Regarding CASE# 2023-00285

I moved to Floyd Co., KY
in 2004. At the time, the
local power company had one
flat rate per person, & property.
I had my garage built and
electricity installed. I was
~~not~~^{not} ready, at the time, for
my home. Then approximately
in 2010, I had a modular home
installed on the property. A
separate service was set
up for the home.

To keep my bill in line,
I have LED bulbs + solar
lights inside & out. My
thermostat is set on 80° during
the summer & 70° in the
winter.

I am a widowed senior
citizen on a fixed income. I
worked until I was 68 years old.
I make an effort to conserve
energy & lower my bill by
conserving kilowatt usage. That,
at one time, was the best
way to save money

My electric company ask
for rate increases on Kilowatt
usage ~~and~~ on several occasions.
They were either denied or the
requested amount was reduced.

Then someone whispered
in their ear, make each meter
a separate flat rate. My bill
immediately increased by \$12
at the time. But that wasn't
good enough.

Again someone whispered
in their ear, request a
rate increase on

the flat rate, not on kilowatt usage, those increases are a lot easier to procure. So this has been the mode of operation. This latest proposal will raise my electric bill by nearly \$20 a month, leaving me with the only option to lower my bill being to remove the meter on my garage. This to me seems a bit "much" from a company that only stays

open 4 days a week.

Thank you!
