PUBLIC SERVICE  
COMMISSION

RE: Case No. 2022-00402

Dear Commissioners of the Kentucky Public Service Commission:

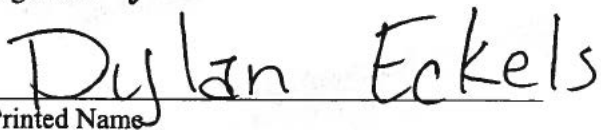

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

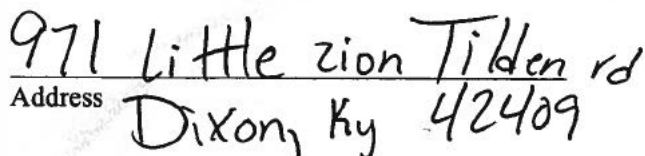

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.

3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGUs Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will hann Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurety retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, i believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Stonn Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. 4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to **deny** KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to deny KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to deny KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

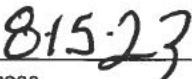

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

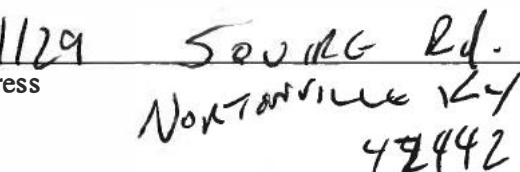

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to **deny** KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to **deny** KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to deny KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.

3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

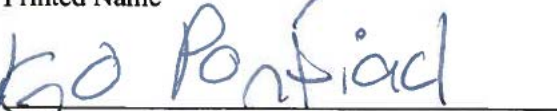

I am asking Commission to deny KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to deny KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. 3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to deny KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

I am asking Commission to **deny** KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity. I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

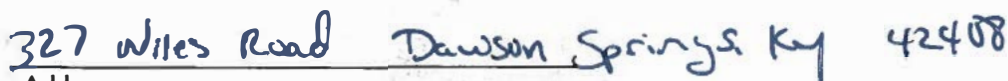

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. 2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. **RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to deny KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to deny KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

RE: Case No. 2022-00402

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities (“KU”) and Louisville Gas & Electric Company (“LG&E”) are seeking the premature retirement of four (4) coal-fired generating units (“CGU”). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU’s Brown 3 and Ghent 2.

I am asking Commission to deny KU’s and LG&E’s joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky’s economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of “electrification,” more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.

**RE: Case No. 2022-00402**

Dear Commissioners of the Kentucky Public Service Commission:

I am providing the following comments relating to Case No. 2022-00402. Kentucky Utilities ("KU") and Louisville Gas & Electric Company ("LG&E") are seeking the premature retirement of four (4) coal-fired generating units ("CGU"). Specifically, LG&E is seeking the premature retirement of two (2) CGUs at the Mill Creek Power Plant and KU is seeking the premature retirement of two (2) CGU's Brown 3 and Ghent 2.

I am asking Commission to deny KU's and LG&E's joint request to close these CGUs because:

1. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase my electric bill.
2. I believe prematurely retiring reliable coal-fired energy sources and installing expensive, less-reliable replacements will substantially increase electric rates for all Kentucky homes and business in the KU and LG&E territories.
3. I believe that increases in electricity rates will harm Kentucky businesses and could result in job losses for thousands of Kentuckians.
4. I believe that increases in electricity rates will harm Kentucky's economic growth and its ability to bring new jobs, industries, and opportunity to the Commonwealth.
5. I believe that prematurely retiring reliable coal-fired energy sources reduces energy reliability across Kentucky.
6. As we move down the path of "electrification," more and more items in our daily lives depend upon safe, reliable and affordable electricity, I believe we need to preserve and continue to operate our existing sources of electric generation.
7. I believe that prematurely retiring reliable coal-fired energy sources significantly increases the risk of electricity being unavailable in emergency situations ranging from severe winter conditions (like Winter Storm Elliott) to dangerous heat waves; I believe that premature retirements of coal-fired energy could endanger the lives of Kentuckians.

Thank you for your consideration of these comments.
