Comments: Dear Commissioners, I am writing to you as a high school student in the JCPS school district who is interested in the future of power within our state and its effect throughout my life time. I ask that you continue to move forward with plans to retire fossil fuel-fired power generators, while providing workers with other industries they can go to, and homeowners with a system that is able to sustain their power usage. I understand that many Kentucky citizens are worried about the impacts this will have on jobs and electricity bills, but this is a necessary step in moving Kentucky into the future. Kentucky needs to step out of its reputation as a coal mining state, and step into its future as a sustainable energy beacon. A place where we do not have people suffering from illnesses caused by coal burning, a place where we have reached our goal of net zero carbon dioxide. Future generations are relying on us, we cannot keep waiting and passing off these tasks onto the next generation, very soon it will be too late. We as Kentuckians have the opportunity, right now, to bring team Kentucky into a place where the rest of the country is looking to us. It is our job to protect future generations by starting now, in removing Fossil-fuel burning generators. The most difficult

part of tasks as momentous as these is continuing to push forward as things become more difficult.
But if we truly wish to create a better future for generations not yet born, then we must start today.
-Ruby Korman (JCPS high school student)
