicants efforts to reduce their TOTAL emissions. Further, the switch to new natural gas fired facilities commits us to lengthening the time frame upon we are dependent on these fuel sources – turning years into decades. Whereas the plan to incrementally reduce emissions through the use of less polluting fossil fuels seems feasible, I believe the time to eliminate these emissions is now. Instead, the plan to increase capacity through renewable energy sources, as well as battery storage, is a better fit for the environmental benefits we need to achieve within our state and our nation. This strategy also has short- and long-term advantages to power generation without continuing emissions or dependence from fossil fuel sources. As a consumer I am also concerned

about the long-term financial consequences of the proposed plan. It can be assumed that LGE/KU customers will fit he bill for construction of these new facilities, including the delivery infrastructure for natural gas. We will also be liable in the future for increased costs of fuel extraction, refinement and delivery. These costs will continue through the life span of the plants, again for decades. I would ask that the Public Service Commission ask the applicants to think in terms of emission elimination, not just partial reduction, and modify their plans to move more heavily toward renewable energy sources and forego reliance on any fossil fuel source.

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Mr. Richie Holman

Dear Kentucky Public Service Commission Public Comment,

We cannot lock ourselves into paying for 40 more years of natural gas when we should be well into our transition away from fossil fuels. Please approve the coal retirements and reject the proposals for two new large scale 40-year fossil fuel plants.

LG&E/KU customers like me have struggled with paying our energy bills or are affected by the air pollution from fossil fuel power plants. Investing in energy efficiency (DSM) instead will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians. My family and I have gotten solar panels installed a year ago and we are quite pleasing with the savings we are receiving. We live in a large neighborhood in Lexington Ky and only one other home has solar panels that bothers me that not enough people seem interested in clean energy.

In addition to my public comment above, please see the comment submitted by Kentuckians for Energy Democracy for important data and evidence that supports my lived experience and concerns.

Thank you for ensuring that Kentuckians' voices are an important part of the regulatory process.

Sincerely,
Ms Benita Anderson

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Joseph Capozzolo

Dear Kentucky Public Service Commission Public Comment,

We cannot lock ourselves into paying for 40 more years of natural gas when we should be well into our transition away from fossil fuels. Please approve the coal retirements and reject the proposals for two new large scale 40-year fossil fuel plants.

LG&E/KU customers like me have struggled with paying our energy bills or are affected by the air pollution from fossil fuel power plants. Investing in energy efficiency (DSM) instead will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

In addition to my public comment above, please see the comment submitted by Kentuckians for Energy Democracy for important data and evidence that supports my lived experience and concerns.

Thank you for ensuring that Kentuckians' voices are an important part of the regulatory process.

Sincerely,
Mrs. Tori Perkins

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Public Service Commissioners,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Randy Harlan

Subject: Public Comment in PSC Case #2022-00402
Date: Monday, August 14, 2023 9:53:13 AM

Dear Public Service Commission,

I support the comment submitted by Kentuckians for Energy Democracy. In addition, I would add: LG&E-KU proposes to continue to abuse its monopoly power in its current application for permission to build more fossil fuel infrastructure. Only a monopoly public utility, guaranteed a return on an approved investment, would spend money to build fossil fuel infrastructure under the current economic, political, and environmental circumstances. Large energy customers like Ford are already choosing not to use LG&E-KU produced power, but are instead contracting to have power produced cleanly and inexpensively.

Economic studies show that as the rates charged by utilities become uncompetitive, their largest customers will be able to make other arrangements for power, leaving a larger and larger portion of the utilities fixed costs for things to be born more and more by those customers who are unable to afford to make other arrangements to obtain power. That is, poor and middle class Kentuckians will be the ones ultimately stuck paying for unnecessary, unwise infrastructure expenditures by LG&E-KU.

LG&E-KU belongs to PPL, which currently promises: "PPL has set an ambitious goal to achieve net-zero carbon emissions by 2050. In addition, we are targeting a 70% reduction from 2010 levels by 2035 and an 80% reduction by 2040." Examination of PPL's environmental reports, however, reveals that of late, PPL's emissions numbers have been going the wrong direction. That is, its 2021 climate assessment report shows in 2020, it claims carbon emission reductions of "nearly 60 percent since 2010 (59%)." but in 2022 "Through 2022, we reduced carbon emissions nearly 57% from 2010 levels." In other words, carbon emissions have been increasing, despite PPL's claimed intentions.

It may be that, just as in the past, PPL's claimed intention to reduce carbon emissions is largely a matter of slight of hand. That is, much of PPL's current claim to have reduced emissions comes from having sold off generating facilities, so that while PPL has shed responsibility for the emissions, they may still be occurring under other ownership. Similarly, PPL's claim that it is doing an environmentally admirable thing by proposing to shift some generation from coal plants to natural gas plants may again be more a matter of PPL shifting responsibility elsewhere than actually doing anything for the environment.

Note that PPL states an intention of "net-zero carbon emissions by 2050," not net-zero greenhouse

gas emissions or carbon-equivalent emissions. More specifically, it states in its 2022 Sustainability Report “We anticipate retiring 2,000 megawatts of coal generation over the next 15 years, including 1,500 megawatts by 2028. Our Kentucky utilities have proposed a generation replacement plan with a mix of cleaner energy resources — a combination of new gas and solar generation, energy storage and customer demand-side management — to power the needs of the state while maintaining the affordability and reliability our customers expect. If approved by the Kentucky Public Service Commission, this mix of resources will reduce the carbon intensity of our Kentucky generation from 2021 levels by roughly 26% by 2030.”

PPL’s claim that gas generation is cleaner than coal is questionable. The article “Evaluating net life-cycle greenhouse gas emissions intensities from gas and coal at varying methane leakage rates” at <https://iopscience.iop.org/article/10.1088/1748-9326/ace3db>, states in its abstract: The net climate impact of gas and coal life-cycle emissions are highly dependent on methane leakage. Every molecule of methane leaked alters the climate advantage because methane warms the planet significantly more than CO₂ over its decade-long lifetime. We find that global gas systems that leak over 4.7% of their methane (when considering a 20-year timeframe) or 7.6% (when considering a 100 year timeframe) are on par with life-cycle coal emissions from methane leaking coal mines. The net climate impact from coal is also influenced by SO₂ emissions, which react to form sulfate aerosols that mask warming. We run scenarios that combine varying methane leakage rates from coal and gas with low to high SO₂ emissions based on coal sulfur content, flue gas scrubber efficiency, and sulfate aerosol global warming potentials. The methane and SO₂ co-emitted with CO₂ alter the emissions parity between gas and coal. We estimate that a gas system leakage rate as low as 0.2% is on par with coal, assuming 1.5% sulfur coal that is scrubbed at a 90% efficiency with no coal mine methane when considering climate effects over a 20 year timeframe. Recent aerial measurement surveys of US oil and gas production basins find wide-ranging natural gas leak rates 0.65% to 66.2%, with similar leakage rates detected worldwide. These numerous super-emitting gas systems being detected globally underscore the need to accelerate methane emissions detection, accounting, and management practices to certify that gas assets are less emissions intensive than coal.

That is, it appears that the LG&E-KU goal is not to actually address climate change, but simply to not have to report its responsibility for causing emissions of green-house gases, just as it has failed for generations to account for the externalities of the pollution damage caused to lives and the environment by its coal plants. LG&E-KU wants to look green, but to not take any responsibility for its supply chain and the emissions that will result from its use of natural gas. It wants to claim it will reduce emissions, when all it is likely to achieve is a shift in responsibility for the emissions that will result.

LG&E-KU has also avoided calling attention to the fact that it plans to close its Doe Run natural gas storage facility which has apparently been leaking for more than a decade without LG&E-KU either noticing or caring enough to address the situation. Instead, it spends money on greenwashing its image, telling the public how green it must be to use sheep to control vegetation at the locations of the tiny amounts of solar power it produces.

Contrast LG&E-KU’s avoidance of mentioning methane and the danger methane poses as a

greenhouse gas with Duke Energy, which plainly states states “Duke Energy is executing an aggressive clean energy transition to achieve its goals of net-zero methane emissions from its natural gas business by 2030 ... ” <https://news.duke-energy.com/releases/duke-energy-details-clean-energy-transition-in-impact-report>

As a monopoly, LG&E-KU has grown complacent and lazy. Apparently, it came up with its current proposal at the last minute, having failed to disclose anything about an intention to build natural gas-generating facilities in its most recent Integrated Resources Plan. Similarly, LG&E-KU went through the motions of creating a Demand Side Management program, but failed to come up with anything substantive.

LG&E-KU should be reminded of its responsibilities to the public as a monopoly public utility, and

- ordered to increase its Demand Side Management programs so as to offer more to low- and middle-income customers and to reduce the need for increased generation.
- ordered to retire the coal-fired plants identified in its request, and to build the proposed solar and battery facilities, but ordered not build new gas-fired plants. Instead, LG&E be required to show that it has considered less risky, cleaner, and most importantly, cheaper alternatives that will not leave its customers facing the likelihood of having to pay for stranded assets.

Finally, the Commission should increase Distributed Energy Resources (DER) to minimize the need for creating new energy capacity and target benefits for affordable rates for low-and fixed-income households.

Thank you for ensuring that Kentuckians' voices are an important part of the regulatory process.

Sincerely,
Elwood Sturtevant

Mercer Citizen & Neighbor In favor of LGE proposed Solar Facility in Mercer County

To: Public Service Commission
PO Box 615
Frankfort, KY 40602
PSC.Comment@KY.gov

Re: Case Doc# 2022-00402 Proposed Solar Field in Mercer County

I request the commission and court consider the following 4 items and approve the solar field in Mercer County.

- 1) The proposed solar field should be a huge asset to Mercer County for attracting manufacturers with good jobs with a long term future presence. 1000MW solar power generation is a lot of power, the national average solar power generation needed per home is 173 households per Megawatt. 173,000 homes is well beyond what it is in Mercer County with just a population of approximately 22,000. Some of this power should be assigned for the benefit of Mercer County and its citizens. Reducing embodied carbon emissions that incur from manufacturing a product is a growing interest to many. Manufacturers across the globe have a greater and greater need to secure green energy for manufacturing their products. Securing a small percentage of this proposed solar electrical power generation for dedicated use in Mercer county will be a huge pull to bring in manufacturers and be a win-win for Mercer and LGE. Manufacturers with good jobs that will stay. Manufacturers that will be good neighbors as they should have concerns about their environmental impact in Mercer county. As a citizen of Mercer county I have the concern that the solar field will be approved with no secured green power allotted to the county. This is because the county government and the utilities seem to be at opposition with each other. As a citizen of Mercer county, I request that the solar field be approved with the stipulation that a set percentage (5-10%) be dedicated to green manufacturing facilities located elsewhere in Mercer county. I fear this windfall for Mercer County will be lost as there appears to be no collaboration between the parties and will take the courts direction to do this. Solar is the way for a better future in Mercer county if some of the power stays here! The local community should benefit.
- 2) I am a citizen of Mercer county with a home that neighbors the proposed site of the solar field. I want to see solar panels, not an industrial park. There appears to be the mantra that all the citizens are opposed. For over twenty years I have lived watching the sun set over the ridge where panels are proposed to be placed. Solar fields are not aesthetically bad if the fields are grazed or mowed. The last thing I want to see in my backyard is an industrial park. The statement that Mercer wants an industrial park there not a solar field is easy for those to say who don't neighbor the property. I don't want to live downhill from a industrial park, this idea is new news for a citizen who borders this area. One can drive down Tapp Road in Harrodsburg and see what a potential future looks like--vacant polluted lots. I'll gladly look out at solar field every day and am not opposed to this. My biggest concern is the 100-120 acres adjacent to Alexander Heights II subdivision is not detailed in the current plans. Why are panels not planned here? Is it because it was once zoned into the city limits? My concern is this city zoning is locking out the use of this SOUTH facing slope from being used. As a neighboring citizen to the proposed field, I would like to see this land used in addition to the other portions of the land or ensure it will be mowed regularly and either used for panels or kept as green space that won't block view of the horizon and the solar field. This view will be an be asset to the neighborhood. I ask this 100acres adjacent be addressed and included in the plans.

3) As a Mercer citizen and benefactor to his generosity, I would like to see the legacy and goodwill of philanthropist and preservationist Ralph Anderson continue. The land being proposed for development was part of the late Ralph Anderson's effort to preserve agricultural land in Mercer county. I believe installing a solar field here not only makes the most sense because its proximity to the main transmission lines but it carries on the spirit of this preservation combined with the needs of the community. Kentucky Utilities has shown in their small solar field the use of grazing animals along with the panels and should be required to do this here too. The counter proposal of industrial park by the Mercer Fiscal court was surprising as I assumed that Anderson had placed some sort of preservation clause on deed for this property. If no legal restrictions are on the land, the solar field will preserve the land versus industrial park. If there are legal deed restrictions on the land to keep it agricultural, why is an industrial park even being mentioned? The debate previously was always solar field vs agriculture.

4) As a citizen and customer of Kentucky Utilities I would like to continue to receive reliable and economical electric service. While other parts of the country have power shortages, I would like Kentucky to invest in diverse portfolio of power generation. Investment in a solar field at this location is a logical choice due to the proximity of the power transmission lines. In 20 years I have lost power no more than a couple times and never more than several hours. At the same time enjoyed some of the lowest electric rates in the country.

Sincerely,

Ronnie Moffitt

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we

protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Mr. RANDY KEISTER

Dear Kentucky Public Service Commission,

We cannot lock ourselves into paying for 40 more years of natural gas when we should be well into our transition away from fossil fuels. Please approve the coal retirements and reject the proposals for two new large scale 40-year fossil fuel plants.

LG&E/KU customers like me have struggled with paying our energy bills or are affected by the air pollution from fossil fuel power plants. Investing in energy efficiency (DSM) instead will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

In addition to my public comment above, please see the comment submitted by Kentuckians for Energy Democracy for important data and evidence that supports my lived experience and concerns.

Thank you for ensuring that Kentuckians' voices are an important part of the regulatory process.

Sincerely,
Miss Shay Doty

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Bruce Reed

Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Ms. Linda Roberts

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Elmer McKenzie McKenzie

Subject: Public comment on PSC case #2022-00402

Dear Kentucky Public Service Commission,

We cannot lock ourselves into paying for 40 more years of natural gas when we should be well into our transition away from fossil fuels. Please approve the coal retirements and reject the proposals for two new large scale 40-year fossil fuel plants.

LG&E/KU customers like me have struggled with paying our energy bills or are affected by the air pollution from fossil fuel power plants. Investing in energy efficiency (DSM) instead will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

In addition to my public comment above, please see the comment submitted by Kentuckians for Energy Democracy for important data and evidence that supports my lived experience and concerns.

Thank you for ensuring that Kentuckians' voices are an important part of the regulatory process.

Sincerely,
Mrs. Christy Collins

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Mrs. Norma Neal

Dear Kentucky Public Service Commission Public Comment,

We cannot lock ourselves into paying for 40 more years of natural gas when we should be well into our transition away from fossil fuels. Please approve the coal retirements and reject the proposals for two new large scale 40-year fossil fuel plants.

LG&E/KU customers like me have struggled with paying our energy bills or are affected by the air pollution from fossil fuel power plants. Investing in energy efficiency (DSM) instead will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

In addition to my public comment above, please see the comment submitted by Kentuckians for Energy Democracy for important data and evidence that supports my lived experience and concerns.

Thank you for ensuring that Kentuckians' voices are an important part of the regulatory process.

Sincerely,
Miss Kelley Sparks

Subject: Comment regarding Case #2022-00402

[REDACTED]

Dear Public Service Commission Representative,

I am writing with regard to Case #2022-00402

LG&E-KU proposes to continue to abuse its monopoly power in its current application for permission to build more fossil fuel infrastructure. Only a monopoly public utility, guaranteed a return on an approved investment, would spend money to build fossil fuel infrastructure under the current economic, political, and environmental circumstances. Large energy customers like Ford are already choosing not to use LG&E-KU produced power, but are instead contracting to have power produced cleanly and inexpensively.

Economic studies show that as the rates charged by utilities become uncompetative, their largest customers will be able to make other arrangements for power, leaving a larger and larger portion of the utilities fixed costs for things to be born more and more by those customers who are unable to afford to make other arrangements to obtain power. That is, poor and middle class Kentuckians will be the ones ultimately stuck paying for unnecessary, unwise infrastructure expenditures by LG&E-KU.

LG&E-KU belongs to PPL, which currently promises: “PPL has set an ambitious goal to achieve net-zero carbon emissions by 2050. In addition, we are targeting a 70% reduction from 2010 levels by 2035 and an 80% reduction by 2040.” Examination of PPL’s environmental reports, however, reveals that of late, PPL’s emissions numbers have been going in the wrong direction. That is, its 2021 climate assessment report shows in 2020, it claims carbon emission reductions of “nearly 60 percent since 2010 (59%).” but in 2022 “Through 2022, we reduced carbon emissions nearly 57% from 2010 levels.” In other words, carbon emissions have been increasing, despite PPL’s claimed intentions.

It may be that, just as in the past, PPL’s claimed intention to reduce carbon emissions is largely a matter of slight of hand. That is, much of PPL’s current claim to have reduced emissions comes from having sold off generating facilities, so that while PPL has shed responsibility for the emissions, they may still be occurring under other ownership. Similarly, PPL’s claim that it is doing an environmentally admirable thing by proposing to shift some generation from coal plants to natural gas plants may again be more a matter of PPL shifting responsibility elsewhere than actually doing anything for the environment.

Note that PPL states an intention of “net-zero carbon emissions by 2050,” not net-zero greenhouse gas emissions or carbon-equivalent emissions. More specifically, it states in its 2022 Sustainability Report “We anticipate retiring 2,000 megawatts of coal generation over the next 15 years, including 1,500 megawatts by 2028. Our Kentucky utilities have proposed a generation replacement plan with a mix of cleaner energy resources — a combination of new gas and solar generation, energy storage and customer demand-side management — to power the needs of the state while maintaining the affordability and reliability our customers expect. If approved by the Kentucky Public Service Commission, this mix of resources will reduce the carbon intensity of our Kentucky generation from 2021 levels by roughly 26% by 2030.”

PPL’s claim that gas generation is cleaner than coal is questionable. The article “Evaluating net life-cycle greenhouse gas emissions intensities from gas and coal at varying methane leakage rates”

at <https://iopscience.iop.org/article/10.1088/1748-9326/ace3db>, states in its abstract:

The net climate impact of gas and coal life-cycle emissions are highly dependent on methane leakage. Every molecule of methane leaked alters the climate advantage because methane warms the planet significantly more than CO₂ over its decade-long lifetime. We find that global gas systems that leak over 4.7% of their methane (when considering a 20-year timeframe) or 7.6% (when considering a 100 year timeframe) are on par with life-cycle coal emissions from methane leaking coal mines. The net climate impact from coal is also influenced by SO₂

emissions, which react to form sulfate aerosols that mask warming. We run scenarios that combine varying methane leakage rates from coal and gas with low to high SO₂

emissions based on coal sulfur content, flue gas scrubber efficiency, and sulfate aerosol global warming potentials. The methane and SO₂ co-emitted with CO₂ alter the emissions parity between gas and coal. We estimate that a gas system leakage rate as low as 0.2% is on par with coal, assuming 1.5% sulfur coal that is scrubbed at a 90% efficiency with no coal mine methane when considering climate effects over a 20 year timeframe. Recent aerial measurement surveys of US oil and gas production basins find wide-ranging natural gas leak rates 0.65% to 66.2%, with similar leakage rates detected worldwide. These numerous super-emitting gas systems being detected globally underscore the need to accelerate methane emissions detection, accounting, and management practices to certify that gas assets are less emissions intensive than coal.

That is, it appears that the LG&E-KU goal is not to actually address climate change, but simply to not have to report its responsibility for causing emissions of green-house gases, just as it has failed for generations to account for the externalities of the pollution damage caused to lives and the environment by its coal plants. LG&E-KU wants to look green, but to not take any responsibility for its supply chain and the emissions that will result from its use of natural gas. It wants to claim it will reduce emissions, when all it is likely to achieve is a shift in responsibility for the emissions that will result.

LG&E-KU has also avoided calling attention to the fact that it plans to close its Doe Run natural gas storage facility which has apparently been leaking for more than a decade without LG&E-KU either noticing or caring enough to address the situation. Instead, it spends money on greenwashing its image, telling the public how green it must be to use sheep to control vegetation at the locations of the tiny amounts of solar power it produces.

Contrast LG&E-KU's avoidance of mentioning methane and the danger methane poses as a greenhouse gas with Duke Energy, which plainly states states "Duke Energy is executing an aggressive clean energy transition to achieve its goals of net-zero methane emissions from its natural gas business by 2030" <https://news.duke-energy.com/releases/duke-energy-details-clean-energy-transition-in-impact-report>

As a monopoly, LG&E-KU has grown complacent and lazy. Apparently, it came up with its current proposal at the last minute, having failed to disclose anything about an intention to build natural gas-generating facilities in its most recent Integrated Resources Plan. Similarly, LG&E-KU went through the motions of creating a Demand Side Management program, but failed to come up with anything substantive.

LG&E-KU should be reminded of its responsibilities to the public as a monopoly public utility, and

- ordered to increase its Demand Side Management programs so as to offer more to low- and middle-income customers and to reduce the need for increased generation.

- ordered to retire the coal-fired plants identified in its request, and to build the proposed solar and battery facilities, but ordered not build new gas-fired plants. Instead, LG&E be required to show that it has considered less risky, cleaner, and most importantly, cheaper alternatives that will not leave its customers facing the likelihood of having to pay for stranded assets.

Finally, the Commission should increase Distributed Energy Resources (DER) to minimize the need for creating new energy capacity and target benefits for affordable rates for low- and fixed-income households.

Thank you for your consideration of these remarks, and for your service to the citizens of Kentucky.

Sincerely,

Rev. Elwood Sturtevant

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Muriel Sammons

Subject: Public comment on PSC case #2022-00402

Dear Kentucky Public Service Commission,

No more fossil fuels. No more steps backward. We cannot lock ourselves into paying for 40 more years of natural gas when we should be well into our transition away from fossil fuels. Please approve the coal retirements and reject the proposals for two new large scale 40-year fossil fuel plants.

LG&E/KU customers like me have struggled with paying our energy bills or are affected by the air pollution from fossil fuel power plants. Investing in energy efficiency (DSM) instead will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

In addition to my public comment above, please see the comment submitted by Kentuckians for Energy Democracy for important data and evidence that supports my lived experience and concerns.

Thank you for ensuring that Kentuckians' voices are an important part of the regulatory process.

Sincerely,
Dr. Shane Quinlan

Say "No" to LG&E and KU's Coal Retirement Plan

Dear Kentucky Public Service Commission,

Please stop the plan by Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired power plants. "Coal keeps the lights on" isn't just a slogan for a license plate or a "cutesy" phrase used to promote one of Kentucky's oldest industries. It's the truth. Coal has kept the lights on for more than two centuries and will continue to do so as long as we protect Kentucky's coal industry.

My family relies on affordable and reliable power but replacing coal-fired plants with solar and battery storage facilities is not going to make "keeping the lights on" easy. With high inflation rates, shocking prices at the pump, expensive grocery trips and high energy bills across the country, this plan will only make matters worse for those struggling to make ends meet here at home.

I urge you to oppose the efforts of Louisville Gas & Electric and Kentucky Utilities to retire four coal-fired electric generating units over the next few years. Hard-working Kentuckians oppose this move, and so should you.

Sincerely,
Sandra Neace
