Dear Commissioners

Case #2024-00115 KY Power DSM Case

Our utilities need to be taking DSM seriously.  
That means investing at the rates that other utilities around the country are, the national average is around 2%.  
We need to see at a minimum an investment of 1% or at least half of what they are proposing to spend on new gas plants (\$150M)

If larger areas are cheaper in power this needs done

Sincerely,  
Kyrie Fowkes

[REDACTED]

Dear Commissioners

Case #2024-00115 KY Power DSM Case

Hello,

I am sending a public comment because...

Kentuckians are facing high bills and frequent rate increases. Many of our most vulnerable friends and neighbors are having to make tough choices to keep the electricity on each month. Energy efficiency helps keep our electric bills low and our homes warm, safe, and comfortable.

OUR UTILITIES NEED TO BE TAKING DSM SERIOUSLY.

That means investing at the rates that other utilities around the country are, the national average is around 2%.

We need to see at a minimum an investment of 1% or at least half of what they are proposing to

spend on new gas plants (\$150M)

Sincerely,  
Annette Hines

Dear Commissioners

Case #2024-00115 KY Power DSM Case

The residents of Pike County have no options for electricity. KY Power has a monopoly and unfortunately they take advantage of that. They have increased rates because as people have left the area, they say it takes more money to support the infrastructure. I should not be punished for staying in my home and remaining in EKY. But that is essentially what is happening. They recently contracted a tree cutting service to cut around lines. One truck parked in my driveway for over 8 hours with 3 workers sitting inside just waiting for another crew somewhere to say come pick up limbs. #1 why did it require 3 people? Is that another reason why my rates have increased? AEP built a new building in Pikeville. They talk about the energy assistance programs. If bills weren't so high, that wouldn't be needed. They may not be taking significant wage increases but performance bonuses have seen an increase around 28.4% in 2023. That's significant.

Sincerely,  
Caleb Hampton

Dear Commissioners

Case #2024-00115 KY Power DSM Case

#### DSM MAKES OUR COMMUNITIES MORE RELIABLE AND RESILIENT

We don't have to choose between affordable energy bills and sustainable communities anymore. The answers we need are available, affordable, and shovel ready.

Energy efficiency reduces the absolute level of load on the energy system, even during extreme weather events (times of peak demand). This makes our energy system more reliable and more resilient (less vulnerable to outages).

Demand Response can reduce load specifically during peak demand, also making our system more resilient.

Virtual Power Plants (VPPs) are an important way to meet energy system needs. VPPs are systems of distributed energy resources (including demand response programs) that work together to balance energy supply and demand on a large scale. We need to invest in new technology to be more resilient NOT old, outdated fossil fuel infrastructure.

Sincerely,  
Kellie Dingus

Dear Commissioners

Case #2024-00115 KY Power DSM Case

This electric company is all about making more money for their stock they have not made a trust or any kind of plan to put money aside drawing interest for upkeep repair of electricity. Every time you turn around they want a raise in rates. It's time for the people who pay for electric to get a break. They need to have and start running their business better. They have cut their maintained of tree's and other stuff like this to nothing unless electric is out. They do no other maintenance. Years ago they answered call for tree's in power lines. Fixing poles. If they're not on ground or broke in half and electric is out they won't do anything

Sincerely,  
Cynthia Mckenzie

Dear Commissioners

Case #2024-00115 KY Power DSM Case

I feel that more needs to be invested back into the hard working Kentuckians. A lot of us have to choose between what we are going to cover and in all cases that shouldn't be happening. I live with an auto immune disease that is impacted by temperatures and stress. Plus I also have an autistic son that I have to buy sensory friendly toys that aren't cheap either.

Instead of building more plants they should find energy efficient ways to do the same thing so it doesn't make it even harder for everybody who is already struggling.

Sincerely,  
Caitlyn Blair

**Subject:** Public Comment in Case #2024-00115

Dear Commissioners

Case #2024-00115 KY Power DSM Case  
I will not support a rate increase.

PUBLIC COMMENTS NEEDED:

Kentucky Power's

Demand-Side Management Plan

Picture

Permission to build new generation capacity (CPCN, or Certificate of Public Convenience and Necessity Case)

Public Comment Needed: Energy Efficiency Programs + Plans (DSM or Demand-Side Management)

Kentucky Power wants US to invest in THEM but what we really need is for KPC to INVEST IN US.

Right now, KPC is anticipating building a new gas plant in 2029 and charging us 100s of millions of dollars to build it. But it would be way cheaper to instead invest a portion of that money in energy efficiency and other demand-side management tools and save us from needing to build new

infrastructure.

Demand side management (DSM)/ energy efficiency (EE) are almost always the cheapest and most effective way to lower bills, protect homes, and address energy demand.

The programs in KPC's DSM proposal are good, but they are a drop in the bucket for what we really need. Let's tell the Public Service Commission to ensure that Kentucky Power invests in us, helping us save money on our electric bills and reduce the need for future investments in new fossil fuel plants.

Learn more

Submit a Comment

Your comments are WORKING!

Picture

Together, we are holding utilities accountable and keeping electric bills affordable.

The Public Service Commission recently ruled on Kentucky Power's most recent rate case. The original request would have increased residential bills by over 18%. The public advocates who intervened in the case came to a settlement agreement with KY Power that would keep rate increases around 11% and provide many new protections for low income customers, including important protections against disconnections. The PSC ruled that the impact of the utility's proposal would be "excessive and disturbing," based on hearing from so many customers that they could not afford a rate increase. They approved a rate increase lower than the agreed upon settlement, increasing a typical residential customer's bill 5.66% over current rates.

This is a HUGE win! Let's keep up the momentum!

Background for DSM Case:

There are two ways to think about meeting customers' need for electricity: generating and supplying electricity, and demand-side management (ie. reducing the amount of electricity needed). Before we consider building new infrastructure to generate more electricity we should always ensure that a utility is doing everything it can to reduce customers' need.

When utilities are projecting an increase in future electricity needs their frequent first response is to build new generating capacity in the form of a new power plant or solar installation. This is because the current utility model rewards utility companies for building new power plants. It allows them to charge us for the price tag of the new infrastructure AND allows them to earn a profit or return on investment for that project. This is old thinking and it hurts customers. Building new infrastructure is EXPENSIVE. Demand side management including investing in energy efficiency is always the cheapest way to ensure utilities can meet our electricity needs and therefore it should be given proper weight in the planning process.

In the future, we need a utility system that rewards utilities for lowering our bills and saving electricity, but for now we need to make sure that the Public Service Commission is encouraging utilities to prioritize demand side management as an important part of the equation for meeting our current and future needs, and protecting the public interest

See Sample Talking Points for your DSM comment below

Submit a Comment

What is Demand-Side Management?

from Wikipedia:

Demand Side Management (DSM) is a strategy used by electric utilities to manage and control energy consumption by consumers.

DSM programs can offer financial incentives, education, or pricing schemes to encourage consumers to reduce their energy demand, especially during peak hours.

DSM programs can provide benefits such as lower utility bills, improved service quality, reduced environmental impacts, and increased grid reliability

What is Energy Efficiency?

Energy efficiency measures are programs, products, and tools that help us to lower our energy usage and our energy bills. This includes weatherization and upgrades to our homes and appliances/heating and cooling systems that reduce the amount of energy needed to keep our homes safe and comfortable.

Watch this short webinar to learn more about how we got here and where we need to go.

Tips for Writing Your Comment

The Commission wants to hear how the decisions KPC makes affect your life and your family. You don't have to be an expert for your input to matter.

Please write your comment in your own words. You are welcome to use the talking points below but try not to copy and paste them word for word. The Commission gives more weight to unique comments over form responses. Don't overthink it. Your comment can be simple.

Share this action with your friends + followers

Talking points to inform your comment

Hover over the talking points to see them better

DSM is supposed to offset expensive and risky investments in new generation

DSM makes our communities more reliable and resilient

We don't have to choose between affordable energy bills and sustainable communities anymore. The answers we need are available, affordable, and shovel ready.

Energy efficiency reduces the absolute level of load on the energy system, even during extreme weather events (times of peak demand). This makes our energy system more reliable and more resilient (less vulnerable to outages).

Demand Response can reduce load specifically during peak demand, also making our system more resilient.

Virtual Power Plants (VPPs) are an important way to meet energy system needs. VPPs are systems of distributed energy resources (including demand response programs) that work together to balance energy supply and demand on a large scale. We need to invest in new technology to be more resilient NOT old, outdated fossil fuel infrastructure.

Our utilities need to be taking DSM seriously.

KENTUCKIANS NEED ENERGY EFFICIENT HOMES
